President Seidel then introduced Max Sondheimer of Memphis. In his usual witty way Mr. Sondheimer had considerable fun with President Seidel and others present. He said while he did not propose to talk "shop," he could not resist the temptation of telling of the bright outlook for the coming year. He said there never was a time in the history of the hardwood trade when the supply of stock was so low at the consuming centers as now. He thought hardwood lumbermen should consider this fact and put up prices to a paying basis.

F. F. Fish, who was the next speaker, mentioned that he had visited all the large markets of the country during the year, but did not know of any place where the lumber trade was better organized than at St. Louis, and he congratulated the Lumbermen's Club on that fact.

At the conclusion of Mr. Fish's remarks the reports of officers and committees were called for by the president.

The membership committee reported eight new applications. They were as follows, and were unanimously elected to membership:

P. F. Cook, St. Louis Lumberman.  
S. W. Morton, Van Cleave Lumber Company.  
E. S. Crull, Grays Harbor Commercial Company.  
H. M. Morriss, Van Cleave Lumber Company.

## Annual St. Louis Lumbermen's Club

The annual meeting and banquet of the Lumbermen's Club of St. Louis was held on Tuesday evening, December 14, at the Mercantile Club. The attendance was large and much enthusiasm was shown.

At the conclusion of a most enjoyable dinner, President Julius Seidel, who presided, called the meeting to order. He announced that Earl Palmer of Paducah, Ky., O. O. Agler, president of the National Hardwood Lumber Association, and F. F. Fish, secretary of the same organization, both of Chicago, were the guests of honor and the speakers of the evening.

Mr. Palmer, who was the first speaker, made a short address. He said he would not talk "shop," as it was not the time and place; he also said he could not advise the St. Louis lumbermen how to run their business, as they are such good lumbermen themselves. He then gave a short talk on "The Power of an Idea." He sketched the growth of some of the greatest political, scientific and ethical ideas, such as transportation and invention: the idea of the building of the Panama Canal, the improvement of the inland waterways and the idea that a man's competitor is not his enemy. He concluded by saying that we are on the eve of a most prosperous era, and that he hoped that the Lumbermen's Club in the future, as in the past, would do everything to realize its highest ideals in placing the lumber business in the position to which it is entitled.

The next speaker was O. O. Agler of Chicago. Mr. Agler stated that the St. Louis

all other nominees on the ticket, was elected by acclamation over a protest made by Mr. Whitmarsh and his second. Quite a number of the members of the club say that this makes the election of officers illegal, as according to the constitution and by-laws, nominations for any office can be made from the floor and they must be elected by ballot.

A rising vote of thanks was then extended to Mr. Seidel for his work during the year.

## Annual Memphis Lumbermen's Club

The "red men," known as the candidates on the red ticket in the election of officers for the Memphis Lumbermen's Club, swooped down on their opponents on the blue ticket on December 18 and captured almost everything in sight. In fact, when the final results were announced it was found that only two men on the blue ticket had survived the onset, all the other offices having gone to the red men's camp.

The red men conceived the idea of posing as Indians at an early stage of the campaign, and they carried it out beautifully. They designated their leader, S. C. Major, as Big Chief Major, and assigned appropriate titles to the other members on their ticket. The red men were vigorous in their campaign, losing no opportunity to make friends for themselves, and it seems that their work was slightly more effective than that of the blues. The campaign was conducted in a most spirited manner, but there was evidence of good feeling throughout, and the result has left no bad effects. The beaten candidates have taken their defeat philosophically and have not only congratulated their victors but have pledged to them their earnest support in behalf of the club during the ensuing year.

The full results of the election are given herewith, from which it will be seen that E. E. Goodlander and W. H. Greble were the only members of the blue ticket to be elected:

President—S. C. Major (red).

First Vice-President—J. W. McClure (red).

Second Vice-President—J. F. McIntyre (red).

Secretary and Treasurer—J. M. Thompson (both tickets).

One-year directors—Keith Blanton (red), L. C. Nolan (red), E. E. Goodlander (blue).

Two-year directors—J. W. McSweyn (red), R. J. Lockwood (red), W. H. Greble (blue).

A. L. Foster of the J. W. Thompson Lumber Company, who ran on the blue ticket, tied with J. F. McSweyn of the red men for director for two years. Some one suggested that a coin be tossed up to settle the matter, and Mr. McSweyn won.

The red men were loud in their cheers as the results were announced. There was an Indian yell when it was stated that Big Chief Major had won, and the yelling increased in enthusiasm as it became evident that the red men had captured almost everything in sight.

The colors indicated by the two tickets were much in evidence throughout the evening. In fact, there was so much red and so much blue that it was an easy matter to see that there was an election under way. Some of the candidates were so bedecked with red that they could hardly be seen, while some of the others were thoroughly covered with blue. Some of the members came prepared to vote on both tickets, and it was not an unusual thing to see a mass of

Mr. Seidel thanked the club, and then said he had secured a fine picture of the Capitol on his recent visit to Washington, which he would turn over to the club to be hung in the rooms.

Mr. O'Reilly, the new president, on being called on for a speech, promised to do all in his power to maintain the record of the club made under the administration of Mr. Seidel, and asked the cooperation of the members.

both red and blue adorning the same individual.

The battle lasted for almost four hours, and the committee on both tickets, as well as the candidates and their friends, worked hard to secure votes while the polls were open. The red men, however, had done more effective work before the polls opened, and they give this as the cause of their victory.

A delightful luncheon was served during the evening. This has become a regular feature of the annual election. After the meal a number of the members were called upon for brief addresses, pending the announcement of the results. There were several visitors present also, and some of these were called upon. Prominent

S. C. MAJOR, NEW PRESIDENT MEMPHIS LUMBERMEN'S CLUB.

among them was former Governor Benton McMillin of Tennessee, who declared that the lumbermen had it in their power to make of the South an even more wonderful country through advocacy of forest preservation.

All of the successful and unsuccessful candidates were called upon for remarks after the results were announced, and those who were successful declared that they would do everything in their power to serve and advance the interests of the club. The occasion was a delightful one and will go down in the history of the club as one of its "red" letter days.

grets from R. M. Fry of the Fry Lumber Company, who was unable to be present.

President Massengale then read his yearly report. He stated that the Lumbermen's Exchange had been a little better than self-supporting during the year; that the inspectors

had measured and inspected about 7,500,000 feet of all kinds of lumber, a gain of about half a million feet over the previous year; that on the first of the year the Exchange had a membership of forty and that since that time six new members had been gained. He then mentioned what the exchange had done during the year.

A resolution of thanks was then tendered to the president.

A committee of three, composed of W. A. Bonsack, A. J. Lang and George H. Cottrill, was appointed to nominate two tickets to be voted on at the annual election on January 3. While the committee was out selecting the tickets, Lloyd G. Harris and Kelly Chandler were called on by the president to speak.

When the Nominating Committee returned they submitted the following names as candidates for the respective offices: President, Thomas E. Powe and George E. Hibbard; vice-president, William W. Milne and R. F. Krebs. The board of directors were the same on both tickets and were: Franz Waldstein, J. R. Massengale, Frank C. Moore, K. C. Chandler, Peter Whaley, A. W. Johanning, E. N. Wiese, W. R. Chivvis, A. J. Lang, R. E. Drake, L. G. Harris and R. J. O'Reilly.

The seven nominees of the Board of Directors receiving the highest number of votes were to compose the Board of Directors and the five lowest were to be the Board of Arbitration.

After the report of the Nominating Committee had been accepted the following gentlemen were called on to speak: Pat Cook, E. H. Warner, A. W. Johanning, Franz Waldstein, Thomas E. Powe, Col. Jack P. Richardson, John E. Massengale, W. W. Dings and James E. Gatewood.

After considerable discussion the resolution offered by Mr. Powe, "endorsing the action of the St. Louis City Council in its stand against the Bridge Arbitrary," was passed and the president and secretary were instructed to send a letter to the president of the City Council to that effect.

The president then appointed as tellers of the election on January 3 the following gentlemen: L. M. Borgess, Frank G. Liebke and F. E. Sommers. The meeting then adjourned.

The guests of the evening were E. H. Warner, J. H. Johanning and John E. Massengale. Others present were:

W. E. Rauch, Drake-Conger Lumber Co.  
R. E. Drake, Drake Conger Lumber Co.  
A. J. Lang.  
Kelly R. Chandler.  
John E. Massengale.  
John E. Massengale, Jr.  
Roland F. Krebs, Krebs-Scheve Lumber Co.  
James E. Gatewood, St. Louis Lumberman.  
Henry A. Marting, G. H. Marting Lumber Co.  
Charles W. Marting, G. H. Marting Lumber Co.  
W. A. Bonsack, Bonsack Lumber Co.  
Franz Waldstein, Waldstein Lumber Co.  
Jack P. Richardson, J. P. & W. H. Richardson.  
John H. Johanning, Johanning Lumber Co.  
J. R. Massengale, J. R. Massengale Lumber Co.  
E. H. Warner, E. H. Warner.  
A. H. Bush, secretary Lumber Exchange.  
W. C. Howland, HARDWOOD RECORD.  
H. F. Nelson, Ozark Cooperage & Lumber Co.  
Lloyd G. Harris, Lloyd G. Harris Mfg. Co.  
William Dings, William Dings.  
Thomas E. Powe, Thomas E. Powe Lumber Co.  
J. L. Benas, Waldstein Lumber Co.  
Charles E. Thomas, Thomas & Proetz Lumber Co.  
James Milne, Milne Lumber Co.  
A. W. Johanning, Johanning Lumber Co.  
W. W. Milne, Milne Lumber Co.  
J. L. Scheve, Krebs-Scheve Lumber Co.  
F. C. Harrington, Thomas E. Powe Lumber Co.  
W. W. Dings, Garetson-Greason Lumber Co.  
Henry Roemer, Southern Lumberman.  
P. F. Cook, St. Louis Lumberman.  
F. C. Moore, F. C. Moore Lumber Co.  
L. M. Borgess, Steele & Hibbard Lumber Co.  
Edward W. Wiese, Thomas & Proetz Lumber Co.  
George H. Cottrill, American Hardwood Lumber Co.  
F. E. Sommers, American Hardwood Lbr. Co.  
F. J. Liebke, C. F. Liebke Hardwood, Mill & Lumber Co.  
R. J. Fine.  
R. B. McConnell, Huttig Sash & Door Co.

## Annual St. Louis Exchange

The annual meeting and banquet of the Lumbermen's Exchange of St. Louis took place Tuesday evening, December 21, at the Missouri Athletic Club. Dinner was served at 6:30, after which the business meeting was called to order by President J. R. Massengale, who read re-

## *A Visit to the Mahogany Forests of Mexico*

SOME FINE MAHOGANY LOGS AT A MEXICAN LOGGING CAMP

While the constantly diminishing supply of timber in this country has been commented on extensively by the daily papers as being a matter of universal interest, references to one of the most important hardwoods now used in cabinet work has been rare, presumably because this wood is not a native of the United States and our citizens have little or no monetary interest in it. This wood is mahogany, the use of which has become so general for interior woodwork, furniture, etc., that it is no longer regarded as a rare and very costly wood.

The finest figured mahogany has for the past two centuries been drawn from Mexico. In the days when Spain held sway in Mexico vessels laden with mahogany for use in Spain and England plied between Europe and America. Quite recently a ship, sunk in Vigo Bay, Spain, in the seventeenth century, was raised for the treasure supposed to be in her hold. While no treasure was found, some beautiful mahogany logs were discovered in a perfect state of preservation, thus showing that the mahogany forests of Mexico have for centuries been exploited. Now scarcely a tree of sufficient size for cutting can be found except in localities where the physical conditions make it unprofitable to remove it.

As is the case with the hardwood growth of our own country, the mahogany forests of Mexico are rapidly becoming a thing of the past, so far as bringing out the timber for

commercial purposes is concerned. While there are vast tracts of virgin forest in the mountains, these are practically inaccessible and will remain so for many years, as the building of roads to handle this timber would be so expensive as to make logging prohibitive. This country's imports of Mexican mahogany will probably be less next year than for a long period.

While there are many other points from which mahogany is shipped, notably from the coast of South America, from Africa and the Philippine Islands, none has been found up to the present time which combines all the desirable qualities which have made the Mexican variety the premier of its class.

On a recent visit to Mexico, Chas. H. Thompson, president and treasurer of Lewis Thompson & Co., Inc., of Philadelphia, Pa., one of the largest mahogany concerns in the country, states that he found many abandoned camps and many old loggers seeking other employment.

No doubt the situation will be similar to the oak of Indiana, which from a commercial viewpoint was cut out ten years ago, although a small amount is still found in remote places previously overlooked; so with Mexican mahogany, for many years a few cargoes will come forward, but the day when the forests of Mexico could almost supply the world's demand for mahogany has vanished.

Primitive methods of logging and cutting

are still followed in Mexico; the majority of the logging camps are on the large rivers in the mountain country at a distance of from 300 to 400 miles from the loading point, so that the transportation and handling of modern equipment is almost out of the question. The natives by their own simple methods really produce better results under existing conditions than could be obtained by the application of modern and scientific methods.

Perhaps 75 per cent of the mahogany logs coming from Mexico are floated down the Usumacinta river, distances varying from three hundred to five hundred miles. The Usumacinta is a very interesting river. At one point it seems to disappear into the earth, to reappear again about two miles further on. It is said that no man has ever been through this portion of the river, although several years ago attempts were made by a party of Indians, who entered in a canoe to which a long rope was fastened. When they disappeared the rope broke, and they were never seen again. Presumably logs which enter this subterranean tunnel never appear again, which has led to the theory that part of the water must continue down into a subterranean channel leading to the bowels of the earth.

It is surprising, says Mr. Thompson, when the difficulties which have to be overcome are considered, how much mahogany has been produced annually from this section. That

mahogany has maintained an unbroken price for the past twenty years also finds explanation in this fact; if any doubt exists as to a material cheapening of mahogany products it would be quickly dissipated by a visit to Mexico and an inspection of the difficulties surrounding the industry. Such a visit is not without its pleasant features, as there is the recreation of tarpon fishing and hunting, as the deer, wild turkey and tarpon

are numerous all through this locality.

Native labor is satisfied with accommodations and food which would not be possible for a white man to submit to for an extended period, but roughing it for a few weeks in this climate is enjoyable. It is rare that white labor is encountered in this section.

The artistic wood lover who has seen the gradual extinction of the San Domingo mahogany looks with regret on the present situ-

ation in Mexican mahogany, which is rapidly approaching the point where this beautiful wood will be but a memory.

The accompanying view was made from a photograph taken by Mr. Thompson on his recent visit to Mexico. It is especially interesting as showing some handsome mahogany logs as they lay at the logging camps of Mexico.

## Utilization of Hardwoods

ARTICLE XXXIII

### Dining Tables

Among the different uses to which hardwoods are put today none shows a keener observance of quality than dining-tables, the manufacture of which has reached a prominent place in the furniture world.

There are only two styles of dining-tables on the market, pedestal and extension tables. In reality there is only one, the pedestal,

ANOTHER COLONIAL TABLE, VENEERED.

of finishes are among the popular woods used.

For the most part the designs are plain. The tendency is decidedly in that direction even among the most beautiful and expensive pieces. Carved pedestals are also popular. The plain tables are usually veneered, while the carved work is, of course, solid wood.

Only the better grades of hardwoods are used. The tendency is so manifestly toward the best hardwood that little if any cheap timber figures in the manufacture.

The construction work on tables has been improved upon to the extent that they are now perfect, so far as anything is perfect.

Two of the illustrations accompanying this article show a veneered and carved table manufactured by Louis F. Nonnast of Chicago, one of the oldest manufacturers of dining-tables in the West. The other illustration is from a popular table made by Niemann & Weinhardt, also of Chicago and one of the prominent manufacturing concerns in this line.

HAND CARVED PEDESTAL TABLE.

COLONIAL STYLE PEDESTAL TABLE.

since the manufacturing ratio is about ten to one. Ten years ago the extension table occupied the first position, but in the same degree that other varieties of furniture have changed so has the dining-table.

The reason for this is wholly economic. On every hand the primary object has been to utilize space, without affecting the artistic appearance of the piece. The extension table was long, always expressionless and invariably bulky. The pedestal table is precisely the reverse. In the first place, when not in use, it can be put into compact form because of its roundness. While in use it serves all and more purposes than the extension variety, which necessarily must have five legs, which very often interfere with the comfort of those seated around the table.

The better grades of pedestal tables are made of quartered white oak, plain oak being used on the extension kind. Ash figures considerably in the manufacture of tables, especially when given a mahogany finish. Walnut, both Circassian and domestic; birch, maple, gum, elm and mahogany in a variety

## Power Transmission for Woodworking Plants

Power transmission is just as important as power itself. After the power is obtained the question that concerns the woodworking plant is how best may it be transmitted. There is a wide difference of opinion as to the merits of the several ways of sending power through a plant.

First, there is the belt transmitter, which is again subdivided into three kinds: Leather, rubber and canvas. Second, there is the rope drive; third, the friction drive; fourth, transmission by chains and gear wheels.

Some factories use nearly all these types, and most factories employ more than one kind. The chief difference lies in the kinds of belts preferred, rather than in the specific style of transmission; for example, there are mill owners who will not allow anything in their plant but a leather belt while there are others who pin their faith to rubber or canvas. As there are different types so are there different points of merit.

In the plant where all leather is used operators are sticklers for an expensive belt. For high speed machines and a medium short belt, leather is regarded as preferable. In fact, some mill owners argue that there is no other belt but leather that will carry the speed without slipping.

There should be, in overhead work, a good distance between shafts. On this kind of a drive it is stated that it is a waste of money to buy a leather belt, because a rubber or canvas belt will do all that is required without trouble. In a number of cases the belt will have to be run in a half-twist and this the leather belt will not carry without great wear. A painted canvas belt will stand great abuse, though they stretch easily.

However, if the belt runs horizontally and there is the proper distance between shafts this stretching or sagging will not bother much. It will in reality give more power. A concern in Ohio ran a fourteen-inch red canvas belt from one motor to the line shaft, transmitting some thirty horse-power. There was a ten inch pulley on the motor and a forty-two inch pulley on the line shaft and the distance from center to center was only twenty-one feet.

There was a good deal of trouble with this arrangement. The belt was not long enough and the drive pulley was too small for the load. The belt, however, stood the strain for over a year. The concern next tried an endless double leather belt about fifteen feet longer than the canvas belt and the motor had to be moved back to accommodate it. For the first few weeks there was much slipping but later it became perfectly adjusted and not since, some three years ago, has it given any trouble.

For overhead counter-shafting rubber belts are found satisfactory, in most cases. After a rubber belt begins to split it might as well be thrown away, for it will not last long.

Double leather belts are very good but they should not, according to many mill owners, be used on pulleys under eight inches. On smaller pulleys there is too much slippage, more than is really noticed and the belt wears away on the under ply.

Rope transmission is fast coming into use. Its specific place in the factory is from the engine or motor to the line shaft; and for this purpose it is considered as just the thing. The use of the tighteners does away with slipping and the drive can be extended almost to any distance and around all kinds of obstructions.

The friction drive for special purposes is also coming into use. It is a positive drive, with variable speed, and can be used on several kinds of woodworking machinery.

In the case of the quarter-turn belt there is much dissatisfaction. Mill owners as a rule do not favor it and have discarded it wherever possible.

The subject of belt dressings is one in which every mill owner is interested. It has caused considerable trouble and probably

will cause more. The dressing tends to rot the belt, and with due regard to the firms manufacturing these dressings, the fact remains that the mill owners have usually found them unsatisfactory.

Canvas belts should be painted every two or three weeks with red paint mixed with oil. Rosin is best for rubber belts, though this has many disadvantages and is shunned by operators.

Summarizing things helpful and things not, it may be stated that mill owners do not favor belt tighteners because they ruin the top side of the belt and stretch one side as against another. A belt clamp should be a part of the equipment of every shop. They are made in sizes to fit almost any belt and they add to the life of the belt if laced on the pulleys. Machines should be built with a sub-base so that it would be possible to take up the slack without having to cut out a piece of the belt. If equipped this way endless belts could be used on pretty nearly every piece of machinery besides lessening half the belt troubles.

## Cutting Mahogany in British Honduras

The mahogany industry in British Honduras is one of the largest and most important in the colony. The wood from that region is of large size, possesses a beautiful figure and rich color, and is very highly prized in all the markets of the world.

As is generally well known among lumbermen such a thing as a mahogany forest is unknown, as this growth thrives best alone, separate from its kind. The trees are always scattered, being found surrounded by the dense underbrush of the tropical forest and a close growth of smaller trees. A forest showing more than two or three trees to an acre is unusual.

Considering the habits of the mahogany tree it is not strange that inexperienced people consider the problem of cutting the wood and getting it out of the forest an almost insurmountable one. The expense of putting in transportation facilities to handle the very heavy and large logs to marketing points, the cost of maintaining camps in a dense tropical forest are matters which would discourage any but the most experienced operators.

The first work in logging mahogany in British Honduras is to mark the trees for cutting, and a man is sent through the forest for this purpose. Then the undergrowth must be cut away so that the trees can be reached, and paths must be cleared to the main roads. Then the trees may be felled. They are next sawed into suitable lengths and drawn by oxen to the railroad, which conveys them to the river, where

they are unloaded into the water. After being made into rafts the logs are towed to Belize, loaded on steamers and carried to the various markets of the world.

Ten years ago it is said that the mahogany industry of Honduras was considered doomed, as the expense attending its operation was so heavy, the returns so small and the work of getting out the trees so laborious. However, American operators became interested in the mahogany forests and pushed the industry until it is at present one of the most important of the country. The cutting of Honduras mahogany is at present largely in the hands of American interests, among whom undoubtedly the foremost concern is the C. C. Mengel & Brother Company of Louisville, Ky., which operates a large camp on the Hondo River, about forty miles from Payo Obispo, a thriving new town. At this point the company has a branch office on a site on which formerly stood a large establishment which was destroyed by fire some time ago.

In a recent issue of The Clarion, a publication issued at Belize in the interests of British Honduras, appeared an account of a visit made to Camp Mengel, which is the result of observation right on the ground, and a resume of it will undoubtedly prove of interest to readers of the RECORD.

Camp Mengel is in charge of Carlton Dodd, an expert mahogany operator and a man physically strong and mentally alert. The camp is built on the side of a ridge of considerable length. On the ridge are situ-

ated the office, the hospital and several bush houses for the accommodation of the staff. At the foot are located the machine shop, blacksmith shop, commissary, carpenter's shop, sawmill, engine shed, water distilling plant and store rooms. All these departments are thoroughly equipped with modern apparatus and are under the management of men of long experience in their several lines. The machine shop is an especially interesting place, being fitted out with a complete and up-to-date line of machinery, and it is said that anything that can be made in a machine shop anywhere can be made in this shop of Mengel's in the heart of the tropical woods.

The company operates three powerful locomotives at Camp Mengel, especially designed for hauling great weights on steep grades. These are used to carry supplies and water to the various camps and tanks along the line and on the return journey draw trucks loaded with logs. The railroad is of most substantial construction and in certain sections is laid with fifty pound steel rails and well bedded down. New extensions of the line are being built into the forests to be cut during 1910, 1911 and 1912. The road-bed for the branch is built for about five miles and the rails laid over perhaps half of this distance. It is expected that the remainder will be laid soon after the first of the year. It is the intention of the company to carry the line seven miles beyond the point now completed, making twelve miles in all, and spurs will be built where necessary. On this new extension heavy steel rails are used and the road will be of very durable construction. While there are no expensive bridges built the line has had to make some steep grades and frequently long stretches of swampy ground, requiring considerable filling in, have been encountered, so that railroad building here is no simple matter. The cost of building the road is about \$4,000 per mile.

As might be expected in an operation of such extent as this one, the Mengel company has besides the camp headquarters various branches at different points. On the site of the original camp No. 1, which was in a valley, low and not nearly so pleasant as the present location on the ridge, there are a number of bush houses for the laborers, a large garden and a plot of land used to graze sick animals. About twenty miles from headquarters is Little Yankee camp, which is the point for making up the trains of logs. At another point are the teamsters' quarters and the sheds for the oxen. Here also is a large blacksmith shop, kept constantly busy with repair work, a large number of cattle sheds and a group of houses. All these camps are well kept, of good construction and display not a few features which the company has installed for the comfort of its employees.

At all points of their operations the Mengels have the most modern equipment

for handling their timber, and by means of skidders and loaders and various minor appliances the work is done with all possible dispatch. Perhaps the most disagreeable and difficult part of mahogany logging is getting the trees from the dense thickets where they grow to the railroad lines. Oxen are used, and owing to the wet and muddy condition of the roads at this season this is a very laborious process. The beasts become literally covered with mud, likewise the teamsters, as the trees are often brought great distances through almost impassable thickets and over roads thick with soft mud. In the dry months of course the work is accomplished much more quickly and is less arduous. Most of the logs are brought in steel cones, which is an especially advantageous method in wet weather as the mud in the roads allows the logs to slip along readily and the cone protects the ends.

Although operating over a vast area of country in British Honduras, the Mengel company knows to within perhaps a hundred how many trees are to be found on its property, not only how many in all but the number in certain specified small areas. This information is carefully tabulated on a large scale map of the company's holdings, on which the unworked territory is laid off into half sections and the number of trees in each of these divisions noted.

Thoroughness in every detail seems to be the motto of this great mahogany concern, and it has not attained its present enviable position in the mahogany industry of the world without being entirely worthy of it.

#### New Pittsburg Concern

A notable addition to Pittsburg's lumber firms on January 1, 1910, will be the Palmer & Semans Lumber Company, whose office will be in the new Oliver skyscraper. I. F. Balsley, one of the best known hardwood men in the country, will be sales manager of the concern, which will have ample financial backing. The members of the company are T. B. Palmer, president of the United Fire Brick Company of Uniontown, Pa., and Isaac W. Semans, a wealthy coal and coke owner and operator, who also lives at Uniontown. As a basis for its business the new company will take the entire output of the United Lumber Company, which has a big spruce mill at Hazelwood, W. Va., and a hardwood mill at Beckley, W. Va., and on the Tri State Lumber Company, whose plants are located at Sutherland and Lick Run, W. Va., Dunbar, Pa., Arzondale, W. Va., and Nicholas county, West Virginia. These two companies have a splendid lot of hardwood and hemlock timber and are constantly buying more, which will give the Palmer & Semans company a strong hold on the hardwood business from the start. The home offices of the company will be at Uniontown, Pa., but the sales headquarters will be in Pittsburg.

Mr. Balsley was for nine years with the Mead & Spear Company of Pittsburg and was treasurer and vice-president of that concern when he severed connection with it. During the past four years he has been hardwood manager for the Willson Brothers Lumber Company. His connection with the various hardwood associations and his intimate knowledge of the hardwood business make him a valuable force in the new concern.

#### A Unique Calculator

The Dodge Manufacturing Company of Mishawaka, Ind., has had prepared a ready reckoner calculator made of enameled celluloid enclosing a slip of cardboard showing diameters and faces of pulleys, and on the reverse side showing horsepower of both split and solid sizes of Dodge clutches and diameters of line and main shafting. By slipping the enclosed card upwards or downwards any calculation referring to drive problems can be noted at a glance. The celluloid holder and card are enclosed in a leather pocket case, which makes it readily adaptable for carrying in the pocket.

The unique little calculator will be found invaluable to everyone having anything to do with machinery. While it costs much more than the price at which it will be mailed—twenty-five cents in stamps or coins—the Dodge Manufacturing Company considers it a good enough advertisement to sell it at this price where reference is made to HARDWOOD RECORD.

#### A Curiosity in Cabinet Work

The little wooden "T," some six inches in extreme length, from which the attached engraving was made, is owned by C. L. Willey, the well-known veneer and hardwood lumberman of Chicago. The dark sections of the "T" are made of vermillion and the light parts from American ash. The work was done by a cabinet-

UNIQUE DOVETAILING.

maker employed by the Pullman Car Company of this city and is surely exquisite handcraft. The maker presented it to Mr. Willey. It is an exceedingly unique and ingenious specimen of wood craftsmanship.

The maker alleges that the specimen contains only five pieces of solid wood. The mystery involved is how it was possible for him to produce the dovetails which appear on the four surfaces of the extreme ends of each section and on the one face of the point where the "T" joins and get the pieces together. As a matter of fact, it is alleged that the maker offers a reward of five hundred dollars to anyone who will tell "how it is done."

Mr. Willey keeps the ingenious little specimen on the center table of his living room in his home on Grand boulevard in this city, and it is the subject of much speculation on the part of visitors.

#### Additional Supplies for Garetson-Creoson

The Garetson-Creoson Lumber Company of St. Louis, Mo., which operates several plants in Missouri and Arkansas, has added to its lumber output by closing a contract with the Sidnell Brothers Company of Campbell, Mo., for its output. This concern has a modern Filer & Stowell band mill and the plant is new and up-to-date in every respect. Its principal output is gum, running largely to red. The company also has on sticks several hundred thousand feet of other lumber, which is included in the Garetson-Creoson Lumber Company's contract.

W. W. Dings, secretary of the Garetson-Creoson Lumber Company, whose sales quarters are now in the Fisher building, Chicago, has just returned

from Campbell, Mo., where he concluded this important deal.

### Important Lumber Purchasing Deal

The Hardwood Lumber Company of Cincinnati, of which J. H. P. Smith is president and W. E. Heyser vice-president and treasurer, has just closed a deal which will be of interest to many lumbermen. This house has made a contract whereby it becomes the lumber purchasing department for the General Motors Company, which includes the Buick Motor Company of Flint, Mich., the Cadillac Company at Detroit, and several other large automobile concerns. Hereafter all lumber for automobile body construction and other purposes will be purchased and handled through the Hardwood Lumber Company, although the stock will be billed to the several concerns and settled for by them.

Few realize the quantity of lumber used in the construction of automobiles. The Buick Motor Company of Flint will use in its body factory alone this year over ten million feet. This is exclusive of the lumber employed for crating and construction purposes. It is estimated that this concern will use at least twenty million feet in 1910, but it is difficult to tell how much the aggregate will be for the combined General Motors Company. This institution is now breaking ground at Detroit for a new two and a half million dollar plant. It is not yet decided whether a woodworking or metal plant will be installed for bodies. This all depends on the price it will be obliged to pay for lumber to be used in automobile bodies. The Buick company has already installed at Flint a large steel press to be used in forming steel sheets into bodies. However, as long as the automobile companies can get lumber within reasonable prices they will continue to make wooden bodies.

The deal for the purchase of lumber by the automobile people through the Hardwood Lumber Company was brought about by the reason that the automobile companies never have had a special organization for the purpose of handling lumber, and they found considerable difficulty in handling it through their regular purchasing departments owing to the fact that they had no experienced lumbermen in these departments.

As Messrs. Smith and Heyser have made a specialty of this class of stock for several years, they decided to make this alliance with them. Therefore their entire lumber department was moved on December 1 to the offices of the Hardwood Lumber Company at Cincinnati, O., which will make this company among the largest distributors of hardwood in the United States.

It is generally known that the General Motors Company controls the automobile situation today, and this arrangement will be of much benefit to the manufacturers of the class of lumber entering into automobile construction, as they can keep in very close touch with the automobile body situation through the Hardwood Lumber Company.

### A New Booklet

The Dodge Manufacturing Company of Mishawaka, Ind., has just issued a booklet entitled "Dividends and Drives." It is illustrated throughout with halftones and on the whole is neatly and artistically gotten up.

The booklet sets forth plans showing how the Dodge idea can be applied to any company's drives, thus increasing its profits. The Dodge company has made a long and careful study of power transmission equipment, and the various illustrations contained in the booklet show applications of many appliances of the Dodge line of "everything for the mechanical transmission of power" in a few of the hundreds of plants where their use has meant power saved and equipment efficiency increased.

The booklet will be mailed on request to any one interested, by addressing the Dodge Manufacturing Company at Mishawaka, Ind.

### Cincinnati Sales Headquarters of Swann-Day Lumber Company

The Swann-Day Lumber Company of Clay City, Ky., has removed its general sales office to suite 1005-1006 Second National Bank building, Ninth and Main streets, Cincinnati, O. The telephone number is Canal 2777. As is well known, the Swann-Day Lumber Company is an important factor in the manufacture of poplar, oak and hemlock at Clay City, Ky., where it has large

FLOYD DAY, PRESIDENT AND TREASURER  
SWANN-DAY LUMBER COMPANY,

sawmills, dry kilns, planing mills, etc., and extensive timber holdings. The president and treasurer of the company is Floyd Day of Winchester, Ky.; the vice-president and general manager of the institution is John C. M. Day, who resides at Clay City; the secretary is E. S. Jouett of Winchester, Ky. In addition to its Clay City mills the company has plants at Jackson and Beattyville, Ky.

C. M. CLARK, SALES MANAGER SWANN-DAY  
LUMBER COMPANY, CINCINNATI.

C. M. Clark, the general sales manager, will have charge of the Cincinnati offices. Mr. Clark is one of the best known and most popular salesmen in the country, and the making of his headquarters at Cincinnati will materially add to his effectiveness in marketing the big output of the company.

### Cabinet Wood in France

Consul James E. Dunning, in response to an inquiry by an American dealer in cabinet wood, and especially bird's-eye maple, reports as follows:

"Havre is the most important lumber and timber market in France, there being a particularly large trade in pitch pine, oak, black walnut, red gum, poplar, ash, hickory, bird's-eye maple and ordinary maple. A certain quantity of dogwood is also imported for the purpose of making shuttles, for which it is admirably adapted. There are no importations of locust, cherry or beech. The following are the ruling prices for wood in Havre at the middle of October:

"Bird's-eye maple, \$44.39 to \$48.25; plain maple, \$20.26; ash, \$13.50 to \$15.44; hickory, \$14.47; black walnut, \$34.74 to \$48.25, all per metric ton (2,204 pounds); satinwood, \$17.37 to \$18.33, and oak, \$17.37 to \$26.05, both per cubic meter (1.3079 cubic yards), in boards; dogwood, \$15.05 to \$15.44 for logs and per cubic meter; poplar, \$9.65, all per cubic meter (1.3079 cubic yards)."

### Sawdust Club's Unique Banquet

The Sawdust Club of the Union League held its fourth annual banquet in the Union League building on December 8. The decorations were elaborate and startlingly unique. Upon entering the banquet hall the eye fell upon a wonderfully realistic arctic scene. A block of ice weighing a ton glistened and scintillated in the center of the table; in this was planted the much-contested North Pole, crowned with the American flag; and toy polar bears, arctic dogs and Esquimaux were appropriately in evidence; candles with glistening mica shades added their cold light to the frigid scene. During the first course, under the shadow of the imposing pole, a poem written by Leigh Mitchell Hodges, entitled "The Flag that Tops the World," was read, after which the guests began to shiver and complain of the cold, whereupon the committee in charge, consisting of William J. Collins, Howard Ketcham and Franklin Smedley, consented to transport them to a warmer clime. They were then conducted to an adjoining room, where by means of moving pictures a train ride bore them happily to the sunny South. Miss Mae Forley, a fine soprano, sang very sweetly selections appropriate to the sections of country through which this imaginary journey was made. Finally when the train reached Florida they all alighted, as it were, and were escorted back to the dining room, from which all traces of the Arctic circle, with its impressive pole, had disappeared, and palms and ferns, Beauty roses and warbling canaries regaled their frozen senses. The white shades of the candles were replaced by those of a warm red, which made the transformation complete. The committee in charge of this entertainment, which was aided by Malcolm G. Campbell, a member of the Kindergarten Club of the Union League, received high praise from the diners. The decorators, who were Habermehl's Sons, all agreed, achieved their usual success.

The Sawdust Club is an organization of Union League members who are members of the Lumbermen's Exchange. The members and their guests at the dinner were:

### MEMBERS

Frank Buck, Stanley L. Buck, William J. Collins, George F. Craig, A. J. Cadwallader, Charles Este, A. M. Fox, Jr., Frank C. Gillingham, F. M. Gillingham, Emil Guenther, Nathan B. Gaskill, Edward F. Henson, Howard Ketcham, Robert C. Lippincott, Edwin B. Malone, Henry C. Riley, John T. Riley, Franklin Smedley, William H. Smedley, Samuel E. Slaymaker, Charles H. Thompson, Samuel B. Vrooman, George Warner and Robert F. Whitmer.

## GUESTS

Harry A. Barnes, Thomas Bell, S. P. Powers, Dr. Martin G. Brumbaugh, Malcolm G. Campbell, Thomas E. Coale, James Sherlock Davis, Edward W. Deakin, Lewis Dill, William Geiger, Harrold E. Gillingham, Frank K. Gillingham, James F. Hope, G. A. Kuemmerle, William M. Leaverty, William H. Lincoln, E. P. Mason, William M. McCormick, John N. McLean, Clarence G. Meeks, Clayton W. Nichols, E. F. Perry, Charles S. Rich, William Seymore Runk, Mahlon L. Savage, Henry J. Scott, Dr. Alexis Dupont Smith, George M. Smith, Edwin S. Stuart, William T. Tilden, Morris S. Tremaine, James R. Turner and Richard S. White.

## Change in Title

One of the well-known car and cargo lumber jobbing houses of Chicago is the Marsh-Hathway Company. During the last few days the name of this company has been changed to the Hathway Lumber Company, the change being in name only, as the officers and stockholders continue the same. The head of this institution as president and manager is Frank J. Hathway.

All contracts and other obligations of the Marsh-Hathway Company will be continued and executed as though no change in name had been made. The new company is remembering its friends in the trade by sending them as a Christmas gift a registered key chain which bears a

FRANK J. HATHWAY, PRESIDENT AND MANAGER HATHWAY LUMBER COMPANY, CHICAGO.

numbered metal label. These numbers are registered at the office of the Hathway Lumber Company, and in event the owner's key is lost the embossed request on the tag, asking that they be notified of the finding of the key, will insure its return.

The offices of the Hathway Lumber Company are at 910 Chamber of Commerce. It handles a full line of building and hard woods from all lumber producing sections of the country.

## Change in W. M. Ritter Lumber Company's Sales Department

The W. M. Ritter Lumber Company, the big poplar, hardwood and white pine manufacturer, with headquarters at Columbus, O., has just added to its western division sales force W. L. Morley, who from this date will represent the company in Indiana territory and will be under the jurisdiction of the Chicago office, located in the Fisher building.

H. A. Shead, who was located in Indiana temporarily, will return to Chicago as representative in northern Illinois and Wisconsin. Mr. Morley has been engaged in several branches of the lumber business during most of his life, and for the past year has been representing the Midland Lumber Company at Cincinnati.

## Dissolution Antwerp Lumber House

The RECORD is advised by August Brants that his old house of Brants, Franck & Co. of Antwerp, Belgium, was dissolved October 1, and that the affairs of the house are being liquidated. Mr. Brants continues in the American hard and soft wood business under his own name at 20 Rue de la Commune, Antwerp.

## Death of Arthur Hill

Arthur Hill, one of the foremost lumbermen of Michigan, as well as an important figure in the political life and lumber history of the state, died at his home in Saginaw, December 6, after a long illness. Mr. Hill began at the bottom round of the ladder and by energy and ability rose to a high place in the lumber industry. His death removes from the state of Michigan one of its foremost lumbermen and one of its most conspicuous figures in business affairs. He was recognized not only in his native state but throughout the country as an excellent business man, and his qualities as a citizen won him extended recognition outside of any commercial class.

Arthur Hill was born at St. Clair, Mich., in 1844, coming from a line of distinguished ancestors. His father, James H. Hill, traded a tract of land he had inherited for a lumber saw, and during the summer he sailed and in the winter logged on the Black river. In 1856 the elder Mr. Hill, attracted by the possibilities of the Saginaw valley, removed to Saginaw and began the operation of a small sawmill. Arthur Hill as a young man thus acquired a knowledge of lumber manufacture in the humble capacity of sorter, scaler and tally man in his father's mill. Finishing his common school education at Saginaw, he entered the University of Michigan and was graduated as a civil engineer. His first serious employment was as a law surveyor in Minnesota. Returning to Saginaw, he engaged in looking lands, which occupation he followed for seven years.

After discontinuing the work of cruising, the firm of Hill Brothers was formed, with Wilbur H. Hill, his brother, as a senior member. When the timber on the Saginaw waters was exhausted, operations were transferred to the upper peninsula of Michigan. Later, on the death of Wilbur H. Hill, the firm name was changed to Arthur Hill & Co., Ltd. This concern also bought 300,000,000 feet of timber on Georgian Bay, manufacturing part of it into lumber and selling the rest of it to Canadian interests.

Mr. Hill was also interested in the Cranberry Lumber Company of Duluth, Minn.; and was associated with the late Eldridge M. Fowler and Edwin C. Whitney of Ottawa, Ont., in the organization of the St. Anthony Lumber Company, which operated in Minnesota for several years, cutting about 30,000,000 feet of lumber a year. It also secured control of the Mississippi River booms at the Twin Cities and later sold out to the Weyerhaeusers for more than \$2,000,000. Previous to this time it had bought a tract of 600,000,000 feet of timber near Ottawa, Ont., where a sawmill was erected.

Mr. Hill was also interested in the Madera Sugar Pine Company, of which he was president. This company built a large sawmill on its California holdings and a flume nearly sixty miles long. In 1904 Mr. Hill bought interests in the Booth-Kelly Lumber Company of Eugene, Ore., in company with well-known Michigan and Min-

nesota lumbermen. The concern had at that time 4,000,000,000 feet of timber.

The firm of Arthur Hill & Co. owned the majority of the stock in the Saginaw Steel Steamship Company, which was formed in 1890. Mr. Hill and his associates also controlled other steamship lines, and the ships in which they were interested have had a notable history. They have operated as far north as Alaska and as far south as Panama, and during the Spanish-American war were used as transports by the government, carrying military supplies to the Philippines and to China. They were also used as oil carriers, operating between Texas and New York and between San Francisco and Honolulu.

In addition to all the interests enumerated, which give some idea of the versatility of the man, Mr. Hill also had heavy investments in mining operations in the West, as well as extensive stumpage holdings in various parts of the country.

In public affairs Mr. Hill was also conspicuous and successful. He was one of the generous patrons of the beet sugar industry in Michigan, and did a great deal toward its development. In the city of Saginaw, where he was greatly beloved by the residents, there are many notable examples of his philanthropy. Three times he was mayor of the old Saginaw, previous to the consolidation of Saginaw City and East Saginaw. He was appointed a regent of the University of

THE LATE ARTHUR HILL.

Michigan by the late Governor A. T. Bliss, and was elected to a full term of eight years in April, 1905. He was a candidate for United States senator from Michigan to succeed the late Russell A. Alger, but later withdrew from that contest.

As illustrating the splendid energy and forcefulness of the man, Mr. Hill's business activities and his keen interest in public affairs continued until the illness which resulted in his death. The state of Michigan has lost a most noteworthy figure in the death of Arthur Hill.

## Gifts from the Trade

In line with the Yuletide season, but quite out of the usual, D. H. Day, hardwood manufacturer and dealer of Glen Haven, Mich., is sending to his many friends a very artistic calendar for 1910. It is a stiff board, eighteen by fifteen inches, with a reproduction of the famous painting, "The Village Championship," done in colors. The calendar is handy, attractive and ornamental.

John W. Coles, the prominent wholesale lum-

ber dealer of Philadelphia, is distributing a fine calendar, which, in addition to its general convenience, shows a lumber table in the center that will no doubt be of great service to the trade. It is attractive and useful.

Schofield Brothers of Philadelphia have one of the most elaborate calendars seen thus far this year. It is four feet by two and one-half feet in size, and bears a reproduction of the famous painting, "Security," showing a group of very lifelike lions. Few calendars are so pretentious, and this one will no doubt be appreciated greatly.

The Midland Lumber Company of Parkersburg, W. Va., will be well before the attention of the trade during 1910. The company's calendar contains a daily pad with figures of sufficient size to be seen a block away.

Among the calendars for 1910 which are especially artistic is the one sent by the Henry S. Holden Veneer Company of Grand Rapids, Mich. It is of convenient size and depicts the Bright Angel Trail of the Grand Cañon of the Colorado, after a painting by Moran, generally conceded as one of the great scenic artists of the times.

The Hayden & Westcott Lumber Company of Chicago has a handsome aluminum and stone blotter as an expression of the Yuletide season. The blotting stone is a new wrinkle in that line, and the article renders a double service, being useful also as a paper weight.

The Wisconsin Veneer Company of Rhineland, Wis., sends a pretty wall panel showing two youthful baseball fans. The title of the picture is "The Ruling Passion." It is an interesting picture of two jolly youngsters, heavily embossed in black and white.

From E. W. Leech of Detroit, Mich., comes a most appropriate calendar. A reproduction of Konrad Dietz's painting, "In the Heart of the Woods," is set in a frame of imitation veneer. This artistic calendar reflects great credit on the concern which operates the oldest yard in the city of Detroit.

A neat little blank book brings the compliments of the Williams Brothers Company, the well-known manufacturers of last blocks and lumber at Manton, Mich. This is a valuable little booklet containing a calendar for 1910, an identification page, a number of tables, much general information, such as antidotes for poisons, helps in accidents, rates of postage, lists of the largest cities in the United States, values of foreign coins, etc. The back pages are arranged for a cash account and contain also a ready reckoner for lumber measuring and a calendar for 1911.

#### Publicity Campaign of Chicago Wholesalers' Association

The Chicago Wholesale Lumber Dealers' Association held its regular monthly luncheon and business meeting at the University Club, December 14. Edward M. Skinner, president of the Chicago Association of Commerce, was the guest of honor. The meeting was well attended.

President Griffith was called away by sickness of a friend, and Vice-President George T. Mickle presided. The minutes of the previous meeting were approved.

Mr. Skinner spoke of association work and its possibilities. The chief point of his address was publicity, along which line he gave concrete instances of the good accomplished by the Chicago Association of Commerce.

George J. Pope, in submitting the report of the trades relations committee, likewise emphasized the publicity proposition and the need for the lumber association to engage in a similar plan. Harvey S. Hayden, chairman of the publicity committee of the Chicago Hardwood Lumber Exchange, spoke also of the need for publicity as a means of calling the attention of the producing and consuming sections of the country to Chicago as a lumber market. He was seconded by Charles Westcott, his partner, and by other members.

One hundred thousand stickers were ordered as a starter, to be used on the stationery of the members, which is in line with what was accomplished at the last meeting of the Chicago Hardwood Lumber Exchange.

Harry K. Gillman, son of Leo Gillman of the Pulaski Lumber Company, a violinist of splendid ability, gave several selections. Secretary Thornton deserves great credit for having obtained Mr. Gillman to entertain the association.

The McShane Lumber Company of Omaha, through T. D. Phillips of Chicago, was admitted to membership.

#### Change of Sales Headquarters

The Himmelberger-Harrison Lumber Company's sales headquarters in the future will be located in the Himmelberger-Harrison building, Cape Girardeau, Mo., in charge of C. L. Harrison, the forceful sales manager of the institution. The purchasing and accounting departments will remain at mill headquarters at Morehouse, Mo.

The Himmelberger-Harrison Lumber Company is the leader in red gum production and has achieved an enviable reputation among the buyers of this handsome wood.

#### A Brand New Machine

On this page is illustrated a new machine manufactured by the J. A. Fay & Egan Company, well-known woodworking machinery house of Cincinnati, O. It is known as the No. 246 Vertical Sand Belt Machine. The manufacturers designed this machine for use in cabinet, furniture, desk and box factories, planing mills and general woodworking shops, for sanding boxes, finishing and fitting drawers, accurately squar-

ing them and sanding irregular surfaces and framed work, etc. The sanding surface of the machine is 14 inches wide and 24 inches high. Column is a heavy, cast casting with broad base, and stands free from vibration.

Drums are made of iron, covered with wood and carpet, and accurately balanced. Driving drum is carried on a shaft of large diameter running in self oiling bearings. Idler drum shaft runs in self oiling bearings carried on trunnion yokes, insuring perfect alignment, and are arranged with simultaneous or independent adjustment from the operator's side for tracking or tightening the sand belt. Sand belt platen is mounted on the column with four treaded posts, giving accurate adjustment for aligning.

Table is fitted to the column in a dovetail slide for vertical adjustment, and is arranged to angle above and below the horizontal. Fence is slotted, and with holes tapped in the table any angle to the surface of the sand belt may be obtained; thus in conjunction with the angling of the table double angles may be obtained.

Anyone interested is requested to write the company at 414-434 West Front street, Cincinnati, for a copy of its large illustrated circular.

#### Important Deal at Bristol

An important deal has recently been consummated at Bristol, Va., whereby the Peter McCain Lumber Company, which recently bought out the Paul W. Fleck Lumber Company of Bristol, acquired the planing mill, mill site and yards of the Morton-Lewis-Willey Lumber Company. The purchasers will take possession January 1, when they will move their offices from

FAY & EGAN'S NEW SAND BELT.

the Fuqua building at Bristol to the office structure of the newly acquired property. The Peter-McCain Lumber Company now has a yard on the site of the old James Strong Lumber Company's operations at Bristol, and stock in the yard will be moved to the new property. This purchase will give the company a mill and a fine large sorting yard at Bristol. The company also has a band mill at Neva, Tenn., and a large circular mill at Booneford, N. C., and handles the output of a number of other mills, besides owning another planing mill at Bristol.

#### A Philadelphia Lumberman's Activity

The city of Philadelphia already has a number of beautiful suburbs, but there is always room for more, especially for one as attractive as Oak Lane Park is, or at least will be in a very short time. Oak Lane Park, in the Chelton Hills, consists of seventy acres of land well provided with old shade trees, and is being exploited by the Oak Lane Land Syndicate, in which Clem E. Lloyd, Jr., well known to hardwood lumbermen as a successful leader in other lines, is one of the principals. The suburb already has all the modern improvements—good water, gas, electricity, paved streets, wise building restrictions, good transportation to Philadelphia, etc. The building of handsome homes is going on rapidly in the hands of the Oak Lane Park Building Company, of which Mr. Lloyd is president, and from present indications the suburb will within a short time be one of the most inviting spots in the vicinity of Philadelphia.

Clem E. Lloyd, Jr., is a man of energy and purpose; he has already shown his caliber in the lumber business, and this undertaking will doubtless bring him new honors.

#### Students Visit Dodge Plant

The visit of engineering students from colleges throughout the Central West has come to be an annual affair at the great works of the Dodge Manufacturing Company at Mishawaka, Ind. On December 3 the junior and senior engineers of Purdue University, Lafayette, Ind., visited the company's plant. The party numbered about 180, not including instructors of the university, who accompanied the boys.

Special exhibits and explanatory methods were so arranged that the students could see clearly every step in the manufacture of "Independence" wood split and "Standard" iron split pulleys, friction clutches, bearings, fly and balance wheels, sheaves, elevating and conveying equipment, "Eureka" water softeners, etc.

The difference between the treated water and the raw supply was an especially interesting and instructive feature, demonstrated by the "Eureka" water softening apparatus for boiler feeding and industrial purposes. On these visits the young students learn certain practical facts about transmission machinery and methods which cannot be derived from any college curriculum.

The boys were given a dinner by Melville W. Mix, president of the Dodge Manufacturing Company, at the new Mishawaka hotel, of which he is also the head.

#### Miscellaneous Notes

The entire plant of the Greer-Wilkinson Lumber Company at Winslow, Ind., was recently destroyed by fire. The company's sheds and warehouse stand near the railroad track and the fire is supposed to have originated from sparks from a locomotive. The loss is estimated at about \$10,000. Bob Tucker, who has managed the Greer-Wilkinson business at Van Buren for some time, has resigned his position and the company has secured Mr. Bush of Wingate to take charge the first of the year.

The Moffett & Bowen Lumber Company of Madison, Ind., has decided to locate at Memphis, Tenn., to which place it will ship all its machinery rather than sell it at a loss. The

company's stock of lumber on hand is being rapidly sold. Inability to get logs down the Kentucky river is one of the reasons given for the removal of this industry.

The Pass Furniture Company has recently been incorporated at Antwerp, N. Y., to manufacture lumber, furniture, boxes and crates. The capital stock is \$25,000 and the incorporators are: C. Pass, York, Pa.; H. L. Baldwin, Watertown; R. H. and W. C. Bent of Antwerp.

Articles of incorporation have been filed by the Illinois Tie & Timber Company of Chicago with a capital stock of \$20,000. Those interested in the new concern are Charles M. Putnam, Eugene S. Nelson and Charles R. Holden.

The W. M. Ritter Lumber Company of Columbus, O., operating a number of large plants in the South, has established another on Hazel creek in western North Carolina. The company is now constructing a railroad from the plant to Ritter, N. C., where it will connect with the Southern Railway. The plant will employ several hundred men. It is said that the timber to be developed by the company in that region will probably cut as much as 200,000,000 feet.

Owing to increased business Uptegrove & Beckwith, who have maintained a warehouse for their veneer and mahogany business at Muskegon and Seventh streets, Grand Rapids, Mich., for the last ten years, have established this department at Court street and Shawmut avenue. Here the company has enlarged capacity and better railway facilities.

The Birdsell Manufacturing Company, manufacturer of wagons and agricultural implements of South Bend, Ind., has recently bought a tract of land containing four acres, which it will use as a lumber yard. The new property is located at High street and the Lake Shore Railroad.

A new concern for Follansbee, W. Va., is the Follansbee Lumber Company, capitalized at \$25,000. The incorporators are: D. Hayden, Montgomery; J. C. Williamson, Steubenville, O.; Frank J. Morton, A. S. Harris and F. B. Mahan of Follansbee.

The J. R. Wheler Company, capitalized at \$40,000, has been organized at Pittsburg, Pa., to conduct a lumber and mill work business. Wilson H. Cralle of Sewickley is treasurer of the concern.

The Aroostook Lumber Company has started up its mills at Presque Isle, Stevensville and Fort Fairfield, Me., and they are now running full capacity. A. R. Gould, president of the company, states that about 6,000,000 feet of logs will be cut to stock the mill at Presque Isle. Stumpage rights have been secured with property owners for a term of years and forest tracts have been opened by the building of a new electric railroad, so that the company has supplies to keep its mills running several years. The company manufactures pine and hardwood lumber, and it is estimated the two mills will cut about 15,000,000 feet of lumber yearly.

The Richland Handle Works of Butler, Ohio, has recently increased its capital stock to \$20,000. The company's business has been growing rapidly and the additional capital will place it in better position to care for its trade.

The Bay City Swing & Ladder Company of Bay City, Mich., has moved all its machinery into a new factory just completed. Considerable new machinery has also been added, so the new plant is well equipped for this line of manufacture.

The contract for supplying the machinery for the new sawmill which the I. Stephenson Company of Wells, Mich., is building has been awarded to the Prescott Company of Menominee, Mich. This will be one of the largest mills in the section and will contain four band mills and a horizontal resaw. Besides the band mills the saw floor machinery will consist of four carriages with steam feeds, the necessary log dock machinery, two heavy 84-inch gang edgers, one gang rift machine, two heavy slashers and two

under-cut trimmers. The live-roll beds are to be entirely of steel and all the equipment will be of Prescott's latest designs. It is expected that the mill will be ready for operation about April 1.

The North Carolina Land & Timber Company on the Murphy branch of the Southern railroad, near Marshall, N. C., has reorganized and resumed business under new management after seven years' idleness. The company has large tracts of timber land and valuable plants in Madison county, North Carolina.

C. E. LeCrone, well known to the hardwood trade in the South through his connection with various large companies, has recently accepted a position with the Robinson Lumber, Veneer & Box Company, with headquarters in the Hibernia Bank building, New Orleans, as sales manager of the hardwood department. This company, in addition to its pine mills, operates a plant at Cates, Ala., cutting hardwoods, and at Meridian, Miss., has two assembling yards, where large quantities of hardwood lumber are collected from eastern Mississippi and western Alabama and sorted for shipment. Mr. LeCrone will not only sell the stock from these sources but has made contracts for the hardwood output of other mills, so that his department will be well supplied with stock to care for the wants of a varied line of hardwood buyers. Mr. LeCrone is a thoroughly trained lumberman, having served in the capacity of inspector, manufacturer, buyer and salesman at various times in his career.

J. L. Breuchley and A. E. Campbell of Shunk, Pa., and F. D. McMullen of Norwich, N. Y., have formed a copartnership and purchased a 400-acre tract of hemlock, oak and pine timber at Schuyler Lake, N. Y. This tract contains 6,000,000 to 8,000,000 feet of as fine timber as there is in New York. Mr. Breuchley took charge of the operations in July and is manufacturing hemlock and pine ceiling, siding and flooring, lath and mouldings, also oak and hardwood lumber, rough and surfaced. They expect to manufacture about 2,000,000 feet a year with the up-to-date 60-horsepower mill they purchased. Mr. Campbell will handle the sales department from the home office at Shunk, Pa.

The Roseland Veneer & Package Company of Roseland, La., is again in operation after a shutdown of about three months. During this time the plant was thoroughly overhauled and many of the old buildings torn down and new and modern structures erected in their place.

Cumberland, Wis., is to be the home of a veneer and box factory which will be established by Julius Ewald of Minneapolis and a number of Cumberland men. Contract for a new brick factory has been let and work on it will be pushed.

The boom in the auto trade at Detroit, Mich., has resulted in a scarcity of labor that is becoming serious in some quarters. Furniture manufacturers in particular complain that they are unable to hold high class men, as their services are in constant demand from the automobile concerns at greatly advanced wages.

The Illinois Division of the Vandalia Line has decided to use old ties removed from its lines for firing locomotives at its various terminals. Formerly old ties were given away for firewood, but it is said that many good ties were taken under this offer. The road has purchased a sawmill at Maroa, where abandoned ties will be cut into small sections for round-house use. Similar plants will be operated on other branches of the line.

A chair is being made in a Grand Rapids furniture factory for President Taft, which will be a souvenir of the trip he made to Japan and the Philippines when he was Secretary of War. At that time members of the party secured several koa logs which were brought home and seasoned and after being sawed into lumber at

Grand Rapids are being made into chairs for various members of the Taft party.

The Becker Wagon Works have recently been incorporated at Evansville, Ind., with a capital stock of \$45,000.

The Boston Floor Company, capitalized at \$30,000, is a new concern for Boston, Mass.

The Lowell Auto Body Company has recently been organized at Grand Rapids, Mich., with a capital stock of \$30,000.

The Furniture & Chair Stock Company is a new concern to embark in the wholesale hardwood lumber business at Philadelphia, Pa.

The Southern Carriage Works, capitalized at \$100,000, have recently been organized at Emporia, Va.

The Western Veneer & Box Company has been incorporated at Edmonds, Wis., with a capital stock of \$10,000.

A new concern for Superior, Wis., is the Superior Lumber & Manufacturing Company, capitalized at \$25,000.

Barger Brothers recently started business in Coresville, N. C. They will manufacture hardwood and pine lumber.

The Hudson Chair Company has been incorporated at Hudson, N. C., with a capital stock of \$50,000.

Paris & Williams have recently started business in Marlinton, W. Va. They will be wholesalers of spruce, hemlock and hardwood lumber.

The N. A. Webster Lumber Company has recently commenced business at Shreveport, La.

The Superior Lumber & Manufacturing Company has been incorporated at Madison, Wis., with a capital stock of \$25,000.

The Acme Box Company of Detroit, Mich., has increased its capital stock from \$75,000 to \$150,000 and changed its name to the Yeomans Body & Box Company.

The Vehicle City Lumber Company of Flint, Mich., has been organized with an authorized capital of \$15,000.

Charles M. Fletcher & Son, manufacturers of hardwood lumber at Bernie, Mo., have recently gone out of business.

The Keller Manufacturing Company of Sauk Center, Minn., has placed a contract covering its oak requirements for next year with W. J. Walsh of Eau Claire, Wis. The contract totals over \$10,000 and will be furnished from Mr. Walsh's northern stock which is an exceptionally choice lot and equal to any in the North at the present time.

Members of the Morton-Lewis & Willey Lumber Company, who have just disposed of their interests at Bristol, Va., to the Peter-McCain Lumber Company, and who have been in the lumber business at Bristol for fifteen years, will return to their old home at Grand Rapids, Mich. They have yet to dispose of their band mill and railroad.

The Gemmer Lumber Company, Indianapolis, Ind., of which Frank Hanley, former governor of Indiana, is president, has lately increased its capital stock from \$12,000 to \$25,000 and the life of the corporation has been extended twenty-five years. A short time ago the company purchased the plant of the Standard Veneer Company.

The Giant Lumber Company of North Wilkesboro, N. C., has just purchased between 60,000,000 and 75,000,000 feet of pine, oak, poplar and chestnut timber. This will be cut and floated down the company's newly completed flume to its plant at North Wilkesboro. The flume extends into the near-by mountains a distance of nineteen miles. The company operates a number of sawmills in the Blue Ridge district and floats large quantities of timber down this flume.

After having been in operation four years and having cut about all its stumpage in the vicinity of its mill the Fair Cypress Company, with a circular mill at Ludovine, La., has sold its plant and equipment to the Bowie Lumber Company of Bowie, La. This purchase is a particu-

larly advantageous one to the Bowie Company, as it will use the mill to cut stumpage it owns in the vicinity of Ludovine, and will thus be saved the expense of logging to Bowie. The Fair Company is composed of S. S. Fair and A. W. Fair, brothers, and E. Sondheimer of Memphis. It has manufactured rough lumber only, having no planer equipment, and has met with considerable success.

Arthur Oelhafen and Arthur Lindquist have formed a partnership and opened an office at 203 Washington street, Green Bay, Wis., where they will conduct a general jobbing business, buying and selling on commission hardwoods, hemlock and crating. Both these young men are experienced and active business men and have a wide acquaintance in the trade. Mr. Oelhafen has been connected with the business of his father at Tomahawk, Wis., for seven years, and Mr. Lindquist has gained his experience with the Bradley Lumber Company, C. P. Crosby and the Colman Lumber Company. The new partnership will undoubtedly rapidly make a place for itself in the Wisconsin trade.

A disastrous fire occurred at Saginaw, Mich., a few days ago, destroying the entire plant of the Handy Wagon Company, with the exception of one warehouse. The damage will amount to more than \$250,000, it is said.

S. L. Nicholson has recently been appointed

general sales manager of the Westinghouse Electric & Manufacturing Company of Pittsburg, Pa. Mr. Nicholson will have direct charge over the sales policy of the company. He has been with the company for eleven years as salesman, district department manager and as industrial and power sales manager, which position he has held for the last five years and leaves for his new place.

A large timber land deal was recently consummated in West Virginia which gives to the Ritter Lumber Company, with branch offices at Bluefield, W. Va., 31,000 acres of timber land in the vicinity of Grundy, Va. This property gives the Ritter Company very extensive stumpage, as it already has immense holdings in West Virginia, Kentucky, North Carolina and other states. Sawmills will be placed on the newly acquired tract at once, and it is expected that operations will be in full swing by next spring. The land is underlaid with valuable coal deposits.

A veneer plant is to be erected at Plymouth, Wis., which will cost close to \$40,000. Douglas Meyer, formerly superintendent of the Frost Veneer Factory at Sheboygan, and A. L. Kanes, deputy factory inspector, are promoting the concern.

The Thomasville Veneer & Panel Company is erecting a plant at Thomasville, N. C. J. Robert Kiser is president of the concern.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

A disastrous fire occurred at Racine, Wis., December 16, destroying in a few hours the larger part of the immense new plant of the Racine Manufacturing Company, with a loss estimated at over half a million dollars. There has been some confusion in the minds of some lumbermen that this fire involved the Racine Lumber & Manufacturing Company, the well-known domestic and export lumber wholesalers in that city. This concern did not suffer any loss and is doing business as usual in northern and southern hardwoods, agricultural and wagon stock, Pacific coast products, etc.

Webster Howland Sturdivant of Toledo, O., was married to Miss Anna Ruth Van Rensselaer of Cleveland, O., on Wednesday, December 15, last. Mr. Sturdivant is a well-known salesman employed by D. J. Peterson of Toledo, O. After January 1 the bride and groom will be at home at The Belvedere, Toledo.

The RECORD is in receipt of the announcement of the marriage of Herbert M. Hayward of Columbus, O., to Miss Muriel Davis, daughter of Mr. and Mrs. Charles Q. Davis of Columbus, in that city on Friday, December 10. Mr. Hayward is the son of Morris A. Hayward, the well-known poplar and oak flooring lumberman of that country. Mr. Hayward and his bride have the RECORD's heartiest congratulations.

T. J. Christian of Indianapolis, Ind., sales manager of Maley & Wertz, was a welcome RECORD caller on December 17. Mr. Christian reports having taken a hardwood order of no inconsiderable size during his Chicago visit.

E. D. Galloway, president of the Galloway-Peace Company, Cincinnati, O., was a Chicago visitor last week. Mr. Galloway reports a satisfactory trade in the Chicago district.

D. E. Kline, Louisville Veneer Mills of Louisville, Ky., was a welcome RECORD caller last week.

Burdie Anderson, retiring president of the National Veneer & Panel Manufacturers' Association, dropped into the RECORD office to pay his respects a few days ago. Mr. Anderson reports decidedly improved conditions in the veneer industry.

J. V. Stimson, well-known hardwood lumberman of Huntingburg, Ind., and Memphis, Tenn., made the RECORD a pleasant call on December 16. Mr. Stimson says that the trade of his institution is entirely satisfactory and that his stocks are in good balance. He has no surplus of coarse end to market, as is complained of by numerous other hardwood manufacturers.

Ira B. Bennett of the big Bennett-Hume Lumber Company of Sanger, Cal., spent several days in Chicago recently on one of his periodical trips to the East. Mr. Bennett reports that trade in redwood and sugar pine in the sales section in which his product is marketed is entirely satisfactory. Mr. Bennett is making extensive improvements at the Sanger operations at the present time, and expects to increase his company's output next year.

W. A. Kettering, secretary of the Defiance Machine Works, Defiance, O., spent several days in Chicago on business last week. Mr. Kettering reports that both the domestic and export trade in Defiance tools is increasing every day and that they now have orders on hand to keep the plant going full force for six months.

Schultz Bros. & Cowen report a splendid business for this period of the year on railroad orders. Factory trade, they say, is exceedingly quiet. W. W. Schultz returned this week from a trip through Wisconsin and Minnesota.

A. W. Wylie of the Fisher building and a great game enthusiast, has been in the South for a week past. He returns for Christmas.

T. J. Roys, sales manager for the Fullerton-Powell Hardwood Lumber Company of South Bend, Ind., was in Chicago last week, but hustled back after spending a few hours with the Chicago manager, F. B. McMullen. Mr. McMullen will go to South Bend the coming week for a two-day stay, finishing up the old year and getting ready for the new. G. H. Holloway, for three years connected with the car and dimension stock department of the company at South Bend, has been made manager of that department. This is a deserved recognition of the faithful and efficient work of a mighty good man.

R. C. Sholtz, sales manager of the Goodman Lumber Company of Goodman, Wis., was here last week.

H. C. Miller, secretary of the Hardwood Mills Lumber Company, with offices in the Monadnock block, and one of Chicago's most popular hardwood men, is still confined (or marooned) around Merrill, Wis., but will get those deer and himself back to Chicago by Christmas day. There is a report current around the offices of the company that Mr. Miller contemplates getting home after eventide.

J. D. Bolton of the Hayden & Westcott Lumber Company returned Wednesday from an extended trip among the mills along the Ohio, extending from Cincinnati to Louisville. He said that business for 1910 would knock "em all silly;" freely translated this means that he got what he went after.

The Heath-Witbeck Company states that for the month of November it did the largest business for any similar month for the past five years. The company has just completed negotiations for the purchase of additional stock near Nashville, Tenn., amounting to 500,000 feet of red oak and chestnut. This compelled the company to increase by one-third the capacity of the Chicago yards. The stock will begin coming in about March 1. Ed Heath is now in New York for a stay over the holidays and will sail about January 5 for a ninety days' tour of Europe. On his return he will go South and complete some work he began there in the early fall.

The T. Wilce Company states that the present year has been the largest for the past five years, so far as actual business is concerned. This means that the company's business has been above normal for some time. In addition to this gratifying showing officials say that there are no dissensions with employees nor complaints of any kind to mar an auspicious 1910 opening.

## NEW YORK

The trustee in bankruptcy for J. L. English, who did business as English & Co., wholesale hardwoods, 1 Madison avenue, has filed his final report with the referee and a final meeting of the creditors will be held at 67 Wall street this week, at which time, if the report is found O. K., it will be allowed and the trustee discharged.

George M. Code, northern sales manager of the Kirby Lumber Company, Houston, Texas, was a prominent visitor during the week.

W. E. Van Wert, manager of the local sales office of the Emporium Lumber Company, has just returned from a trip up the state. He reports business conditions among the country yards and general manufacturing trade greatly improved. More freedom is manifested in purchasing stocks.

M. W. Teufel, who for the past several years has been managing director for the extensive lumber operations of the Davison Lumber Company, Nova Scotia, with headquarters at 1 Madison avenue, recently severed his official connection with that company to become assistant to Edward Hines, the distinguished and wealthy Chicago lumberman. He also becomes a stockholder and director in the Hines company. Mr. Teufel is not only a highly efficient and capable lumberman but a man whose personality has endeared him to the hearts of all who came in contact with him, and he leaves a wide circle of friends and acquaintances.

While no definite announcement has been made as yet of the successor to Mr. Teufel in the management of the Davison Lumber Company, it is pretty generally understood that C. O. Shepherd of the C. O. Shepherd Lumber Company is at least tentatively slated for the position. Bearing out this idea, Mr. Shepherd and J. M. Hastings, head of the Davison Lumber Company, left last week for an extended inspection tour of the Davison Lumber Company's properties in Nova Scotia.

The Webster Lumber Company, manufacturers

and wholesalers of northern and southern hardwoods, headquarters Swanton, Vt., has just opened a local sales office at 1 Madison avenue in charge of M. B. Morris. Through this office it will aim to extend increased facilities to buyers in this district and vicinity of the classes of lumber which it handles.

Among the prominent visitors in town during the fortnight were Thomas F. Smouse, Cumberland, Md.; J. Lee Ensign and John W. Hyde of Jacksonville, Fla.; E. D. Hardy, manager of the Canadian branch of the Lumber Insurers' General Agency; Justin Peters, manager of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, Philadelphia, Pa., and Wilfrid Talbot, well-known manufacturer of Montreal.

E. H. Barton of the Barton-Thompson Company, well-known lumber house of London, Eng., spent several days in town during the fortnight, preparatory to his departure for home after an extended tour of American manufacturing points. He reported a royal good time all along the line, and seemed very well satisfied with the results of his visit.

The Bronx Piano Club is the name of a new organization just formed by leading representatives of well-known piano manufacturing firms of Winters & Co., Krackauer Brothers, Este Company, Lafargue Brothers and Jacob Doll & Sons, whose plants in recent years have been centered in the big Bronx region. The new club will be operated along social as well as trade betterment lines and will have well equipped headquarters along the same lines as similar organizations in the city.

Frank B. Lee, formerly Long Island representative of the Stevens-Eaton Company, has just been designated by the company as manager of a branch sales office, with headquarters at Albany, N. Y. From this point he will cater to the large and increasing business of the company's northern New York trade.

Schooner Joseph R. Thomas arrived at this port from Seattle, Wash., with a cargo of 1,400,000 feet of big coast timbers and spars, manufactured and loaded by the Pacific National Lumber Company at Tacoma, Wash., who is not only specializing in big sizes of Pacific coast supplies, but is making a special drive for the big eastern business. In this connection E. W. Demarest, president of the company, has just arrived in New York to make his headquarters at the Hotel Richmond for the winter season for the purpose of devoting his attention to the eastern markets. Following the Thomas comes the Henry Failing with another cargo of 1,400,000 feet for the local market, mostly lumber and big timbers. Both of these cargoes are all sold before shipments and indicate the growing interest of the trade in the use of Pacific coast lumber and largely large sized timbers. Some of the sticks off of the Thomas ran as long as 105 feet and weighed ten to eleven tons, which made their handling quite a problem.

H. T. Walcott, timber merchant of Liverpool, Eng., sailed from here during the fortnight after an extended tour of lumber shipping centers in the United States and Canada.

K. McLeod, president of the American Hardwood Company of Columbus, O., sailed from here during the fortnight for a month's trip abroad, during which he will visit the English markets in the interest of business.

Nelson H. Walcott of the L. H. Gage Lumber Company was in town during the fortnight attending the meeting of the board of trustees of the national wholesalers, along with J. V. Stimson of Huntingburg, Ind., and W. W. Knight of Indianapolis, Ind., who are trustees of the same organization. All of these gentlemen expressed themselves very optimistically as to the general hardwood situation.

The Windsor Lumber Company, wholesalers, 1 Madison avenue, New York, has increased its capital stock to \$40,500, in addition to which R.

S. Voorhis and his associates in the company have been joined by F. C. Close, formerly assistant purchasing agent of the Michigan Central railroad. He becomes a stockholder as well as active in the selling department of the company. These changes will be of benefit to the company in still further increasing its business and prestige.

## BUFFALO

The syndicate of the Wall brothers, incorporated as the Yale Timber & Lumber Company, is still adding to its holding in British Columbia. The American Forest Company, under Manager H. S. James, is building a big hardwood mill at Gainesville, Ga., and E. V. Dunlevie is still in the same state beyond Savannah, getting his big yellow pine mill started up.

Athelbert Cropsey, who represented the Southern Exchange Company in the sale of ties and similar lumber and has been located here in a quiet way several years, died on the 17th, aged sixty-three. He was an excellent man, but not well known to the trade.

Frank A. Beyer is still in politics, as he has still to solve the problem of a deputy for his county treasurer office, but hopes to soon get back in full sight of the lumber trade. His many friends regretted to learn of the death of his father, Christian Beyer, on December 12, aged seventy-six years.

G. Elias & Bro. are busy. They report mill work especially active.

J. N. Scatcherd is prosecuting his suit against the Street Railway Company for \$50,000 damages sustained in a collision with a car while riding in his automobile in 1908. He has never recovered from the injury and was very nearly killed.

The Buffalo Hardwood Lumber Company says it is buying all the green lumber it can get in the Southwest and is making a better showing of stock in the Memphis yard than ever.

There is always business in the yard of I. N. Stewart & Bro., for oak, poplar and chestnut move well and the day of cherry and walnut is not far off now. West Virginia furnishes the stock and H. A. Stewart knows where it is.

The yard of A. Miller is full of an all-round stock of hardwoods and he is moving it out as fast as the season warrants, with every prospect of a much better movement of everything early next year.

Hugh McLean still spends most of his time on the road in eastern lumber-buying centers and finds the demand almost too encouraging, for there are now so many people trying to buy for future delivery. It is easy to sell too much now.

The winter yard stock of T. Sullivan & Co. is at its best. Some late cargoes of lake hardwoods came in recently, filling up the yard. There is also plenty of Pacific coast fir and spruce on hand.

F. W. Vetter found a good stock of hardwood lumber on his trip South and is prepared to meet the coming spring demand with everything filled in. He recently did some good business in maple.

The yard of O. E. Yeager is taking in a big stock of oak and other Kentucky hardwoods. Mr. Yeager is now vice-president of the Manufacturers' Club.

Plans are matured by the Standard Hardwood Lumber Company for shipping a lot of its hardwood on the Cumberland this way by river barge as soon as navigation is favorable. It is coming in by rail now.

## PHILADELPHIA

J. C. Tennant, secretary of the Fenwick Lumber Company, recently spent several days at the Edgewood, N. Y., plant of his company. At this plant the company is cutting spruce and a

very nice lot of birch and maple at present. The Fenwick, W. Va., plant has been running night and day for the past year, cutting principally poplar, oak and chestnut. The market has been taking the output of this mill as rapidly as it was in shipping condition. Just now the company is either sold up or oversold on practically all items on the list, and is taking no orders whatever for poplar or oak and very few for chestnut. It recently secured several good contracts for 4 4 sound wormy chestnut for Chicago delivery. Mr. Tennant speaks very optimistically of the future, and states he has advised his salesmen to remain at home for the balance of the year, so as not to load the company with orders for future delivery. He is accepting orders only for stock immediately in sight and for prompt shipment.

The Cunningham Piano Company of this city has just completed a seven-story addition to the plant, as a result of which an increased output to the extent of from 3,800 to over 5,000 pianos annually will be possible.

The Philadelphia Furniture & Bedding Manufacturers' Association held its fifth annual dinner at the Hotel Walton on December 16. Thirty-two firms were represented. It was made an interesting affair with recitations and short speeches. John Balbirnia is president of the association and Harold R. Burke, secretary.

It is announced that with the aid of \$50,000 stock subscribed by citizens Frackville, Pa., is to have a \$100,000 saw factory which will be established by C. W. Wilson of Williamsport. It will have a daily pay-roll of \$1,000.

It is stated that Hoffman & Huyett of Morgantown are cutting 75,000 feet of lumber ordered by a Philadelphia company for automobile spokes.

The J. G. Brill Company of this city has received orders for ten motor car bodies from the Washington Power Company, Spokane, four semiconvertible cars from the Consolidated Railways of Charleston, S. C., and one hundred cars from the Third Avenue Railroad of New York City.

Orders for sixteen locomotives from the St. Louis Southwestern Railroad Company and two from the Atlanta, Birmingham & Atlantic Railroad have been received by the Baldwin Locomotive Works of this city.

The state forest reservation in Bedford county, near the Maryland line, has been swept by a disastrous fire for the last two weeks, in which great damage has been done to young timber. Nearly all the forest south of Martin mountain, which is closest to Cumberland, has been burned over. There are 14,000 acres in the reservation and more than one-half of it has been burned. Hunters are accused of setting the woods on fire to drive out deer.

Fire destroyed the factory building of Serack & Sherwood, manufacturers of coffins and undertakers' supplies at 1616-18-20 Callowhill street, this city, on December 16. Loss is estimated at \$250,000.

The Buffalo, Rochester & Pittsburg Company has awarded a contract for the building of a timber preserving plant near Bradford, Pa., with a capacity of 250,000 ties a year. The general contract was placed with the Allis-Chalmers Company, and work will be begun immediately in order to have the new plant ready for service by spring.

J. D. Lacey of the big timber house of J. D. Lacey & Co., Chicago, New Orleans and Seattle, was a recent visitor to Philadelphia.

H. H. Gardner of Gardner, Lacey & Co., Georgetown, S. C., cypress and hardwood manufacturers, with his wife, recently made a stop in Philadelphia on his way to New York.

Colonel H. C. Trexler of the Trexler Lumber Company, Allentown, Pa., recently visited Philadelphia on special business.

The American Mahogany Company, 871 Metropolitan building, New York, has removed to 225

Fifth avenue, where it will have better facilities for conducting its rapidly increasing business.

The R. E. Boyer Company, Irvington, was incorporated under New Jersey laws on December 6 with a capital of \$25,000. It will manufacture bars for saloons, counters, shelving, etc.

The Keller-Dunham Piano Company, Scranton, obtained charter under Pennsylvania laws on December 10. Its capital stock is \$75,000.

The Standard Sanitary Couch & Chair Company, to manufacture folding beds and chairs, was incorporated December 14 under Delaware laws. Incorporators are C. S. Metcalf, G. M. Skeen and G. R. Demontford, all of Philadelphia. The capital stock is \$100,000.

The Standard Wheel & Motor Company, Rochester, N. Y., was incorporated December 8 under Delaware laws with a capital stock of \$500,000.

The Standard Railway & Timber Company, Everett, Wash., capitalized at \$100,000 recently, obtained a charter under Delaware laws.

A meeting was held Wednesday, December 15, in the office of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, Philadelphia, those present being H. E. Stone, secretary Lumber Mutual Fire Insurance Company, Boston, Mass.; W. H. G. Kegg, secretary Lumbermen's Mutual Insurance Company, Mansfield, Ohio; F. B. Fowler, secretary Indiana Lumbermen's Mutual Insurance Company, Indianapolis, Ind.; C. A. L. Purmort, secretary Central Manufacturers' Mutual Insurance Company, Van Wert, Ohio, and Justin Peters, manager Pennsylvania Lumbermen's Mutual Fire Insurance Company, Philadelphia. The above gentlemen composed a committee that was appointed at the time of the Indianapolis conference of the above companies for the purpose of considering matters that were referred to it by that conference.

## PITTSBURG

### PITTSBURG GOSPEL OF 1909

Retailers loaded to the guards early and couldn't get out.

Tariff tinkering kept them all thinking till midsummer.

House building made a bad record all the year.

Mills had too much stock and put it out at any old price.

Low-grade lumber was a drug on the market all the year.

Hardwoods headed the procession from start to finish.

Poplar and oak were general favorites at all times.

Manufacturing trade woke up in August and has been buying freely since.

Railroads held their cash till fall, but then got a tremendous buying move on.

Small sales to mines and mills the first half of the year; big sales since October.

Pittsburg market prices have been much lower than eastern quotations.

Hardwood prices average from ten to twenty per cent higher for high-grade stocks than one year ago.

High-grade stock in all hardwoods is very hard to find, and low-grade lumber will be normal in stocks by January 1.

Everybody says that 1910 will be a hummer. Lighter stocks, better prices, larger orders and more satisfactory business conditions.

\* \* \* \* \*

W. P. Craig, president of the W. P. Craig Lumber Company, says that it is hard to get cars on many lines. The company is making big shipments of spruce.

J. J. Linehan of the Linehan Lumber Company is down East this week. The company's plant at Catlettsburg, Ky., is grinding away at full speed and things begin to look like old times in the flooring business.

E. H. Shreiner, manager of the Goodwin Lumber Company, has been down at its mills at Blue Jay, W. Va., which are running night and day.

He is doing a nice business from the Pittsburg office this month.

The Marietta Chair Company of Marietta, O., whose big warehouse and sales quarters are on Liberty avenue, this city, reports twenty-five per cent more business during 1909 than in 1908.

The R. A. McCall Lumber Company, whose plant in the East End was chartered October 20, has erected a two-story planing mill and iron-clad warehouse, 48x102 feet, on Putnam street, and is busily at work again.

C. W. Wilson of Williamsport, Pa., and other Pennsylvania capitalists are about to start the erection of a large saw factory at Frackville, Pa., to cost \$100,000.

The Acorn Lumber Company is breaking off some very good orders these days. Its president, H. F. Dombhoff, left recently on a business trip to Michigan.

The Pennsylvania Lines West are about to purchase the well-known cooperage plant of Kennedy Brothers at New Brighton, Pa., forty miles below Pittsburg on the Ohio river, for \$300,000, for additional trackage room.

The sawmill and over 7,000,000 feet of seasoned walnut lumber owned by F. M. Waring at Tyrone, Pa., were burned December 10. It was the finest lot of walnut in the state.

The Traffic Club of Pittsburg held an interesting meeting at the Fort Pitt hotel, December 13. It was addressed by William H. Stevenson of the Pittsburg Chamber of Commerce, who spoke on "The Relation of Commercial Organizations to the Railroads." The American Lumber & Manufacturing Company, the Willson Brothers Lumber Company, the Furnace Run Sawmill & Lumber Company, and the Flint, Irving & Stoner Company were represented.

The Hyde-Murphy Lumber Company has about concluded to move its large woodworking plant from Ridgway, Pa., to Dubois, Pa. It is preparing plans for a building 80x420 feet and three stories high.

The Empire Flooring Company has been formed at Pittsburg by A. S. Morrow, Ira F. Keith and George M. Buttle to manufacture and deal in flooring.

Porter Haskell, Sr., the oldest living representative of old-time Pennsylvania lumbering, celebrated his ninetieth birthday at the home of his daughter in Clarion, Pa., December 9. He broke into the lumber business in western Pennsylvania in 1840 and for more than sixty years was one of the "boys." Few men know as much about rafting lumber down the Allegheny river as he.

The Webb Manufacturing Company of Pittsburg has been formed by W. I. N. Lofland of Dover, Del.; I. H. Webb of Emlenton, Pa., and George D. Voce of Pittsburg, to manufacture curtain poles.

C. A. Shreve of Bowling Green, Ky., has been appointed Pittsburg inspector for the National Hardwood Lumber Association to succeed Inspector Thompson, who has joined the ranks of the Furnace Run Sawmill & Lumber Company.

H. V. Curll of the H. V. Curll Lumber Company says that Nos. 1 and 2 poplar will be worth \$60 at the mills before May 1. Automobile demand is largely responsible for the sharp advances.

The Mead & Spear Company is cutting steadily on chestnut and poplar at its plant at Strange Creek, W. Va. It looks for a fine poplar market in the spring. Just now beech flooring is quite a favorite on its books.

J. L. Lytle is a bull on the 1910 market. "Look out for a car shortage and higher price for all good hardwoods," he says. His company's sales have averaged 20,000,000 feet a year.

President W. W. Dickey of the West Virginia Lumber Company says spruce is selling better and that oak and poplar are doing well. He has lately been bringing down some fine rafts of lumber from the mills in northern Pennsylvania.

Secretary J. H. Henderson of the Kendall Lumber Company has been down at the West Virginia and Maryland plants of the Kendalls this week. They are all working overtime. The Croft Lumber Company, one of the Kendall concerns at Alexander, W. Va., is cutting 60,000 feet a day and the other plants are also making a splendid showing this month.

J. N. Woollett is hustling to get his newly organized Aberdeen Lumber Company square with the world by January 1 and bids fair to succeed. His orders have been coming in at an encouraging rate the past two weeks.

The McDonald Lumber Company is moving off a large amount of hardwood and is shipping extensively to the eastern market from its West Virginia operation. It is getting O. K. prices, too, and President R. A. McDonald looks for some fine developments in 1910.

Hon. A. J. Barchfeld, Pittsburg Congressman, James W. Wardrop, secretary and general manager of the National Builders' Supply Association, and Arthur L. Holmes, editor of The Scout of Detroit, Mich., have been added to the list of speakers who will address the Pennsylvania lumber retailers when they gather here in semi-annual convention January 27 and 28. The Pittsburg wholesalers are leaving no stone unturned to make the first evening of their stay a record breaker in point of fun. Covers will be laid at the Fort Pitt Athletic Club for over 500, preceding a vaudeville and boxing entertainment.

## BOSTON

A large hardwood dealer in speaking of the market says: "The intense firmness of prices, for so long a conspicuous feature of the market, is as noticeable today, and in some cases more so, than at any time for months past. The tendency of prices is still upwards, particularly in thick stock of all kinds, of which supply in first hands seems just now to be particularly light. Dry hardwood lumber of all thicknesses, however, promises to become a more valuable asset than it is at present."

Wendell M. Weston of the W. M. Weston Company, Boston, has recently returned from a trip West.

John K. Marshall, formerly of this city, is treasurer of the Marshall-Polhemus Lumber Company of New York. The latter company was recently organized and has taken over the business of the old firm of Uptegrove and Polhemus of that city.

Morris A. and James R. Hall of the Hall Lumber Company spent the early part of the month in the Maine woods.

The Curtis & Pope Lumber Company, retail lumber dealers, has taken over the business of the late J. B. Rhines of Weymouth, Mass., who operated there for many years under the name of J. B. Rhines & Co. About the first of September, Chester Tenney, who had been a salesman for the Curtis & Pope Lumber Company, became manager of the business, and on November 30 the latter company secured control. Mr. Tenney remains as manager. The new owners have a lease on the wharf property, with the privilege to buy later. This gives the company a large yard on the South shore, where business has been of large proportions for the past year. The company is also owner of the lumber business of Pope & Cottle, Chelsea. George F. Cobb is manager and buyer for the latter company. The business at Weymouth will be operated under the name of the Rhines Lumber Company. It is stated that E. W. Cottle will buy for the new company.

Charles M. Hamlin, salesman for Wistar, Underhill & Co. of Philadelphia, was a visitor in the local market early in the month.

The Shawmut Storage Company, Atkinson street, Boston, has ceased operations. The storage house was a large and modern affair,

but never seemed to pay. It was built on the land belonging to the New York, New Haven & Hartford Railroad Company. The latter company has taken it over. It is reported that it will not be used for the storage of lumber in the future.

The Dickerman Lumber Company of New Haven recently filed a final certificate of dissolution with the secretary of state at Hartford, Conn.

The sawmills and lumber yard of H. F. & A. J. Dawley, Preston, Conn., have been damaged by fire.

Larger exports of plain oak and ash are reported as being made to South America. At least three large cargoes, of which a good part were these woods, have been made from here this month.

The Andrews & Peck Company, whose plant was destroyed by fire at Hartford, Conn., a few weeks ago, has already started up again in a small part of the factory that was not badly damaged. The employees of the plant were all put to the work of cleaning up, so that they have not lost a day's work. The company was rushed with work at the time of the fire.

The Lampson Lumber Company of New Haven, Conn., will build a large storage building in that city. It will be of brick and fireproof construction.

## BALTIMORE

The annual meeting of the Baltimore Lumber Exchange, a report of which appeared in the last issue of HARDWOOD RECORD, was a most enjoyable occasion. All the reports of officers showed progress during the past year. The report of Secretary J. H. Manken set forth that four firms had been admitted into the exchange, while one had dropped out because of dissolution. The report of the treasurer, George B. Hunting, stated that the finances of the exchange are in excellent condition, with a balance in the treasury, and J. G. Creamer, the chief inspector, submitted the information that his force of inspectors had inspected 79,121,151 feet of lumber in the twelve months from December 1, 1908, to December 1, 1909, an increase of 7,928,373 feet. E. P. Gill, the retiring president, in his formal statement called attention to the fact that the inspection system of the Baltimore Exchange was receiving notice elsewhere. The New York Lumber Trade Association had decided to adopt its method of inspection, and Cincinnati regards it with favor. He congratulated the exchange on the fact that the organization had been the first to inaugurate a reform which was proving of much benefit, and he urged the membership to continue its hearty co-operation. The new president, John L. Alcock, spoke briefly, soliciting all the members to give him their support. He expressed regret that his business was not such as to give him a comprehensive knowledge of the local trade, but he felt that in the vice-president, Theodore Mottu, and in the managing committee he had men who were thoroughly familiar with this division of the business. It was decided to appoint a committee to get in touch with the municipal authorities relative to reserving the new pier No. 6 for the exclusive use of the lumber trade.

Much inconvenience is still being caused in the hardwood trade by the car shortage, which is stated to be more troublesome this year than for a number of seasons past. Mill men are kept waiting at times for weeks without the means of making shipments of stocks, and the wholesalers are in a position of having to place orders a long period ahead on the chance that by the time the lumber is wanted it will have arrived.

Norman Wright of the firm of C. Leary & Co., London and Dublin, was a visitor in Baltimore last week, and saw some of the exporters here.

He was on one of his periodical trips to the United States for his firm, and said he had found business decidedly on the increase.

Arrangements for the annual meeting of the National Lumber Exporters' Association, which will be held here on January 19 and 20, are well under way, and the main points have already been decided upon. The sessions will be held in the Hotel Belvedere, which will be headquarters. Various diversions have been planned, and one of the entertainment features will be the annual dinner.

## CHARLOTTE

During the past two months loss from forest fires in eastern Carolina and in the mountain sections has been heavy. George K. Vanderbilt set a good example on his vast estates in the Asheville (N. C.) district by having the state set aside a large tract for a state park.

Little difficulty has been encountered with the railroads this year by reason of inability to get freight cars, although there has been some complaint. There has likewise been some complaint on the part of lumbermen over alleged discriminatory and excessive freight rates in both North and South Carolina.

The Cape Fear & Coastwise Transportation Company of Wilmington, N. C., has just been organized to operate a line of freight steamers between Wilmington and a number of points in eastern Carolina. C. D. Maffitt of Wilmington is president of the company.

Shipments of holly from Duplin county to northern markets surpassed all previous records this year, many carloads having left Kenansville.

The Giant Lumber Company of North Wilkesboro, N. C., has purchased from 60,000,000 to 75,000,000 feet of oak, poplar, pine and chestnut timber, which will be sent down to North Wilkesboro by way of the company's new flume the coming year.

Practically all the lumber companies in western North Carolina are increasing their facilities for taking care of increased business. Prices on various grades have advanced materially during the past few weeks, and there is every indication that high prices and strong demand will be the order of business during the balance of the winter and spring. The increased activity in the lumber industry is indicative of heavy building operations under way, and this supposition is backed by reports from all the towns and cities of the two Carolinas.

The North Carolina Lumber Company, which operates near Hot Springs, N. C., and which has been about shut down for months, resumed business and is running full force.

It has just been learned that the Graggy Lumber Company, which operates near Asheville, N. C., is planning to extend the Bee Tree railroad from its present terminus in order to supply mills with logs. Extension of the road is necessary because of the increased business of this concern.

It is announced that the plant of the Kingsdale Lumber Company of Lumberton, N. C., which was destroyed by fire a few days ago, causing a loss of about \$60,000, will be rebuilt at once. It is understood that the loss was covered by insurance. Between 150 and 250 men have been thrown out of employment on account of the fire.

R. P. Foster has purchased from E. Sternberg the Biltmore Box Factory at Biltmore, N. C., and will shortly take charge. The plant is well equipped for making packing boxes.

The John F. Bell Company of Morehead City, N. C., has been chartered to do a general lumber business. Capital stock is \$15,000 and J. F. Bell and others are the incorporators.

The Olive Parker Lumber Company of Wake Forest, N. C., has been chartered with \$25,000 capital stock.

The Roxboro Lumber Company of Roxboro,

N. C., has been chartered with \$50,000 capital stock by J. C. Pass, J. A. Long and others of Roxboro.

The Montezuma Bobbin Company of Montezuma, N. C., has been chartered with \$25,000 capital by E. Harris and others.

A new concern from Raleigh, N. C., is R. D. Goodwin, Inc., with a capital of \$25,000. R. D. Goodwin and others are the incorporators and they will do a general lumber business.

The Tilghman Lumber Company of Dunn, N. C., has been chartered with \$50,000 capital to operate sawmills, planing mills, woodworking plants, etc. G. M. Tilghman and others are the incorporators.

### NORFOLK

Among the lumbermen visiting Norfolk this month were C. L. Hutchins, secretary of the Gay Manufacturing Company, Suffolk, Va.; W. H. Vincent, Caperton, Va., who has just purchased a large tract of timber land and will start operation the first of the year; and Guy L. Buell, president of the Montgomery Lumber Company, Spring Hope, N. C.

Mr. Kelly of the Clyde Iron Works was in Norfolk a few days ago. He had been on a visit to T. Raine, president of the Meadow Creek Lumber Company, Meadow Creek, W. Va., which he states is one of the largest lumber concerns in West Virginia. This company expects to use three 70-ton Shay locomotives in this operation.

The entire plant of the Kingsdale Lumber Company situated at Kingsdale, N. C., was destroyed by fire a few days ago. The loss is estimated at about \$50,000.

Harvey M. Dickson, president of the Dickson Lumber Company of this city, one of the largest hardwood firms here, states that he has no idea of running for a public office and that reports to that effect are erroneous.

F. O. Havener, president of the Atla Lumber Company of Pulaski, Va., has purchased about 8,000 acres of timber land, including hardwood and pine growth. The company's plant will be thoroughly equipped with up-to-date machinery to cut this timber.

Nichols Bros., Inc., have organized here with \$50,000 capital stock. C. K. Nichols is president and A. D. Nichols, vice-president. Both of these men are from New York, but have been in this city for some time. The company's head office is in the National Bank of Commerce building; it will handle hardwoods and pine.

### CLEVELAND

The building outlook in Cleveland for the next year is unusually bright, indicating an increased use of hardwood for finishing purposes. A fifteen-story hotel, a sixteen-story office building, a \$1,000,000 Y. M. C. A. building, several big stores and many other projects have already been announced, plans for all of which call for the starting of operations during the winter or early next spring. This year will see a total of \$13,000,000 in building permits, which exceeds all former records except 1907.

W. A. Cool & Son say there is great activity in most lines of hardwoods, the call for oak being exceedingly lively. They are trying to fill all their orders for choice wide poplar, which is in great demand here for automobile bodies.

The F. T. Peitch Company reports a good general business in hardwoods, though it looks for a slack period about the holiday season. Mr. Peitch says that there has been an unprecedented call for good cypress, which promises to become an important factor in the trade in this locality.

R. H. Jenks of the R. H. Jenks Lumber Company is back at the office again after an illness which confined him to his home for a couple of weeks.

One of the interesting visitors in Cleveland recently was Max Peterson of Hamburg, Germany, manager for J. Bach, large hardwood and timber dealers of Europe. With him was J. B. Lauer of Semon Bache & Co. of New York. They report unusual activity in the hardwood business at present.

John Raine, a prominent hardwood manufacturer of Mill Point, W. Va., was in Cleveland during the past week on a business trip.

Charles Haywood of the Georgian Bay Company has been confined to his home by pneumonia the past two or three weeks. Recently he underwent an operation from which he is slowly recovering.

Among the visitors to the local market during the past fortnight were C. E. Mead of Jefferson, O.; W. T. Parsch of Elyria, O.; F. H. Weeks of the Weeks Lumber Company, Akron, and I. C. Harris of the South End Lumber Company, Youngstown, O.

### COLUMBUS

Herbert M. Hayward, a member of the wholesale lumber firm of M. A. Hayward & Son, was recently united in marriage to Miss Muriel Davis, daughter of Mr. and Mrs. Charles Q. Davis. The ceremony took place at the Chittenden hotel with Bishop Earl Cranston of Washington, D. C., officiating. The couple will reside in the King-Neil apartment.

The John R. Gobey Lumber Company announced the appointment of W. H. Morris as traveling representative in the Detroit territory to succeed J. W. Urban. Mr. Morris was formerly connected with the Gobey company, but had other connections in the past few years. Mr. Gobey left recently for a business trip in the upper part of Michigan. He reports a good demand in that section, but that everything is snowbound. He says that hardwoods are getting stronger.

The wholesalers and representatives of outside lumber concerns of Columbus are preparing to entertain the members of the Union Association of Lumber Dealers which will meet in their annual session in Columbus January 18 to 20. The Great Southern theater has been rented and a vaudeville entertainment will be given one evening for the association members. It is believed that the attendance will be larger than ever before.

C. T. Nelson, manufacturer of columns, reports a nice run of orders, despite the lateness of the season. He predicts a busy season during 1910.

At Canton the Brown & Bush Lumber Company was incorporated with an authorized capital of \$20,000.

The M. D. Francher Lumber Company of Mansfield was incorporated recently with a capital stock of \$10,000 by M. D. Francher, A. A. Pearce, H. E. Speaks, C. B. Winegarten, Frank C. Lewis and Howard Lewis, to do a general lumber business.

The J. J. Snider Lumber Company, which recently purchased the land formerly used by the Columbus branch of the Crosby & Beckley Company at Long street and the Norfolk & Western Railroad tracks, announces that it will open a retail yard at that place in the spring. The last of the stock of the Crosby & Beckley Company has been removed. The concern will continue to operate the two retail yards from one office.

Active work in the development of the 54,000 acre tract of timber land recently purchased by a Columbus and New York syndicate in the lower part of Vancouver Island has been started. Several mills will be erected which will be in operation early in the spring. E. B. Kurtz of New York was in Columbus recently in consultation with his brother, Charles L. Kurtz. Both are heavily interested in the syndicate.

W. E. Hyde, receiver for the Rood Lumber Company, a box factory on Buttes avenue, re-

ports that the plant is being operated on full time and that a nice profit is being made for the creditors. No order of sale at auction has been issued as yet by the court.

Ralph Ely, a Columbus man traveling for W. A. Cool & Son, Cleveland, has returned to Columbus after a severe illness in a Chicago hotel.

At Eaton, Ohio, the Eaton Lumber Company has broken ground for a modern planing mill to be operated in connection with the yard.

The J. W. McLaughlin Lumber Company of Fremont was recently incorporated with a capital stock of \$25,000 to conduct a general lumber business. J. W. McLaughlin is at the head of the company.

Samuel Barr, representing the Lilly Lumber Company of New York, was a caller at the office of the A. C. Davis Lumber Company recently.

The General Lumber Company is placing its large mill at Ashland, Ky., in repair for operation as soon as the spring freshets will float the large number of logs now awaiting transportation down the Big Sandy river. The company is operating the mill on the timber tract on the Big Sandy. President H. W. Putnam reports a steady run of orders and a better demand from manufacturing establishments. He says that a number of the southern mills have withdrawn stock from the market, waiting for higher prices. He believes that advances will be made soon.

H. W. Collins, sales manager of the central division for the W. M. Ritter Lumber Company, said: "Prices are well maintained in all sections and for all grades and varieties of woods. The demand is holding up well right up to the holidays and we look for considerable activity after the first of the year. It is the general opinion that advances will be made some time in January."

Many of the traveling salesmen of the W. M. Ritter Lumber Company will remain in the field between Christmas and New Years, while others will seek their homes. J. W. Mayhew of the company recently returned from a business trip to Chicago. W. M. Ritter returned December 18 from a ten-days' trip through the mill region and among eastern markets.

H. R. Allen of the H. R. Allen Company returned recently from a buying trip through Mississippi and Alabama.

W. V. Smith, treasurer of the Clear Creek Coal & Lumber Company, left recently on an inspection trip of the company's property located at Isoline, Tenn.

W. F. Felton of Columbus and Dr. Gooding of Tiffin have left for San Domingo for an inspection trip of a tract of 150,000 acres of timber land on the island which has been optioned. In case the option is closed the tract will be developed.

George B. Jobson, secretary of the A. C. Davis Lumber Company, has returned from a selling trip through the Northwest. He reports a good demand and that many concerns are buying for future delivery.

A. P. Waterfield, formerly with the Yellow Poplar Lumber Company, has accepted a position as traveling salesman for the Domestic Lumber Company of Columbus. He will travel Ohio and western Pennsylvania.

The Brooks Lumber Company of Pataskala, O., of which J. K. Sowers of the Sowers-Leach Lumber Company of Columbus is a director, has increased its capital stock from \$25,000 to \$50,000 to take care of the rapidly increasing business.

R. E. Elmer of the Fearson Lumber Company of Ironton, O., has returned from a trip to the mountains. He reports business satisfactory in wholesale lines.

C. G. McLaughlin, general manager of the McLaughlin Hoffman Lumber Company, has returned from a week's business trip in Chicago, where he found a good demand from factories. He says that railroads are still buying freely and that the prospects are very bright.

W. L. Whitacre of the lumber company bearing his name returned recently from a two weeks' trip through the mill regions of the South. He reports a peculiar condition existing in that section. He says where mills are selling to the North and interior points prices are variable, but where mills are selling for the export trade prices are stiff.

### CINCINNATI

The Cincinnati Furniture Exchange held its thirty-seventh annual meeting and election at the Gibson House on Tuesday, December 14. A number of lumbermen were present, both as guests and members, two of whom were elected to be directors, J. E. Dulweber and E. C. Feuss. The election for fifteen directors resulted in a victory for the regular (red) ticket, and the following were elected: J. F. Dietz, John Dornette, Jr., Henry Hoffeld, A. G. Steinman, Paul Schirmer, F. H. Uchtman, Frank B. Warsel, Jr., H. B. Kemper and Fred H. Ballman; also the following supply men: E. Kuhlman, Sr., John Wolf, E. C. Feuss, J. E. Dulweber, Theo. Groene and H. A. Lloyd. A banquet followed, with addresses by Mayor Dr. Louis Schwab and Judge Wm. Lueders of the Probate Court. President John F. Dietz presided and read a speech on the year's progress of the exchange. Clinton Crane was present, and on behalf of the Hardwood Manufacturers' Association of the United States extended an invitation to the manufacturers present to attend the sessions of the Hardwood Manufacturers' convention at the Sinton hotel on February 1, 2 and 3, 1910.

Cliff S. Walker, president of the Bayou Land & Lumber Company, accompanied by his wife, left Saturday night, December 18, for New York City. He was joined at Pittsburgh by his son, Stuart Walker, now with Belasco's "The Lily," which will open for a long run at Belasco's New York Theater on Christmas week. Mr. Walker's visit to the East is to arrange for the opening up and operating of the 60,000 acres of hardwood forest in Concordia parish, La., recently purchased by the company in which he is interested. His stay will probably extend into the new year, as the business problems will involve a number of weeks' work in the metropolis. He expects to return in time for the meeting of the Cincinnati Lumbermen's Club on January 3 at the Gibson House.

At the December meeting of the Cincinnati Lumbermen's Club a challenge was read from the bowlers of the Queen City Furniture Club to the bowlers of the Lumbermen's Club. The challenge was accepted, and President Walker named E. J. Thoman a special committee to arrange for a series of games with the belligerent furniture makers. The games were arranged and the first meeting was held at the Hamilton County League alleys on Thursday afternoon, December 16, and both sides claim the victory, the lumbermen by virtue of the fact that they took two games out of three and the Q. C. F. C.'s because they scored most pins.

Lumbermen's Club—	Pins.
H. Brown.....	527
C. A. Higgins.....	492
Wm. F. Duhlmeier.....	501
Joseph Wehry.....	433
E. J. Thoman, captain.....	456
Total.....	2,499
Q. C. F. C.—	
Christ Angert.....	488
Fred Bullerdick.....	512
Fred Busse.....	492
Henry Sprengard.....	511
Henry Hoffeld, captain.....	471
Total.....	2,474

High individual score, H. Brown, 206. Team average, Q. C. F. C., 828; Lumbermen, 803. High team score, Q. C. F. C., 949.

Robert E. Becker of the Maley, Thompson & Moffett Company, who has just returned from an extended trip through Indiana and Illinois, reports business good, though he ran into some

very cold weather. He left on Monday for a trip through Ohio, and will not return until the opening of the new year.

Walter McCabe of the McCabe Lumber Company of Newport, Tenn., was working the buying trade in this city last week, calling upon a number of the Cincinnati hardwood men.

W. H. Dawkins of the Dawkins Lumber Company, Ashland, Ky., was in the city the past week and a caller at the Hardwood Manufacturers' headquarters.

The Licking River Lumber Company has changed its headquarters from Ashland, Ky., to Huntington, W. Va. The company operates a mill at Farmers, Ky.

On Saturday, December 11, there was a meeting of the directors of the Hardwood Manufacturers' Association at the headquarters in the First National Bank building, to devise means for the entertainment of the hardwood consumers who are invited to attend the sessions of the convention to be held here February 1, 2 and 3.

R. H. Stoehr, president of the Cincinnati Hardwood Flooring Company, left last week for a visit to the hardwood floor manufacturers of Michigan, and will remain in that section for a fortnight. His company makes a specialty of hardwood inlaid flooring.

J. D. Farley, the local representative of the Lyon Cypress Company of Garyville, La., left on December 12 for an extended visit to the plant of the company, where will be a general meeting of all the representatives from various parts of the country.

Clinton Crane was a delegate to the Rivers & Harbors Congress at Washington, D. C., and extended his trip to Philadelphia, from where he returned to attend a meeting of the directors of the Hardwood Manufacturers' Association last week.

Dwight Hinckley is home from a trip to Chicago and the North. Mr. Hinckley is the owner of a speedy stepper and is an admirer of equine blood, but did not take his fleet trotter to Chicago on his recent trip. If anyone should desire to own a high bred horse he might communicate with Mr. Hinckley.

C. H. Loveland, Winchester, Ky., was a visitor in the Queen City for a few days last week, looking after the selling end of his business.

B. F. Dulweber was appointed director of the North Side Business Men's Club at its election last week and was awarded the prize.

Fred M. Duling of the Graham Lumber Company is touring the South, and is sending in orders as an indication that business is good in that section.

Ferd Brenner of the Ferd Brenner Lumber Company has just returned from a visit to the mill of the company at Alexandria, La., where he was the guest of W. F. Best, vice-president of the company and manager of the mill.

R. C. Witbeck, secretary of the Ferd Brenner Lumber Company, is of the opinion that business in the export trade is rather dull at present, but will be taking a turn for the better before long. Advices from F. Reichenberg, the European agent at Marseilles, France, are to the effect that business is dull at that point.

Ralph McCracken of the Kentucky Lumber Company says that business at the office is good. The mill at Burdside, Ky., is running, and has sufficient logs to keep it busy for a few weeks.

W. E. DeLaney of the Kentucky Lumber Company has just returned from a visit to Mississippi, where the company has interests in the red gum section. J. M. Cheely of this concern is in Arkansas, where he has been for several weeks making lumber contracts.

Sam Richey is rejoicing over the arrival of a fine boy baby at his home. This is boy No. 2, and Mr. Richey is correspondingly happy and willing to hand out the cigars when receiving the congratulations of his friends. He is study-

ing whether to buy a cradle or an automobile for the late arrival, who will be two weeks old about Christmas.

George Ehmman, the partner of W. A. Bennett in the firm of Bennett & Witte, who makes his headquarters at the Memphis office, arrived in Cincinnati on Thursday with his family and remain over the holidays.

T. J. White stopped in Cincinnati on Thursday while en route to his old home in Ripley, Ohio, to spend the holidays. Mr. White is the western representative of Bennett & Witte.

A. W. Euler, who has been in Europe for the past six months as the representative of Bennett & Witte, passed through the city on Thursday last on his way to the Memphis office. Mr. Euler expressed himself as well pleased with the results of his trip and was very optimistic as to the future of the business in Europe. From a business standpoint his stay in Europe was successful, notwithstanding the fact that business generally in Europe was very slow.

The Swann-Day Lumber Company have opened offices in the Second National Bank building at Ninth and Main streets. The Galloway-Pease Company is also located in the same building.

Freight officials of the Burlington & Ohio Southwestern Railroad are making a canvass of the heavy shippers of Cincinnati, to endeavor to secure more business. The officials seem to be awakening to the fact that rival lines are getting the lion's share of the business. Conferences of officials are being held frequently and plans made for an effective canvass of the conditions.

James King, who for many years was connected with Gage & Possell, and later succeeded to the business of that firm on their retirement, operating under the firm name of King & Trimble, died at his home in this city last week. The firm of King & Trimble was dissolved a few weeks before Mr. King's death, owing to a long siege of illness. His death was caused by a malignant cancer. He was a member of the Cincinnati Lumbermen's Club, and President Cliff S. Walker appointed a committee to draft resolutions to be presented at the January meeting of the club.

Lewis Doster left recently for an extended trip through the South. During his absence he said he would be present at a wedding, but assured his friends that he would not be one of the most interested parties.

### TOLEDO

Those connected with the hardwood trade in this section are interested in the announcement of Receiver Lowell of the Detroit, Toledo & Ironton railway that he will make application to the court for permission to borrow \$1,000,000 to be expended in improving the service of the road. This action is taken at the instigation of the state railway commission, which has recognized the fairness of the demands of shippers in Ohio, who claim that the company has discriminated in favor of foreign shippers and that Ohio shipments have been unduly delayed as a result. The receiver admitted the cause for complaint, but claimed that it was due to inadequate equipment rather than to willful neglect.

Clark H. Snyder, a cabinetmaker at the Bryan show case plant, Bryan, O., was instantly killed while attempting to throw a belt on a pulley. His clothing caught and he was whirled around the main shaft, which was running at a speed of 250 revolutions a minute. Nearly every bone in his body was broken. He was twenty-six years old and leaves a wife and one small child.

Frank I. Consaul, city engineer of Toledo, and for twenty-three years connected with that office, will sever his connection on January 1 and assume new duties with the Acme Builders' Supply Company. He has been chief of the department for the past six and a half years.

The J. W. McLaughlin Lumber Company of Fremont, O., was incorporated last week with an authorized capital stock of \$25,000. The company owns a large tract of timber land in Arkansas, where it will erect a sawmill and stave factory.

The home of Rowland Starr of the lumber firm of Barbour & Starr at Toledo was entered by burglars recently and all the family silver stolen, the loss amounting to several hundred dollars. This is the second robbery within the past year, the former perpetrators now serving eight-year sentences in the Ohio penitentiary.

### INDIANAPOLIS

M. S. Huey of the Capital Lumber Company has returned from a visit in Chicago.

The Mossman Lumber Company has closed its hardwood mill at Dubois because of inability to get logs. The company is contemplating removing to Memphis, Tenn.

Arrangements are being made by the Moffett & Bowman Lumber Company of Madison to move to Memphis, Tenn., soon.

Among delegates to the National Rivers & Harbors Congress at Washington, D. C., this month was D. W. Place, a prominent South Bend lumberman.

The annual meeting of the Indiana Manufacturers' & Shippers' Association will be held here January 26. The executive committee of the association has asked the Indiana Railroad Commission to adopt the demurrage rules recently approved by the National Association of Railroad Commissioners.

Plans are being considered by the Parma Manufacturing Company for enlarging and extending its business. As a preliminary step, the stockholders have decided to increase the capital stock from \$40,000 to \$50,000.

A branch wholesale yard is to be established in Michigan City soon by the National Pole Company of Escanaba, Mich. It is planned to ship about 2,000 carloads of poles a year to the new yard by water for rail distribution.

The Muncie Chair Company has been organized by Muncie capitalists and has been incorporated with an authorized capital stock of \$130,000. A factory will be established at once for the exclusive manufacture of chairs. Those interested in the concern are: M. A. St. John, E. L. Brown, J. E. Johnson, F. J. Lesh and W. E. Hitchcock.

Building operations in Indianapolis this year have amounted to something more than \$7,000,000 as compared with about \$5,800,000 in 1908. The figure this year will be the largest in the history of the city and prospects are bright for increased activities next year.

### MEMPHIS

There is no longer doubt regarding the building of the union station. All details have been perfected. The officials of the Memphis Union Station Company have already filed with the legislative council an acceptable bond as evidence of their good faith. Furthermore, President J. L. Lancaster has \$3,000,000 subject to check to defray expenses connected with the building of this structure. Work is to begin early in January and the railroads interested state that it will be pushed to completion with all possible haste. Five railroads will use this station: the Louisville & Nashville; the Nashville, Chattanooga & St. Louis; the St. Louis, Iron Mountain & Southern; St. Louis-Southwestern, and the Southern railway. There is just a prospect that the Rock Island and Frisco may join hands with these railroads and enter the Memphis union station on the user basis.

The Frisco railroad has announced through W. C. Nixon, vice-president and traffic manager,

that Memphis will not suffer in the least by reason of the divorcement of the Rock Island and Frisco Systems. He says that the road is now completing its new terminal yards at Marion, Ark., and that these will not be sufficient to meet the large requirements of Memphis and the Memphis territory. The company purchased extensive yards east of the city some years ago and will soon proceed with the erection of terminals fully as extensive as those at Marion.

The Anderson-Tully Company has put its mill in North Memphis in operation and is also running its big mill at Vicksburg. For quite a while the mill at Memphis and the big mill at Vicksburg were both closed down on account of the low stage of the water. The company is also operating its box factory here at full capacity and the one at Vicksburg is also being run.

The Lamb-Fish Lumber Company has prepared to resume operations at its band mill in New South Memphis. This plant was formerly owned by the Guirl-Stover Lumber Company, one of the companies forming the present Lamb-Fish Lumber Company. It has a capacity of about 25,000 to 30,000 feet and is to be superintended by George Higley, who has heretofore been manager of the mill of the company at Chancy, Miss. It will be recalled that the company decided some time ago to discontinue operations at Chancy with a view to consolidating all of its manufacturing enterprises in Mississippi at Charleston.

The E. Mossman Lumber Company is proceeding rapidly with the erection of its mill in North Memphis and will have this in readiness for operation at a comparatively early date. It has interests at both Evansville and Ft. Wayne, Ind.

Export conditions are improving, but they are still not altogether satisfactory. There has been a considerable amount of lumber sold to Europe, but exporters as a rule say that prices on the other side are hardly proportionate to those in America. G. A. Farber, London representative of Russe & Burgess, Inc., says that there is a great deal of cheap lumber offered in Europe and he also refers to the fact that 3 ply wood from Russia is being sold all over Great Britain and the continent. He states that this is supplanting thin poplar, sap gum, oak and ash and that it will hurt the sale of all thin lumber manufactured in this country and sent abroad. He is, therefore, inclined to look for some decrease in the amount of thin lumber wanted in Europe from this country and some interests here think this is a subject which should be given serious consideration.

The H. Alfrey Heading Company, Jonesboro, Ark., has filed an amendment to its charter, whereby its capital stock is reduced from \$215,000 to \$91,000. The company operates heading plants at Jonesboro and Hope. A partial explanation of the decrease may be that the H. Alfrey Land & Manufacturing Company, with headquarters at Jonesboro, has been granted a charter. The capital stock is \$100,000.

General Traffic Manager F. B. Bowes of the Illinois Central Railroad has notified the Tennessee Railroad Commission that a rate of 10 cents per 100 has been arranged on shipments of ties from Medon, Teague, Toone, Shandy and Bolivar, all Tennessee points, to Cairo, Ill. The new rate goes into effect December 27.

The Myers-Newson Lumber Company has purchased the band mill formerly owned by the Kentucky Lumber Company at Tutwiler, Miss., and has already put it in operation.

The Winston County Lumber Company has been formed at Louisville, Miss., and will have a capital stock of \$10,000. Among the incorporators are C. N. Wagner and G. H. Gilliam.

The Iron Mountain Railroad is preparing to spend about \$5,000,000 in improvements in Arkansas. The main line of the road in that

state is being ballasted and relaid with heavier rail. The company is also building a large number of stations and is otherwise putting the line in first-class condition.

The legal divorcement of the Rock Island and Frisco Systems has led to the report that the Illinois Central will soon begin the construction of its own line between Haleyville and Birmingham, Ala. It will be recalled that the Illinois Central entered into traffic arrangements with the Frisco Railroad whereby it was to use the tracks of the latter from Haleyville into Birmingham in making the trip from Jackson, Tenn., via Corinth, to Birmingham. Lumber interests are very much pleased with the prospect of this new line because it will afford additional facilities for the development of timber holdings in northwestern Alabama.

Citizens of Arkadelphia, Ark., have pledged \$60,000 to secure the extension of the Memphis, Paris & Gulf Railroad from Murfreesboro to Arkadelphia. The road now runs from Nashville to Murfreesboro and officials of the company have issued the statement that the road eventually will be extended as far south as Pine Bluff. There is also some discussion of the negotiation of traffic arrangements whereby the Memphis, Paris & Gulf Railroad Company will use the tracks of the Kansas City Southern from Nashville to Texarkana, but nothing definite has yet been decided. This road runs through a very important timber section and will be an important factor in the development of the timber resources throughout this section.

### CHATTANOOGA

The Berry Lumber & Stave Company has added to its office force H. B. Henry, who in the future will assist P. S. Burrow, general manager.

A charter of incorporation was applied for last week by the Chattanooga Chair Manufacturing Company. This company will manufacture a full line of chairs.

A suit was filed here in chancery court lately by O. S. Green against J. S. Hunnicutt and others to prevent the culling and removing of a quantity of hardwood lumber and crossties from lands in Sequatchie county, this state.

C. D. Berry of Oil City, Pa., member of the Berry Lumber & Tie Company, was in the city a few days ago on his way home to spend the holidays. Mr. Berry has recently bought a large tract of timber land near Rockwood, Tenn.

Snodgrass & Field are working their large stock of hardwood into moulding, ceiling, weather boarding and dimensions. It is doubtful whether they will ever run their sawmill again at the present location, owing to the city laying out several streets through their yard.

### NASHVILLE

Further details of the new hardwood flooring plant to be built in Nashville have been announced during the past few days. A. H. Bachelor of the Strable Manufacturing Company of Saginaw, Mich., has purchased from the Davidson, Hicks & Greene Company a ten-acre site for \$10,000. He recently visited the city, bringing plans with him for a factory which he hopes to have ready for operations by March 1. The plant will be a large frame building, together with a dry kiln 104 feet long, the kiln to be of brick. Mr. Bachelor will be the local manager. The capacity of the new plant will be about fifty thousand feet a day and between fifty and one hundred men will be employed. Associated with Mr. Bachelor in the enterprise are: J. T. Wylie, a Michigan capitalist, and George Strable, Mr. Bachelor's partner in Saginaw. Nashville was selected by these gentlemen by reason of its being in the center of the hardwood belt. The local concern

will be entirely separate from the Michigan plant, the latter using maple, while the one here will saw hardwoods. The investment here will represent about \$150,000.

A new line of railroad, that will pass through a new and undeveloped timber belt, is being promoted in Nashville. It is the Nashville & Adairville Railroad and proposes to run from Nashville through Davidson and Robertson counties and on into Logan county, Ky., to Adairville. The line will pass through or near Goodlettsville in Davidson county, Millersville, Whitehill, White House, Cross Plains, Olinda, Lamont in Robertson, and on to Adairville. The officers of the road are: S. C. Robb, president and general manager; W. A. Buntin, vice-president; Dr. B. P. Gilbert, treasurer, and R. A. Wilson, secretary.

An interesting decision to all lumbermen or other shippers was recently handed down by the Court of Appeals of Tennessee in the case of N. C. & St. L. Ry. vs. Farris, Wilfort & Kennedy. The suit was brought under an amendment to the interstate commerce law fixing the liability for damage on the initial common carrier. The damage claimed happened on the destination end of the shipment, the original carrier turning the shipment over to another road, the latter causing certain losses to the shipper. Judge Palmer of the Court of Appeals held in favor of the shipper, and that the road endorsing the original bill of lading became liable for any loss incurred by the goods, whether such loss happened on the line of the original carrier or any subsequent road handling the shipment. This decision upholds the constitutionality of the amendment, which has on two previous occasions also been held constitutional by the Supreme Court of Tennessee.

A special from Indian Mound, Tenn., states that C. A. Moery has bought from J. T. Mc Nichols the latter's 500-acre farm, for a consideration of \$4,500. The purchaser represents a timber concern that intends developing the tract. The property is said to be rich in timber resources.

In the death of Thomas H. Harris the town of Trezevant, Tenn., loses one of its leading citizens and the lumber and sawmill business a progressive and active member. At the time of his death Mr. Harris ran a big planing mill and sawmill. He was fifty-eight years old and leaves a wife and two children.

Secretary of State Hallum W. Goodloe has granted a charter to the Scott-Lambert Lumber Company of Carter county, capitalized at \$25,000. The incorporators are: A. M. Scott, W. W. Lambert, W. E. Hunter, W. C. Bresnahan and Lee F. Miller.

Creditors of the Bradley Furniture Company of Elizabethtown, Tenn., have filed a petition in bankruptcy against that company. The plant burned not long since and has not been rebuilt. One of the items set forth as an asset was an uncollected insurance policy for \$21,000.

Secretary of State Goodloe has granted a charter to the King Lumber Company of Polk county, capitalized at \$10,000. The incorporators are: M. C. King, Boon Crawford, J. H. McCoy, N. E. Edenfield and C. W. Kiker.

A railroad charter granted by the secretary of state recently will allow new timber country to be opened up. The Crandall & Shadt Valley Railroad Company of Johnson county was granted leave to do business in the state. It will run a road from Crandall, in Johnson county, up Beaver Dam creek to a point on top of Cross mountain, in Johnson county. The capital stock is \$10,000 and the incorporators are: R. E. Donnelley, H. A. Donnelley, R. E. Butler, D. H. Donnelley and W. T. Smythe.

The Chattanooga Chair Manufacturing Company has been granted a charter. The capital stock is \$25,000 and the incorporators are: J. H. Parham, Claude Smith, J. H. Kuhlman, C. M. Preston and J. B. Cantrell.

The Home Building & Manufacturing Company, which recently bought out the stave plant of A. L. Hayes in East Nashville, is said to be considering the addition of a hardwood flooring plant. However, no definite decision has been reached as yet. This concern for some time has manufactured sashes, doors and blinds, etc., and the purchase of the Hayes plant doubles its capacity. The A. L. Hayes Stave Company will move its stave machinery to a point near Chattanooga.

A new lumber firm in Nashville is styled T. R. Crittenden & Co. They have opened up yards on Adams street in North Nashville and will manufacture and wholesale hardwood lumber. Mr. Crittenden came here from Hartsell, Ala. Fred Roth, formerly with A. H. Card & Co., is also a member of the firm.

## BRISTOL

The development of a large tract of timber in Greene county, Tennessee, near Greeneville, has just been undertaken by O. H. Vial of Elizabethton, Tenn., a well-known lumber manufacturer of this section. Mr. Vial has been busy for some time building a narrow-gauge line of railroad to the mill site, and will be ready to begin cutting before a great while. The operation will be one of the largest in upper east Tennessee.

There is much activity in lumber manufacturing in Polk county, east Tennessee, where the Pendergrast Lumber Company of Marion, O., the Conasuga Lumber Company, and others are at work. The Pendergrast company erected a band mill at Duckton, Tenn., in Polk county, and put it in operation several months ago.

A marriage of much interest in hardwood circles occurred this week, when Miss Ora Belle Rogan of Bristol became the bride of J. Herbert Kester, an official of the Southern Hardwood Lumber Company of Ashland, Ky. The bride is a popular and charming young Bristol society girl, while the groom is a prominent young lumberman. They were married at Charlotte, N. C., and will make their home at Ashland, Ky.

R. W. Lucius of the William H. Perry Lumber Company of Cincinnati, and J. A. Watson of the F. W. Crane Lumber Company of Pittsburg, Pa., were among the buyers on the Bristol market this week. Both were on their way home for the holidays. They left some nice orders with Bristol lumbermen.

The export business in Bristol is reported as in fine shape. Numerous foreign buyers who have been in this region recently report excellent prospects for business abroad, though the improvement in trade there has not been as marked as in this country. Some of the local exporters, however, are getting reports from their foreign customers that are somewhat ominous.

N. A. Wright, representing C. Leary & Co., well-known London wood importers, was among the recent visitors here who brought cheering news.

"Cheer up the worst is yet to come," is what the Bristol lumbermen are hearing in regard to the freight car supply. While the situation has not yet assumed proportions of a car shortage, it is almost certain that if business improves much more, unless the railroads handle traffic with much greater dispatch, there will be a pronounced shortage.

The Whiting Manufacturing Company has undertaken big things for the coming year. Besides the two band mills and planing mills with which the company is now developing its 100,000-acre tract of timber contiguous to Bristol, it will from time to time install other important operations.

"The outlook for the lumber business is good indeed," said Paul W. Fleck of Fleck & Dunwoody, Philadelphia, who visited Bristol a few days last week. "The feeling in the East is very much better."

The Whaley-Warren Lumber Company has closed contracts for several million feet of hardwood stock for spring delivery. The company reports business in good shape.

H. V. Curll of the H. V. Curll Lumber Company of Pittsburg was here last week, after a visit to his company's mills in West Virginia. He reported fine prospects for trade during the coming year.

Among recent visitors here was Samuel H. Shearer of Samuel H. Shearer & Son of Philadelphia, who spent several days on the local market.

Work is going forward on the W. M. Ritter Lumber Company's new operations on Hazel creek, North Carolina. Mr. Ritter was here a few days ago and after visiting his band mills in this section and spending several days hunting and fishing, returned to Columbus.

P. W. Bevins, a prominent Scott county (Va.) manufacturer, visited the Bristol market a few days ago and reports much activity in manufacturing in the rural districts.

C. H. Smith, Jr., manager of the Bristol office of the R. A. & J. J. Williams Company of Philadelphia, has gone to Nashville to spend the holidays with his parents.

J. M. Hines of the Tennessee Lumber & Manufacturing Company of Sutherland, Tenn., and formerly of North Tonawanda, N. Y., and Miss Connie Nidiffer of Watauga Valley, Tenn., were married here this week and left immediately for a ten days' honeymoon trip to New York and other points in the East.

## LOUISVILLE

The Hardwood Club is beginning to talk of the annual convention of the National Hardwood Lumber Association, which meets here in 1910. President A. E. Norman is chairman of a committee which is to communicate with Secretary F. F. Fish and decide upon a date for the meeting. The Detroit convention was held in June, but it is likely that the Louisville meeting will be in May, which is usually a cool and pleasant month here. The convention will be held at the Seelbach hotel. The convention of the Hardwood Manufacturers' Association at Cincinnati has been discussed informally and it is likely that one or two local men will attend.

Railroad men have been holding the floor at the Hardwood Club of late. Fred H. Behring, assistant general freight agent of the Southern Railway, spoke two weeks ago, referring to the importance which is now attached to the Louisville hardwood market by the railroads, and assuring the club that the Southern, as well as the other lines, will do all in their power to give Louisville a fair deal in the matter of rates. Last Tuesday evening J. Taylor Green of the office of the district freight agent of the Big Four, made an informal talk on general railway matters of interest to the lumbermen.

As suggested some time ago, the Mengel Box Company has been elected to membership in the club. Charles E. Davis is the company's representative. There are several other firms which will likely be made members before long, and when that happens the Hardwood Club will have enrolled about all the eligibles and will be a completely united and representative body.

Among recent visitors at Hardwood Club meetings have been Hoyt Gamble of Gamble Bros., dimension stock manufacturers; Mr. Perkins of the Jamestown Table Company; Mr. Pollard of the Mengel Box Company's force at Mengelwood, Tenn., and Mr. Lortz of the Kentucky Wagon Works, Louisville. Buyers continue to seek the Louisville market in large numbers, attesting to the increasing reputation of this locality.

A. E. Norman of the Norman Lumber Company, Barry Norman of E. B. Norman & Co. and E. L. Davis of the Edward L. Davis Lumber Company hunted last week in Barren county,

near Mr. Davis' mill. The Normans returned after two or three days, but Mr. Davis stayed longer. They had good luck. R. F. Smith of the Ohio River Saw Mill Company hunted with success in southwestern Kentucky. W. A. McLean, president of the Wood Mosaic Flooring & Lumber Company, has returned from a big game expedition in Canada, about 100 miles off the railroad. He landed several deer and moose.

Business is usually quiet in December on account of annual inventories being the rule, said A. E. Norman, but things, nevertheless, are pretty fair. His company is closing a good year.

Rose Lea, the boat chartered by C. C. Mengel & Bro. Company, arrived from Belize at Pensacola two weeks ago, and its cargo of 800,000 feet of mahogany logs has been deposited at the Louisville mill. The Chiswick, which is on its way to America from Africa with a cargo of 1,000,000 feet, will reach here January 1. Shortly after the first of the year J. C. Wickliffe, secretary of the company, who is in Bahama securing laborers for the Central America mahogany tracts, will return home. Joseph Waltman, the national inspector stationed here, called on the Mengels last week. He has been kept busy at local yards and taking up lumber at Mississippi and Tennessee mill-points. Building reports received by C. C. Mengel & Bro. Company indicate that prospects for 1910 are mighty good. The demand for mahogany continues to hold up well.

H. A. McCowen of the Ohio River Saw Mill Company was down from Salem, Ind., last week. Business with the company continues to remain above the average. The furniture factories are buying in large volumes.

H. J. Gates of the Louisville Point Lumber Company has returned from a successful business trip to the East, which included Buffalo. Ed Shippen of the company said that the demand for all items on the list is fine, and that the company is heels over head in work getting out orders. "It's a sellers' and not a buyers' market now," was the way he expressed it. He added that higher prices are in order, since the timber people are asking a lot more for their logs now than ever before, and good logs are getting scarce.

W. P. Brown of the W. P. Brown & Sons Lumber Company was down from Indianapolis last week. He said that trade up there was good, but that the country dealers were complaining because the farmers, instead of putting their surplus into new buildings, are buying pianos and automobiles. "There are nearly as many factories of that kind," he said, "as there are planing mills." J. G. Brown, his son, has been laid up for a few days with bronchitis. T. M. Brown said that business is fine and the demand good.

H. A. Ranker, secretary of the Wood-Mosaic Flooring & Lumber Company, whose office is in Rochester, N. Y., was out last week to look over the plant. He seemed to think that the general situation is good, with an especially favorable outlook.

D. E. Kline of the Louisville Veneer Mills has returned from the convention of the National Veneer & Panel Manufacturers' Association, where he read an important paper on the rise in the cost of timber. H. M. McCracken of the Kentucky Veneer Works was unable to attend, on account of having just recovered from an attack of illness, but his brother represented the firm.

E. W. Rhubsky, a hardwood broker, said that the demand for lower grades is improving, due to the fact that during business depression the poorer classes were unable to buy any sort of furniture, while there remained a fair demand for high-grade stuff, thus moving the better grades of lumber. Now that the situation is generally improved, however, lower grade furniture is being manufactured in a larger volume.

Business is holding up well with the Southern Veneer Company, which has completed its addition and installed a circular saw. It is making sawed and sliced veneers at the rate of 50,000-600 feet a year.

The Hardwood Manufacturing Company, which is incorporated here, has increased its capital stock from \$150,000 to \$200,000. Its mill is in Louisiana, where it is cutting oak and gum. The capacity of the mill is 40,000 feet a day. A. L. Musselman is president, Henry Koehler vice-president and Frank Offutt secretary and treasurer of the company. Mr. Offutt is in active charge of the mill.

In order to utilize a lot of timber that had to be moved, Frank Russell, the beer stove manufacturer of Louisville, has organized the Kentucky Tie Company. James B. Hall of Lexington and Samuel R. Russell of Irving are the other incorporators. The company was organized with a capital stock of \$25,000. The probabilities of large construction work by the railroads seems to promise a fine market for ties during the next year or two. Mr. Russell's office reports a car shortage in Alabama, Tennessee and Kentucky, especially at the mills.

The Kentucky Manufacturers' Association, which will endeavor to enlist every manufacturer in the state, including the lumbermen, in its ranks, has been organized with the following officers: Carl C. Wilson, president; Joseph C. Van Meter, treasurer, and M. C. Browder, secretary. All of these are Louisville men, but there are thirteen vice-presidents who represent the various sections of the state.

Announcement has been made that a bill will be introduced in the state legislature providing for the creation of a state board of forestry; the appointment of a state forester; the creation of a state reserve and provisions for restricting and fighting forest fires. At present the state is not permitted to receive or buy lands, and the bill will give it this power. Experiments in forestry and in scientific lumbering will be carried on. Mrs. Mason Maury of Louisville is having the bill drawn up, and it will be backed by the state federation of women's clubs as well as other organizations.

The State Good Roads Association held a big banquet at the Seelbach hotel last Friday evening for the purpose of celebrating the victory of the good roads amendment to the state constitution. It has been suggested that a Department of Engineering be created to have charge of the construction of roads under the new amendment, which provides state aid for the counties.

R. G. Dunn & Co. in their annual report on Louisville business conditions for the past year say: "Mahogany lumber and veneer manufacturers have had a good year, and show gross sales for the first nine months of 1909 of nearly seventy-five per cent greater than for the same period of 1908. The growing scarcity of domestic hardwoods is stimulating the use of mahogany for furniture and interior finishing. Imports of mahogany into the United States were twenty-eight per cent less in amount during the first nine months of 1909 than for the same period of 1907, and the price has been steadily advancing since 1907. Hardwood lumber manufacturers report an increase of about twenty-five per cent in volume of business over 1908, and consider the outlook good."

Officials of the Pennsylvania Railroad are in Breathitt county, inspecting the hardwood supply of that vicinity with a view to the possible purchase of timber lands, according to a special from Lexington. The officials in the party attended a conference in Chicago at the call of Chief Forester Gifford Pinchot, and have since been looking at timber lands available for purchase. A. E. Sterling and J. W. Foley, foresters of the railway, were in the party.

Representative Stanley of Kentucky has introduced a bill in Congress providing for the con-

struction of a dredge boat costing \$200,000 for use on the Ohio river between Louisville and its mouth. Congressmen Langley and Edwards are fighting for proposed improvements on the Kentucky and Big Sandy rivers, which have been neglected of late. One of the things which Kentucky congressmen will ask for especially is a dam on the Ohio at the mouth of the Green river. The Green is one of the most important timber streams in the state. The proposed dam would cost \$2,000,000.

The Louisville & Nashville has filed a mortgage for \$50,000,000 at Beattyville, in Lee county. It is in favor of the United States Trust Company of New York, and covers the Louisville & Nashville and related lines. Capitalists from the East have personally gone over the survey of the proposed railroad from Jackson into eastern Kentucky mountains during the past few days. Louisville & Nashville earnings continue to increase. For the first four months of the 1910 fiscal year operating revenues went up \$1,200,000. The State Railroad Commission has increased the assessment of the railroads \$2,132,000. The Wasito & Black Mountain Railway Company has increased its capital stock from \$50,000 to \$1,000,000 and is beginning important railway construction work in eastern Kentucky. The counties which will be covered are Harbin, Bell and Letcher. The line is to run up the Cumberland river, and will open up important coal and timber fields.

## ASHLAND

Opening of the large splash dam of the Yellow Poplar Lumber Company was a great success, every operation of the dam proving perfect in construction. John McDyer of this city was superintendent and civil engineer of the work and spent most all last summer at the site of the dam. A few days preceding the time appointed for opening a large fire was reported in a gorge of poplar logs below the dam. A great army of men were engaged to fight the fire, but so intense was the heat nothing could be accomplished. The only hope was to open the dam even though the time set for opening it was a few days off, and after communicating with Leon Isaacson, general manager of the Yellow Poplar Lumber Company, the gates were opened, then holding nine feet of water. The fire was drowned out and thousands of dollars saved. Among the owners were Vansant, Kitchen & Co., Thornbury Brothers of Cattleburg, Nigh Brothers of Ironton, James Hatcher, Pikeville, Ky., and the Yellow Poplar Lumber Company.

S. M. Bradley, a lumberman of Morehead, Ky., spent several days in the city recently. He said that business was satisfactory, prices were better and an increase in the demand for all kinds of lumber.

Wm. McOwen of New York City was here on business this week. He buys large amounts of fine poplar from Ashland millmen, shipping some to eastern markets.

F. G. Eberhart, Mishawaka, Ind., president of the Licking River Lumber Company, recently spent a few days in the city and at the company's new hardwood flooring plant at Huntington, W. Va. Mr. Eberhart has just returned from a three months' trip to Europe. The company moved its general offices to Huntington a short time ago. Good reports are received from its offices, stating business is very satisfactory. More orders than can be handled are being received for hardwood flooring, and the car stock business is better than it has been for two years.

The Wright Saulsberry Lumber Company is busy loading out lumber on its orders. Its mill is closed at present and the company advises very satisfactory business, especially so in the lower grades, which has been very slow.

W. J. Fell of Salt Lick, Ky., was a business caller here this week. Mr. Fell is operating on full time the stave plant he opened up in Ashland a few months ago, and advises business very satisfactory.

Vansant, Kitchen & Co. are loading out a large number of cars of lumber, car oak and switch ties this week, and are operating their mills every day.

### ST. LOUIS

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, feels encouraged over the present outlook. He says there is every prospect of a good business soon after the first of the year, when inventories have been taken and when the retail dealers find out just what items they want.

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, says his department has been having an unusual trade in high-grade lumber for this time of the year. Alf. Bennett, president of the company, returned from an extended trip through the South last week. He did considerable business while away and some big deals in hardwood were pulled off.

Harry Swartz has tendered his resignation as treasurer of the St. Louis Lumber Company and has been elected president of the Colonial Timber & Lumber Company, with offices in the Third National Bank building.

L. Methudy has gone back into the hardwood lumber business in spite of his seventy-five years. For many years Mr. Methudy was well known in the hardwood lumber trade, but retired. Now he has resumed the business and is located in the Security building. He will confine himself to the domestic trade and will make a specialty of red cypress.

Miss A. Bauer, who for twenty-three years was connected with Mr. Methudy, having full charge of the office and also buying and selling lumber, has opened an office in the Fullerton building and will buy and sell hardwood and will also do a commission business.

J. S. Garetson of the Garetson-Grease Lumber Company has returned from Washington, where he went as a member of the Missouri Conservation Commission.

W. H. Richardson of Richardson & Richardson, Linden, Tenn., was a recent St. Louis visitor. He reports a satisfactory condition as a rule, but says some trouble has been experienced in shipping out lumber as rapidly as one wishes.

The Charles F. Luehrmann Hardwood Lumber Company is fairly well pleased with the trade, says George E. W. Luehrmann. It is too near the end of the year to expect any but a normal condition. The red gum trade, the company's specialty, is making quite a good showing.

Thomas E. Powe of the Thomas E. Powe Lumber Company says inquiries and orders are increasing. His business thus far this month has been quite gratifying to him.

According to George E. Cottrill of the American Hardwood Lumber Company there has been a brightening up of business and an improvement in the number of inquiries and orders received.

### MILWAUKEE

During the course of a recent lecture in Milwaukee State Forester E. M. Griffith made the interesting announcement that the state forestry board of Wisconsin had secured a census of all the woodworking industries of the state, giving the amounts of lumber they use in the different varieties, what proportion comes from outside the state and where the industries ship their products. The idea is to see how near Wisconsin comes to producing the necessary material and what steps can be taken to retain their industries within the state.

The mill of the Owen Lumber Company at Owen, Wis., has been remodeled and will be placed in operation at the opening of the new year.

The Gilkey Timber Company has been incorporated at Janesville with a capital stock of \$400,000 by William Smith, L. A. Avery and Leona Westlake.

The Kaukauna Land, Timber & Supply Company, a new concern at Kaukauna, has commenced logging operations on the Little Wolf river.

Announcement has been made of the engagement of Ralph W. Wells, a son of John W. Wells, the millionaire lumberman of Menominee, Mich., to Miss Frances Winchester of White-water, Wis.

The headquarters of the Northwestern Lumber Company will be removed from Eau Claire to Stanley on January 1. Only the land business of the company will be carried on at Eau Claire.

K. Jacobson & Co., manufacturers of wood novelties at Racine, are installing a new engine, boiler and other equipment.

The present winter will be a record breaker for loggers all over northern Wisconsin and upper Michigan, according to the statements of well-known lumbermen. Not only will there be more timber cut for the mills, but more pulpwood, bolts of all kinds and cedar products will be turned out. Woodsmen's wages are higher this year than ever before.

The saw mills at Bayfield have closed down for the season. The plants of the Red Cliff Lumber Company, the Bayfield Mill Company and the Wachsmuth Lumber Company cut the large total of 55,748,479 feet of lumber.

The Wisconsin Handle Company has been organized at Sturgeon Bay to manufacture handles of all sorts. The Pankratz saw mill has been remodeled and will be used.

With a loss of more than \$650,000 the entire plant of six buildings owned by the Racine Manufacturing Company, well-known manufacturers of automobile bodies and piano stools, was destroyed by fire recently. An insurance of only \$250,000 was carried. Announcement has been made that the plant will be rebuilt at once and that the manufacture of automobiles may be added. The company, which was swamped with orders at the time of the conflagration, will carry on its manufacture in other nearby plants at Racine until its new establishment can be completed.

It is reported that the American Seating Company will make extensive improvements at its Racine Junction plant during the coming year. A new factory structure and new offices are planned.

The Thompson saw mill at Washburn, owned by the J. S. Stearns Lumber Company of Odanah, has been closed after a busy season.

The Berlin Machine Works of Beloit have announced that they will build a new \$500,000 plant next year, to be devoted to the manufacture of sawmill machinery. The plant will consist of factory, foundry, tool and pattern shops.

Timber land to the value of \$132,000 has just been sold by the Joseph Dessert Lumber Company to the Mosinee Log, Land & Timber Company. The land is located in the towns of Mosinee and Emmett.

The saw mill of the Heineman Lumber Company at Heineman has been placed in operation after a year's idleness. The plant has been remodeled.

The new planing mill of the Central Lumber Company at Fifield is fast nearing completion. Five planing machines and extensive equipment in other lines will be installed.

### SAGINAW VALLEY

The Island Mill Lumber Company at Alpena is installing a battery of three boilers and will

then start the mill on hardwood timber and run through the winter.

W. D. Young & Co. will run their sawmill day and night during the winter. The flooring trade is active and the firm crowded to meet its trade, which is steadily expanding. Prices of flooring are expected to advance, as the price of the rough maple is considerably higher. The firm gets a train load of logs from the North every day.

Surveys have been made of the site of the old Kern Manufacturing Company's mill at Bay City for the new wood alcohol, charcoal iron plant to be started about the first of March.

The usual stock of logs will be put in in the northern lumbering districts of the state. Many of the interior mills along railroad lines are operated the year through and logging is conducted on a heavier scale during the winter. The Lobdell-Churchill Company at Onaway, and all of the concerns in which Salling, Hanson & Michelson are interested, at Grayling, Lewiston and Johannesburg, run through the winter, and these concerns have camps actively at work cutting and skidding logs for the supply of these plants. Sleighing is reported good, now that the temperature is low and several inches of snow have fallen.

E. Foster will cut 250,000 feet of hardwood lumber with a portable sawmill at Spaulding, on Flint river.

During the last season something over a million feet of hardwood logs were rafted out of Cass and Flint rivers. These were great lumber producers in their day, but during the last twenty years they have contributed to the Saginaw river mills but a few hundred thousand feet each year.

Fred Robinson of Bay City has put up a mill in Presque Isle county, near Onaway, which will be employed during the winter cutting lumber for the Churchill Lumber Company of Alpena.

The Kneeland-Bigelow and the Kneeland, Buell & Bigelow sawmills at Bay City have cut about 40,000,000 feet of lumber the current year. These companies have very little dry lumber in the mill yards at present.

The Dayton Last Block Works at Gaylord, which utilizes about 3,000,000 feet of hardwood logs yearly, has started operations for the winter.

The Jackson, Wylie & Co. hoop plant at Gaylord has also started operations for the winter.

The Mershon-Bacon Company, manufacturer of hardwood box stuff, is building a new box factory, which will be equipped with modern machinery throughout. The plant is 100x150 feet and is distinct from the planing mill, the latter and the box plant having heretofore been under one roof.

The Kneeland-Bigelow Company has taken an order to saw 25,000 hardwood ties for the New York Central Lines. Those roads are taking 150,000 hardwood ties from along the Mackinaw division of the Michigan Central and Bay City for 1910. These ties are to be creosoted before being laid on the tracks. They are manufactured from beech, birch and maple timber.

### CADILLAC

The Michigan Hardwood Manufacturers' Association is planning for a midwinter meeting to be held at the Ponchartrain hotel, Detroit, not later than January 20, 1910. Secretary Knox is urging the members of this association to report their stocks immediately after January 1, in order to make an early meeting possible.

D. H. Day of Glen Haven not only believes in reforestation but is actually practicing it. He has 1,400 acres of land between Glen Lake and Lake Michigan on which is a considerable growth of sugar maple, beech, red oak, black cherry, white ash, aspen and paper birch, also some white and norway pine and hemlock. This is an exceptional variety of hardwoods to grow within so small a compass, but many of these

trees are eight to eleven inches in diameter. This new forest has been laid out under the direction of a government forester and it will not be many years before Mr. Day will reap some of the benefits of his laudable enterprise. He will not, however, lumber this new tract under the old wasteful methods, but will constantly make selections of the most mature timber, protecting the smaller growth from injury, so it may continue a source of income for himself and his posterity.

The Michigan Railway Commission will make an effort to test the right of the Interstate Commerce Commission to make demurrage rates for the various states. The Interstate Commerce Commission in November adopted uniform demurrage rules which eliminated all overtime over two days in the unloading of cars, practically doing away with what is known as the Michigan "average plan" agreement. In this the railroad commission will be upheld by the shippers of Michigan.

Mr. and Mrs. W. W. Mitchell and Charles T. Mitchell have returned from a week's visit in Chicago. While there they met Miss Marie Mitchell, their daughter, who has been attending school in Washington, D. C., and is now home spending the holidays with her parents.

Mr. and Mrs. G. von Platen of Petoskey were the guests of Mr. and Mrs. F. J. Cobbs a few days ago.

J. S. Weidman of Mt. Pleasant has returned home after visiting relatives in this city.

F. A. Diggins of Murphy & Diggins and W. L. Saunders of the Cummer-Diggins Company have returned from a several days' trip to Chicago and other points.

### GRAND RAPIDS

The Lumbermen's Club of Grand Rapids held its monthly meeting Tuesday evening, December 21, at Bauman's new banquet rooms, the business session being preceded by an excellent dinner. There were twenty-four members present and an enjoyable evening was spent. L. L. Skillman of the Skillman Lumber Company, former president of the club, presided in the absence of President F. I. Nichols. The club adopted the report of the railroad and transportation committee recommending that the State Railway Commission be commended for its attitude on the car demurrage question, and the commission will be notified to this effect through the secretary of the club, Fred Dregge of the Dregge-Grover Lumber Company.

The chief matter of business was the adoption of a new constitution and by-laws. H. J. Dudley of the Dudley Lumber Company, as chairman of the by-laws committee, read the new articles, which, after being discussed, were adopted unanimously. Under the new rules the membership is to be widely extended, being made up of three classes, as follows: Active, those in the lumber business in Grand Rapids, wholesalers, jobbers or manufacturers; associate, those in any affiliated industry, also any lumbermen, manufacturers or jobbers living outside of Grand Rapids. Then another class is provided for, made up of men whom the Executive Board recommends be made honorary members for life, without payment of dues, simply as a mark of esteem.

The date of annual meeting is changed from the last Tuesday of January to the last Tuesday of May, and the old officers will hold over until next May. A change is also made in the method of electing officers. Heretofore the chairman has appointed a nominating committee and this committee would name nine directors, who in turn would select the officers. Under the new by-laws the chairman will appoint two nominating committees of three each, who are to nominate an executive board, made up of a president, first and second vice-presidents, secretary and treasurer, and these five officers will

constitute the executive body in place of the old board of directors.

The president was authorized to appoint an arbitration committee to take up matters of dispute arising between members and others.

P. E. Gilbert of the Major Lumber Company, Memphis, was a guest of the club, and on introduction by Mr. Dudley responded with an excellent talk.

Ed C. Allen of Leroy, member of Gibbs, Hall & Allen, was in the city December 18.

E. F. Miller of the Engel Lumber Company has returned from a selling trip and reports good business conditions. The manufacturers are feeling fine and have not curtailed orders as much as usual during the holiday season.

Z. Clark Thwing, manager of the Grand Rap-

ids Veneer Works, is expected to return the first of the year from an extended business trip through the South, where he has been busy installing dry kilns.

The Rice Veneer & Lumber Company is busy with the work of removal to its new location in the Vinkemulder building at Market street and the railroad crossing. Trade conditions are excellent with this company.

The Boyne City Lumber Company, in which several Grand Rapids men are interested as stockholders and officers, has declared an annual dividend of 15 per cent. Claude Hamilton of this city has been elected a member of the board of directors to succeed Edward Fitzgerald, resigned.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

The Chicago hardwood market situation is excellent. At this time of year it is expected that trade will fall off; on the contrary, the yards are all still busy and have every prospect of a continued demand during the winter.

Out-of-town salesmen who are daily callers at the Record offices report an excellent trade during the last fortnight among local yards, railroads, corporations and wholesale consumers. Several sales of a million feet or more of hardwoods have been made during the past few days in this market.

Stocks on the local yards are in fair balance, but the interior finish and furniture people have not yet accumulated any large holdings. With the immense trade in sight for the furniture manufacturers and interior trim makers, it looks as though there will be about all the business for the months to come that can be conveniently handled.

### NEW YORK

The hardwood market at New York shows a good tone all along the line, considering the fact that this is the inventory season. While hardwoods have been strong for the most part, particularly high-grade lumber, the strength of the market has for a greater portion of the year been due largely to the scarcity of good-grade lumber, and low-grade stock has not been as buoyant as was wished for. However, the marked improvement during the past sixty days has been of a much more substantial character in that buying has been more free and general, both as regards good-grade and low-grade lumber. This is giving a better tone to the market all along the line and it is believed that while the winter season will not permit much continued improvement, yet the better conditions in all directions indicate a most promising spring trade. The market is unquestionably broadening, which is giving prices a stronger hold and the general situation is encouraging.

The salient feature of the market continues to be the scarcity and high price of good-grade, well manufactured lumber, and with very little indication of any material change in this direction for some time to come. The low-grade market, as stated, is broadening and if no more low-grade stock is produced than there was last year, the opportunities for improved prices and demand between now and spring are very bright. The call at this time runs largely to plain and quartered oak, ash and chestnut, and also poplar. Birch and maple are in fair supply and prices are a little stiff. An improvement has been noted in the export demand. The hardwood flooring market is one of the most promising branches of the trade for next year.

### BUFFALO

The lumber trade is in a good condition and is doing well all along the line. Some dealers, however, with no mills behind them and a yard to carry, say they are not getting as good a margin from the mills as they think they are entitled to. Cypress has been selling pretty well of late, considering the time of year. There are more reports of large orders from consumers in all branches, and even dealers with well assorted stocks are turning them down, for they believe it is wise to hold on to good lumber. It will be worth more in three months than it is now.

Quartered oak and sap birch are scarce and plain oak is very strong. The demand for ash and elm is unsteady. The maple market has improved considerably. All the flooring mills report better prices and a brighter outlook. The demand is holding good right along. Of course there is no letting up on poplar. Less complaint is heard about the lower grade stock.

### PITTSBURG

There is little new to say about hardwoods here. All high-grade stock is scarce and increasing in price. Low-grade hardwood has been sold off freely the past month and stocks are being greatly reduced. Mills everywhere are working full time, many double time. At the country plants a little snow has helped matters the past few days. Roads have been fine, though, all the fall and winter and for two months shipments from these points have been good. Mill owners are getting bullish on hardwood prices, for they see that by January 1 stocks of all grades will be pulled down to normal or below.

Plain oak is a very popular seller, with small stocks on hand. Wide poplar is at a premium owing to the demands of the automobile trade. All good poplar lumber is more than holding its own. Ash has made advances in price recently. Hickory continues to be very scarce. Spruce is selling well at good prices. Some good sales of hardwood timbers, especially of mining stocks, have been made lately. Railroads are big buyers this month. The manufacturing trade's demands have increased. The call for vehicles, implements, furniture, chairs, carriages and wagons is very hard to fill. December will show larger shipments except for the customary holiday week, and the average of prices will be considerably over that of September.

### BOSTON

Firmness prevails in the market for hardwoods, with the tendency of prices toward a higher level,

it anything. Dry lumber is not in large supply. Those manufacturers who had large stocks during the quiet months and who did not try to force business at the low prices now are being approached in some cases by other manufacturers for lumber to fill quick delivery orders. One dealer in this market has had an opportunity to sell about 3,000,000 feet of dry lumber to another manufacturer, but has refused, as he wants the stock for his own trade. Thick stock in good shipping condition is in small supply. The piano trade is moderately active, although in a few cases trade holds up well. One local manufacturer is running to full capacity in all departments, but he has not been a large buyer of hardwoods for some time. General demand has been rather quiet this month, although some have placed orders for delivery after the turn of the year. Manufacturers of house finish are all fairly busy. Furniture manufacturers have had a good fall business and anticipate good times to come. Veneers have been in better demand, and mahogany stock has attracted considerably more attention. The outlook for mahogany is toward a firmer and higher level. The offerings are below normal, and advance in logs is anticipated.

The market for quartered oak is firm. Southern stock is quoted at \$85 to \$88 and Indiana oak at \$88 to \$90 for one-inch ones and twos. Demand is moderate and offerings are reported as light. Plain oak is firm. Ash and maple are in moderate call at present. Trading in cherry has not been large of late. Walnut is in a little more inquiry in some instances, and prices are firmly maintained. Offerings of the better grades are very small. Cypress is firm and in fair request.

### BALTIMORE

The year is drawing to a close with all the hardwoods in good shape. Just now quiet prevails and this state will continue until after the holidays.

Hardwood men have ample reason to view the expiring year with satisfaction. They have made decided gains over 1908 and in some instances even the figures for 1907 have been exceeded, both as to value and volume. For months progress was slow, but gradually the forward movement became pronounced and for the past few months the activity has been admitted even by the most conservative. Since October a car shortage has interfered with shipments. Some mills have been unable to get cars for weeks and much delay has been experienced. Nevertheless the exceptionally fine weather has aided distribution. Roads that in other years were deep in mud remained in good condition for a month or six weeks longer than usual, and hauling was expedited to such an extent that stocks were fairly well cleaned up.

The growing domestic demand, which boosted values, had the effect of curtailing shipments abroad. A reduction of stocks followed, with the result that an advance in prices has taken place and at this time the foreign situation is more promising than it has been at any previous period of the current year. In anticipation of the requirements of the foreign market exporters have been placing liberal orders of late. The situation, especially in wagon oak planks at Liverpool, reached the stage of actual demoralization and shippers added to their losses by reason of the practice resorted to among buyers of rejecting numerous planks as under grade, on which they insisted upon heavy reductions. The arbitrary procedure, whereby the buyers sought to obtain No. 1 and No. 2 at the price of common, served to work a cure of the situation by reason of its drastic character. Exporters were compelled to stop making shipments and the process of recovery was further assisted by the action of brokers refusing to make the liberal advances on forwardings which had been a strong

incentive to shipments. So far the foreign business in oak planks has been far from active, but the outlook is promising, while the other divisions of the trade are greatly improved.

In the domestic market poplar still heads the list with respect to activity, but all other woods share in the advance, and there is every prospect that 1910 will effect a complete restoration. Baltimore wholesalers report a better demand in the Middle West than in the East.

### CHARLOTTE

The close of the year finds conditions all that lumbermen could expect. This time last year many of the mills in the Carolinas were closed down because prices were so low and demand so weak that operations could be carried on only at a loss. Today lumber mills are running full time with full forces.

Orders are coming in freely and there is every prospect that present activity will be continued through the rest of the winter and spring. Woods work is going along at a lively pace. Prices on all grades of lumber have stiffened materially during the past few months. This has been reflected in manufactured products, and the first of the year will witness an increase of ten per cent on all grades of furniture manufactured in the Carolinas.

Lumbermen have all the business they can handle, and both local and foreign demand are active. Prospects for 1910 are very bright.

### NORFOLK

Lumbermen generally in this city are optimistic in regard to the business outlook. Prices of higher grade lumber show an advance of \$1 a thousand over thirty days ago, and stocks of high-grade lumber are scarce. The low grades still move rather slowly, and little improvement is looked for in this direction until prices on the upper grades advance still more.

One of the features of the market is the strong demand for good poplar and red and white plain oak. Firsts and seconds ash show an advance of \$1 a thousand. Basswood and birch are in good demand with no change in prices. Chestnut is in good call and No. 1 common has been slightly advanced. Prices on cypress are unchanged, and the demand is active. White and red quartered oak is in good call with prices stationary. Plain oak is active and shows an advance of \$2; common is strong at unchanged values and there is some improvement noted in the market for low-grade oak, although prices remain the same. Dry stocks of good poplar are scarce, and the demand is strong; prices have advanced from \$1 to \$2 per thousand feet. Local lumbermen believe that prices will be higher after January 1.

### CLEVELAND

Business among the hardwood dealers in this locality during the past month has been unusually brisk, though it is not anticipated that the holiday trade will amount to much.

The low condition of stocks in many of the local and suburban yards has provided a lot of business during the past fall. Manufacturing concerns are again in full swing and there is an active demand for all kinds of merchantable hardwoods. Oak seems to be in best demand, the quartered stock being unusually firm. Poplar is so scarce that it is selling at better prices and promises to soar again next year as it did in 1907.

### COLUMBUS

The tendency of the hardwood market in central Ohio during the past fortnight has been

to strengthen. Manufacturers and shippers report that the holiday season has had less effect on the market than ever before, and that business has been excellent right up to the present time. Many of the larger concerns will keep a part of their traveling force in the field between Christmas and New Year.

Prices are strong under better demand and more inquiries. Shippers unite in the statement that orders are coming in very satisfactorily and that the prospects for next year's business are very bright. Concessions are now a thing of the past, and in some grades where a marked scarcity exists, premiums are the rule at this time. Slight advances have been reported, especially in the higher grades, and the entire list is higher than it has been for months. A number of mills have withdrawn their stocks from the market to wait until after the first of the year, when higher prices are anticipated. This has caused prices to advance in certain sections. The lower grades are in fair demand and the movement is quite uniform. The car situation has improved, but lumbermen believe that the relief is only temporary and that a more acute shortage will be felt after the first of the year.

Plain and quartered oak continue strong, and the supply appears to be limited. Prices are strong. Chestnut is in good demand at steady prices. Ash is also strengthening. Poplar prices are still high and the latest quotation on wide sizes is \$140 per thousand. Other sizes are quoted at the usual figures. Other hardwoods are strong.

### CINCINNATI

At the close of the year there is a satisfactory feeling among the hardwood fraternity of the Queen City over the year's business. At the opening of 1909 a spirit of optimism was manifest, and on all sides predictions were made that the year would show a vast improvement over 1908. While the business of the year has been generally good, there were months that were poor, especially during the summer. The fall business was excellent. As compared with December, 1908, this month showed up favorably. Just now the general theme of interest is the prospect for 1910. Indications are that 1910 will be a record year in hardwood. Reports from consumers of hardwoods and the numerous inquiries received lead to the conclusion that, unless some unforeseen catastrophe should paralyze trade, the business of the coming year will be phenomenal. The impression is general that prices on hardwoods are too low, and there seems to be an almost unanimous sentiment that advances will be made all along the line.

A review of the condition of the stocks in this section shows that there is not sufficient quarter-sawn oak in sight or available to meet a heavy demand. Select figured stuff of quarter-sawn white is scarce, with plain white oak in not much more abundant supply. Red oak, in both quarter-sawn and plain, is in fairly good supply, with a steadily increasing demand. Chestnut is in good supply in ordinary lengths, but not in lengths of twelve feet and over, which are in strong demand for the eastern building trade. Sound wormy and lower grades are equal to the demands of the market.

There are heavy stocks of low-grade lumber, especially in poplar, with a good supply of oak, basswood and buckeye. But there is a confident feeling that the coming year will see every stick of low-grade lumber disposed of and the yards well cleaned up.

Ash is in good supply, especially for wagon and carriage makers' stock, while furniture grades are fully equal to the wants of the market. Hickory is plentiful, the stocks having steadily increased during the past two years. There is a good supply of hickory stock for spoke, shaft and pole manufacturers and wheel

# OAK FLOORING

An artistic volume by Henry H. Gibson, editor of *Hardwood Record*; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FRI E. until supply is exhausted. Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick!

Book Dept., **HARDWOOD RECORD**, 355 Dearborn St., Chicago.

## BARGAINS IN REBUILT WOOD WORKING MACHINERY

Every Machine Thoroughly Overhauled and Tested Before Leaving Our Shops

1 30-in. 3-Drum Invenible Sander  
1 30-in. Single Drum Berlin Sander  
1 Iron Double Circular Saw Table  
1 44-in. McDonough Band Resaw  
4 9x16 Baldwin 36 in. Gauge Locomotives  
60 miles relaying rails  
5000 Bolders, Engines and other Machines

Complete stock of Structural Steel and Iron, Shafting, Belting and Pulleys

Send for list, also our new 500-Page Catalog No. 946

For other Wanted and For Sale  
Matter See Page 61

### WANTED—POSITION.

As Buyer and Inspector of Hardwoods. Have had twelve years' experience. Can give best of references. Address  
"Box 65," care **HARDWOOD RECORD**.

## HARDWOOD LOGS—FINEST QUALITY.

Rock elm—20' to 40', 16" and up diameter.  
Gray elm—20' to 40', 16" and up diameter.  
White ash—12' and up, 14" and up diameter.  
Hickory—12' and up, 14" and up diameter.  
Delivered at port F. O. B. or C. I. F. London or Liverpool. Full particulars

**HOPTONS.**

George St., Euston Sq., London, England.

## MADDOX TABLE CO., JAMESTOWN, N. Y.,

Wishes to contract with a Band Mill which cuts about two million feet a year of the following: Birch, Maple, Oak, Chestnut, Basswood, Butternut, Beech, Cherry and Elm. Will move stock within eight months.

L. L. AMIDON,  
Lumber Buyer.

## BASSWOOD AND BIRCH WANTED.

6' 4" Basswood and Birch 20" long. 60 per cent 6" and up wide, clear one face.  
**SANITARY SPECIALTIES CO.,**  
1836 E. Clearfield St., Philadelphia, Pa.

## FOR SALE—SELF FEED RIP SAWS.

Bolting saws, quick acting saw gauges and special machinery. Prices right. Write for particulars.  
P. O. BOX 345, Muncie, Ind.

## BAND MILL FOR SALE.

In Mississippi Delta; situated on floating stream and two railroads with nearby hardwood timber supply for twenty years. Complete mill outfit with wagons, mules, etc., also furnished hotel, commissary, stocked with merchandise, etc., all ready for business. Price \$15,000. Terms: One-third cash and balance on time or will take lumber. Reasons for selling, have other interests requiring time and capital.  
Address "BOX 66," care **HARDWOOD RECORD**.

makers. Red gum is in good supply and is steadily increasing in demand, as is evidenced by the number of dealers who now have red gum on their stock lists. There is noticeable a steadily increasing number of small orders from consuming manufacturers—which indicates that more manufacturers are experimenting with a view to replacing other and higher priced hardwoods with gum. The stocks of walnut and cherry for export are greater than for several years, owing to the weak condition of the export demand in the past two years.

## TOLEDO

The local hardwood market continues to show considerable life. The demand from builders has dropped off somewhat owing to inclement weather, but the loss in this line has been about counterbalanced by an increased factory demand. All kinds of box materials are firm. There has been an especially nice demand for basswood, with but a limited supply in sight and prices firm. Oak, both quarter and plain sawed, is still a ready seller. Oak and maple flooring are still finding an anxious market. Furniture factories are consuming their usual quota of hardwoods, including a fair volume of chestnut, which is holding strong at the old prices. Poplar is settling down to a regular basis, except the greater widths of clear stuff suitable for automobile bodies, which is commanding almost fabulous prices. Announcement is made here of a material advance in all grades of cypress on January 1. Local hardwood stocks are well filled, but dealers are buying considerable stuff yet and show no fear of the future. Ash, hickory, birch, and even elm, are all finding ready sale in this market.

## MEMPHIS

Hardwood conditions continue to improve and the feeling of confidence among the trade is getting stronger. There are an increasing number of buyers in the market and more interest is being shown in low-grade stock. High-grade lumber has been in demand for quite a long while, but there has been more call for it recently and buyers who come to this market complain that they have difficulty in finding what they want. Manufacturers and wholesalers also testify to the fact that their stocks are badly broken. It was pointed out some time ago in the **HARDWOOD RECORD** that there was a good demand for hardwood lumber for forward shipment, but that sellers here were opposed to business of this character because they did not know whether they would be able to secure the necessary stock when the contracts matured. It would seem that they were quite wise in the course, there being already a most pronounced shortage of certain classes of high-grade stock.

There has been a further increase in the production of hardwood lumber in the Memphis territory during the past fortnight. Some of the mills in Arkansas which had been closed down for some time on account of lack of adequate water supply have resumed and there is no reason why the others should not do so at an early date. In addition to the heavy rainfall in Mississippi, Arkansas and Tennessee there has been considerable fall of snow in Arkansas, Tennessee and northern Mississippi and the stage of the water in most of the courses is satisfactory for bringing out timber. In the meantime the railroads are going right along handling timber and the mills here are well supplied with raw material. In fact, there is no indication of any decided shortage in the supply of timber for Memphis mills any time soon.

General business conditions could scarcely be better. Bank clearings in Memphis continue at

record proportions. The railroads report that they are handling a constantly increasing volume of traffic and only recently the Southern Railway found it necessary to add 1,000 new box cars to its equipment. Another southern road has placed an order for 500 box cars and one of the big car manufacturing plants at Anniston, Ala., which has been closed down for some months, has resumed operations with a force of 1,500 men. Traffic officials of the roads passing through Memphis say that they are having about all the business they are able to handle and that all lines are furnishing their full quota, with the exception of cotton. The steel and iron industry is in excellent condition and there is not a member of the hardwood trade here who does not admit that the present situation is better than for more than two years. All the woodworking enterprises of Memphis, with one or two exceptions, are working full time.

So far as the building trade is concerned, it is already evident that the total amount involved in building operations this year will exceed last year by practically \$1,000,000. The gain up to the end of November was \$900,000. A well-known trade paper here has compiled a statement of the amount that will probably be expended in new buildings next year on the basis of projects already under way. This authority gives the figures at \$16,000,000. It also allows \$4,000,000 for residences and \$1,000,000 for other buildings.

## NASHVILLE

Christmas generally brings somewhat dull times to the Nashville lumbermen, the buyers as a rule holding off until after the first of the year. This has not been the case this season, however, and from general reports the trade has held up remarkably well. Prices remain about the same. No appreciable let-up has been noted in the wholesale trade. It is believed that many of the wholesalers, fearing increased prices the first of the year, have kept in the market and are buying right on up to the close of the old year. The work of taking stock begins the first of the new year, however, and this will undoubtedly, for a little while at least, cause a lull. Renewed activity is expected immediately after invoicing is finished.

A special feature of the hardwood market the past few days is the unusual demand for wide poplar, this being a leader in both first and second grades. Good plain and quartered oak has been right up with poplar and chestnut in point of demand. Beech, elm and gum are slow. A fair demand is noted for ash and maple. The cypress market is quoted as strong.

## CHATTANOOGA

Hardwood is rather quiet of late. This is due partly to the close of the year and partly on account of bad weather. Indications are for a good trade immediately after the beginning of the new year. Prices are looking up and the demand is good.

## BRISTOL

The general feeling among lumbermen here is that the new year will be a most prolific one for the hardwood industry and that the improvement that was so marked during October and November will continue. There is plenty of optimism and good cheer on every hand. The lumbermen say that, considering the holiday season, December will not make a bad showing by any means, though orders have not come in as fast as might have been expected. Prices are high and firm and there is the best of feeling as to the trade outlook on every hand.

## LOUISVILLE

Though the closing of the year, involving stock-taking and a consequent inclination to put off purchases of lumber, has somewhat slackened the demand, the general hardwood situation is good. The increased demand for low grades during the past few weeks has been the most encouraging development, indicating that the large accumulations of the past two years will be used up rapidly. Reports from all over this section indicate that building projects are more numerous and important than since the panic, and that the consumption of lumber in construction work will set a new record in 1910. Proposed construction by the railroads is another favorable sign. Oak, both quartered and plain, poplar, chestnut and gum are in good demand at firm prices. With the opening of the new year it is believed that lumber prices will begin a climb for a new level.

## ASHLAND

Manufacturers here are more than pleased with present market conditions. In spite of the nearness of the holiday season, no slump has been noted in business.

Poplar is very strong, with prices on all grades advancing. There is a great scarcity of high-grade stock, grades used for bevel siding and moulding. Retail yards and planing mills report a noted increase in business the past thirty days. Both plain and quartered oak is in active call, with prices advancing. There is also a greater demand for low-grade hardwood, some manufacturers having sold their entire lot of dry stock. Car stock men are buying more freely and large orders are being placed at advanced prices.

## ST. LOUIS

The hardwood trade is quite well sustained in spite of the cold weather and accompanying snow and sleet. The current demand is for the most salable hardwoods and is best for first and second grades in nearly all the woods. The lower grades, however, are coming to the front in the demand and a more active movement is noticeable than there had been for a long time. This activity will not last long, is the opinion of the best informed hardwood dealers and they look for a sudden let up at almost any time. The reason for this is because the inventory period is at hand, as well as the usual holiday quietness. The season is considered about ended. The cypress situation is encouraging. Orders, however, are small and buying is for immediate use. The outlook for next year is most encouraging.

## MILWAUKEE

The demand for hardwoods is holding up much better than dealers and manufacturers had anticipated it would during the holiday season. Business is not as heavy as it has been, but no decided falling off in sales is noted. Indications are that most of the manufacturing concerns are beginning to replenish their stocks even at this early date. The furniture people are buying more freely and this has done much to improve general business. The sash and door factories, while not placing the orders that they did during the heavy building season, are looking plenty of business ahead. Dealers and manufacturers are just waking up to the fact that dry stocks, especially in the upper grades, are not as large as they might be. Lower grade stuff is still rather easy, with the box factories buying lightly in this line. Poplar is in excellent demand and in some instances prices have gone higher. Oak is still wanted, and maple seems to

be in better demand from the hardwood floor manufacturers, who are now preparing for the spring trade. High-grade birch is wanted. Basswood is holding its own.

## MINNEAPOLIS

Inactivity is the ruling characteristic of the northwestern hardwood lumber market this week. Buying for country yard delivery is practically at a standstill, partly because of the switchmen's strike, which has tied up traffic to a great extent, and partly due to the fact that the holiday season is naturally quiet. In the larger cities, however, the demand for hardwood lumber for finish is still drawing considerable supplies. The sash and door factories are busy, and, as building goes on steadily, this source of trade will continue profitable during the winter months. Most of the hardwood mills of Wisconsin and Minnesota are either already at work or are preparing to commence sawing soon after the first of the year. Conditions for logging in the northern woods have been fairly favorable, and now there is plenty of snow for hauling purposes. As mills have greatly reduced their stocks during the past few months, there will be an unusual effort to get in a large supply of logs.

Stocks in the hands of wholesalers are very low. Everything points to a good volume of trade soon after the beginning of the new year, and prices will undoubtedly be better. High-grade stock has been steadily improving in value, and the lower grades have also moved up some. Oak is especially strong, and both basswood and birch have improved of late.

## SAGINAW VALLEY

Usually business at this season assumes a holiday character and the lumber industry eases up for a few days, but reports from dealers and manufacturers are that there is no apparent cessation in the movement. Orders are coming right along, and prices are advancing. On some grades of lumber there has been an advance of \$2 to \$3 a thousand feet, while the trade is calling for more dry lumber than is available.

Recent sales of maple, No. 1, common and better, have been made at \$20, an advance of \$2 and \$3 compared with last spring's quotations. Thick maple has advanced correspondingly and is active, with dry lumber reported scarce. Beech No. 2, common and better, is firmly held at \$15 to \$17, while birch is strong at \$22 to \$26. Basswood has been active and strong all the fall. There is hardly basswood enough to meet the trade requirements, and it is selling quickly at \$27 to \$30. There is very little white ash available now in northern Michigan, and black ash is not so abundant as it was a few years ago. The market is firm for both at \$30 to \$31. The movement in elm has been sluggish. It is quoted at \$23 to \$26. Some red oak comes to this market. It is firm at \$35 to \$38. Beech, birch and maple culis are moving freely at \$9.50 to \$10. The trade goes into the winter in prime condition, with light stocks of dry lumber available, and an active and hardening market.

## CADILLAC

The outlook for hardwood lumber in general and also hemlock is exceedingly bright, and many inquiries are being received by the manufacturers for various kinds of stocks.

There never was a brighter outlook for maple lumber than at the present time. The maple flooring industry is enjoying as great a demand as it has ever known, and the manufacturers of this stock are short of this commodity, as well as short of the rough lumber from which it is manufactured.

## MACHINERY FOR SALE

### FOR SALE AT A BARGAIN.

Fruit Package machinery equipment complete. Further particulars furnished on application.  
JOHN MOTCH, Kimmund, Ill.

### FOR SALE.

Six-foot Fay & Egan band mill outfit, complete with exception of boilers.  
KENTUCKY LUMBER CO., Cincinnati, O.

## TIMBER LANDS FOR SALE

### STANDING TIMBER FOR SALE IN GEORGIA.

69 million feet Pine—mostly short leaf or "N. C. Pine."  
10 million feet Cypress.  
39 million feet Oak.  
30 million feet Gum.  
14 million feet Ash.  
2 million feet Poplar, Hickory, Cedar, etc.

164 million feet.  
Located on 21,492 acres—about one-third in fee, balance 19 to 29 years' lease. All in condensed tract, favorably situated on two railroads and a navigable river.  
We are not manufacturers or brokers, but owners.

THE SIZER TIMBER COMPANY,  
15 William St., New York, N. Y.  
Care Robert R. Sizer & Co.

## BUSINESS OPPORTUNITIES

### HARDWOOD STUMPAGE FOR SALE.

1,000,000 feet White Oak; 500,000 feet Red Oak; 200,000 feet Spruce, Pine and some Poplar and Ash. Located in Lauderdale county, Miss., 3 miles from the A. & V. R. R., and good level road. This is prime timber—large trees for quarter-sawing or veneer. Will sell at a very reasonable price.

WHITAKER BROS. CO., Meridian, Miss.

### SPOKE FACTORY FOR SALE.

Complete spoke plant with hickory stumpage. Four "Egan" lathes; two "Defiance" lathes; two dry kilns all in first-class condition and now running. Oak and Hickory stumpage of good quality to last 10 years. Address  
"BOX 60," care HARDWOOD RECORD.

## DIMENSION STOCK WANTED

### WANTED—ORDERS

For dimension walnut and oak cut to patterns. We also want 500 cars each of walnut, white oak and hickory logs—quick.

### FOR SALE

20 cars of walnut squares of all sizes.  
5 cars of white oak plank and timbers.  
LANGTON LUMBER COMPANY, Pekin, Ill.

### WANTED—DIMENSION STOCK.

We are in the market for several carloads of oak and hickory dimension stock.  
ESTABROOK-SKEELE LUMBER CO.,  
Fisher Bldg., Chicago, Ill.

## RAILWAY EQUIPMENT FOR SALE

### LOCOMOTIVES FOR SALE.

Narrow or standard gauge from 7 tons to 70 tons; over 165 locomotives of various types at our shops.

SOUTHERN IRON & EQUIPMENT CO.,  
Atlanta, Ga.

## MISCELLANEOUS

### GRAPHOPHONE EQUIPMENT FOR SALE

Three Columbia graphophones practically unused, of modern type, in perfect order, including shaver with electric motor attachment. These machines for commercial dictation will effect an economy of about forty per cent in time.

The entire equipment will be sold at a bargain. Address

"H. H. G.," care HARDWOOD RECORD.

### ADDRESSOGRAPH EQUIPMENT.

An up-to-date addressograph equipment, including machine, cabinet, chain links, type cabinets and type enough to carry seven thousand addresses, for sale at a bargain.

This equipment can be utilized for the addressing of letters, envelopes, pricelists, circulars, wrappers, etc., and is now being used by HARDWOOD RECORD for addressing its mailing list. The increased subscription list has necessitated the purchase of a paper-roll wrapper addressing machine, and therefore this first-class equipment will be disposed of at a great bargain.

Delivery can be made immediately.

Address HARDWOOD RECORD, Chicago, Ill.

## COUNTERFEIT CHECKS

are frequent except where our

Two Piece Geometrical Barter Coin is in use, then imitation isn't possible. Sample if you ask for it.

S. D. CHILDS & CO.,  
Chicago

We also make Time Checks, Stencils and Log Hammers.

10 Elm	19 Dimension stock
11 Gum	20 Veneers and panel stock

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial reputation is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago

# American Hardwoods and Where They Are Sold

## Some Interesting Statistics Showing Where the Hardwoods of the U. S. are Sold

During the past four years the HARDWOOD RECORD, by means of sending out nearly one thousand letters and report blanks daily, has collected information from the chief hardwood buyers throughout the United States, covering their normal annual requirements by quantity, kind, grade and thickness. This information has been put into the form of condensed paragraphs, which recite the state, town, name of concern, use to which the lumber is put, the name of the purchasing agent, with the other information added. Up to this date forty of these bulletins have been issued. This information, when pasted up on tabbed cards, as shown on page 62 of this issue, and filed alphabetically by towns, between state guide cards, forms a roster of the leading wholesale hardwood consumers of the United States, and makes a ready reference, showing from what source trade in every line of lumber, including foreign woods, dimension stock, veneers and panels may be intelligently sought. This information is free to every display advertiser in the HARDWOOD RECORD, and is being utilized by the majority of them to their manifest advantage.

As before noted, these bulletins, including all back numbers, are supplied free to advertisers, and where people desire to paste up their own system, the only additional cost involved is that of the tabbed cards, which cost \$3.50 per thousand, and a set of state guide cards, costing 75 cents. However, in a good many instances, advertisers have preferred that this service be pasted up for them in complete form, with the extra tabs removed from the index cards, and filed alphabetically by towns between state guide cards, enclosed in a four-drawer oak cabinet. The service thus prepared is sold to advertisers at practically cost—the sum of \$35. This includes 1,000 extra cards to continue the service as subsequent bulletins are issued. Once a year a correction sheet is sent out to all concerns listed in this service, and if there are any corrections to be made they are supplied and issued in a correction bulletin form. Thus the service is kept up-to-date. There is no question about the accuracy of the information involved, as in every instance it comes direct from the purchasing agent of the various concerns.

Up to this time more than 15,000 requirements are shown on this service, which, in part, list up about as follows:

Buyers of Ash.....	625
Buyers of Basswood.....	600
Buyers of Beech.....	215
Buyers of Birch.....	550
Buyers of Butternut.....	65
Buyers of Cherry.....	200
Buyers of Chestnut.....	475
Buyers of Cottonwood.....	250
Buyers of Cypress.....	425
Buyers of Elm.....	350
Buyers of Gum.....	375
Buyers of Hickory.....	300
Buyers of Mahogany.....	350
Buyers of Maple.....	675
Buyers of Oak.....	1,350
Buyers of Walnut.....	165
Buyers of Poplar.....	675
Buyers of Sycamore.....	110
Buyers of Dogwood.....	15
Buyers of Persimmon.....	12
Buyers of Locust.....	10
Buyers of Holly.....	15
Buyers of Dimension Stock.....	650
Buyers of Veneers and Panels.....	550

With this information at hand the manufacturer or jobber in hardwoods is able to address an intelligent letter to buyers on the subject of any variety of lumber. They know approximately what the buyer uses and this enables them to gauge their offerings in accordance with the requirements of the prospective customer. It is not an economical proposition to write these vast number of buyers individual typewritten letters, but it is logical for the man in charge of the lumber sales department to write one letter covering one kind of wood each day and have this letter sent out in duplicate form to every buyer of this particular wood. The most successful sales managers handling out this HARDWOOD RECORD mail-order sales system follow this plan minutely. On Monday he will write a letter devoted exclusively to ash, describing in detail his offerings in this wood. On Tuesday he will talk to buyers of basswood, oak, birch or poplar. In the course of the month other letters pertaining to these same woods are repeated in different forms, and, of course, the answers induced are replied to in individual letters.

This system of soliciting orders of hardwood lumber by mail in no way interferes with a sales force on the road, but manufacturers and jobbers are able to reduce their number of salesmen to a marked degree by

the use of this service and reduce their sales cost to a very low figure. For example: The average expense of having a regular traveling salesman call on a prospective customer averages about \$2 per visit. These letters in duplicate form, can be forwarded to prospective customers, even under 2-cent postage, at a cost not to exceed 5 cents per letter. In other words, it is a forty-to-one proposition in favor of the mail sales system, so far as cost goes.

It is not contended that even a forceful, tactful and diplomatic letter in each individual case is as capable of effecting a sale as a competent salesman, but the people who have thoroughly utilized this service have demonstrated that the percentage of letters inducing sales of lumber is very much greater than the forty-to-one cost involved in a personal visit. Again, it would be impossible for the ordinary sized concern to employ salesmen enough to cover the vast number of sales possibilities that is involved in this list of buyers.

The HARDWOOD RECORD would be very glad to supply further suggestions to both users and prospective users of this system in detail and will also be glad to suggest the use of the best form of letter-duplicating apparatus.

A very important fact has been demonstrated by the HARDWOOD RECORD's Information Bureau which pertains to the distribution territory of hardwoods throughout the United States. Every user of wood in every line has been thoroughly canvassed for this information in all parts of the United States, and it is found that eighty-five per cent of the hardwood sales are made in a comparatively small area. It is an area where things are made out of wood. It is within the seven states of Wisconsin, Michigan, Illinois, Indiana, Ohio, New York and Pennsylvania. This would indicate that the New England states, New Jersey, Delaware, Maryland, the High Point district of North Carolina, the St. Louis district and the small quantity of hardwoods consumed in the chief cities of the Pacific coast and other cities in parts of the country not herein mentioned consume only fifteen per cent of the total of hardwoods employed in the domestic trade. These facts are further emphasized by the circulation books of the HARDWOOD RECORD, which show more than sixty per cent of its circulation is in the seven states first named.

## This Handy Calculator and Real Leather Case Prepaid—To You For 25c

YOU will find it invaluable—once you use the Dodge Calculator. It is the handiest and most useful article we've seen in many a day. The price is no indication of its worth. It actually costs us 25c for the calculator and real leather pocket case—but we gladly pay the cost of postage, handling and packing in order that you may have one.

We know how useful you will find the Dodge Calculator. We know it will please you so well you will remember where it came from. Thousands of engineers and factory men already have the Dodge Calculator, and are more than pleased with it.

## We Have Several Thousand But They Won't Last Long

at the rate they are going now. So send us the 25c and we will mail you one at once. After you get it—if you don't think it is worth 25c to you—mail it back and we'll gladly refund your money. But to practical factory men—engineers and men who understand—it's worth many times 25c. Send the 25 cents with coupon and receive the Dodge Calculator by return mail. Remember you get your money back if you are not satisfied.

**Only Gang Dovetailer on Which Swell or Barrel Front Drawers Can Be Made Without Dismantling Any of Its Parts**

**OUR NEW NO. 201 GANG DOVETAILER**

is designed to meet the requirements of furniture manufacturers who desire fine dovetailing for drawers and various other purposes. This machine is the growth of many years' experience in the manufacture of dovetailers, and will be found a very superior tool.

One of its features (which is protected by patent) is that either straight or swell front drawers can be dovetailed without removing or changing any of its parts. Any operator will appreciate the amount of time and trouble this will save over the old styles.

**Our New Booklet Describes and Illustrates, With Five Cuts, Our New No. 201 Gang Dovetailer**

**J. A. Fay & Egan Co.**

414-434 W. Front St.

Cincinnati, Ohio

**New Hoosier Improved Short Log Sawing Machine**

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

## **RESULTS**

in steam skidding depend largely on keeping the machine busy **at skidding** and in getting the logs up to track at the **nearest** spot.

Frequent moves from one point to another are accomplished quickly by the

### **CLYDE SELF-PROPELLING STEAM SKIDDER**

and require no more time than walking down the track.

The steam guying-drums enable a set to be made while the tongs are being taken out to the first log.

These important features are exclusive in the **Clyde Skidder** and are what determine the **average results** for the month, the year or any other period.

A half million may be skidded with our machine in a single day, with large logs, in thick timber, close to track but the **correct test** of

any machine is the **average** in all kinds of timber, scattered growth and from the long haul as well as the short haul.

It's in the **final results** that the **CLYDE SKIDDER** outclasses them all. Let's send our testimonial booklet giving such results from scores of customers.

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

## RED BOOK

Published Semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Get an order in early for quartered

### White Oak

We only have 2 cars of 5-4 No. 1 Common and Better.

Ask us about our Log Run

### Bass

We have 4 cars each 4-4 and 8-4—mill culls out—running from 50 to 60% No. 1 Common and Better.

You can get a good price on this Common and Better

### Ash

2 cars each 4-4, 5-4, 6-4, 8-4, 10-4, 12-4 and 16-4; also 1 car 5-4 No. 1 and No. 2 white containing about 20% or more 12 in. and over wide—good tough stock.

How are you fixed on

### Red Oak

We have about 6 cars each 6-4 and 8-4 No. 1 Common and Better and 100 M feet 8-4 No. 2 Common and Better—all dry and good lengths and widths.

### There is a lot of Yellow Poplar

at one of our outside points.

5 to 6 cars 5-8 No. 1 Common  
2 to 3 cars 5-8 No. 1 and No. 2  
2 cars 5-8, 18 in. and over  
1 car 5-8, No. 1 and Better  
100 M feet 4-4 No. 2 Common

If you are in the market for

### Cherry

get prices on 2 cars 4-4 No. 2 Common and 1 car 4-4 Common and Better.

Another chance on Heart Rived

### Cypress Shingles

300 M each 6x20 and 7x24. Can ship immediately.

If you are in the market for

### Chestnut

get prices on 400 M feet each 4-4 and 6-4 Sound Wormy and No. 2 Common; 200 M feet each 6-4 and 8-4 No. 2 Common and Better; we also have 2 cars Common and Better.

Get prices on this

### Soft Yellow Tennessee Poplar

good widths and lengths. One to two cars each of 10-4, 12-4 and 16-4 No. 1 Common and Better.

What about

### No. 3 Common Poplar and Bass

mixed? We have five to ten cars of 6-4 and 8-4.

We can make prompt shipment of the following. This lumber is cut at mills located in the Adirondacks and Canada. It is thoroughly dry; and the Birch is very choice, running largely to Red.

### BIRCH

175,000 feet 4-4, 45 to 50 per cent. 1's and 2's; largely 12 feet.  
30,000 feet 5-4. Good clean stock, good widths; 50 per cent. 10 inch and up.  
30,000 feet 6-4. Wide lumber. 65 to 75 per cent. 1's and 2's.  
10,000 to 12,000 feet 12-4 and 8,000 to 10,000 feet 16-4. No hearts. 6 inch and up.  
6,153 feet 4 inch; 22,360 feet 2 inch; 18,700 feet 3 inch; and 14,000 feet 3½ inch.

### BROWN ASH

Two to three cars 4-4 Log Run. Mill culls out.

### DRY WHITE ASH

200,000 feet 2 to 3 inch Log Run.

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

# 100% LABOR EFFICIENCY

The Gillette Roller Bearing Box Factory Truck, No. 1

Can be had as easily as 25 per cent, 50 per cent or 75 per cent.

One way to get it is to furnish your men strong and durable vehicles—the kind rarely laid up for repairs, and good for years of hard service.

Another way is to provide easy running trucks—the Gillette Roller Bearing kind. The strength your men now waste on friction can then be used in moving bigger loads.

The Gillette Roller Bearing Factory Truck, No. 7

Gillette Roller Bearing trucks in factory, mill yard or warehouse, run one-half easier than others and last twice as long. That's why reorders are the rule in our business.

That's why the cheapest trucks made are Gillette Roller Bearing Trucks—the lightest running, longest lasting kind. If you would reduce labor costs, address

The Gillette Roller Bearing Lumber Cart, Style "A."

## A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances without adjustment. It has many other good features, but we've no more room to describe them.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

# HERMANCENCE MACHINE COMPANY

WILLIAMSPORT, PA.

Chicago Machinery Exchange, 159-161 N. Canal Street, Chicago

## Chicago Machinery Exchange,

(Incorporated)

WOODWORKING MACHINERY MERCHANTS  
CHICAGO, ILLINOIS

No. 35 SINGLE SURFACE PONY PLANER

Planes 24 inches wide and 6 inches thick. Table slides on outside of frame so it is steady and the work will not be wavy or have clipped off ends. Two rates of feed driven from cylinder, one regulating the other.

## MOST PERFECT

## DOUBLE HEAD DOWEL MACHINE

These machines have two spindles running side by side, both spindles operated at the same time and by the same operator. Double No. 1 cuts from ¼-in. to 1-in. diameter; double No. 2 cuts up to 2-in. in diameter; double No. 3 cuts up to 3-in. in diameter. These machines are designed for the rapid production of round rods for all purposes, and have a capacity of 7,000 feet per hour and larger when required. Waste stock and every grade of stock may be turned without danger of it twisting off or clogging in the cutter head.

Write for Circular describing these machines in detail

# General Electric Motors Will Increase Your Profits

GENERAL ELECTRIC MOTOR DRIVING TIMBER SIZER

GENERAL ELECTRIC MOTOR DRIVING BAND RESAW

## Bigger Output

Whether all the shop, or only a few machines are working, each machine is doing its best. The speed of every one is under full control of its operator.

## Lower Expenses

Every machine makes the most of its power. The motor is attached direct to the shaft of the machine instead of turning it through belts and long lines of shafting.

## Better Work

The one speed best for each kind of work can be found and kept. There are no belts to look after. The operator can give his whole attention to the work. Best results are easily obtained.

## Your Woodworking Shop Needs Electric Motor Drive

There is a kind of motor for every type of machine and a size for every capacity. Electric Motors are as useful to small shops as to larger ones. Expert machinists are not needed to care for them. With slight attention from the man at the machine these motors are always in condition.

The next annual meeting of this association will be held at the Sinton Hotel, Cincinnati, Ohio, on Wednesday and Thursday, March 2 and 3, 1910.

E. F. PERRY,

GEORGE F. CRAIG,

Secretary.

President.

## General Market Conditions

During the last fortnight a storm of almost unprecedented severity and unusual length has prevailed from the Atlantic seaboard to the Rocky Mountains, in all the territory north of the Ohio river. It has interfered very seriously with the movement of freight on the railroads and has precluded the possibility of handling lumber. While orders of large volume in the aggregate have been placed during this time, little or no hardwood has been loaded or is in transit.

There is an insistent and increasing call for wide, good poplar, especially in the automobile trade. Values on this class of stock have gone as high as \$150 per thousand feet in several of the important automobile manufacturing centers.

Oak of all varieties, in both plain and quartered, of high grade is daily securing an increased price. Stocks in first hands in shipping condition are undeniably short and there is no telling what price either good poplar or oak will reach before new dry stock goes on to the market. This state of affairs is inducing substitution to a marked degree, and the good end of cottonwood and red gum is having a reflected increased value.

Red birch and hard maple are growing scarcer day by day with slightly increased values.

Basswood and the other northern hardwoods are doing very well. Miscellaneous southern woods are in fair call at good prices.

With the country released from the clutches of zero weather, there is going to be a demand for hardwoods that will tax the facilities of the entire manufacturing and jobbing trade, as well as the capacity of the railroads to carry the business.

Interior trim, door and flooring factories are fairly busy to busy, and there is an expectation of an excellent trade in these lines for months to come.

The veneer and panel manufacturers report increased inquiries and the placing of a considerable volume of new business.

The trend of the times seems to be toward an increased capacity for the production of hardwoods and hardwood flooring.

## Chicago the Greatest Lumber Market

The magnitude of Chicago's interests as a lumber distributing center as compared with those of any other city in the country is demonstrated by the statistics of the past year. The total receipts for 1909 were 2,584,512,000 feet, against 2,053,639,000 feet for 1908, an increase of 530,873,000 feet. Chicago shipments for last year were about 2,000,000 feet greater than those of 1908.

Receipts by lake last year were heavier than for the last three years and amounted to 381,444,000 feet. The Illinois Central leads in the list of railroads delivering car shipments, bringing in 580,838,000 feet of lumber to this market; the Chicago & Eastern Illinois brought in 562,675,000 feet; Chicago & Northwestern, 295,262,000 feet; Chicago, Milwaukee & St. Paul, 284,414,000 feet, and the Chicago, Burlington & Quincy, 180,332,000. The remainder of the receipts were divided among the other roads.

Eastern lines carried out of Chicago about fifty per cent of the lumber shipped in or passing through the city. There is no record to show the proportion of building woods and hardwoods involved in these receipts and shipments, but possibly a fair estimate of the hardwood receipts would be approximately 1,000,000,000 feet.

## Evolution of Hardwood Merchandizing

HARDWOOD RECORD is in receipt of a letter from a leading hardwood jobbing house which says: "We have read with a great deal of interest your editorial entitled 'Tertium Quid' in HARDWOOD RECORD of December 25, which involves a new and conflicting element in hardwood grading affairs, i. e.: that the re-manufacturer or consumer of hardwood lumber shall participate in the formation of rules of inspection under which hardwoods should be classified. What we want to know is this: What position will the jobber be in if this proposal should take effect? Are we not in difficulties enough now without letting the consumer have a hand in grade-making? I believe that Palmer is right when he says that 'any attempt to draw the consumer into the grade-making business will muss things up.' Year by year it is getting more difficult for the hardwood jobber to make a reasonable profit in his business, and this new departure if it should come about would, to my mind, put him on the shelf entirely."

The editorial referred to recited:

First: That when the hardwood business assumed importance the jobbing element took control of inspection matters and dominated the classification of hardwood lumber for some years thereafter.

Second: That about ten years ago hardwood manufacturers interested themselves in the subject and with or without the jobbing element have had considerable to do with the making of inspection rules since that time.

Third: That latterly remanufacturers of hardwood lumber, people making furniture, wagons, automobile bodies, coffins and kindred lines, are insisting that the present and somewhat conflicting rules of hardwood inspection do not provide for grades that best suit their requirements, and are quite generally demanding that they shall have a hand in basic grade-making.

Fourth: There were recited the opinions of Earl Palmer of Paducah, Ky., R. H. Vasant of Ashland, Ky., and W. A. Bennett of Cincinnati, O., on this subject.

Fifth: It is the contention of the RECORD that the specific rules covering the inspection of hardwood lumber are of minor importance to all elements of the trade if these rules reasonably accommodate themselves to the present output of hardwood logs, and the grades reasonably fulfil the requirements for the eventual use to which the lumber is put; and further that hardwood lumber should be divided into grades to best suit the requirements of the eventual user; that based on modern business methods, present hardwood inspection is crude, involved, out-of-date and illy adapted to present-day economical utilization.

Sixth: A system of grading was suggested that should multiply the grades to a considerable extent, and better suit the specific requirements of eventual utilization.

The RECORD was very glad to receive the letter above referred to, and just now it may be pertinent to analyze more fully the history and present status of hardwood inspection matters. Formerly lumber exchanges, in the chief commercial centers of the country, formulated sundry rules for the inspection of hardwood lumber. These rules were made almost exclusively by the merchandising element of the trade and differed in details in as many ways as there were exchanges.

The first concerted attempt to make a set of universal hardwood rules came about in Chicago some thirteen years ago when the National

Hardwood Lumber Association was formed. This was a new organization made up primarily of the jobbing element, and was dominated by Chicago dealers.

The original idea of the inspection rules of this association was to establish a system of inspection to standardize transactions between manufacturers and jobbers, and it was distinctly not the intention that the rules should govern the finer manipulation of lumber into yard grades sold to consumers. Gradually, such a turmoil was raised over the allegation that jobbers bought on one grade and sold to consumers on another, that by general consent and understanding the rules were made to apply to all lumber transactions.

As the years have gone by, this development placed the hardwood merchants in rather an unenviable position. The large manufacturers who formerly sold their lumber as "good, common and cull" to the jobbers went into the finer manipulation of stock as provided for by the rules, and sold direct to the wholesale consuming trade. Thus it is that the jobbing element has been obliged to fight for trade that formerly was entirely their own against manufacturing concerns of large capital who found it quite as easy to make specific grades and market their product direct as to do so through the jobbers. It has come about that the jobbing element has been wedged in between the "devil and the deep sea."

The strong competition of manufacturers selling lumber in carload, and often less than carload lots, to concerns who were formerly considered customers only of the merchants, has played havoc with a large proportion of the jobbing trade.

This system of doing business has worked around to a condition where the profits of the merchants have been cut to a point that has left little margin in their transactions. In some instances a certain element in the jobbing trade has succeeded in making fair profits by dint of evasions of the inspection rules, and in some isolated cases by short measurement and other irregular practices, but beyond question the profits of the jobbers on an "up-and-up" and square business

basis have been reduced to very small margins. The people who have been making any considerable money in the jobbing trade for some years have resorted to the making of "special grades" in order to provide lumber at a price and of a quality that would suit the eventual user. They have been obliged to evade the specific grading systems supposed to be in general use. This is the truth covering the situation.

There can be no logical argument presented against manufacturers of hardwood lumber becoming merchants as well as manufacturers if they choose to assort lumber into many specific grades and to pay the added cost of establishing and maintaining competent sales departments of their business to handle the wholesale consuming trade. On the other hand, there is a feeling on the part of many competent and financially responsible hardwood merchants that the manufacturers are not at all times playing the game fairly. The jobbers feel that they have an established trade. They invest their money in stocks of lumber, and they should be protected in their trade, especially when in many cases it is a demonstrable fact that manufacturers can secure better financial results by dealing through the jobber than by selling direct to a scattered and small trade with which they are not familiar.

In the minds of many intelligent hardwood lumbermen the time

### For the New Year

*RESOLVED, That I will not lie to myself: I will not call revenge justice, nor sin weakness, when I hug them to my heart.*

*RESOLVED, That I will not steal from anyone his confidence and faith in others, nor from myself my self-respect.*

*RESOLVED, That I will covet no one's happiness, for I know that love and hate will be mine in just the proportion I mete them out to others.*

*RESOLVED, That I will not murder the pleasant passing hours by useless regret over the past that even Omnipotence cannot change.*

*RESOLVED, That I will keep holy every day, because I will devote it to work and to truth.*

—THE WOMAN BEAUTIFUL.

is now ripe when there should be a revolution in hardwood affairs. There is no good reason to believe that the merchant in hardwood lumber is not an essential and valuable element if his status in the trade be clearly defined, and he have a chance of securing a reasonable profit on his investment, time and labor in the prosecution of his business.

This desideratum can only be brought about by going back to pretty nearly first principles in the sale of forest products. For many years in the white pine trade of this country lumber was largely marketed on the basis of mill run or "good, common and cull," and sold to jobbers at Chicago, St. Louis, Cleveland, Toledo, Buffalo, Tonawanda, and other points for manipulation into a multiplicity of grades to suit the requirements of the eventual user. In a general way this system of selling hardwoods was also quite extensively employed. There would be no general trouble in transactions between manufacturers and jobbers on the basis of the grades of firsts and seconds, No. 1 common, shipping culls and mill culls, or in many purchases on a straight mill run basis. This system surely would clarify the atmosphere and give merchants a reasonable chance to do business on a fairly profitable basis.

Again, there is no good reason why merchants and such manufacturers as make sufficient quantities of stock to enable them to go into the finer manipulation of lumber should not establish a series of grades as outlined in the last issue of the RECORD to suit the exact requirements of the eventual consumer. If the big manufacturer wants to make these numerous grades and sell direct to the wholesale consumer he has the right to do so, if he is willing to pay the cost of doing it. The great mass of minor hardwood manufacturers would not and could not, by reason of the limited quantity of stock produced and their deficiency of knowledge of the subject, enter into this trade. They would sell their lumber *en bloc*, or under the grades of firsts and seconds, common, culls and mill culls, to the jobber, and let him group lumber at advantageous points and assort it to these exact specifications.

This system of doing business would work no hardship on any division of the industry. The big manufacturer could, if he chose, be a merchant and do business in hardwoods in exactly the same way as the Edward Hines Lumber Company, for example, does it in building woods. They could assort their lumber to the twenty or more grades necessary to cover the exact requirements of and sell direct to the factory. The small hardwood manufacturer would find it to his manifest advantage to market his lumber to the jobbing trade. The hardwood jobber could make this same multiplicity of grades now masquerading under the title of "special grades," and could secure a reasonable profit.

The wholesale consumer could also have what he is seeking—established grades made exactly to his requirements for the most advantageous cutting.

This plan would put the manufacturers on a better footing, would put the jobber in better shape, and would be advantageous to the wholesale consumer. It would mean going back to first principles—selling lumber at wholesale and in a wholesale way, and selling in carlots in a carlot way.

Furthermore, it would put out of business the undesirable and piratical element of the hardwood trade—men who sell lumber at any old price—and then make a grade to suit the price, not forgetting a "reasonable" profit for themselves.

The RECORD thinks this subject is worth the earnest consideration of every element of the trade, and it believes that this is the only logical solution to the present hardwood grade embroglio.

### Association Meetings

It is hoped that lumbermen will not fail to attend the association meetings in which they are interested.

On Thursday, January 13, the invariably interesting annual of the Indiana Hardwood Lumbermen's Association will be held at Indianapolis. This meeting usually brings out the full attendance of the Indiana contingent and their friends from neighboring states. This year's meeting should be no exception.

On Friday, January 21, occurs the annual meeting of the Hardwood Manufacturers of Wisconsin at Hotel Pfister, Milwaukee. This is an unusually important meeting and it is desired that all the Wisconsin hardwood fraternity be present.

On Tuesday, Wednesday and Thursday, February 1, 2 and 3, will be held the big annual meeting of the Hardwood Manufacturers' Association of the United States at Hotel Sinton, Cincinnati. A lot of enthusiasm has been aroused over this meeting, as, for the first time in lumber history, the wholesale consumers of hardwoods will take an active part in grade making. It is expected that fully five hundred manufacturers and jobbers will be present at this meeting, and an equal number of leaders in the remanufacture of hardwood lumber into furniture, wagons, automobile bodies, coffins, caskets, etc. Matters of the greatest importance to the trade will be discussed at this meeting, and undoubtedly the legislation will be of great moment to the future of the industry. The entertainment features provided for the function are elaborate and interesting.

The daily "doings" of this convention will be recounted in three special issues of HARDWOOD RECORD, which will not only be distributed at the convention, but more than two thousand extra copies daily will be mailed to prominent manufacturers and wholesale consumers throughout the country.

The American Forestry Association holds its annual meeting at Washington, on Tuesday and Wednesday, January 18 and 19, which should be attended by such of the lumber fraternity as are interested in forest conservation.

On Wednesday and Thursday, March 2 and 3, at the Sinton Hotel, Cincinnati, will be held the annual meeting of the National Wholesale Lumber Dealers' Association. This meeting should not only call out the larger number of eastern wholesalers in both building woods and hardwoods, but also include the attendance of large delegations from all the important trade centers of the Middle West and South.

### Technical Publicity Association

The Technical Publicity Association is the name of an organization made up of the advertising managers of a good many of the leading machinery manufacturing houses of the country. The president of this organization is Chas. S. Redfield of the Yale & Towne Manufacturing Company, and the headquarters of the institution are at 202 E. Twenty-third street, New York, at the office of the secretary, H. Harrison Kress, of the A. S. Cameron Steam Pump Works, of New York. Affiliated as members are quite a number of the advertising managers of manufacturers of electrical, logging and woodworking machinery.

The Technical Publicity Association is attempting to work out logical means of insuring the best possible advertising results for the houses they represent. It is giving considerable attention to the trade press, and while working in perfect harmony with publishers, is in a measure insisting that trade newspapers shall supply them with definite information covering the quantity and character of circulation, the distribution of this circulation and other facts. The association is working on the theory that if they spend money in advertising in the trade press they should know what they are buying.

The HARDWOOD RECORD is entirely in accord with the tenets of this business organization, and can see no more reason why a publisher should not supply an advertiser with definite information covering breadth and character of circulation than should a machinery man refuse to tell a prospective buyer something of the character and capacity of the machine he proposes to sell.

Members of the Technical Publicity Association are not foolish enough to demand a vast volume of miscellaneous circulation from trade publications. What they do expect is a circulation among a class that are probable buyers of the tools they wish to sell, and that this circulation shall cover with reasonable fidelity the majority of this special class.

The trouble with the average trade paper publisher is that he is ashamed of his circulation, and is afraid to turn loose facts about it for fear that it will be compared with the million circulation of the Ladies' Home Journal, to his disadvantage. This is illogical

reasoning, for an advertising announcement in a logically circulated trade paper of five thousand circulation is worth more to the average machinery man than the same advertisement would be in a publication having a million miscellaneous readers.

The Technical Publicity Association has frequent meetings and invites to these gatherings representatives of the leading trade journals, at which time opportunity is given for a free discussion of all phases of trade paper publicity. The association is a good thing, and the RECORD wishes it the greatest possible success.

## The Trouble of the Railroads

The demands being made upon the railroads by their operators for more wages based on the plea of increased living expenses is still an important topic in the railroad world. The claims of the organized switchmen's union against the railroads by mutual agreement with the road managers has been referred to arbitration. It is to be hoped that the affair can in this manner be settled amicably, and also that claims of other railroad operators can be handled in the same way and an impending strike avoided.

Railroad managers are doing everything in their power to conciliate their employees. With the demand for higher wages on one hand and legislation forbidding an increase of freight rates on the other, they are really "between the devil and the deep sea." On top of their other troubles the snow and sleet storms prevailing over a large area of the country during the last two weeks have played havoc with railroad business. Nearly every passenger train between the Atlantic seaboard and the Rocky Mountains is running hours late and a great many freight trains are at a standstill. In some cases there is a paucity of available food and fuel supplies and prices on the necessities of life have been boosted in Chicago, New York and other cities. The extreme cold that has accompanied the recent storms has entailed an immense amount of suffering not only on the part of railroad employees but on the poor over a wide range of country.

## Pinchot and the President

Gifford Pinchot, chief of the Forestry Division of the United States, is a very patient man. For years he has been assailed by lumbermen, by coal men, by waterpower trusts and everybody else who wanted to grab chunks of Uncle Sam's property without paying a just equivalent for it, and heretofore he has held his peace.

Mr. Pinchot, in the light of recent events, is more deeply interested in conserving, for the benefit of the general mass of citizens of the United States, their equity in the public domain than he is to hold his job and continue to be a football for sundry politicians and the grafters a good many of them represent.

A few days ago in New York, in discussing the conservation question as a moral issue, Mr. Pinchot suggested that steps be taken to restrict the tactics of monopolies. He declared the people had been the victims of a system of plunder and that special interests have made repeated attacks on the United States Forest Service, and these attacks have increased in violence just in proportion as the service has offered effective opposition to predatory wealth. He believes that the American people have made up their minds that the natural resources of the country must be conserved, but this settles only half the question. He asks: "For whose benefit shall they be conserved—for the benefit of the many or for the use and profit of the few?"

Mr. Pinchot continued:

The conservation issue is a moral issue. When a few men get possession of one of the necessities of life, either through ownership of a natural resource or through unfair business methods, and use that control to extort undue profits, as in the recent cases of the sugar trust and the beef packers, they injure the average man without good reason, and they are guilty of a moral wrong.

I believe in one form of government and I believe in the golden rule. But we must face the truth that monopoly of the sources of production makes it impossible for vast numbers of men and women to earn a fair living. Right here the conservation question touches the daily life of the great body of our people, who pay the cost of special privilege. And the price is heavy.

The people of this country have lost vastly more than they can ever regain by gifts of public property, forever and without charge, to men who gave nothing in return. It is true that we have made superb material progress under this system, but it is not well for us to rejoice too freely in the slices the special interests have given us from the great loaf of the property of all the people.

The people of the United States have been the complacent victims of a system of plunder often perpetrated by men who would have been surprised beyond measure to be accused of wrongdoing, and many of whom in their private lives were model citizens. But they have suffered from a curious moral perversion by which it becomes praiseworthy to do for a corporation things which they would refuse with the loftiest scorn to do for themselves. Fortunately for us all, that delusion is passing rapidly away.

It is the honorable distinction of the forest service that it has been more constantly, more violently and more bitterly attacked by the representatives of the special interests in recent years than any other government bureau. These attacks have increased in violence and bitterness just in proportion as the service has offered effective opposition to predatory wealth. The more successful we have been in preventing land grabbing and the absorption of water power by the special interests, the more ingenious, the more devious and the more dangerous these attacks have become. A favorite one is to assert that the forest service, in its zeal for the public welfare, has played ducks and drakes with the acts of Congress.

The fact is, on the contrary, that the service has had warrant of law for everything it has done. Not once since it was created has any charge of illegality, despite the most searching investigation and the bitterest attack, ever led to reversal or reproof by either house of Congress or by any congressional committee.

Another, and unusually plausible, form of attack is to demand that all land not now bearing trees shall be thrown out of the national forests.

Still another attack, nearly successful two years ago, was an attempt to prevent the forest service from telling the people, through the press, what it is accomplishing for them, and how much this nation needs the forest.

Since the forest service called public attention to the rapid absorption of the water power sites and the threatening growth of a great water power monopoly, the attacks upon it have increased with marked rapidity. I anticipate that they will continue to do so. Still greater opposition is promised in the near future. There is but one protection—an awakened public opinion. That is why I give you the facts.

Secretary Ballinger believes that Gifford Pinchot has been instrumental in throwing the lime-light on sundry transactions of his department, and has reached a point of peevishness and has demanded a congressional investigation. It has therefore transpired that a committee of the Senate and House has been appointed to investigate (?) and tell the story of Mr. Ballinger's transactions. As the committee is made up, it is very easy to assume in advance that Mr. Ballinger will come out of the mixup with a clean bill of health; in fact, he will make the Apostle Paul look like the star member of the Black Hand fraternity.

Gifford Pinchot is on the level, and the RECORD is with him first, last and all the time. It sincerely trusts that he will keep on telling the truth and thus keep up the fight that has been inaugurated for the conservation of the public domain for the benefit of the people and not for the individual.

It is a mighty sure thing that Pinchot is not going to desert under fire. He will probably "get fired," but this will be only another nail in the coffin of the present administration.

Just wait until Teddy gets back on the job!

[Editors' Note: The foregoing article was written early last week, and the prophecy it contains has been fulfilled, for President Taft requested the resignation of Gifford Pinchot on Friday last.

To the mind of every intelligent and fair-thinking man who has kept in touch with the splendid work of Mr. Pinchot in connection with the Forest Service, the action of the president is the culminating blunder of his administration.

I used to think I had some grudges against Theodore Roosevelt, but they are all wiped out now save his one monumental offense, the selection he made for the Republican presidential candidate in the last campaign.

[I again repeat, "Just wait until Taddy gets back on the job."]

## The Forestry Situation.

It is perhaps ironical to start in this issue of HARDWOOD RECORD a series of articles on the subject of the Status of Forestry in the United States. As a matter of fact, under conditions as they are today forestry has no status of any sort in the United States.

## Pert, Pertinent and Impertinent

### Perfectly Proper

She lit a cigarette  
I don't approve of smoking  
Not for ladies, no! and yet  
I shall never forget  
And I could not but admire  
As she lit that cigarette.  
How she set the thing afire

First she hunted high and low,  
'Till she found a box of matches  
Then she set one all aglow  
Does she smoke? My goodness, no!  
Certainly, you must divine,  
Though she lit a cigarette,  
That the cigarette was mine!

### Just Facts

If you're sailing pretty fast,  
That you can't use as a "chaser"  
The water that is past.  
And then again you'll notice, if  
You're drifting down the stream,  
That the milk of human kindness  
Generates but little cream.

## Which is the Cheaper Fuel

Coal at \$4.50 a ton or Hardwood Cuttings at \$45.00 a thousand feet?

### My Real Life

Resistance my religion is,  
Repression is my creed;  
My real life is that which I  
Have never dared to lead.  
—Harold Susman, in *The Smart Set*.

### Often Miffed

Even one's wife,  
"Light of his life,"  
Is without doubt  
Often "put out."

### The Humble Optimist

When the whole dern world has gone to pot,  
And business is on the bum—  
A twig in a rim and a lifted chin  
Helps some, my boy, helps some.

ANNA LEWIS

A woman is never as  
hard to understand as  
she thinks a man thinks  
she is.

The man who isn't  
afraid of work can al-  
ways find plenty of it  
to do.

Many a man imag-  
ines he is wielding a  
big stick when in real-  
ity he is only using a  
small hammer.

We might do more  
work for posterity if it  
wasn't such slow pay.

A woman seldom has  
any time to be thank-  
ful for the things she  
has because of the many  
other things she wants.

Even sensible men  
talk nonsense to women.

Youth is the spring-  
time of hope; but when  
a man gets a little  
older he stops hoping  
and begins to reach out  
for anything he can get  
his hands on.

The landlady goes to  
extremes when she feeds  
her boarder's headcheese  
and pigs' feet.

Money talks, but it  
doesn't always make  
a satisfactory financial  
statement.

Lot's wife probably  
turned around to see  
what another woman  
had on.

The man who can  
tell you just how a  
thing ought to be done  
is seldom busy.

# Builders of Lumber History

NUMBER LXXXVII

EDWARD E. SKEELE

(See Portrait Supplement)

One of the best known and most forceful individuals engaged in the lumber business in Chicago is Edward E. Skeele, vice-president of the Estabrook-Skeele Lumber Company, whose portrait appears as supplement to this issue of **HARDWOOD RECORD**.

Mr. Skeele was born September 7, 1863, at Kenosha, Wis. He is of English ancestry, his forebears having settled in New England before the Revolution. Mr. Skeele's father was J. H. Skeele, an old-time Chicago lumberman of the house of J. H. Skeele & Co., which operated in this market from 1875 to 1880, inclusive.

Edward Skeele came to Chicago as a lad with his parents in 1869. He attended the public schools, from which he was graduated, and completed his education at Amherst College, from which he was graduated in 1885. When he was but fourteen years of age he gained his first knowledge of the lumber industry working for his father during school vacation, until the latter went out of business.

Afterwards Mr. Skeele was employed by the Michigan Lumber Company of Chicago, a white pine house, for about a year, and for five or six years he was engaged with the A. F. Fisher Lumber Company, another white pine institution of this city. Later during a like period he was associated with S. R. Fuller & Co. of Chicago. Four years, or until 1904, he spent buying and selling lumber for the big Paepcke-Leicht Lumber Company, whose headquarters are in Chicago. Mr. Skeele observes that it was under the tutelage of Herman Paepcke, president of that institution, that he had his best training as a lumberman.

In 1904, together with T. S. Estabrook, the Estabrook-Skeele Lumber Company was organized, which has become one of the dominant factors in the hardwood jobbing business of Chicago, and an important factor in the manufacture of lumber as well. The Estabrook-Skeele Lumber Company handles from forty to fifty million feet of lumber annually, specializing in northern hardwoods, but it also markets a considerable quantity of southern hardwoods, white pine and hemlock.

Mr. Skeele is a director in the allied manufacturing institution, the Newhouse Mill & Lumber Company at Gould, Ark., which makes a specialty of gum and oak. He is a director in a second allied house, the Turtle Lumber Company of Columbus, Miss., which manufactures oak, hickory, gum, ash and cottonwood, and he is also a director in the Gould-Southwestern Railroad, in which he and his associates are prominently interested. This is a standard-gauge road running from Gould on the Iron Mountain road to Star City, the county seat of Lincoln county, and is an important line some thirty miles in length, penetrating a rich section of the state,

Mr. Skeele is married and has two children, a boy and a girl. He lives in the handsome Chicago suburb of Beverly Hills.

It goes without saying that to build up a business of the importance of the Estabrook-Skeele Lumber Company and its allied institutions, in the growth of which Mr. Skeele has been so prominently identified, that there must needs be something in the man's make-up considerably above the average. He has the reputation among his associates in business, as well as in the trade at large, of strict integrity and an ability to analyze very carefully the commercial possibility of every undertaking. One friend describes him as a "born merchant." He has the happy faculty of giving little attention to minor details, but focusing his entire energies on important matters. A one, two, three or half dozen car purchase or sale is not of much moment to him, but a deal that involves one to three or four million feet of lumber arouses his interest, and to such trade he devotes his best energies.

With his extensive acquaintance with lumber producers and with the chief buyers of lumber *en bloc*, he has a close alliance, and their confidence to that extent, that he makes a good many purchases and sales involving large sums of money.

Mr. Skeele has but few fads. To a moderate extent he is interested in golf, but much more so in his home and family. He is a close student of association affairs and is a valued member of the Chicago Hardwood Lumber Exchange, in which he at all times advocates clean business and progressive methods. In the trade he is equally distinguished as a buyer and a salesman, which largely makes for his success in lumber merchandising.

It is with a good deal of pleasure that the **RECORD** prints this brief sketch of Mr. Skeele, that those who are not acquainted with him may be able to better judge of the character and worth of this upright and successful Chicago lumberman.

## Utilization of Hardwoods

ARTICLE XXXIV  
WOOD CARVING

The wood carving art is centuries old; indeed, it is said that wood was the sculptor's first material. Many intricate and beautiful examples of the art are to be found among highly esteemed relics in various old museums. The products of the sixteenth century, during which period the art was at its height, are interesting as showing the development of the art.

The reason wood was early used as a material for the sculptor was because its texture and warmth, as one famous carver stated, "was preëminently the comfortable material for architectural furniture." It gives variation to the object besides grace and beauty.

Marble and metal, in the early part of the last century, replaced wood more because they afforded a quicker and more economical means of construction than for any other reason. This has been particularly true in the United States during the past thirty-five years, because of the rapid development of the country. There is a gradual change apparent in this particular, however, in the better grades of art. Metal always will be used in the cheaper grades.

There are many varieties of wood that can

be, and have been, carved, but for general purposes only about twenty kinds are now used. These twenty are favorites because they cut with a clean, sharp line and because their grain is so straight as to enable them to be worked with less trouble and risk of splitting than other woods. Among these woods are oak, bog-oak, walnut, lime or linden, holly, pearwood, chestnut, mahogany, pine, fir, American whitewood or basswood, cherry, sycamore, satinwood, boxwood, ebony and cedar.

Seasoning is of the greatest importance in wood to be used for hand carving and wood for this purpose is kept for a year or two to insure its being thoroughly dry. Oak, so far as is known, has been used for carving longer than any other wood. It is hard, firm and compact, glossy and smooth, with an even surface. However, it requires a skilled workman because of its hardness. Most of the carvings of the Middle Ages, many of which are still to be found in the churches and abbeys of the older countries, were wrought from true British oak. Bog-oak is often used for carving, particularly in Ireland, where, among the peasantry, it is an important industry. This wood is hard, close-grained and brittle and finished with a smooth, glossy surface. When finished it closely resembles ebony. Walnut is also a favorite wood for this handicraft. Carving is usually left in the natural tone of the wood; varnish and stains are rarely if ever used.

All carvings are made from special designs, pencil drawings. The designs cover all articles of furniture, figures for churches, pedes-

EDWARD E. SKEELE

CHICAGO, ILL.

tals, column bases, newell posts and ceiling and woodwork decorations.

Each piece of carving is composed of but one kind of hardwood. On fine grades of furniture carvings of handsome design in expensive and rare woods are growing in popularity, and the public is gradually being educated to appreciate the beauty of hand work as compared with the ornate and over-decorated articles made by machine. However, there is no danger that hand carving will ever interfere with machine-turned decorations to any serious extent, as no army of hand carvers could ever supply the demand for the vast amount of turned goods used nowadays.

The work of the carver requires most painstaking attention to details. No carver ever has less than eighteen tools, which are used on every piece of work he turns out. At his bench he has a round, movable table that permits him to take any position desired before

his design. Several kinds of bench screws, vises and the like are also important elements in the work. Joints, such as making a small part fit into another, are glued. There are, however, any number of designs that are not made up of parts, but are carved out of a solid piece of wood. This is true, as it was centuries ago, of figure carving and animal and pictorial designs at present used quite extensively on buffets and cabinets and other high grade furniture, and for the interior decoration of churches. The famous carving of St. John the Baptist was carved of one massive piece of mahogany.

Modern carving, while not as intricate and elaborate as that of the old masters, is quite as effective and artistic. Many pieces of carving by the old masters are wonderful examples of handiwork, every inch of space being worked out with carefully manipulated designs.

HAND-CARVED FROM SOLID MAHOGANY

The large half-tone of the ebony cabinet is typical of the carving of the old masters. Every inch of space is carved, and the accuracy with which the intricate designs are worked out of hard and unyielding ebony is remarkable. The work is a wonderful monument to the patience and skill of these old wood carvers. The cabinet now forms part of the royal collection at Windsor Castle.

The small illustration of the stool is of modern French design. It was carved in

MODERN FRENCH WORK IN PEARWOOD

pearwood and was the work of a young French artist, E. Bagnès. It was shown at the Paris Exhibition in 1900. The other cuts accompanying this article show carving in solid mahogany done at the factories of W. K. Cowan & Co., Chicago, to whose kindness the RECORD is indebted for their use here. This concern makes most exquisite mahogany furniture, much of it with hand-carved decoration.

INTERESTING SPECIMEN OF OLD CARVING. FLEMISH WORK IN EBONY

# THE STORY OF YELLOW POPLAR

Illustrations from Photographs by Editor Hardwood Record

In November last the editor of *HARDWOOD RECORD* received an invitation from C. M. Crawford, secretary and treasurer of the Yellow Poplar Lumber Company of Coal Grove, O., to visit himself and Leon Isaacson, vice-president of the company. The invitation was accepted. As a result of the conference, Messrs. Isaacson and Crawford, accompanied by the writer and several other guests, left Ashland, Ky., on the morning of Monday, November 15, for a trip to the company's timber and logging operations in Dickenson county, Virginia. On this tour it was arranged that the editor of *HARDWOOD RECORD* should prepare and write a series of illustrated stories telling of poplar timber growth, the history and development of the poplar industry up to the present time, and specifically recite the details of the operations of this foremost yellow poplar manufacturing house—the Yellow Poplar Lumber Company.

The trip was an intensely interesting one, and a series of articles reciting not only the details of this trip, but giving also a general history and analysis of the poplar industry, in which special reference will be made to the wonderful operations of the Yellow Poplar Lumber Company will appear in this publication.—  
[EDITOR]

## CHAPTER I

Yellow poplar, or whitewood as it is commonly called in the eastern sections of the United States, is the most esteemed and the highest priced American hardwood. From a physical viewpoint it is not a hardwood, but it is among the broad-leaved trees and is commercially classed with the hardwoods and is manufactured and marketed by that branch of the lumber trade.

Yellow poplar has been recognized as a high class wood for many purposes since the earliest days of lumbering in this country. It has continued to advance in value following the extinction of high grade white pine timber of large size, owing to the fact that it is adaptable to nearly every purpose for which white pine was formerly employed and for many uses where white pine was not regarded as valuable. Commercially, yellow poplar is the natural successor of high-grade cork pine lumber.

The original growth of this wood extended from southern Ontario to Rhode Island and west to Lake Michigan; throughout Michigan as far north as the Grand river; south to Florida, southern Alabama and Mississippi, and west of the Mississippi river in southeastern Missouri and adjacent Arkansas.

The physical characteristics of the wood are as follows: Weight,  $26\frac{1}{2}$  to  $38\frac{1}{2}$  pounds to the cubic foot. It is without smell or taste. The grain is very fine, but spongy; it splits with a clean edge; the surface is dull, the little luster being due to the shining pores.

The bark is very thick, often as much as one inch, and is in two layers. The inner layer is much like the sapwood and is about one-quarter of an inch in thickness in old growth, and nearly white in color. The outer bark is of a dull gray color; is corky and deeply fissured. The heartwood of poplar in its highest development is canary-color, running to white, greenish, gray or brown, in various environments, in different localities.

and upon varying soil. The highest and most esteemed quality of poplar is canary colored, the thin sapwood of which is white to brownish in tone.

The rings of growth of poplar are clear on account of the very fine boundary line of autumn wood. The contour of the tree is round and somewhat undulating, and there is a slight difference in the color of the spring and autumn wood.

The leaves of the poplar tree are of marked shape, and once identified can never be mistaken. The flower is also unusual and very beautiful. The leaves vary from three to eight inches in length. In the springtime, when the tulip-like flowers of this tree are in bloom, it is truly a beautiful sight.

Botanically, poplar is of the family *Magnoliaceae*, genus *Liriodendron* and species *tulipifera*. The tree is a native of America and the sole surviving species of its genus. In shape it is dull and round, with spreading branches. In height it ranges from sixty to one hundred ninety feet. It blooms from April to May. The fruit ripens in September and October, these features depending on the latitude or compensating altitude of its growth.

In size the trees vary from the sapling to five, six, seven, eight, up to as high as nine feet in diameter at the base and are the largest trees that grow in the United States east of the Rocky Mountains. The wood is therefore obtainable in large-sized planks. It is comparatively free from tree diseases, and hence boards of extreme width, from seventeen inches to often even as high as sixty inches are obtainable in the process of manufacture.

Poplar never grows in a pure stand, that is it never constitutes a comprehensive forest growth. Ordinarily one tree to an acre is regarded as a good stand in what is known as poplar timber area. In long years of woods cruising, the greatest number of poplars ever encountered by the writer in a single

A FULLY MATURE YELLOW POPLAR.

group was seven, which were contained in an area of a quarter of an acre. The poplar ordinarily stands alone in a forest and seems a veritable monarch among the surrounding trees. The finest specimens of poplar are found in the deep coves of the mountain regions of Virginia, West Virginia, Kentucky, Tennessee and North Carolina. The best growth is found in heavy and rich soil.

The heaviest and richest growth of poplar in the United States undoubtedly is that of the Big Sandy river region of Kentucky, West Virginia and Virginia. The yellow poplar of this section has become famous in the annals of poplar production as of the very highest type in texture, in color, and in all the qualities that make up a high-class lumber product.

The Big Sandy river, for a stretch of one hundred and fifty miles, is the dividing line between eastern Kentucky and western West Virginia. The river has a multitude of branches in Virginia, in Wise, Dickenson and Buchanan counties, three of the four extreme western counties of the state that border on Kentucky.

Big Sandy poplar has made the wood famous, but the region tributary to the river for a distance of one hundred and fifty miles above its mouth has been exploited ever since poplar manufacture commenced, and is now practically exhausted of this timber. The same, or even a higher type of the wood, exists on the tributaries of the upper reaches of the stream, and in Dickinson county, Va., is found the very highest type of poplar growth that ever existed. In quantity of stand per acre the Big Sandy region is far in excess of ordinary poplar areas. It often shows an average of twenty-five hundred feet per acre, and is usually intermingled with a high type of white oak. In fact, the stand of white oak per acre is considerably in excess of that of poplar. There is also intermingled other woods, red oak, chestnut and beech, but from a commercial viewpoint the growth is essentially poplar and white oak. The same observations in regard to Big Sandy poplar being the highest type that exists is equally true of white oak growth of this section. Both of these woods to reach their highest development require good soil, and such obtains along the entire watershed of the Big Sandy river and its tributaries.

It is in Dickinson country, Va., that the present and final yellow poplar timber holdings of the Yellow Poplar Lumber Company are located. In this county the company has yet remaining after this year's cut more than one hundred million feet of virgin growth. The present season's output will approximate forty million feet. This timber has already been felled and transported to the gorge of Russell Fork, one of the main branches of the Big Sandy river, and is now being splashed out to the lower river, where it is being rafted and floated down the Big Sandy to Catlettsburg, and thence will be transferred across the Ohio river to the Yellow Poplar Lumber Company's log harbor at its big sawmills at Coal Grove, O.

NOT EXCEPTIONAL BUT TYPICAL OF YELLOW POPLAR LUMBER COMPANY'S TIMBER

## Veneer Production During 1908

Following is the annual federal report on veneer production for 1908, compiled through the coöperation of the Bureau of the Census in the Department of Commerce and Labor, and the Forest Service in the Department of Agriculture. The work was conducted under the direct supervision of a committee of four, consisting of W. M. Steuart, chief statistician for manufactures, and J. E. Wheelchel, expert chief of division, representing the Bureau of the Census, and R. S. Kellogg, assistant forester, and A. H. Pierson, forest assistant, representing the Forest Service.

The growth of the veneer industry during 1908 was rapid, as it had been during the preceding few years. Returns for the year 1908 were received from 402 establishments in operation in 34 states as compared with 370 establishments in 30 states in 1907. The development of this industry follows logically the growing scarcity and increasing cost of timber, as a result of which, economy in the use of wood is being practiced in numerous ways, one way being the substitution of thin lumber for thick. Formerly veneers were manufactured from the cabinet woods exclusively, and their use confined to the covering of inferior woods. While this class of veneers still forms an important part of the total product of the industry, by far the larger and more rapidly increasing part is made up of veneers manufactured from inferior hardwoods

and a few of the conifers, and utilized as material in the manufacture of "built up" lumber, packing boxes, crates, barrels, baskets, etc.

Of the veneers prepared by the three processes—rotary cutting, sawing and slicing—the first-named process is much the more extensively used, especially in the case of the cheaper woods, while sawing and slicing are the methods generally employed in manufacturing veneers from the more expensive cabinet woods. In the case of bird's-eye maple and curly birch, however, the peculiar figure in the grain is best shown in tangential section, and rotary cutting is the process usually employed.

The quantity of timber consumed in the manufacture of veneers during 1908 exceeded the quantity so consumed during the preceding year by 34,019,000 feet, log scale, or 9.8 per cent. Increases are shown for both the domestic and the imported woods. The relative increase was much greater for the imported than for the domestic woods, the rates being 71.9 per cent and 7.6 per cent, respectively. Of the twenty-three domestic woods reported separately in both 1908 and 1907, all but eight showed increases in quantity, the increases ranging from 0.8 per cent for elm to 270 per cent for Douglas fir. Comparisons for individual species of the imported woods consumed can be made only for mahogany and

Spanish cedar, as these were the only kinds shown separately in both years. The consumption of mahogany was 70.9 per cent greater in 1908 than in 1907, and the increase in the quantity of Spanish cedar used was 67.2 per cent.

The largest actual increases in the consumption of domestic woods occurred for red gum, yellow pine, beech, sycamore, tupelo and walnut, while the largest actual decreases are shown for yellow poplar, white oak and basswood.

The quantity and cost of material used in the manufacture of veneers in 1908 are shown, by kinds of wood, in the accompanying table.

While domestic woods supplied 94.8 per cent of the total quantity of wood consumed during 1908 in the production of veneers, their cost formed only 70.7 per cent of the total cost of the cut of all woods for that year. The average cost per thousand feet, log scale, for all woods utilized in veneer manufacture increased from \$18.47 in 1907 to \$20.63 in 1908, the gain being \$2.16, or 11.7 per cent. This increase, however, was due entirely to the fact that the proportion of the high-priced imported woods in the total quantity used was larger in the latter than in the former year, and the average cost per thousand of these woods advanced from \$103.38 in 1907 to \$115.67 in 1908. Of the imported woods, Spanish cedar had the largest increase in average cost per thousand feet, the average advancing from \$72.44 to \$121.52. While increases occurred in the average cost per thousand feet in the case of nine domestic woods, the average for all domestic woods decreased from \$15.53 to \$15.38. Among the woods for which important changes in price were reported were white oak, with an increase from \$35.56 per thousand feet to \$47.44, and sycamore, with an increase from \$9.96 to \$13.44. On the other hand, the average cost of walnut decreased from \$70.39 to \$60.53 and that of magnolia from \$15.46 to \$8.31. Smaller actual decreases occurred in the case of eleven other domestic woods.

In 1904 plants manufacturing veneers were reported from only twenty states, and the industry was, in the main, confined to four North Central states, namely, Illinois, Indiana, Michigan and Wisconsin. In 1908 plants were reported from thirty-four states, and the four mentioned, though still important in the industry, had ceased to monopolize it. The extent to which the industry is becoming distributed is indicated by the fact that in 1908 the four leading states in the production of veneers were Florida, Illinois, Indiana and Tennessee.

Naturally the industry is, in general, confined to sections where suitable timber abounds, and the kind of timber most used in each state depends, in a measure, upon the prevailing species there. Thus red gum is the principal timber used in Arkansas, Illinois, Kentucky, Missouri, Tennessee and Texas, where this wood is plentiful; yellow

QUANTITY AND COST OF VARIOUS WOODS USED IN VENEER PRODUCTION IN 1908

pine is the material principally used in Florida and Georgia; maple in Michigan, New York and Pennsylvania; birch in Vermont and Wisconsin, and oak in Indiana.

Several of the states, noticeably Indiana, Michigan, New York and Ohio, reported a wide range of woods used in the manufacture of veneers. This is largely due, especially in the case of New York, to the utilization of timber from other states and of imported woods.

In former reports upon the veneer industry, statistics of the quantity in square or superficial measure of veneer produced have been presented. The attempt to give such information was abandoned in the case of the

present report, however, because it was found that accurate records covering this point were not kept by all establishments. Statistics as to the thickness of the veneers manufactured and the amount of material used in the production of veneers of each thickness are generally kept, and from these data the square measure of the stock produced may be estimated. The number of square feet of veneers yielded by a given amount of timber depends upon the thickness of the veneers and the amount of waste. The latter varies widely, and depends upon the quality of the material and the method of manufacture. If the percentage of waste is known, the amount of veneers produced per thousand feet of timber

may be approximated by deducting the waste and multiplying the remainder by the number of thicknesses of veneers per inch.

The thicknesses of most of the rotary-cut veneers are multiples of one-sixteenth of an inch. The amount of timber used for veneers one-eighth and three-sixteenths inch in thickness formed 37.1 per cent of the total amount reported for this process. In general, the sawed or sliced veneers are thinner than the rotary-cut veneers. This is shown by the fact that in the case of the last-named process the largest amount of material used in making any one thickness was for the  $\frac{1}{8}$ -inch stock, while for the other two processes the greatest amount was used for 1,20-inch stock.

## A Forestry Student's Letters to His Father

### SECOND SERIES

DARMSTADT, GERMANY, NOV. 28.

My Dear Father:—

Well, at last, I am settled, and I sure am glad. My trunk arrived yesterday and to my dismay I found that my typewriter was broken in transit and I will not be able to use it until I return to America, as I do not believe they have a foreign agency.

Jones and I are located in a good place, with a fine old German Frau as a landlady. She cannot speak a word of English, nor can anyone else in Darmstadt, I believe, and we have a hard job making ourselves understood at times. However, I find that my German is not so bad, and as a rule, I get along all right.

I had the greatest experience of my life yesterday. Jonesie, Jerry and I were eating in a Rathskeller, and at a table nearby sat a German "Student Corps" (fraternity), such as you saw with Mansfield in "Old Heidelberg." They had their colors above their table, which is always reserved for them. All wore the little caps which are shown on the postal I am sending. Finally, one fellow passed me and I asked him, "agreeable?" and put out my hand. He was a fine fellow, and while it is not their custom to shake hands he took mine and introduced us all to his friends. We had quite a hard time talking to them, but finally got on all right. Then the young fellow who introduced himself invited me to a "kneipe" that evening. I did not know what that was, but I said I was game and he said he would call for us at eight o'clock. I got another forester, named Sanderhagen, who speaks German, to come with us and we were all ready here in my room when Lehner, the young student, arrived. He led us to their club house, which is extravagantly furnished, and introduced us to the rest of the Corps Franconia. A fine crowd of fellows they were, and they entertained us in great style. A "kneipe" is a beer drinking party among students. I am sending you a postal of the house, and you will notice where it was held.

On next Friday, the students of this corps fight the students of another corps, and I am invited to the duel. They fight with swords and every man in a corps must fight three times. All of these fellows are cut up. One man had about seven cuts on the top of his head, and you see fellows on the street every day with their faces bound up. They are proud of their wounds and to make them look big they often rub cigar ashes in the cut when it is made. They were very impressive last night and they drank our health with a long toast from the president.

The affair opened with a lengthy speech by the president about the Grand Duke of Hesse, their state. His birthday occurred Thursday and after the speech everyone arose and yelled "Hoch" three times, and clinked their steins. It was very interesting, as well as a great honor to us. I learned today that they seldom invite strangers or any guests to these affairs.

I never saw such politeness as is exhibited here. Men do not shake hands. They tip their hats very low and bow almost to the ground. If you enter a door with a German, he will say "Bitte schön" and bow to the ground, and absolutely make you go first.

In drinking, if you say "Prosit" to a man, you must drink all your beer, or it is an insult, while he only takes a swallow. However, if he wants to be real polite to you, he will also drain his glass. That is a compliment, indeed.

After having met a man, one must always pass to his left on the street, otherwise you have been impolite.

In a rathskeller, if you leave the top of your beer mug open while it has beer in it, you are liable to have seven or eight empty steins put on top of it by others around the table, and then you get stung for the drinks. That is the only time you can treat. They never drink water here. I am so sick of beer that I cannot go it any more, so I always order mineral water with my meals. I pay twenty-five marks per month for my room and breakfast, without light or heat, which is extra. Twenty-five marks are about seven dollars in American money.

The woods here are great. Trees grow so close together that they utilize every bit of sunlight, so that the woods are always dark. Fires never occur here, as the whole affair is covered by a network of fire lanes and roads, making them easily accessible. As a result of no forest fires, the ground is wet and porous always, so that one sinks in over his shoe tops when walking. It is very interesting, this forestry work over here, and I think I will learn a lot which will be of value to me in the future. We have a fine German forester as an assistant, and he sure does know his business.

Now that the Doctor gives us all of his time we find it requires a little more of ours. Lectures last from 8:30 to 12:30 every morning; one hour is given for eating and then it's to the woods until dark. Field work consists of estimating timber and sylviculture trips through these immense tracts which can be seen surrounding the city of Darmstadt.

Timber here consists chiefly of beech and

white oak for hardwood, while Scotch pine and Norway spruce (*Picea excelsa*) are the leading conifers. The stands are very dense.

Absolutely no forest litter exists on the ground. Dead or fallen trees are not seen because they are immediately disposed of by the excellent means of transportation existing in the woods. Even fallen branches are picked up by the peasants who twice a week swarm through the woods like bees in search of firewood. Underbrush is unknown here because of an absence of light underneath and because the trees take all the nourishment from the ground.

Lumbering is done in the most economic manner possible. When a tree is felled it is uprooted by a clever felling device which simply pushes it over by means of props forced upward against the bole. Roots and fagots are worked up as well as lumber and cordwood. The felled trees are sold by auction in the woods. They are not dissected but are left to be cut up at the discretion of the highest bidder.

In working up lumber the logs are individually "bastard sawn" and the boards then piled in the same position as they occupied in the log. This is a good plan, for then wood of the same texture and color (factors varying with the individual tree) can be worked up into one desired piece of furniture, finish or flooring.

We visited a furniture factory the other day and were surprised to find that only veneered furniture is made here, and the finished product far surpasses that of our own manufacture.

For the past three weeks Dr. Schenck has had us estimating the various stands in proximity to Darmstadt. Our work consists of estimating by the "strip method" and in making "form factors" for the various species in order to ascertain the stand per acre. The work continues every day, rain or shine, so that now the good folk of Darmstadt are no longer astonished when a gang of forty American lumber Jacks clad in Mackinaw coats, flannel shirts, riding breeches and hob-nailed boots, go tramping through the streets on their way to the woods, headed by "the man who looks like the Kaiser."

We have been very well received here and everyone is so enthusiastic that we feel sure that B. F. S. will pass safely this critical stage of her career.

December 2.

Dear Father:—

Here goes for a short letter before supper. I have been out in the woods all afternoon estimating timber and am pretty tired tonight. Things are going nicely. I wish you could see how comfortably we are fixed here. Jones and

I have the best rooms of all the fellows. Our sitting room is very light and comfortable, with a stove and a piano, while the bedroom is fixed up nice with "Old Glory" right beside my bed. We sleep with a mattress over as well as under us, a feather one. Our landlady—Frau Keller—is a fine old German woman and as neat as wax. She blacks our shoes for us every night—they all do—and sews on buttons, etc., whenever they are needed. I actually have to hide my high logging boots to keep her from shining those.

Last night I attended one of the best things ever. The President of the University invited us to a grand "kneipe" given in honor of the Grand Duke and including every student in Darmstadt. There were over five hundred German students seated, each with his colors on, etc., and sitting with his fraternity. I never saw so many ribbons, brass buttons and swords in my life.

They toasted the Grand Duke, and finally Doc Schenck and the B. F. S., and America, and just as they finished the band struck up "The Star Spangled Banner," and maybe we didn't get on our feet. That was a great honor, I understand, as here in Germany they are usually careful not to permit national airs other than their own.

Soldiers! Lord, I never saw so many in my life before. About every ten minutes a company of soldiers come tramping through the streets with swords banging, etc., and I believe, really and truly, that one American citizen, not even a soldier, could lick three of them at once. All they do is to march and shoot fake cannons. All day long you see and hear salutes. I am enjoying it all very much. However, this Bohemian life does not appeal to me so much. We eat in cafés, hotels or wherever we are. All the people do that. The school is going fine and you would die to see people eye us when we wear our logging boots, etc. They think we are lunatics.

Doc is busier than a dog killing a snake these days. He's right in with the royalty here, and because of that, all of these fraternities are rushing us around. Jonesie and I are the favored ones, and Doc says the Corps Franconia will invite us to join soon, he thinks. However, nothing doing for the face slashes. I prefer American fraternities, and if it's a fight I want to use my mitts, not a dinky sword. I am going to see a duel soon. The one this week has been postponed because the police found out about it. Oh, yes! I am requested to appear at the police station tomorrow to give them a record of my past life, etc., stating also why I am here. They are always looking for trouble here, it seems. I prefer the U. S. A.

Sunday, December 5.

My Dear Father:—

This is the first Christmas we have been separated, and I hope it will be the last. Am sure it will be, in fact, for I have determined that once having set foot on the soil of good old Uncle Sam's country, your son will keep in close touch with his father and mother hereafter. This idea of separating our small family may be all O. K. during the school year, but now I want to be with you and live happy ever after.

I think I will stay here in Darmstadt for Christmas. I like the place very much. The school is coming fine. We have been doing a lot of estimating, and to show his confidence in my work, Dr. Schenck always appoints me boss of a gang of fellows. We go to the woods every day with him now, and I assure you it is very interesting work. Our lectures are held in the Merck dining-room; it is a beautiful big home, and we appreciate the kindness of Mr. Merck. Doc received a letter from the Grand Duke, inviting the B. F. S. to hold school in the Schloss (castle). That

shows how we stand here. Everybody kowtows to us, and we are invited to everything. I have to refuse invitations from all the German fraternities. They go for Jonesie and me and want us to attend all their stunts. We are going to a "slicing" match next week, when a very good German friend of ours fights a man from another corps. We are going to root for him.

I received the Sunday papers and maybe I didn't whoop it up when I read that Michigan had at last conquered both East and West. The German students have asked us to give them an exhibition of the "manly art of self-defense," so I framed up a go between two of the biggest fellows of the school, and we are going to give them their money's worth at our next Sangerfest.

One thing I learn over here is good manners. The Germans overdo the polite and the Americans do not do enough of it. Here every time you go through a door with a Dutchman you imitate "my dear Alfonso." Everything is "bitte, bitte" (if you please). Jonesie said to me the other day, "If you do not give me your seat, say 'bitte,' or take off your hat to me when we are alone, I'll wallop you." And I told him, if he did not do the same to me I would "knock his block off," so you see we are going to be polite if we have to fight for it.

I am taking German lessons, one hour every morning before school. I am crazy to see you both, and if I could be home with you tonight I would be the happiest man alive. I want this to reach you before Christmas. Let it wish to you both, as well as all others, a Merry Christmas and Happy New Year.

Wednesday, December 8.

Dear Father:—

Was out estimating spruce all afternoon and had to walk about fifteen miles, so it did seem good to find your letter here when I got back. Everything is going nicely. The school is great and I am learning a lot. Doc has placed me at the head of a gang of fellows, so that now I only direct the running of lines, etc., while the new men do the work. This is good practice for me, as it gives me a chance to see all the phases, and is less mechanical. The B. F. S. is going to be recognized as a wonderful school in the future. We study our botany in the university laboratory, with Dr. Carl Schenck, an authority on tree botany, as teacher.

I must now tell you about a great experience I had yesterday. You remember I wrote that I was invited to attend a German sword bout (monsun). Well yesterday morning at 6:30 Jonesie and I were awakened by three members of Corps Franconia. They were to have their fight then and came to get us. Everything was carried on in secret, because of the police. They led us three miles out of the city, to an old inn. Here were assembled members of the other corps. We saw five bouts, and lastly, one saber bout, and I never want to see anything so brutal again, or to hear people knock American football and prize fighting as being brutal.

In America it is science and an even chance, always, between opponents. Here there is little science, no one is a victor, no one gets excited looking at it, and both contestants get cut up always. The sword bouts were the most bloody and least dangerous. Here the contestants have their breast, neck, arms and eyes protected, but their faces and heads are bare. The first bout was between two freshmen who had not fought before. They were fine looking boys when they began. When they finished one had eleven big cuts on his face, the other had his head split open, so that the top was like the lid of a box, and his mouth was slit, and he had a hole through one cheek.

I saw five bouts like that. There were five

Americans of the school there and we almost fainted, but we had to stick it out, for fear of showing ourselves "yellow." The saber bout was awful. Here the contestants were fighting because one insulted the other, and the other handed him his card, which was torn up. These men had their chests bare, heart and all, and unprotected; faces, heads and arms also were unprotected, even the eyes. Their elbows, shoulders and the arteries of their necks were covered. They were to fight twenty minutes unless one got injured so he could not go on. Result: One fellow got his arm almost cut in two and broken after three minutes fighting, and had to stop.

Two doctors were in attendance; they sewed up the slices on all the men as they finished fighting, and in the cuts they put caustics, etc., to make them look fierce, at the direction of the man wounded. The swords were like razors, and often you could see the hair fly, as they cut hair instead of flesh. Only in the saber match did one man get out free from cuts; everyone else who fought got sliced, and the floor looked like a slaughter pen. I sure was disgusted when I left, and proud of our American style of "the manly art of self-defense." The contestants cannot move when fighting; they must stand still directly opposite each other, looking straight ahead and slash. The man who gets first blood is supposed to win, but it is always a chance.

In the sword bouts they are allowed three strokes at a time; then they must pause, which corresponds to a round in boxing. It sure was awful, but I am glad I saw it, for I learned that few foreigners ever see this, and it is considered a great honor. These Franconia fellows are great chaps, all good looking, except for their wounds. Everyone in a corps must fight at least three times. Nine out of ten business men in Germany are all cut up. Doc Schneck has a cut over his forehead, I learned. However, he "cut it out" after that one and went to America.

We heard today that Mr. Defebaugh, of the American Lumberman, is dead. Doc is all broken up about it, as he was a great friend of his, as well as of the Biltmore Forest School. We sure are all sorry and are awaiting the papers to see if the news is authentic.

Wish I could be with you all at Christmas time. Think I will remain in Darmstadt.

Dec. 15, 1909.

My dear Father:—

I sure was glad when I received two letters from you today. Was just starting for field work when they came and I felt rather lonesome all morning, so they sure did go well.

Today I worked like a horse, estimating pine. Doc had me run a strip with a gang of fellows, and my estimate checked to the dot with that of the German foresters, so I am getting good, I think. We do a lot of estimating over here and that is the very thing I wanted. It is getting cold tonight for the first time this year.

After field work I went with the gang to the swimming pool (it is a peach), and after a good swim we had a beefsteak supper. Living expenses over here are not much cheaper than in America; eating costs more, for we eat in restaurants and cafés all the time.

Let me advise you not to take the Bankers' Association checks abroad; take American Express but not Bankers', as there is only one bank in town where they will cash these, and at few hotels in Germany. Express checks can be cashed anywhere. I had a deuce of a time getting money in Rotterdam, while all the other fellows came out fine. Christmas day I will stay here. Doc gives us five days' vacation then, and I think

I will leave the day after for a little trip around, visiting some of the told towns, like Heidelberg, Weisbaden, etc. Have been to Frankfort for one afternoon; it is a great city and just twenty minutes ride from here, fare, 24 cents, third class.

I think I will go to grand opera next Saturday. Am getting quite "nuts" about it. Do not like their singing, but the music (harmony) is great. Am working like a fool here. All the school is. Doc keeps us busy, from early morn until night, and the only time we have to ourselves is after supper, and then we must write our diaries.

Dec. 19. 1909.

My dear Father:—

This will be a short letter tonight, as I am pretty tired and I want to get a good night's sleep. Things are going nicely. I

## Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

### Wants an Iron Lathe

BLOOMSBURY, N. J., November 12.—Editor HARDWOOD RECORD: I am looking for a second-hand iron lathe with 16" swing and full equipment. Can you put me in touch with anyone who has a lathe of this sort for sale?

Anyone who has a second-hand iron lathe that answers above description that they wish to market, can secure the address of this correspondent by addressing this office.—EDITOR.

### Mill Cost in Hickory Handle Manufacture

JACKSON, TENN., December 28.—Editor HARDWOOD RECORD: For comparison, we would like to hear from some of the hickory handle manufacturers and from you, as to the cost per thousand feet of logs, also per cord when cut in short lengths to saw rough dimension hickory. Would like to have the information include flitching, ripping to proper sizes, equalizing lengths, grading and piling in the warehouse for seasoning. What we mean by dimension stock is from 1 to 2½ and 3" squares, and 14 to 48" lengths. We are very much interested in the average cost of handle production and would thank you for such information as you can furnish.

ANCHOR BLOCK MILLS CO.

With the information at hand, the editor of the RECORD does not feel competent to give this inquirer the cost schedule that he asks for. Therefore he would be very much gratified if readers who are handle manufacturers would communicate to him for publication their analysis of the cost items referred to.—EDITOR.

### Cost Accounting

G. O. Worland of Thompson, Thayer & McCowen, the well-known hardwood manufacturers of Evansville, Ind., has addressed the following interesting letter to all members of the Indiana Hardwood Lumbermen's Association. Mr. Worland has been interested for a long time in the subject of cost accounting in connection with lumber manufacturing enterprises, and it is to be hoped that his communication to the members of the Indiana association will bring out a discussion involving facts pertaining to cost accounting in the lumber trade that will be of great value not

have not heard from you for several days, and mother's letters are always late, because she puts only 2 cents on them, thus making them come by slow boats. Please tell her to spend 3 cents more after this.

This is to be quite a busy week in Darmstadt, and in fact all Germany. The Germans are preparing to celebrate in fine style "Dechnachten Abend." Our landlady has been baking cakes and cookies for a week, and she prepares for it so religiously that it seems funny. She and her daughters are the only ones in the family, yet they make as big a fuss over their own entertainment then as mother does for thirty people.

I will be ever so lonely on Christmas day. I feel it coming, but am looking forward to meeting you in Genoa on the 3rd of March so much that it will not be so bad.

only to the members of the association, but to the trade at large.—EDITOR.

EVANSVILLE, IND., Dec. 30.

To Members Indiana Hardwood Lumbermen's Association:

We would be very much pleased to have brought up for discussion before the next meeting of the Indiana Hardwood Lumbermen's Association, the cost of producing lumber, and as we are all just closing our year's business, will be prepared to get together figures.

We will be pleased to have you come to the meeting prepared to enter into a discussion, as to What is your labor cost per M. feet, from log yard to sorting slip?

What is your cost per M. feet for distributing on yard?

What is your cost of sticking, loading, re-handling, covering and uncovering?

Also, what is your cost for selling your product?

In order to bring the discussion along parallel lines, we would suggest that you prepare your data as to the cost of manufacture, as follows:

Labor, (mill employees only).

Interest on investment.

Insurance on mill.

Taxes on mill.

Maintenance and repairs, (oil, waste, belts, supplies, repairs, etc.).

Overhead expense, (proportion of office, and general expense).

Depreciation, (what percentage of mill cost).

Take these items for a stated period, and the amount of lumber sawn would give the average cost of the manufacture of lumber, from unloading the logs off the wagon or car, into mill, sawing and distributing on yard.

We would also be pleased to have your idea of cost of yardage:

Inspection and handling.

Re-handling outs.

Covering and uncovering

Carrying expenses, (interest, insurance, and taxes).

Shrinkage and depreciation.

Will say, that we have figured this matter all out in our own way, and from our own experience, but we would like very much to have the experience of others in the same line of business and we believe that there are a great many others who would be glad to have this information, and that we will be able to mutually benefit each other.

Another matter that we would be pleased to have discussed, is the cost of producing *Quartered Red Oak*. In order to facilitate discussion, would thank you to prepare figures on this product, as follows:

What percent, 1st and 2ds, @ . . . . . \$ . . . . .

What percent, No. 1 Com., @ . . . . . \$ . . . . .

What percent, No. 2 com., @ . . . . . \$ . . . . .

What percent, Strips, @ . . . . . \$ . . . . .

Cost of logs delivered at mill

Cost of manufacture

Cost of yardage.

Cost of selling, (including selling expenses, commissions, percentage of general expense, and discounts).

It is within our knowledge that the manufacture of quartered red oak is not profitable, at present prices, and it is our opinion that with concerted action which can follow an intelligent discussion as to costs of production, that better values for this product can be obtained.

In our own experience we find that quartered red oak is the scarcest article on the cabinet wood list, and the demand constantly increasing out of proportion to its possible production.

We are not asking that you send in any information, but simply that we all be prepared with figures along the same lines, that a profitable discussion may follow at the Indianapolis meeting on January 13th.

Hoping that you will see your way clear to assist in this matter, we are,

Yours truly,

THOMPSON, THAYER & McCOWEN.

G. O. Worland.

### Thanks from the Philadelphia Bourse

PHILADELPHIA, December 30. Editor HARDWOOD RECORD: We take this occasion to tender you the thanks of the Bourse for sending HARDWOOD RECORD to the News Department of the Bourse, where it is kept on file.

We take pleasure in handing you herewith a complimentary ticket entitling any representative of your paper to the privilege of the Bourse for the year 1910.

Wishing you happiness and prosperity for the New Year.

Emil P. Albrecht, Secretary.

### Likes the Story

CINCINNATI, December 27.—Editor HARDWOOD RECORD: The forestry student's letters to his father in last issue of RECORD is certainly good reading. Its story value far eclipses anything a jaded old globe trotter could possibly write. Give us some more.

E. D. GALLOWAY.

### Wants to Know About Catalpa

CINCINNATI, January 1.—Editor HARDWOOD RECORD: What can you tell us about catalpa? A customer of one of the members of our association is desirous of information as to whether sufficient quantities can be obtained to justify him in making a line of furniture from such wood. Would very much like to know in what section of the country catalpa grows, and whether it can be obtained in commercial quantities.

HARDWOOD MANUFACTURERS' ASSOCIATION.

Lewis Doster, Secretary.

This correspondent has been advised that the variety of catalpa having good commercial qualities in *Catalpa speciosa*, which has been planted quite extensively by the railroads and also by individuals in supplementing their timber growth in various parts of Ohio, Indiana, Illinois and the middle west. The correspondent has been referred to John P. Brown, of Bay Minette, Ala., who is an authority on catalpa growth and its value as a lumber material.—EDITOR.

### Look Out For Him

SAGINAW, MICH., Jan. 4, 1910.—Editor HARDWOOD RECORD: There is a young fellow calling upon lumbermen, generally acquaintances of mine, representing at times that he is W. B. Mershon, Jr., and other times C. K. Eddy, Jr., of Saginaw. His usual procedure is to show by his conversation great familiarity with Saginaw affairs and especially those relating to the Eddys and Mershons. Quite often he succeeds in either getting a bogus check cashed or getting a loan.

He has worked several in Chicago, tried it in Louisville, Ky., and elsewhere.

This is to warn those to whom he is liable to apply at any time that he is a fraud, and that I should like very much to get him in the clutches of the law. A warrant is now out for his arrest for obtaining money under false pretenses in Chicago. He is described as about 30 years of age, small dark moustache, large mouth, prominent separated teeth, weight about 150 pounds and about 5 feet 7 inches in height, darkish complexion, apparently well educated and smokes cigarettes.

I send you this notice, for he surely will keep trying this on lumbermen who either know me or the concerns with which I am connected. Yours truly, W. B. MERSHON.

### Wants a Wood Scraper and a Router

MCHENRY, ILL., December 24.—Editor HARDWOOD RECORD: We are interested in securing a wood scraper and a router similar to the Kelley machine if we can pick them up at a reasonable price.

Any reader of the RECORD having equipment noted above for sale can have the address of this inquirer by addressing this office.—EDITOR.

### A Slight Correction

MILWAUKEE, WIS., December 30.—Editor HARDWOOD RECORD: We note in the issue of

HARDWOOD RECORD of December 25 an article which calls for some correction. We wish to state that the Cooper & Maxson Company is dissolving by mutual consent of the principal stockholders, and it is not a matter of retiring on the part of anyone connected with the company. We are simply dissolving, and out of this dissolution will spring a lumber business conducted by W. E. Cooper, former president of the Cooper & Maxson Lumber Company, and also a lumber business conducted by Geo. M. Maxson, former secretary of the Cooper & Maxson Lumber Company. Relative to these lines of business you will no doubt receive announcements from the proper sources.

COOPER & MAXSON LUMBER Co.,  
Geo. M. Maxson, Secretary.

## Making A Business Organization of the National Lumber Manufacturers' Association

The National Lumber Manufacturers' Association is an organization made up of sundry lumber manufacturing associations, including the Northern Pine Manufacturers' Association, Northwestern Hemlock Manufacturers' Association, Wisconsin Hardwood Lumbermen's Association, Yellow Pine Manufacturers' Association, North Carolina Pine Association (Inc.), Georgia-Florida Saw Mill Association (Inc.), Hardwood Manufacturers' Association of the United States, Southwestern Washington Lumber Manufacturers' Association, Pacific Coast Lumber Manufacturers' Association, Southern Cypress Manufacturers' Association, Western Pine Manufacturers'

twelve of the most distinguished lumbermen in the United States. At the last annual meeting of the National Lumber Manufacturers' Association, held at Seattle, the employment of a manager was authorized, and the choice of the Board of Governors fell on Leonard Bronson of Chicago to fill this most important position. Mr. Bronson has been the leading editorial writer of the American Lumberman for many years, and is thoroughly equipped with a specific knowledge of lumber affairs, and with brains and energy to carry on very forceful and intelligent work on behalf of the affiliated manufacturing lumbermen embraced in the National Association.

Mr. Bronson's duties will be to represent the association on every national question, and to promote its interests in a national way. One of his duties will be to attempt a campaign of publicity and education, so that the general public may be thoroughly informed on lumber affairs. This work is intended to counteract the idea that a lumber trust exists and to change public sentiment from hostility to friendliness. Within the province of the association work to be handled by Mr. Bronson will be uniform state legislation so far as it affects the lumber industry, forest conservation, forest taxation, general law matters like the uniform bill of lading, uniform state corporation laws, collection laws, insurance matters, etc. Very likely uniform terms of sale will also be handled by the association. It will be the purpose of this new business management to work for the common interests of all lumber manufacturers in all sections of the country, and to assist any particular section in matters that do not conflict with general subjects, or which are not countervailing in their territory.

It is undeniable that this great alliance of lumbermen has just begun to realize its dormant powers, and in the future it will be conducted along lines that are very beneficial to the industry. Problems affecting the lumber trade can surely be worked out through its efforts. The coalition of corporate interests in other lines has been forced by the law of self-preservation and more economical operation, and is desirable and necessary in lumber affairs.

It will readily be seen that Mr. Bronson has a big task before him, but as before noted in this article, he is entirely capable of handling the work to the manifest advantage of the National Lumber Manufacturers' Association, and the trade at large.

### A New Seal of Chicago Hardwood Lumber Exchange

The publicity committee of the Chicago Hardwood Lumber Exchange has had prepared several hundred thousand seal stickers, which members of the organization will employ on their letterheads, envelopes and circular matter to advertise Chicago as the greatest hardwood market in the world. A black and white drawing of this seal is shown in connection with this paragraph. However, the original sticker has a width of only 1 3/4 inches with a gold back-

LEONARD BRONSON, MANAGER NATIONAL LUMBER MANUFACTURERS' ASSN.

Association and The Oregon and Washington Lumber Manufacturers' Association.

Of this association Edward Hines, the eminent lumberman of Chicago, is president; E. G. Griggs of Tacoma, Wash., first vice-president; Wm. B. Stillwell, Savannah, Ga., second vice-president; G. A. Freeman, St. Louis, Mo., treasurer; George K. Smith, St. Louis, Mo., secretary, and just appointed Leonard Bronson, with headquarters in the Fisher Building, Chicago, manager.

The Board of Governors is made up of

ground, the remainder of the design worked up in crimson and blue. It is a very attractive seal and was executed by the well-known Chicago engraving and printing concern, the Rose-now Company.

Of the 4,000 trees Washington planted last year, 353 were elms, 848 pin oaks, 637 Norway maples, 447 sycamores, 291 lindens, 275 sugar maples, 352 silver maples and 104 ginkgos, showing that Washington does not fear that these choice hardwood trees will grow too slowly for enjoyment. Washington's Carolina poplars, willows, cottonwoods and box elders, of which the city once had a large number, are being replaced by these better trees. The ginkgo or maidenhair tree is a native of Japan. It may be seen growing on the streets in Boston, Washington and Pittsburg. It grows very slowly and prefers sandy or gravelly soil.

## Obituary

During the first few days of the New Year, death invaded the ranks of hardwood lumbermen to an appalling extent. On Christmas day, Wellington W. Cummer, the millionaire lumber manufacturer of Jacksonville, Fla., and Cadillac, Mich., passed to the Great Beyond.

On January 5, death overtook the foremost Nashville lumberman, John B. Ransom, and on the morning of the same day F. S. Hendrickson, one of the best known lumbermen of Chicago, passed away.

### W. W. Cummer

One of the strongest men that the lumber industry of this country has ever produced was Wellington W. Cummer, who died at his home

the houses of Jacob Cummer & Son, Blodgett, Cummer & Diggins, Cummer Lumber Company, and later the present corporation of the Cummer-Diggins Company, which includes in its make-up W. W. Cummer, F. A. Diggins, the Estate of Delos F. Diggins and Wm. L. Saunders.

Early in the nineties Mr. Cummer made extensive purchases of yellow pine timberlands about 125 miles southwest of Jacksonville, built a standard gauge railroad line to connect the timber with a big sawmill plant which he built at Jacksonville. This mill was burned in 1897 and was rebuilt on even a larger scale than the first one. Associated with Mr. Cummer in his Florida enterprises were his sons, Arthur G. and Waldo E. Cummer, who undoubtedly will continue the big enterprise.

Mr. Cummer was a very modest man and never sought political preferment. However, the mayoralty of Cadillac was forced on him for one term, and he also was alderman and a member of the school board for several years. In 1888 he was presidential elector from the ninth Michigan congressional district, and he has held sundry offices in connection with public interests of Cadillac and Jacksonville for some years, in places where he could work advantageously for the betterment of the cities in which he was interested in developing.

The death of Mr. Cummer brings to an end one of the most forceful and useful lives of the generation. He was a man of strong mentality, strict integrity and broad charity. His death is a distinct loss not only to the lumber trade but to the country at large.

### John B. Ransom

It is with extreme regret that the RECORD announces the death of Nashville's foremost lumberman, John B. Ransom. He was cut off at the very meridian of life on the morning of Wednesday, January 5. Mr. Ransom was the son of a Rutherford county farmer and lumber dealer. He started in the lumber business in the little town of Murfreesboro, in the heart of the Tennessee cedar belt, some thirty years ago.

cluded timberlands, a large sawmill, planing mill and box factory at Nashville, and the immense plant of the Nashville Hardwood Flooring Company. He was recognized as one of the foremost factors in the poplar industry as well as in the oak flooring business. He was also allied with numerous other enterprises in Tennessee, and especially in Nashville, and he has done a great deal for the industrial history of that great southern city.

John W. Love, of Love, Boyd & Co., was at one time associated in business with Mr. Ransom. At the time of his death Mr. Ransom was a stockholder in the Gayoso Lumber Company of Memphis. He was not only a large manufacturer of lumber, but purchased immense quantities from other manufacturers as well, which he manipulated through his several Nashville factories. Mr. Ransom was also financially interested in the Nashville Transportation Company, owner of a line of tow boats and barges

THE LATE W. W. CUMMER.

at Jacksonville, Fla., on Christmas day. He was at the head of the Jacksonville yellow pine manufacturing house, the Cummer Lumber Company, and was president of the even better known lumber institution, the Cummer-Diggins Company of Cadillac, Mich.

Mr. Cummer had been in poor health for some time. He spent last summer at one of the German baths and for some weeks this fall was under medical treatment at a Chicago hospital. Death was caused by aneurism. He leaves a wife and three children, Mrs. Mable Roe, Arthur G. Cummer and Waldo E. Cummer; a sister, Mrs. Fred A. Diggins of Cadillac, and his mother, Mrs. Jacob Cummer of Cadillac. The funeral was held on December 28 at Jacksonville, and at the same hour memorial services were held at the Congregational Church of Cadillac, where there were gathered old friends and former business associates, in addition to the working men from all the camps and mills of the Cummer-Diggins Company.

Mr. Cummer was born near Toronto, Ontario, October 21, 1846. In 1860 his parents moved to Newaygo, Mich., where he grew up. He attended the common schools and later was graduated from a business college in Toronto. He commenced his business career in his father's grist mill at Newaygo. This routine developed into the lumber business and gradually extended northward from Newaygo along the lines of the Grand Rapids & Indiana Railroad to Cadillac. Mr. Cummer was one of the chief builders of the city of Cadillac and its diversified interests, but his attention was principally devoted to lumber operations involving at various times

THE LATE JOHN B. RANSOM

His beginning was as modest and unostentatious as has been his demeanor up to the time of his death, yet this self-made man, less than fifty years old, became the head of the foremost lumber business in Nashville, and one of the greatest in the country. His lumber interests in

THE LATE F. S. HENDRICKSON

in the Cumberland River. He was allied with the American National Bank of Nashville, and the Nashville Tie & Cedar Company. He was an ex-president of the Hardwood Manufacturers' Association of the United States, in which capacity he served this organization two terms. He was a member of the book committee of the Methodist Episcopal Church South, and of the Board of Stewards of the West End Methodist Church of Nashville.

Mr. Ransom was a man of indomitable energy, untiring zeal, good business judgment, with ever-present nerve to back his judgment, of unusual executive ability, quickness of decision and fairness in dealings. These attributes enabled him to spell "success" with capital letters while he was still a young man.

Mr. Ransom was ill just a week. Up to that time he seemed in good health and spirits. He was taken violently ill and soon thereafter lapsed into a comatose condition, from which he never emerged. During the first few days of his illness, physicians announced the trouble to be acute indigestion. On last Monday he showed an alarming turn for the worse, and a consultation of physicians was held. The news of this beloved man's death caused a pall of gloom to be cast over the entire city of Nashville, for he was regarded in the capital city of Tennessee as the foremost man who had assisted in its upbuilding in every material way. There was never an enterprise proposed or launched in which his unerring judgment and alert brain saw good that it did not receive his hearty advice and cooperation.

The life this man had led, the success in

land back upon the community, the friends he had won, the hearts he had conquered, were manifested in the splendid testimonials to his revered memory in the great outpouring that attended his funeral in blizzard weather at the West End church on Thursday last. He was a devout member of this church. The structure was crowded to overflowing.

As a specimen of the testimonials representing the love and respect in which Mr. Ransom was held by every religious, social and business body with which he was associated, the following resolutions adopted by the Nashville Lumbermen's Association, of which he was president at the time of his death, is printed below:

Whereas, In the death of John B. Ransom the entire lumber trade of America has sustained a great loss, the hardwood manufacturing business of the South an irreparable loss, and the lumber interests of Nashville the greatest loss in its history, it is proper that the members of the Nashville Lumbermen's Association, of which Mr. Ransom was a member from its organization, of which he was president at the time of his death and for many years preceding, and the members of which have been closely associated with him, most of them for many years, should express their deep sense of loss and their appreciation of his noble qualities. Therefore, be it

Resolved, That this body has recognized in John B. Ransom a man of the highest type of character. A self-made man in the truest sense, he was one of nature's noblemen. He attained to an exceptional commercial and financial success solely as the result of native ability and force. Ambitious to succeed, he was yet always considerate of his associates and competitors, and deeply interested in the success and welfare of all his friends. John B. Ransom was a singularly modest man, free from vainglory, and really undervaluing his own great abilities. He never spoke of his own achievements, but was always quick to give full credit and to speak in admiration of the accomplishments of others.

John B. Ransom was a public-spirited man. In recent years particularly he has interested himself as few men have in the building up of his home city and state. Brought into close connection, through the ramifications of the great business he had built up, with most of the interests of the city and state, he strove to advance them all. At the time of his death he was prominently identified with the erection of the new buildings of the Young Women's Christian Association, the Young Men's Christian Association, and with many other public enterprises, to all of which he gave his unremitting personal attention.

Mr. Ransom was a man of deep affections, and his home life was beautiful. He was to his immediate family, and to his large connection, the soul of generosity and tender consideration. Democratic in his tastes, he shunned all ostentation. He treated rich and poor, the powerful and the humble, with equal consideration and kindness.

"His life was gentle, and the elements

So mix'd in him, that Nature might stand up  
And say to all the world, 'This was a man!'"

Resolved, further, That these expressions be spread upon the minutes of this special called meeting of the Nashville Lumbermen's Association, and that a copy be sent to the family and to the daily and lumber newspaper press.

#### F. S. Hendrickson

The hardwood fraternity will learn with sincere sorrow of the death of Forman Spencer Hendrickson, president and general manager of the F. S. Hendrickson Lumber Company of the Masonic Temple, Chicago, handler of southern hardwoods.

Mr. Hendrickson died on January 5 of cerebral malaria. He was taken ill in the South about a week before Christmas, and returned to this city about two weeks ago, in a critical condition. He leaves a widow and three daughters, and was the first of a family of five children to pass away.

Mr. Hendrickson was born at New Buffalo, Mich., fifty-two years ago. After completing his preparatory school work he entered the University of Michigan, from which he was graduated in the class of 1880. He first went into the grocery business with his father, but soon after obtained a position as stenographer in the Insane Asylum at Pontiac, Mich. After coming to Chicago he started with the old Chicago Lumber

Company, but in 1893 he went into partnership with A. J. Howard, with which firm he continued until 1902, when he organized the F. S. Hendrickson Lumber Company. This concern was incorporated in 1908 and has so continued up to the present time. The F. S. Hendrickson Lumber Company will be continued by his associates.

The funeral services were conducted at Mr. Hendrickson's late residence, 5748 Kimbark avenue, at four o'clock in the afternoon of January 6. The remains were shipped to Ann Arbor for interment.

Mr. Hendrickson's standing in the Chicago trade was enviable. He was a man who did business on a high plane of morality, and he achieved a reputation for upright dealing that has placed his house as one of the foremost handlers of southern hardwoods in this market. His untimely taking-off is much to be deplored.

At a special meeting of the Chicago Hardwood Lumber Exchange, called for the purpose of taking action relative to the death of Mr. Hendrickson, the following resolutions were adopted:

Whereas, The members of the Chicago Hardwood Lumber Exchange learn with profound sorrow of the death of Mr. Foreman S. Hendrickson, who has, for many years, been a valued friend of all members of the lumber trade; and

Whereas, We all hold the memory of his conduct and honorable life both as a citizen and member of our organization with the highest respect and commend the emulation of his honesty and uprightness; therefore, be it

Resolved, That we express our deep sense of loss in the death of one standing so highly in the lumber trade, and commend his efforts to promote a high standard of business and civic life.

Resolved, That we extend our deepest sympathy to the afflicted family, and be it further

Resolved, That the secretary forward a copy

of these resolutions to the bereaved family and the lumber trade journals.

F. L. Brown, president of the exchange; J. H. Dion, secretary; J. S. Trainer, Fred D. Smith, Edward Skeeel, H. S. Hayden, A. W. Wylie, Park Richmond, C. L. Cross, Theo. Fathauer, A. R. Vinnedge and George Thamer attended Mr. Hendrickson's funeral as representatives of the exchange.

#### John H. Lidgerwood

On January 1 at his home in Morristown, N. J., occurred the death of John H. Lidgerwood, president and treasurer of the Lidgerwood Manufacturing Company, the largest manufacturers of logging machinery in the world. Mr. Lidgerwood was eighty years old; he had lived a life of great usefulness and was generally recognized by lumbermen all over the country, as well as by the entire machinery trade, as a man of upright and forceful character and a strong figure in his special field.

Mr. Lidgerwood was born in New York, but went to Morristown when he was only sixteen years old. He married a daughter of the late Judge Stephen Vail, who started the Speedwell Iron Works in 1812. When he began to learn the machinery business Professor Morse was working on the telegraph, and the building in which the experiments were carried on is only a few feet from the house in Speedwell avenue occupied by Mr. Lidgerwood at the time of his death. Mr. Lidgerwood was a prominent and widely beloved figure in Morristown. He was one of the organizers of the Church of the Redeemer in that city and was a member of the Morristown Club and also of the New York Yacht Club.

## Tales About Live Ones and Dead Ones.

By the Editor.

#### It Happened on Broadway

Joe Linehan of the Linehan Lumber Company of Pittsburg, who has a parquet flooring plant in New York City and an oak flooring factory at Catlettsburg, Ky., rotates between these three points. Joe tells a story about meeting a Pittsburg man on Broadway a few nights ago with his electric lights all agoing and adorned with an evening suit that was not only ill-fitting but unmistakably of ancient vintage. At home this man is one of the quiet and well-behaved sort, and belongs to the strictly good and virtuous class of the community.

Joe shook hands with the Pittsburger and passing up the subject of his unmistakable inebriety, said to him: "Where in the mischief did you get those clothes?"

The individual beamed on Joe benignly and replied: "Joe, this is a great town, and it has great hotels. Shay, Joe, do you know I am stopping at the finest hotel on Broadway. Even the bellboys there will do anything for me. A bellboy got me this suit of clothes."

#### Where He Kept His Overdraft

F. A. Kirby, salesmanager of the Cherry River Boom & Lumber Company of Scranton, Pa., has this anecdote to relate about a Columbus lumberman:

The cashier of a Columbus bank with which the individual in question did business accosted him one day with the observation:

"Where do you keep your money?"

The man hesitated at the query, but eventually observed: "Why I do business here at your bank."

"Yes, I know you do business here, but what I want to find out is where you deposit your money. All you ever have here is an overdraft."

#### Opened By Mistake

Jas. A. Cheyne of the Pennsylvania Door & Sash Company of Pittsburg, tells how he got back at a southern shipper some time ago. The institution had an order, which had been held up for months, for a carload of tupelo gum mouldings. Mr. Cheyne wrote the concern that the delivery of the goods was months past due and insisted that prompt shipment be made.

A reply to his communication materialized in the form of a long-winded and discursive letter explaining that Mr. Cheyne did not understand conditions that prevailed in the south country. The company recited the trouble with labor, the floods that had prevailed in the woods, the necessity of overhauling and repairing dry-kilns and planing mills, but failed entirely to give him any satisfaction about the delivery of his moulding order. Mr. Cheyne read the letter carefully and re-enclosed it in the envelope, which he endorsed, "Opened by mistake," and returned it to the writer.

Jim says the people are real "peevish" about it, and insist they have been insulted.

### A Man of Strong Prejudices

I knew the late W. W. Cummer of Cadillac and Jacksonville for many years, and while he was a man of remarkable acumen, forcefulness and integrity, he had one marked peculiarity, and that was the violence of his prejudices. He might forgive an injury, but he never could forget one.

Years and years ago, in the early days of the Northwestern Lumberman, a little news item crept into that paper which Mr. Cummer imagined reflected on his attitude in a suit in which he was involved. The item was of no particular moment and entirely escaped both the attention of W. B. Judson, the owner of the publication, and the copy editor, but from that time on for a period of a quarter of a century, Mr. Cummer absolutely refused to do any business with the Northwestern Lumberman or its successor. It was only about ten years ago that he permitted the resumption of business relations with the American Lumberman, and still that three-line paragraph rankled in his mind.

Years ago a brother of Mr. Cummer's became entangled in the gear works of a Shay locomotive, and was so badly injured that he died as a result. Mr. Cummer immediately "scrapped" every Shay locomotive in his operations, and would never knowingly permit the use of one of them in his works. Some years ago, unbeknown to him, his associates in the Cadillac operation purchased and used several locomotives of this type, but they were kept carefully out of his sight when Mr. Cummer visited Cadillac.

The Lidgerwood Manufacturing Company had a similar experience long years ago with Mr. Cummer. Some friends of the eminent deceased lumberman had a controversy with this company and he considered that his friends' position was right, and although at that time the Lidgerwood logging equipment was the only one manufactured that had any particular value, he got along with make-shift skidding appliances of one sort and another for years. It has only been of recent date that he again became a patron of the Lidgerwood company.

When Mr. Cummer built his big sawmill at Jacksonville he made a tentative arrangement with one of the leading trunk lines to build a branch road connecting their lines with his timber in Alachua county, Florida. The company dilly-dallied along with the proposition to such an extent that Mr. Cummer eventually became annoyed at its delay in fulfilling its obligations, and in an interview with an officer of the road expressed himself quite forcibly on this subject.

The railroad magnate evidently did not know Mr. Cummer very well, or he wouldn't have had the temerity to do what he did, for he reached over and patted Mr. Cummer on his semi-bald head with the observation, "Don't get sweaty, sonny!"

Mr. Cummer left the railroad man's office in no enviable frame of mind, and within the hour put plans under way for securing a right of way for an independent railroad line run-

ning for a distance of something like one hundred and twenty-five miles to connect his timber with the Jacksonville plant. The result was the building within a few months of the Jacksonville & Southwestern Railroad.

The big railroad system treated the matter as a joke at first, but eventually becoming convinced that Mr. Cummer was going to attempt to build the line, bethought themselves of a scheme to balk the enterprise. Cabals against the enterprise were put out in financial circles of New York, which advised against the purchase of any bonds on the property, on the ground that the road could never earn its dividends. As time progressed it was found that the entire road was being paid for in cash and no bonds were ever issued. It was this same system that eventually took over the Jacksonville & Southwestern Railroad, paying Mr. Cummer its entire cost and interest, together with a bonus of more than \$400,000 in prepaid freight receipts, applicable to his log freights.

### A Good Story if Not True

I don't want to vouch for the following story, but it is being told about a lumber inspector who buys stock for a northern house among the small hardwood mills of Tennessee. One day in a little town down in the mountains, a half-witted and more or less whiskey-befuddled mesmerist encountered the inspector among a group of friends and discoursed on his ability to perform wonderful feats of mesmerism. He alleged that he could mesmerize the inspector. The lumberman was a good-natured chap, and so he professed his willingness to pose as a subject.

The mesmerist made sundry passes with his hands over the lumber buyer's face and said to him: "Now you are mesmerized. You will believe anything I say to you. Now you are fully under my control."

The inspector fell in with the humor of the situation and said, "Yes, that's true."

"You are a hardwood lumber inspector."

"Yes," assented the victim.

"You are a good and honest lumber inspector."

"Yes," again came the assent.

"When you buy lumber of these little millmen in this country you always give them full measurement and a straight grade."

"Yes," still acknowledged the subject.

Thereupon the mesmerist straightened up, and said to the buyer, "Now if I didn't snap my finger and wake you up, wouldn't I leave you in a h——l of a fix?"

### Maligned Chicago

I found a story in an English periodical a short time ago which is a base slander on Chicago. Supposedly, it was told to illustrate a type of American humor.

It happened, so the story ran, in Chicago. The man who had lived there, no better and no worse than any others, soon after his death woke up to a new life in the other world. Within a short time he met a man from his

own city, who took him around for his first walk in his new surroundings and showed him all there was to be seen. After a while the new arrival said:

"Yes, all this is not to be underrated, and at any rate, it is ten times better than Chicago. But I can't deny that I expected something still better in heaven."

His companion's eyes grew larger as he looked at him in astonishment and exclaimed: "What do you say? Do you think this place is heaven? We are in hell. Don't you know it?"

### The Old Woodpecker Story

About once in so long the lay press revamps an old woodpecker story of bird's-eye wood being produced by the aid of sapsuckers. The latest is an alleged telegraph dispatch printed in the Chicago Inter Ocean from Bangor, Maine, and recites that after spending more than sixty years and more than \$10,000 in hunting bears and studying the ways of wild creatures, Greenleaf Davis of Mount Katahdin has begun to raise tame woodpeckers for the purpose of using them to convert ordinary rock maples into the rare and costly woods known as bird's-eye maple.

The dispatch alleges that Mr. Davis is employing redheaded sapsuckers which pick round holes in the bark of the maple, and thus produce the scars that eventually heal and produce the bird's-eye marks. There is a lot more "rot" mixed up with the article which is indicative of the paucity of real news and the fertility of the imagination of the associated press correspondent "down Bangor way."

### The Great Success of Big Splash Dam

In last issue of RECORD were related the details of the construction of the big splash dam of the Yellow Poplar Lumber Company erected above the "breaks" of the Big Sandy river, built to drive the company's logs through the five miles of rocky and tortuous channel of the cleft of the Cumberland mountains, which it passes. Even to the minds of the investors in this very expensive concrete dam, the result of this venture was considered conjectural. Therefore the RECORD is very glad to receive a communication from C. H. Crawford, secretary of the company, stating that at 4:30 on last Friday morning the fifth splash of this dam was let off with a twenty-two-foot head over the toemill, accompanied by a large number of logs.

The river is now clear of logs to Elkhorn City, although about 6,000 sticks are lodged in Elkhorn ford. It is estimated that about 30,000 logs have passed below Elkhorn City, and that there is about three and one-half feet of water in the river at that point.

On Friday, Mr. Crawford did not know how far down the Sandy the splash has taken the logs, but he judges quite a distance. The result means that 36,000 of the Yellow Poplar company's logs are being rafted in floating water and will come out to its harbor at Coal Grove on small rises in the river. Naturally he feels very jubilant over this. The dam has done even more than was expected, and seems to have solved the problem of getting out timber above the breaks of the Sandy.

Mr. Crawford and his associates are to be heartily congratulated.

# The Status of Forestry in the United States

[The following article is taken from a circular entitled "The Status of Forestry in the United States," by Treadwell Cleveland, Jr., recently issued by the Forest Service. In this issue is considered merely what the federal government is doing in forestry, as related by Mr. Cleveland; in a future number state and private forestry will be covered. This circular treats of present conditions in forestry matters so thoroughly that these articles should be of interest to every timber land owner in the country. Editor.]

## The Forest Situation

A very few years ago "forest conservation" was little more than a phrase; to-day it is a vital issue in our national development. In connection with the general plan to conserve all natural resources, it is the most important and far-reaching economic policy ever adopted and pursued by any nation.

These things are bound up with the practice of forestry because the forest is one of the chief supports of the whole material fabric of our civilization. The forest means not only a permanent supply of wood and the life of all the industries which depend upon it, but also the control of the waters for human use. There is only barrenness in the future of the nation which has lost the use of wood and the control of water.

The sort of use that was made of natural resources during the pioneering stage, while right enough at the time, is far too wasteful to be carried on into the new industrial era. In order to know how to use a thing, however, it is necessary first to find out how much of it there is to use, and taking stock of our forest resources has led to startling results.

It has shown that we are still destroying the forest as we use it; that we are taking from it every year three and a half times as much wood as is added by the new growth. It has shown that less than one-third of the growing tree felled by the lumberman is ever used at all, so that two-thirds of all the timber cut is simply destroyed. It has shown that one-eleventh of all the forests are swept by fires every year, and that on the average since 1870 forest fires have yearly cost \$50,000,000 in timber and 50 lives. It has shown that over 99 per cent of the forests in private hands—which comprise three-fourths of all the forest land and four-fifths of all the wood—is thus devastated by destructive use and the scourge of unchecked fires, while less than 1 per cent is properly handled for successive crops or effectively protected from fire. The forest as a resource is rapidly being obliterated.

It is not use which destroys the forests, but waste. Not use as such, but destructive use, combined with inexcusable neglect, is causing the forests to dwindle under our progressive demands upon them. The problem, therefore, is not to be solved by disuse, but by wise use and protection. These together will so stimulate forest growth that the needed wood may be harvested without depleting the stock on hand, and will keep

intact the protective cover at the stream sources.

In waste alone we reject more than two-thirds of the lumber that might be taken from the standing trees. At least half of this waste is unnecessary. In the first place, we waste the forest by refusing to take advantage of its full capacity for growth. Protected and properly managed, our forests will produce far more wood than they do at present. But while it is wasteful to cripple the forest by a violent lumbering which destroys young growth—the promise of the future forest—it is doubly wasteful to lock up the forest and let the ripe timber die and decay, for in the former case the forest at least contributes a temporary supply of wood, whereas in the latter case it contributes no wood at all.

## What the Nation Is Doing

### THE NATIONAL FORESTS

Congress authorized the President to establish National Forests in 1891. They were called "forest reserves" then, and in fact they were "reserves," for Congress did not at that time make provision for the use of their great resources, which are estimated to be worth over \$2,000,000,000. A law was passed in 1897, however, which made it possible to use and to protect their resources. To give them a name in better accord with their object, the "reserves" were renamed "National Forests" by Congress in 1907. Now there are nearly 195,000,000 acres of National Forests, including about 27,000,000 acres in Alaska and Porto Rico.

The object of the administration of the National Forests is to use them in such a way that they will yield all their resources to the fullest extent without exhausting them, for the benefit primarily of the home builder. The controlling policy is serving the public while conserving the forests.

The administration of the forests by men actually on the ground is secured by grouping the 150 forests in 6 districts, with headquarters, in the districts, at Missoula, Denver, Albuquerque, Ogden, San Francisco, and Portland. This arrangement also guarantees dispatch in business and prompt payments. Only matters of exceptional importance are referred to the Forester, in Washington.

### DISTRICT OFFICES

Each of the district offices has at its head a district forester and an assistant district forester. A chief of grazing has charge of range matters. A chief of products handles the preservative treatment and strength tests of timber, and studies market conditions. A chief of silviculture has charge of timber sales, planting, and silvical experiments. A chief of operation supervises the personnel of the forests; the permanent improvement work, through an engineer in charge; the accounts of the district; and the routine business. The Forest Service never passes

on the land titles themselves; this matter rests always with the General Land Office of the Department of the Interior.

Each of the chiefs and assistant chiefs of office spends about half of his time in the field on forest work.

Following is the number of forest officers on duty on December 31, 1908:

Supervisors .....	106
Deputy forest supervisors .....	70
Forest assistants .....	117
Forest planting assistants .....	11
Lumbermen .....	17
Forest rangers .....	188
Deputy forest rangers .....	420
Assistant forest rangers .....	413
Forest guards .....	151

Total ..... 1,493

### NATIONAL FOREST BUSINESS

The growth of the timber sale and grazing business of the National Forests during 1908 was remarkable.

During that year timber to the amount of 386,384,000 board feet was sold in 5,062 separate sales. Of these sales 4,584 were made for timber valued at \$100 or less.

The uses to which the resources of the forests are put are classified as follows:

(1) Timber sales, (2) free use of timber, (3) grazing, and (4) special uses, the most important of which is the development of water.

### TIMBER SALES

All timber within the National Forests which can be cut safely, and for which there is actual need, is for sale. Green timber may be sold except where its removal would make a second crop doubtful, reduce the timber supply below the point of safety, or injure the streams. The limited supply on some forests prevents sales except for local use. All dead timber is for sale.

### FREE USE OF TIMBER

Forest officers are authorized to grant permits without charge for \$20 worth of timber during any one year to persons who may not reasonably be required to purchase. This amount may be increased in cases of great and unusual need, or to assist enterprises of a public or benevolent character. Under these regulations timber is taken from every National Forest for fuel, fencing, and building material required by settlers, for mining timbers needed in developing mineral claims, and for such community uses as the construction and maintenance of schools, churches, and bridges. More than 30,714 free-use permits were issued in 1908, in which year about one-fourth of all the timber cut from the National Forests was under free-use permits.

### GRAZING

In the National Forests grazing is regulated in the interest of the stockmen, who pay for permits. The leading objects of the grazing regulations are: (1) The protection and conservative use of all National Forest land adapted for grazing; (2) the permanent

good of the live-stock industry through proper care and improvement of the grazing lands; and (3) the protection of the settler and home builder against unfair competition in the use of the range.

During the season of 1908 permits were issued to 24,000 different owners, allowing 1,380,000 cattle and horses and 7,000,000 sheep and goats to be grazed upon the National Forests. The revenue derived from grazing this stock was \$960,000.

#### SPECIAL USES

All uses of National Forest lands and resources, except those which relate to timber and grazing, are known as "special uses," among which are included the following: Residences, farms, pastures, drift fences, corrals, dairies, schools, churches, roads, trails, telephone and telegraph lines, stores, mills, factories, wharves, tanks, dams, reservoirs, etc.

For such permits a reasonable charge may be made. This charge is based chiefly upon the value of that which is actually furnished to the permittee by the Forest Service, including advantageous location and other indirect benefits, and not directly upon the profits or the magnitude of the business which is to be carried on.

#### PERMANENT IMPROVEMENTS

Permanent improvements have during the past two fiscal years been provided for by special appropriations from Congress. Roads, trails, and bridges for readier travel and transportation and the protection of the forests; telephone lines—one the greatest aids in reporting fires and getting together a fire-fighting crew, as well as in the transaction of ordinary forest business; drift and pasture fences for the control of stock, and watering places for their use; houses, barns, and corrals for various purposes, are transforming the forests and insuring the safety and convenience of settlers and users. During the year 1909, \$554,435 was expended for permanent improvement.

#### THE PROTECTION OF FORESTS FROM FIRE.

The methods of controlling forest fires on National Forests consist in:

(a) Constant patrol of the areas included within the National Forest boundaries by a picked force of rangers and guards. The present summer force of rangers and guards whose main duty is fire patrol is 1,351 men; the average area that each is required to protect is 121,506 acres.

(b) The construction of roads and trails in order to provide rapid means of travel between the various parts of the National Forests and to facilitate the massing of large forces of men to fight fire, as well as to furnish vantage points from which fire may be fought successfully; and of telephone lines connecting ranger stations with the headquarters of the forest in order that fires may be quickly reported and effective measures taken promptly to extinguish them. During the fiscal year ending June 30, 1908, 160 miles of road, 3,300 miles of trail, and

3,500 miles of telephone lines were constructed in the National Forests. In several cases also fire breaks from 16 to 100 feet in width have been constructed, from which all timber and inflammable material are removed. These check the spread of fire and afford lines of defense in fire fighting. Several miles of such fire breaks have been constructed on the National Forests in southern California, where it is especially important that the forest cover on the watersheds of important irrigation streams be protected.

(c) The equipment of the National Forest with fire-fighting tools, canteens, and other supplies necessary for fire-fighting crews. Just as rapidly as possible each National Forest will be fully supplied with shovels, axes, and other tools, which will be distributed over the forests and in cabins and tool boxes placed at points where there is the greatest danger of fire and where they can be most easily reached by road or trail.

The Forest Service has been most successful in securing the cooperation of local residents in the vicinity of National Forests, and especially of the stockmen and others who use the forests under permits of the various classes. Every permittee is required to assist the forest officers in the suppression of fire, and this assistance has been of the utmost value.

#### OTHER FOREST WORK OF THE GOVERNMENT

In addition to administering the National Forests, the Forest Service carries on many lines of forest work; in the investigation of forest problems; cooperation with other departments of the national government, with states, and with private owners; the dissemination of information, and various kinds of educational work.

#### STATE CO-OPERATION

The Forest Service cooperates with states in making examinations of their forest conditions and outlining forest policies necessary to protect and maintain the timber supply. Preliminary examinations are often followed by more comprehensive studies, which include, among other things, a detailed forest map and an estimate of the timber, plans

for systematic management of the timberlands, and a general forest policy for the state. The cost of such examinations is shared equally by the Forest Service and the state. In addition, experiments in nursery practice and field planting are conducted in cooperation with state educational institutions and state forest commissions.

#### PRIVATE CO-OPERATION

Private owners of timberland, large or small, may secure the aid of the Service in the care of their timberlands and in planting. Forest Service Circular 165 outlines the plan of cooperation with owners of timberlands. Any owner who wishes to learn whether forestry might be profitable to him may apply to the Service for an examination by one of its experts. A preliminary examination is made on the ground and a report in all cases is submitted to the owner. If the tract is large and the owner desires a working plan afterwards, a party is sent to collect the necessary data. The investigation is conducted from both the forester's and the lumberman's point of view. When the field data have been collected, a working plan is made which takes into account the special needs or purposes of the owner. The recommendations in the plan enable the owner to derive from the forest the fullest and most permanent revenue which is consistent with his special requirements. Applications for assistance of this character have been received from the owners of about 10,000,000 acres of forest.

The Forest Service provides two forms of assistance to prospective tree planters: (1) Advice for forest planting in all the principal planting regions, which can usually be given free of cost by means of publications and an advisory letter, together with lists of dealers who sell plant material of the species recommended; (2) examinations of tracts in regions where a detailed study has not been made, and which present problems of great economic importance and high experimental or educational value. As a result of such examinations, planting plans are usually prepared.

## News Miscellany

### Oklahoma Hardwood House

The Pioneer Hardwood Company, with general offices at Wagoner, Okla., announces that its new mills and finishing factory at Durant, Okla., are almost finished. With this factory completed the Pioneer Hardwood Company will have two thoroughly equipped, modern wagon-wood plants located in the heart of various timber sections. For competitive delivery the company is well located, having outlets over the St. Louis & San Francisco, the Missouri Pacific, the Missouri, Kansas & Texas and the Missouri-Oklahoma and the Gulf railroads. The policy of the company will be continued as in the past to manufacture a strictly high-grade line of hardwood lumber and vehicle woods, and to maintain complete assortments.

At the Wagoner, Okla., plant, where the company's general offices are located, the Pioneer Hardwood Company has a sawmill, storage

yards and finishing plants, and a duplicate of this equipment at its plant No. 2 at Durant, Okla.

### Incorporate to Centralize Interests

S. E. Slaymaker & Co., the big West Virginia spruce, hemlock and hardwood house, with headquarters Fifth Avenue building, New York, who are sales agents of the large lumber output of the West Virginia Pulp & Paper Company, have, in line with the centralization of all those interests as recently instituted, incorporated under the laws of West Virginia, under the style of S. E. Slaymaker & Co., Inc. The stock of the new corporation is but nominal and will be owned by Mr. Slaymaker and the Messrs. Luke and their associates in the West Virginia pulp and paper institution, and is the last step in the centralization of all those interests under the latter named style. S. E. Slaymaker & Co., Inc., will

continue the selling agency of the lumber output as above noted, in addition to which their charter is broad enough to permit them to acquire other properties and to do such general business as they may desire.

### Building in Chicago During 1909

Permits for Chicago buildings aggregating in value nearly \$90,000,000 were issued by the building department during 1909. This is the high water mark in the history of the city and shows an increase of nearly \$22,000,000 over the building total of 1908, which was a record-breaker itself.

From January 1 to December 30 permits were taken out for the construction of 11,228 buildings, with a total frontage of 311,477 feet and involving a cost of \$89,833,480, against 10,771 buildings, 291,655 feet of frontage, and \$68,204,080 in cost for 1908.

The 1909 figures in detail follow:

1909—	No. bldgs.	No. ft. frontage.	Cost.
January .....	669	18,873	\$ 8,227,700
February .....	828	22,873	5,159,000
March .....	1,254	32,831	8,145,800
April .....	1,082	30,129	8,047,900
May .....	1,054	31,332	12,609,480
June .....	1,182	29,468	7,786,300
July .....	954	27,024	6,856,250
August .....	894	22,083	4,801,650
September .....	957	26,880	7,720,500
October .....	986	28,701	7,603,400
November .....	891	25,624	6,825,700
December .....	477	13,659	6,001,000
Totals .....	11,228	311,477	\$89,833,480

The first high water mark in Chicago building was set in 1890, when the boom which preceded the world's fair started. During that year, building to the extent of \$47,322,100 was done in the city. The following year the amount was \$54,000,000, and in 1892 it was \$63,000,000. This mark held the record until 1905, when it was equaled. In 1906 a record of \$64,298,335 was set.

### Interests Consolidated

William D. Mershon of 9076 Metropolitan Life building, New York City, engaged in wholesale lumber and manufactured wood goods trade, has merged his business with that of his brother, the John D. Mershon Lumber Company of Saginaw, Mich. Offices will be maintained at both New York and Saginaw, and the future business of the house will involve the handling of Michigan, west coast and southern lumber products of all varieties.

The Messrs. Mershon have had a wide experience in nearly every detail of lumber purchases and sales, are strictly honorable in all their dealings, and the new house should meet with success. At the present time John D. Mershon is in California concluding arrangements with the Pacific Lumber Company for the handling of its redwood output in the territory east of the Mississippi and north of the Ohio rivers.

### Committees of National Veneer & Panel Manufacturers' Association

The following is a roster of the committees that have been appointed by the National Veneer & Panel Manufacturers' Association for the ensuing year:

#### NOMINATING COMMITTEE

D. W. Williamson, chairman, Baltimore, Md.  
R. A. Rothermel, Batavia, Ill.  
F. A. Richardson, Alpena, Mich.

#### COMMITTEE ON CONSTITUTION AND BY-LAWS.

S. B. Anderson, chairman, Memphis, Tenn.  
C. T. Crandall, Brockton, N. Y.  
H. M. McCracken, Louisville, Ky.

#### AUDITING COMMITTEE

L. P. Groffman, chairman, St. Louis, Mo.  
R. V. Parsons, Benton Harbor, Mich.  
C. W. Talge, Evansville, Ind.

#### COMMITTEE ON RESOLUTIONS

J. N. Penrod, chairman, Kansas City, Mo.

Haines Ebert, Goshen, Ind.  
J. C. Hill, High Point, N. C.

#### ARBITRATION AND GRIEVANCE COMMITTEE

D. E. Kline, chairman, Louisville, Ky.  
F. E. Hoffman, Ft. Wayne, Ind.  
E. W. Benjamin, Cadillac, Mich.

#### ENTERTAINMENT AND PROGRAM COMMITTEE

E. H. Defebaugh, chairman, Chicago, Ill.  
H. S. Young, Indianapolis, Ind.

### Holly Lumber Company Succeeds the Crosby & Beckley Company

The Crosby & Beckley Company, the veteran and well-known hardwood jobbing house of New Haven, Conn., announces that it has been dissolved by mutual consent and is succeeded by the

R. L. WALKLEY, PRESIDENT HOLLY LUMBER COMPANY

Holly Lumber Company, which will continue the business of manufacturing and wholesaling, with principal offices at 42 Church street, New Haven, Conn.

The Holly Lumber Company is the name under which the Crosby & Beckley Company has carried on one of its manufacturing institutions for the past ten years. This plant is located at Pickens, W. Va., and the output has been sold in the past by the parent company. For the purpose of simplifying its business affairs, the Holly Lumber Company will hereafter sell its output direct to the trade, and will also handle the wholesale business heretofore carried on by the Crosby & Beckley Company.

Of the Holly Lumber Company, R. L. Walkley is president; W. E. Douglass, vice-president; E. A. Beckley, treasurer, and T. C. Beckley, secretary. The company specializes in poplar, but also handles a good deal of oak and other woods.

### African Timber

In a report on the timber resources of Germany, Consul Thomas H. Norton of Chemnitz says that the Empire is making earnest efforts to become independent of other countries by looking to territories in Africa. He says:

"Germany was one of the first countries to recognize the vital importance of forest conservation and of forestry itself as a branch of applied science, standing on the same level with agriculture and mining. Despite the care that has been taken to protect the forests for over half a century, the supply of native woods is now insufficient to meet the demands for fuel and industrial purposes, so that increasingly large amounts of lumber are imported. Germany's foreign supplies of ordinary lumber come chiefly from Russia, Austria-Hungary, Scandinavia, France and the United States. Choicer and more expensive varieties come from the East and West Indies.

"For some months two experts have been actively engaged in studying the forest conditions in the colonies of western Africa, Togo and Kamerun. Most of the time was spent in the latter territory, which embraces over 200,000 square miles. The examination covered the regions that are easily accessible to the chief streams, the Mungo, Sanaga and Wuri, and to the two railroad lines now in course of construction. Much of the surface is covered by thick forest, and there is a great variety of different woods. Some 600 varieties are represented in the collection of samples brought back to Germany. There seem to be no extensive forests in which any one sort of timber predominates. Lumbering aiming at the gathering of any one variety can not be carried out with any degree of economy.

Hardwoods form the great bulk of the forests, and among these the heavier sorts are most common. About one-half of the available timber is regarded as of distinct industrial value. The exact value of many varieties can not be definitely determined until the large collection of samples has been submitted to technical tests, as the woods have not been introduced industrially in Europe. In order to make lumbering operations profitable, the timber should be sawed in the colony and shipped in the half-manufactured form to Germany. Conditions are favorable for such undertakings. Water power is available, and the refuse of the mills would supply, likewise, fuel for steam purposes. Transport from the interior to the coast by water is easy, and can be supplemented by the use of the railroads in construction. The timber of minor value for export can be utilized largely for charcoal and pulp, as well as for destructive distillation.

"As a result the experts regard the Kamerun colony as capable of contributing a valuable quota to Germany's timber supply. They recommend the prompt introduction of scientific forestry, in order to preserve the wooded regions as constant sources of timber.

"In the smaller colony of Togo, which embraces about 20,000 square miles, the conditions are quite different. It has been ordinarily assumed that this territory was well wooded like Kamerun. This may have been the case once, but a careful estimate now fixes the forests at about 200 square miles, lying in the hills and along the water courses. The practice of systematically burning off the grass on open tracts seems to have been the chief factor in reducing the former area of forests and in preventing its extension. The character of the timber is much as in Kamerun. The experts report that in this remote section of Africa, where natural conditions should favor luxuriant forest growth, there is now actually more need of the application of scientific measures to protect and extend tree growth than in any of the southern countries of Europe, so sadly denuded of forests."

### Opportunity for Sale of American Furniture in Venezuela

Consul Isaac A. Manning of La Guaira, believing that American-made furniture would find greater sale in Venezuela if certain simple points were heeded in packing, etc., makes the following reply to the inquiries of a manufacturer in this country:

"There has been but slight importation of furniture during recent years into Venezuela owing to the unsatisfactory economic conditions.

"Germany leads in amount. Of the wooden furniture from Germany the principal items are imitation Vienna chairs and rockers. These articles are not particularly attractive in appearance nor lasting in quality, yet in default of more attractive articles of equal utility and cheapness they seem to have a demand. The discomfort and instability of the Austrian rocker and light straight chair are so palpable that it seems a sale might easily be established for American chairs. But, of course, one thing must be taken constantly into consideration, and that is cost of goods laid down in Venezuela.

"One thing that militates against cheapness in the American furniture is its weight, and also, usually (and this of itself is almost fatal to the effort to overcome the competition), the excessive weight of the packing, on which not only freight but duty must be paid. Thus our furniture manufacturers must compete with a trade which supplies a line of reasonably neat-looking goods in chairs, round black frames, cane seats, which can be retailed in this country by the set, consisting of a sofa, two rockers, two armchairs, and a dozen straight chairs, for \$60. These are shipped in the flat, baled in burlap, and are sold so. If set up before delivery an extra charge of \$5 is made on the set.

"A very cheap, poorly finished, straight chair is made in the country, there being three establishments in Caracas, none of which is well equipped for the work. These can be bought for from \$2 to \$3.50 each. They are not as attractive and in no wise compare with the cheap maple or beach wood chairs made in the United States and retailed there for one-third the money.

"The United States has the lead in office and house furniture of the better grades, as the convenience of the American product and its finish appeal to the man wanting a handy and good-looking office, etc. Sale of these articles could be greatly enhanced, however, if in some manner the cost of duty and freight could be lowered. In office desks and furniture of that character, if the goods could be shipped in bales, knocked down, cost of importation would be greatly reduced; a minimum freight rate could be demanded, and advantage taken of reduced customs charges. The desire for this sort of furniture is sure to grow, but its becoming a demand must of course be dependent on the cost of the articles as compared to the would-be purchaser's financial ability. Where it is possible to use them, screws and bolts should take the place of glue for the tropics; or where glue must be used, manufacturers should be careful that it is prepared to stand the moist heat of these countries.

"The duty on furniture coming into Venezuela is levied on the gross weight, including the packing, and is as follows, the bolivar equaling \$0.193 and the kilo 2.2 pounds: Furniture of iron and wood, or of common wood, of wicker, of straw, rattan, or rush, 0.75 bolivar plus 55 per cent surcharge per kilo; furniture of fine wood, such as palisander, mahogany, rosewood, walnut, or oak, such as may be upholstered, and of common wood if gilded, 1.50 bolivars plus 55 per cent surcharge per kilo.

The sale of office furniture and appliances should be greatly extended in Venezuela, but demonstration of the use of many new wrinkles in this line is necessary to its fullest development. During the past year the number of typewriters in use has been greatly extended

in this district, principally through the activity of an American agent. He is also taking some interest in showing the merchant and business man some of the benefits of better office equipment, which should naturally include typewriter desks. One man, however, can not do it all in an extended territory like Venezuela. It is thus an open field, and should have greater attention from manufacturers of furniture and appliances than they have given it.

### Building Operations for 1909 and 1908 Compared

Official reports from some fifty building centers throughout the country, as compiled by The American Contractor, Chicago, show a gain in the aggregate of 42 per cent for 1909 as compared with the previous year, only five cities showing losses, and these of little moment. The cities scoring an increase of 50 per cent or over are: Bridgeport, 79; Des Moines, 172; Manchester, 207; Newark, 95; New York, 56; Oklahoma City, 233; Omaha, 56; Philadelphia, 50; Rochester, 86; St. Paul, 58; Scranton, 68; Salt Lake City, 70; Worcester, 79. The details will be found in the following table:

City.	1909. Cost.	1908. Cost.	Per Cent Gain. Loss.
Baltimore .....	\$ 7,913,296	\$ 6,374,703	24 ..

### A Live Concern

"And he gave it for his opinion, that whoever could make two ears of corn, or two blades of grass, to grow upon a spot of ground where only one grew before, would deserve better of mankind, and do more essential service to his country, than the whole race of politicians put together."

Thus spake Jonathan Swift.

If his proposition is correct, as it undoubtedly is, the sawmill world owes a debt of gratitude not easily measured to the Gordon Hollow Blast Grate Company of Greenville, Mich., whose wonderful grate makes two boilers do the work of three.

The Gordon Hollow Blast Grate Company was

organized in February, 1890. On the original board of directors were R. F. Sprague, T. J. Potter, C. L. Hecox, W. D. Johnson and C. W. Johnson, all of Greenville.

The present officers are R. F. Sprague, president; L. W. Sprague, vice-president, and Paul van Deinsse, secretary and treasurer. They also constitute the board of directors.

The success of the Gordon hollow blast grate has been phenomenal. It is used in sawmills in all parts of the world, as well as in plants manufacturing veneers, hoops, staves, heading, etc., and is conceded to be indispensable where the boilers are overloaded or fine, wet sawdust is employed as fuel.

It gives perfect control over the fire, making it possible to economize fuel on the one hand, at times when but little steam is needed, or to crowd the boilers on the other, where they are taxed to their full capacity.

The grate further saves labor in firing.

Last, but not least, it is so durable that in the end it is much cheaper than a draft grate.

The Gordon Hollow Blast Grate is suitable for either plain furnaces or Dutch ovens. It can be applied to any number of boilers, from one up. The largest outfit can be installed without losing a single hour—that is, it can be installed between quitting time Saturday and starting up time Monday morning. A fire can be maintained on it when the blower is idle, if desired, as at night, without difficulty and without injury to the grate.

But the service the Gordon Hollow Blast Grate Company has rendered the lumber trade is not confined to its introduction of the Gordon hollow blast grate.

It was also the first to place on the market a gang edger for portable and small stationary mills, and its Tower line of edgers and trimmers is almost as well known as the Gordon hollow blast grate. At the present time the company is building seventy-two sizes and styles of edgers and ten sizes of trimmers, which enables the purchaser to select a machine perfectly adapted to his requirements in every particular.

Those who lack steam, who wish to burn sawdust or other refractory fuel, or who are in the market for an edger or a trimmer, would do well to drop a line to the Gordon Hollow Blast Grate Company, Greenville, Mich., stating the situation.

### The Last Yew Forest in Bavaria

Consul George Nicolas Ifft of Nuremberg states that a bit of primeval yew forest is still to be found in the Bavarian highlands of Germany.

This tree, he says, whose wood was so eagerly sought in the days when the crossbow was still a dangerous weapon of warfare, was, in the middle ages, widely distributed over Germany, but is today almost extinct, and even most German foresters know it only as a very rare tree, individual specimens of which are here and there preserved. There is, however, a tiny yew woodland still in existence in the Bavarian mountains, near the village of Paterzell and not far from the royal city of Munich itself. It covers an area of not much more than a half mile square. Here along the peaty shores of the dried-out lake of Zell grow the last of the yew trees.

It is primeval forest land and, according to a recent count, comprises some 845 large and 1,456 small trees. The larger trees are at least 200 to 500 years old, and, perhaps, hundreds of years more. The smaller trees are all under 50 years. The largest of the trees, at a height of four feet from the ground, has a circumference of 8 feet 8 inches, and quite a number of them are more than 6 feet in circumference, and have heights varying from 50 to 60 feet. The larger trees are much damaged by storm and still more through the cutting away of the young sprouts in the spring. These dark-green, needled branches are much sought for wreaths and for decoration.

Fortunately, if it may be so put, the old trees are all more or less rotted and their wood thus rendered useless, for to this fact undoubtedly is due their preservation. A small part of the yew woodland belongs to the community of Paterzell, but by far the greater part is included in the state forest reserve. There is at present a movement on foot looking to the preservation of these rare trees.

### New Officers St. Louis Lumbermen's Exchange

At a meeting of the Lumbermen's Exchange of St. Louis held on Monday, January 3, the following officers and directors were elected for the coming year:

President—George E. Hibbard.

Vice-President—R. F. Krebs.

Directors—A. J. Lang, F. Waldstein, Alf. Johanning, J. R. Massengale, Loyd G. Harris, Tom Powe, William W. Milne.

The Arbitration Committee consists of Peter

GEORGE E. HIBBARD, NEW PRESIDENT ST. LOUIS LUMBERMEN'S EXCHANGE

Whaley, F. C. Moore, Edward Wiese, W. R. Chivvis and R. J. O'Reilly.

The secretary will be elected by the Board of Directors at the first meeting held. A. H. Bush who has so efficiently performed the office of secretary will undoubtedly be reelected to that office.

### A Big Poplar Contract

A few days ago The Hardwood Lumber Company of Cincinnati, as purchasing agent of the General Motors Company, closed what is probably the largest deal for poplar ever made in the history of the trade. It involved upwards of \$500,000 worth of high-grade poplar and special widths of panel stock for delivery during 1910. It included an option on about the same amount for 1911. This particular purchase was for the Buick Motor Company of Flint, Mich. Participating in the sale were the Yellow Poplar Lumber Company of Coal Grove, O., and the W. H. Dawkins Lumber Company of Ashland, Ky.

While this was the largest order for poplar ever placed, it is only a small part of the stock that The Hardwood Lumber Company is prepared to buy for the General Motors Company during 1910.

### Imports and Exports for November, 1909

Advance sheets from the Monthly Summary of Commerce and Finance, issued by the Department of Commerce and Labor, showing details of imports and exports for the month of Novem-

ber, 1909, show that wood and manufactures thereof to a total value of \$5,304,346 were imported during November, 1909, as against a total of \$4,220,739 during November, 1908.

Exports of domestic woods and manufactures thereof for the same month of 1909 reached a total of \$5,498,070 as compared with \$4,544,467 the previous year.

Under Exports of Foreign Merchandise it is found that wood and manufactures thereof to a total value of \$109,840 were shipped out of the country in November, 1909; in November, 1908, the total was \$103,153.

In each case there was a substantial gain, showing that the country's prosperity continues to grow.

### Meeting Cincinnati Lumbermen's Club

The first meeting of the new year held by the Cincinnati Lumbermen's Club was the most interesting in its history. Aside from its importance as a business meeting, the principal work of which was the raising of funds and the arrangements of committees on entertainment for the convention of the Hardwood Manufacturers' Association of the United States, which meets here on February 1, 2 and 3, a program of rare excellence was afforded by Chairman Joe Bolser of the entertainment committee.

At 6:30 p. m. the dinner was served, and while this was being enjoyed the "Pork Chops" band sang songs and rendered a number of instrumental numbers. Perfectos being passed, President Clif S. Walker introduced Howard Saxby, the noted humorist, who gave a short talk on "Statistics," but which was as devoid of figures as a frog is of hair. But it was funny, and all present shook down their dinner with laughter.

Minutes were read and approved and the announcement made that applications for membership of Harry R. Browne, the Swann-Day Lumber Company, and the Standard Lumber Company had been favorably reported and they were unanimously elected to membership.

An invitation for a series of games between the bowlers of the Queen City Furniture Club and the Cincinnati Lumbermen's Club was accepted, and E. J. Thoman was chosen to manage the lumbermen's end of the contest.

An invitation to attend the convention of the Indiana Hardwood Association at the Denison hotel, Indianapolis, Ind., on January 13, was read and accepted. Jim Buckley of Brookville was present and promised all who would attend a most enjoyable time.

A letter from the secretary of the National Boxmakers' Association, thanking the club for the invitation to hold its convention of 1910 in Cincinnati, was received and read. It stated that the Executive Committee had decided on French Lick Springs as the place for the convention.

A letter of thanks from the widow and family of James King was read, thanking the club for floral tribute and courtesies extended.

The following letter from E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association, was read, and was the basis of a long discussion:

NEW YORK, Dec. 21, 1910.—W. S. Sterrett, Secretary Cincinnati Lumbermen's Club—Dear Sir: Following the adverse decision of the Interstate Commerce Commission in the matter of car stake and equipment complaint, the National Wholesale Lumber Dealers' Association appointed a committee of its own members to consider the feasibility and advisability of carrying out one of the suggestions contained in the report submitted to the complainant associations by Counsel Ross and Associate Counsel Stone. After careful consideration this committee decided that the only practical line of action lay in an effort to obtain from Congress an amendment to the Hepburn act which would compel the railroads by law to furnish the car stakes and other equipment necessary for the transportation of lumber and similar commodities upon flat or gondola cars. A bill was accordingly prepared and in-

troduced in the House of Representatives at the last session of Congress known as the House Bill No. 27,528, but owing to the shortness of the session and the failure of Congress to consider any railroad legislation nothing was done with this bill.

At the meeting of the board of trustees of the Wholesale Lumber Dealers' Association held in New York on December 10, the committee of this association, known as the Congressional Car Stake Committee, composed of F. R. Babcock, of Pittsburg, chairman; L. L. Barth, Chicago, Ill.; R. W. Higbie, New York City; J. L. Kendall, Pittsburg, Pa., and Lewis Dill, Baltimore, Md., was instructed to take steps to have the same bill presented at the present session of Congress to make an effort to accomplish its passage.

The plan outlined by the committee consists in asking the cooperation of the associations which joined with us in the old car stake and equipment complaint, and of such individuals as may wish to associate with us.

It will be necessary for a strong delegation of representative lumbermen to appear before the committee of Congress having this matter in charge and to present their argument in support of the bill. In addition to the traveling expenses of these delegates, the expense of prosecuting this effort will be very inconsiderable compared to the expense incurred in making the original fight before the Interstate Commerce Commission.

Each association desiring to be represented will be asked to provide for the expense of its own delegates, and in addition to contributing a moderate sum for the general expenses, such as printing briefs, employing clerical assistance, etc.

Our association feels that the justice of the cause and the great advantage to be derived from it by lumbermen generally and from the passage of such an act, fully warrant the very limited expenditure which will be necessary to make this additional effort. Having already expended such a considerable sum it would be unwise to drop the matter without action on the suggestion of counsel which apparently promises relief. Although our main contention was defeated, we have at least obtained a valuable concession in the matter of allowance for the weight of stakes.

We hope that you will feel sufficiently interested in this matter to consent to furnish as many delegates as possible to present a strong argument before the committee of Congress at Washington. It is probable that the hearing will be set for some time during the month of January and therefore prompt action is necessary.

Will you kindly advise us, therefore, at your very earliest possible opportunity whether your association is willing to further join us in this action and indicate the maximum amount which you would be prepared to contribute to the fund for general expenses, with the confident assurance on our part that this expense will be made as light as possible, and that you will not be called upon for more than your proportion for any amount expended.

While our association has already taken the initial steps, we believe that your earnest cooperation, and particularly in the matter of sending delegates, is necessary to success, and in view of the interest which you have already shown, we therefore urge upon you to join with us in this renewed effort.

Upon receipt of your reply, Chairman Babcock will inform you fully as to the exact plans of his committee, and keep you advised as to the date of the hearing and all other matters connected with the work. Yours very truly,

GEORGE F. CRAIG, President.

E. F. PERRY, Secretary.

On motion of W. A. Bennett, it was decided to send two delegates to the conference at Washington on Car Stakes and Equipment.

The report of the special committee on entertaining the convention of the Hardwood Manufacturers of the United States was presented as follows:

CINCINNATI, O., Dec. 3, 1910.—C. S. Walker, President Cincinnati Lumbermen's Club—Dear Sir: Your committee appointed at the last meeting of the club for the purpose of cooperating with the Manufacturers' Association in making their coming meeting to be held in Cincinnati a success, beg to report that it is the sense of this committee that the club show their appreciation in Cincinnati having been chosen as the meeting place of the association by properly entertaining them.

The committee at this time is unable to ascertain the approximate number which is expected to attend this meeting, consequently can form no definite opinion as to the cost of entertaining. We would recommend, however, that if the club undertake the entertainment that they do so in a manner that will reflect the greatest credit upon the good city of Cincinnati and this club, and which will leave a fragrant and lasting remembrance of Cincinnati hospitality (to be afterwards reflected in a pecuniary way) and

to avoid any likelihood of any flaw appearing in the entertaining by reason of insufficient funds, we would suggest that the matter be not undertaken unless there can be raised a guaranteed subscription of approximately \$5,000. In the event that this sum be not required the surplus can be returned.

As a method of raising this subscription we suggest that the club subscribe \$1,000, the balance of \$2,000 to be raised by individual subscriptions from members of the club, who are inclined to subscribe an amount in excess of their proportion of the subscription, and from subscriptions which we think can be procured from concerns located here who derive a source of profit through their dealings with the lumber interests, and to whom the meeting, viewed from a business standpoint, will, by being held here, be of as much advantage to them as to the lumber interests. Very truly yours,

CHARLES F. SHIELS,  
W. E. DELANEY,  
B. F. DULWEBER,  
Committee.

The report of the committee brought out a strong discussion, all of which was in favor of giving the convention such a reception as will forever make the delegates have a warm spot in their hearts for Cincinnati's hospitality and the character of her lumber merchants as business men.

On motion, the chair appointed the following committee to have charge of the finances and the raising of an entertainment fund of such proportions as will enable them to show the visiting lumbermen the most enjoyable time of their lives: Fred W. Mowbray, chairman; W. E. DeLaney, B. F. Dulweber, Clinton Crane and Chester F. Korn.

A circular letter from George F. Craig, president of the National Wholesale Lumber Dealers' Association, was read, which gave a detailed statement of hotel rates and accommodations at the Sinton hotel where the convention will be held. A large attendance is indicated. It is requested that members having any suggestions as to subjects to be discussed forward the same to the secretary at the earliest date, in order that they may be referred to the proper committees for investigation and report.

A letter from a lumber concern that for a long time has been operating under questionable methods was read, offering for sale lumber at far below its real value. As the concern referred to is well known in Cincinnati, it was considered advisable that lumbermen at other points be careful in looking into the rating and commercial standing of lumbermen with whom they are unacquainted, before shipping lumber to them.

On motion, it was decided that the Lumbermen's Club be incorporated as an organization for profit, and the Executive Committee was instructed to file articles of incorporation with the Secretary of State.

The meeting then adjourned.

### Monthly Meeting Baltimore Exchange

The first monthly meeting of the new managing committee of the Baltimore Lumber Exchange, elected December 6, was held January 3, when the new president, John L. Alcock, announced the appointment of the following standing committees for the year:

Arbitration and Grievances—Lewis Dill, chairman; Theodore Mottu, Maurice W. Wiley, Rufus K. Goodenow and E. P. Gill.

Inspection—Ridgeway Merryman, chairman; William M. Burgan and Theodore Mottu.

Hardwood Inspection—Richard W. Price of Price & Heald, chairman; John J. Kidd of the Kidd & Buckingham Company, and Frank A. Parker of Mann & Parker.

Membership—Richard W. Price, chairman; Henry C. Matthews, of Thos. Matthews & Son, and E. P. Gill.

House—George E. Waters, chairman; Henry C. Matthews and Parker D. Dix.

Legislation and Transportation—William M. Burgan, chairman; Rufus K. Goodenow, Maurice W. Wiley, George E. Waters and Geo. H. Poehlmann.

Lewis Dill, William M. Burgan, Henry P. Duker of Otto Duker & Co., George B. Hunting and Theodore Mottu were named a special committee to confer with the wholesale and retail members of the trade with the view to bringing about closer relations. The committee was provided for by a resolution adopted at the annual meeting of the exchange. The Managing Committee also provided for the appointment of a committee on the car stake question to cooperate with the car stake committee of the National Wholesale Lumber Dealers' Association.

### New Year's Jollification of Philadelphia Lumbermen

As is the annual custom of the Lumbermen's Exchange of Philadelphia, the last afternoon of the old year was devoted to a social union and general jollification. At one o'clock George A. Howes, chairman of the office and entertainment committee, announced in his stentorian voice that luncheon was served in Griffith's Hall on the second floor of the building, to which all repaired in the heartiest good fellowship to partake of a dainty repast, provided by the efficient and never failing caterer, Wiener, after which, as the hands of the clock pointed to two, President Herbert P. Robinson, who also acted as master of ceremonies, mounted an impromptu stage and informed all present with great gusto that the performances would begin. After a lively overture by the pianist, the famous Kindling Wood Quintette of the Exchange, delivered themselves of a significant and soul stirring selection, which brought down the house. Then the fun increased when Lawrence Sharkey took the floor and reeled off some of his side splitting Irish stories. Following the first installment of these, H. C. Saylor, whose voice has repeatedly charmed the gatherings in these Exchange rooms, gave one of his choice solos, but he was not to be let off with so modest a contribution, and was forced to give an encore to satisfy his audience. Sharkey with his inimitable Irish anecdotes, now came on the scene again and with his true Irish brogue kept his hearers in convulsive laughter, and only out of compassion for their overtaxed muscles did he finally desist. The social ended with the singing of an original composition of five stanzas by the Kindling Wood Quintette, each member singing a stanza as a solo, which was followed by the chorus, "Throw Out the Life Line," in which all present joined.

### SONG OF THE KINDLING WOOD QUINTETTE.

This Exchange is a place where you learn how to trade,

Where contracts and deals of all kinds are oft made,

Where wholesalers touch the retailers, a fact, And sometimes they say that our meetings are packed.

Chorus: Throw Out the Life Line.

Our President Robinson every one knows, Is square as can be, from his head to his toes; He wants to buy roofers, the six-inch, I mean, If you want to sell him, you sell at fifteen.

Now there is Frank Smith, who will be our next mayor;

He has lots of nerve but he hasn't much hair. If you have a pain in your back, side or are ill, He'll give you a cure and not send you a bill.

Our friend Owen Bruner a picture once took, Of one of our members who frontward did look; This member was touched by a queen or a jack, And ever since then he has been Luckenback.

When the Pirates of Barnegat go on a cruise, There's some that play pussy and some that play booze;

There's some buy dark secrets, then back out, 'tis said,

And some who are caught walking off with their bed.

The office and entertainment committee, which arranged this jolly year-end entertainment, is composed of George A. Howes, chairman; Howard Ketchum, F. A. Dudley, Fisher Dalrymple and George Rodgmen.

### In Acknowledgment

Has anyone called you up and asked you, "Is this one-nine-one-O?" and when you said that it wasn't, told you to look at the calendar? If you had as many calendars for 1910 as the RECORD has you'd know what year it was, sure. This office has been most bountifully remembered, and some of the handsomest calendars seen this year have come to hand, besides a number of blankbooks, cards and other remembrances, for all of which the RECORD wishes to express thanks and to wish the donors the best and most prosperous times during the coming year.

From the Anderson-Tully Company, manufacturer of hardwood lumber, packing boxes, egg cases and veneers at Memphis, Tenn., came a beautiful calendar, showing a reproduction of the painting by Thomas Moran, entitled "An English Fishing Village." It is well printed in soft, hazy colors and mounted on a stiff cream board, making a most artistic hanging.

Charles K. Parry & Co., wholesalers of lumber, with offices in the Land Title building, Philadelphia, and mills at Selma, N. C., Bingham, S. C., and Pine Bloom, Ga., sent a splendid calendar, containing a reproduction of one of Thomas Moran's famous paintings, "Tower Rocks—the Yellowstone." The most pleasing feature of this wall hanging are the large, clear figures of the calendar pad which may be seen at some distance.

A most acceptable and useful "tickler" conveyed the compliments of Ward Bros., the well-known manufacturers of maple flooring at Big Rapids, Mich. This handsome little notebook bound in soft black leather and containing no other printing on the cover except the editor's name in gilt letters, is of the new style loose leaf type, and the generous donors state that they will be glad to furnish additional leaves as they are needed. This is a big gift from a big concern.

From Cobbs & Mitchell, Inc., manufacturers of the well-known Electric brand of hardwood flooring at Cadillac, Mich., came New Year's greetings in the shape of a billcase in black leather lined with brown. A duplicate of this case was received from the Mitchell Brothers Company, Cadillac, Mich., makers of "rockhard" hardwood flooring.

The Hermance Machine Company of Williams-

port, Pa., builders of woodworking machinery of excellent reputation, sent a clever wall hanging in black and white. The picture shows a pretty basket ball girl attired for the game nestling down among a bunch of sofa cushions.

The J. W. Darling Lumber Company, Cincinnati, O., manufacturer and wholesaler of southern hardwoods with yellow cottonwood a specialty, showed its foresight in the selection of a desk calendar which is good for 110 years, from 1810 to 1920. The calendar has a good strong frame and will make an attractive and useful ornament on any desk.

A handy little vest pocket book, containing a veritable mine of useful information, maps of the various countries of the world, and ruled pages for a diary, general memoranda and a cash account, came from J. Arthur Meeks, manufacturer of handles, lumber, rivets and special machinery at Muncie, Ind. This is a valuable little book and will serve to keep in mind the diversified line of this Indiana concern.

New Year's wishes from Henry C. Atkins and Nelson A. Gladding of the prominent saw manufacturing house of E. C. Atkins & Co. of Indianapolis, Ind., came on a handsome embossed card.

Wistar, Underhill & Co., wholesalers of lumber with offices in the Real Estate Trust building, Philadelphia, send their regular weekly calendar, well printed in red and black and mounted on a stiff red cardboard. This calendar shows only the six business days of the week and is arranged so that it is also convenient for a memo pad. It is a very popular calendar in the Record offices.

The Baldwin Locomotive Works of Philadelphia, the great builder of logging locomotives, send a good standard calendar, clearly printed and of convenient size, showing one of the company's famous engines.

A handsome engraved card brought New Year's greeting from C. C. Mengel & Bro. Company, the big mahogany people of Louisville, Ky.

A neat calendar bearing a reproduction from the painting "Here He Comes," by Carl Hirschberg, brought annual greetings from Robert Black & Co., wholesale hardwood, pine and hemlock lumber, with offices in the Shearer building, Bay City, Mich. This calendar is most appropriate for the home, as the picture shows a happy family of mother and three little ones, as well as a fine collie dog, awaiting the return of the father.

One of the most artistic calendars received came from George C. Brown & Co., well-known hardwood concern at Memphis, Tenn., which makes a specialty of Tennessee red cedar. This shows a picture taken from the painting by Francis Day, entitled "The Critic," a quaint old-fashioned young mother is playing on a harpsichord and a little girl stands beside her, listening. The soft tones of the picture are well set off by the green and tan watered paper and green taffeta ribbon hanger provided.

A weekly calendar pad of convenient size and good printing came from Scatcherd & Son, wholesale dealers in hardwood lumber, with main offices and yards at Buffalo and mills at Memphis, Tenn.

A large and attractive wall hanging showing the picture of a New York belle driving in Central Park, a reproduction of a painting by Herman N. Hyneman, was sent by the Williamson-Kuny Mill & Lumber Company, manufacturer of southern hardwoods and high-grade veneers at Mound City, Ill., with a Chicago office in the Monadnock building.

C. I. Hoyt & Co. of Pekin, Ind., manufacturers of Indiana hardwoods, with hickory dimension stock a specialty, have a fine large calendar printed in red and black, good bold figures, and showing the moon phases. This is a sensible calendar and more useful to keep tab on Father Time than as a wall ornament.

Barker & Co., Inc., wholesalers of pine, spruce, southern pine, cypress and whitewood, with headquarters at Boston, Mass., and branch offices in

New York and Philadelphia, sent their usual calendar, the same style that they have used for some time back. It is of convenient size and has good strong figures.

An artistic little calendar containing a picture, "The Greatest Show on Earth," from a painting by Karl Witkowski, came from the John Gillespie Lumber Company of Chicago.

A Harrison Fisher head in which blue is the predominating color brought New Year's wishes from John Dulweber & Co., one of the foremost hardwood houses of Cincinnati. This calendar is very artistically put up, the picture being surrounded by an oval frame of white watered paper with a blue border and a blue ribbon for a hanger.

Compliments of the Three States Lumber Company, big manufacturer of hardwood lumber, with general offices at Memphis, Tenn., distributing yards at Cairo and Joppa, Ill., and mills in Missouri, Arkansas, Tennessee, Mississippi and Louisiana, came with a neat little leather bound blank book ruled to accommodate a diary, addresses, and memoranda. This company has made this book of special value to the trade by inserting a deal of information, such as weights of hardwood lumber, Doyle and Scribner rules, and the Hardwood Manufacturers' Association grading rules for oak, cottonwood, gum, ash, sycamore, elm and cypress, as well as considerable general information.

A post card of quarter-inch oak in which the following greeting was burned came from the Cardwell Mill & Lumber Company of Cardwell, Mo.: "We wish you a happy and prosperous New Year and remind you, we cut quite a figure."

The Cypress Lumber Company, manufacturer of gulf cypress and other cypress lumber at Apalachicola, Fla., sent a striking little calendar mounted on red board and tied with red cords and showing a picture of a young girl in a flaming red coat.

From Young & Cutsinger of Evansville, Ind., manufacturers and wholesalers, dealers in hardwood lumber, with fine figured quartered oak a specialty, came an attractive calendar showing a picture of a young girl seated before a dressing table.

The American Wood Working Machinery Company's calendar has several features which make it especially valuable. It shows, besides the current month, the month previous and the following one on each sheet, gives the moon phases, and is clearly printed in black and red, the figures of good size. The location of the company's many branches offices is given, also pictures of a number of its important machines and views of its plants.

The R. E. Wood Lumber Company of Baltimore always sends out handsome calendars, and this year's is no exception. This one is of large size, the picture being a reproduction from a painting by W. Verplanck Birney, "Where the Fox Ran." It shows a number of gentlemen in red coats gathered after the hunt to listen to an explanation of "where the fox ran."

The compliments of Louis Wuichet, shipper of California white pine and Arizona soft pine, with office in the Railway Exchange, Chicago, were sent in company with a neat little pocket blank book bound in red leather and bearing the editor's name in gilt letters on the cover.

"Just a Song at Twilight" is the title of the picture which adorns the calendar of the Pioneer Hardwood Company, manufacturer of wagon woods at Wagoner, Okla. This is a reproduction of a painting by Albert Herter, and, after his usual style, light effects are used to heighten the beauty of the subject. The picture, which is in very soft, suggestive coloring, is set off by a stiff buff pasteboard mount.

The R. S. Bacon Veneer Company of Chicago, importer and manufacturer of mahogany crotches, Circassian rosewood, American walnut, quartered oak, birdseye maple, curly birch, bay poplar, red gum, yellow pine, red oak and

birch veneers, sent its holiday greetings with a vest-pocket book bound in black leather, and containing, besides the blank pages for diary, addresses and memoranda, considerable useful information such as rules for computing interest, weather bureau signals, brief business laws, postage rates, etc.

An artistic calendar containing a picture of the head of a young girl, from a painting by Aibert Lynch, with a double mounting in two shades of brown, and tied with brown cords, came from the Huddleston-Marsh Lumber Company of Chicago, manufacturer of mahogany and veneers.

The Righter Lumber Company, wholesaler of ash, oak, chestnut, poplar, maple, beech, birch, cypress, gum, basswood, cherry, hickory, hemlock, pine and spruce lumber, with offices in the Land Title building, Philadelphia, sent a large wall hanging, having a picture entitled "Off the Coast of Devon," from a painting by A. J. Warne-Browne. The calendar pad is printed in good bold figures and the picture is well reproduced in artistic colorings.

### The New Hermance Line

At Williamsport, Pa., is located the plant of the Hermance Machine Company, builders of high-grade woodworking machinery. This plant is a model of efficiency and up-to-date-ness; it is fitted in all departments with the best equipment that money can buy and all manner of labor saving devices are in use. In addition shipping facilities available at this factory are excellent, so that the company can give its customers not only some of the finest woodworking tools on the market today, but also quick and reliable service.

Hermance machines are built to satisfy particular buyers; they have an enviable reputation among the trade which has not been achieved without meriting it.

The Hermance line includes various sizes and styles of planers and matchers, carefully built of the best material throughout and embodying a number of special features which make them particularly valuable; single and double surfacers of different styles and uniformly excellent quality, a pony planer, the famous "Double Quick—Wide Open" moulder, having so many special features as to put it in a class by itself; 6" moulders and sash stickers of various styles, tenoners, mortisers, door and sash clamps, rip saws, swing saws, and a combination saw and dado machine. All of these tools may be depended on for quality, speed and efficiency, and with a concern like the Hermance Machine Company purchasers can be assured that they are getting the kind of equipment they want, and that they will get a square deal.

The Hermance Machine Company has prepared a substantial and artistic booklet entitled "New Hermance Line" which gives all the details in regard to its machinery and is illustrated with numerous fine engravings. This the company will be glad to send to interested persons on request. It is a good book for users of woodworking machinery to keep on hand for future use, as they cannot go wrong by purchasing any one of the Hermance line.

### The Porter Woodworking Machines

Users of woodworking machinery will find among the Porter tools some of the finest and most effective machines on the market. This concern, whose large and varied line of goods is manufactured in a model plant at Grand Rapids, Mich., has forged its way through the production of uniformly excellent tools to a place among the recognized leaders in the woodworking machinery business of the country.

Among the well-known machines made by the Porter Company are: The Porter, Jr., 5 inch bench jointer for jointing small stock in pattern shops, carpenter, wagon making and job

shops, furniture factories, etc.; the Porter hand jointer or buzz planer in varying sizes, a machine which is essential in any woodworking factory, as it is an especially handy tool for jointing or fitting, and is also adapted for special work, such as rabbeting, grooving, chamfering, squaring, heading, gaining, etc.; cabinet and pattern makers' wood turning lathes, swing cut-off saws, columns and frame shapers as well as several different carving machines, including rounders, carvers and sanders.

The Porter factory also turns out some very effective and valuable attachments and fittings, such as the well-known Solid Round Safety Cylinder, a protection for the hands and fingers of machine operatives; the Jointer Guard, a simple and practical device that would save factories a great deal of time and money through the accident avoided, and Bennett's Reliable Saw Guard, a positive safeguard for hands and fingers, preventing stock from flying back, keeping sawdust from the operator's eyes, and avoiding contact between the saw and the operator.

An illustrated booklet descriptive of these tools will be sent on request to the Porter Machinery Company at Grand Rapids, Mich.

### The Economic Value of Factory Trucks

Employers of labor in mills, factories or shops—everywhere in fact—are taking account as never before of the relation between the money they pay for labor and the results they get on their investment or outlay, call it what you will.

The average man who has studied the question has found that on a basis of one hundred per cent efficiency he received fifty per cent or less. Some men on learning this have jumped to the conclusion that their men were "soldier-

Just this—that stock was piled down on the floor after one operation; then repiled on a truck and moved to the next operation. After finishing that operation the process was repeated. The stock was handled three times where it

STEEL FRAME FACTORY TRUCK NO. 2

should have been handled but once, and there were not enough trucks to handle it properly at that. The remedy? Enough trucks to permit of handling the stock from kiln to finished product without piling it on the floor at all. And to insure the handling of loads of maximum size—trucks having roller-bearing axles, cutting the draft down one-half and doubling the size of the loads. The result? The substitution of profits for loss, of satisfaction for annoyance.

Instances like the above cannot be found in

The accompanying cuts show a few of the many labor-saving vehicles manufactured by the Gillette Roller Bearing Company of Grand Rapids, Mich. These vehicles are known to those who use them as "the light running, long lasting kind." This company will be glad to send full information on request.

### A Splendid Line of Special Flooring Machines

The W. S. Sherman Company of Milwaukee, manufacturers of special flooring machines, turn out a number of tools that should be of great interest to flooring manufacturers. This company's line includes side face boring machines, top face boring machines, flooring end matchers and flooring butters.

The most striking machines made by the company are the twin end matchers, which have made a record of twenty-six cuts per minute for each machine. These twins being placed one on either side of a conveyor with a strip shoot over the conveyor and between the twins admit of the strip of stock being end matched without turning, and as the conveyor carries all lengths of strips to and from the hands of the machine operators there is no loss of time and a surprising amount of work is accomplished. The machines can handle any width of strip up to 5½ inch face; any thickness up to 1½ inch and lengths up to 16 feet.

The Sherman company also makes an end matcher designed especially for small flooring factories which is a combination of the twins above mentioned, has all the latest improvements of the twins, the only difference being that not so much work can be accomplished with this machine.

The Sherman flooring boring machines have long been recognized as tools of exceptional merit and constant efforts are put forth by the company toward improving them. The company's style B face boring machine will bore flooring as fast as it can be fed through the flooring machine. It is a particularly valuable tool, as with it lower grades of flooring stock can be made marketable as jointed flooring by face boring on this machine.

The W. S. Sherman Company is located at 495 Clinton St., Milwaukee, Wis., and anyone interested can obtain further information and literature in regard to the Sherman machines by writing to the company.

### The Grand Rapids Crescent Machines

No line of woodworking machinery enjoys a more favorable reputation throughout the trade than that made by the Crescent Machine Works of Grand Rapids, Mich. This company is constantly looking for ways and means of improving its machines so that they are known universally as efficient, easy running and up-to-date tools.

One of the most notable products in the Crescent line is the Universal double sawing machine which embodies every known improvement of consequence employed in such machines, as well as a number which are the result of the company's many years of observation and experience in building this class of tools.

Another splendid tool is the Variety Single sawing machine, which is designed to meet the demand for a heavy and finely constructed single saw, such as is required in the modern cabinet shop. Other tools made by the Crescent people include the "D" variety saw bench, one of the strongest and heaviest benches on the market, including even those which sell at much higher prices; various styles of dowel machines, double and single head; the Automatic chair seat router, a lock mortising machine, twist moulding machine, rope moulding machine, bead moulding machine, and veneer presses.

Whatever bears the name Grand Rapids Crescent

ROLLER BEARING APPLIED TO METAL WHEELS

ing" and have tried to drive them harder, only to find that the average laborer is growing more and more averse to being driven, and the driving has failed in consequence. Other men have looked deeper into the situation and have found the low efficiency of labor in their mills and factories due to causes with which the men were not connected.

Take, by way of illustration, the case of a certain flooring plant. Equipped with the best machinery it is possible to buy, this factory was operating under difficulties. Day after day stock accumulated on the floor, interfering seriously with the work. Night after night the plant was operated overtime to clean up the factory for the next day's business. What was the trouble?

DRY KILN TRUCK

every mill or factory, but they may be found in any line of business—in any place where raw material is sent on its way to become a finished product—in mill, factory or warehouse. And the remedy is always the same—enough vehicles suited to the particular needs of the place, to permit of handling the stock without waste of labor: vehicles so built as to make it certain that they will stand up for years under the most severe service; and lastly, vehicles having roller-bearing axles, thus enabling the worker to use his strength in moving loads, not in overcoming friction. With equipment of that sort the labor cost of handling material can be reduced to from twenty to fifty per cent without adding to the burdens of the man who does the work.

ROLLER BEARING APPLIED TO WOOD WHEELS

may be depended upon to be exactly as represented. The company's plant at Grand Rapids, Mich., is a model of up-to-dateness, as it is improved and enlarged as often as its business requires in compliance with the company's policy of always having the best equipment in its line.

#### Of Interest to Glue Users

One of the most important problems that confronts the woodworking shop today is the question of glue handling. All manufacturers and practical users of glue agree that when kept under heat for long periods of time glue loses its strength and deteriorates generally, and this lessening in strength takes place even at the lowest temperature at which glue can be used for practical purposes. It is claimed that glue manufacturers would not be able to sell their product if they applied one-tenth of the heat to their glue that users have been wont to do.

The old method of keeping glue liquid by subjecting it to constant heat in a supply kettle has long been recognized as faulty, particularly as it was impossible to overcome the deterioration of the fiber substance or main strength of the glue. Under the old method it was necessary to keep a quantity of glue under heat, and the glue not only lost strength by remaining under heat for such long periods but also was lessened in quantity through evaporation.

In October, 1908, Charles M. Zimmerman invented the Instantaneous Glue Filtering Converter, which is now manufactured by the Instantaneous Glue Converter Company, 221 223 West Third street, Cincinnati, O. This converter, consisting of a single small apparatus, neat, clean and occupying little space, has been installed by many prominent concerns throughout the country, and is rapidly superseding the antiquated method which required the use of a

number of messy kettles. Two patents have been granted on this apparatus and four improved patents are now pending.

The construction and operation of this converter are very simple. It consists of an inner

vessel with a perforated bottom which fits into and extends about half way down into the outer vessel. Below this inner vessel is a catch basin into which the glue flows as it melts and from which it flows on out through the open faucet. There is no stop to the faucet and all glue put into the converter melts and flows out. Glue is melted at the rate of a quart a minute or one gallon every three minutes.

The melting is caused by a moist heat produced from a greatly reduced volume of steam, the reduction made being due to a reducing steam trap attached to the converter. The condensation from steam takes place in the outer vessel and passes out at the bottom of the converter while the moist heat from the steam surrounds the glue which melts immediately and flows out through the open faucet.

By means of this process the glue comes out in the same proportion of water and glue in which it is soaked, temperature is always the same, evaporation is entirely eliminated and there is not the slightest deterioration in the strength of the glue. The apparatus is made of copper with brass fittings, and as the glue merely passes through it it will last indefinitely.

A brass filter is provided in the catch basin which filters the glue as it passes through the converter so that it is always clean and there are never annoying particles of dirt and chips of wood in the glue which comes through this apparatus.

The Instantaneous Glue Converter Company also manufactures glue testing apparatus for testing glue in solution and evaporation, to determine the amount of dry glue in solution or the amount of water involved in the solution. The price the company puts on this article is not for profit, it claims, but for the purpose of giving glue users an insight into existing con-

THE INSTANTANEOUS GLUE CONVERTER WHICH REPLACES ALL THE KETTLES USED IN "THE OLD WAY"

THE OLD WAY OF HANDLING GLUE

ditions where the old style glue heaters are used. When a concern learns these conditions and realizes what the Instantaneous Glue Converter can do there are few who will not make the change, considering that the cost of the apparatus is really very reasonable. The company will be glad to send to anyone interested in its line literature and further details in regard to its apparatus.

### The Driver Sander

This is a combination horizontal and perpendicular belt sandpapering machine. The belt is reciprocated as it runs around. The views show a combination machine in a horizontal as well as in a perpendicular position. The references in combination with the horizontal view show the several necessary points of advantage embodied in this sander and show how conveniently the whole arrangement has been designed for sandpapering a large variety of work. To change from either position to the other is done by turning the crank seen in front. This crank turns a worm engaging a gear on the main frame and thereby locks the running part of this sander perfectly rigid at any desired point from below a horizontal line to beyond the perpendicular.

Sandpapering can be done over the rolls at either end. The approaching table can be swung around in front of the roll for a rest so work can be placed on it and fed on the sandpaper as it travels over the plate between the rolls. Tables of different sweeps can be put on in place of the flat table shown between the rolls. Provision is made to remove the flat table and places are provided for fastening built-up forms to fit the inside of curved work, such as chair backs, serpentine or swell drawer fronts, and anything in that shape to run the sandpaper belt over. Over these different forms the inside of curves can be sandpapered.

The perpendicular view shows the sander with the swinging table in front of the plate over which the sandpaper belt travels. This table is universal in every way, and can be set at any angle with the plate and is also provided with a protractor. With these combinations, work of different angles is finished handily and accurately. This view also shows the reciprocating mechanism which is driven by a round belt. The sander is built very rigid on a heavy base. The main frame is suspended from a heavy pillar block in which a large

FRONT HORIZONTAL VIEW OF DRIVER SANDER

hub, a part of the main frame, is fitted. The main frame is revolved on this hub to change the sander for different positions.

The rollers are 10 inches in diameter by 14½ inches long and made of solid cork. The sandpaper belt is 14 inches wide by 90 inches long and its table is 14½ by 24 inches. The sandpaper belt adjustment is similar to that used on a band saw for making the blade run in its proper place and for giving it the right tension and is right at the hand of the operator; the adjusting screw for making the belt run in its proper place sets a governor that automatically keeps the belt from running off. This eliminates the trouble of belts being broken and sandpaper being wasted.

Before starting the sander the crank that works the raising and lowering device can be put on the shaft of the driving roll and machine put in motion to see that the sandpaper belt is properly adjusted.

The machine embodies two complete sanders and has a capacity for doing a great variety of excellent work. The reciprocating motion of the belt makes the sandpaper cut fast, does away with scratches and the sandpaper lasts longer. Work done on this machine is claimed to out-rival in quality what an expert can do by hand. An attractive card descriptive of this sander has been issued, which the manufacturer, C. H. Driver, 1322 16th St., Racine, Wis., will be pleased to mail to any one on request.

### 1909 Conference Dodge Manufacturing Company

The annual conference of the managers of the various sales offices of the Dodge Manufacturing Company was held at Mishawaka, Ind., on December 17, 18 and 19, 1909. The Chicago, New York, Boston, Pittsburg, Philadelphia, Cin-

SIDE HORIZONTAL VIEW OF DRIVER SANDER

branches at St. Louis, Minneapolis and Atlanta were represented. Several addresses were made during the various sessions, among which was one by D. J. Campbell of the sales promotion and advertising force, who spoke in detail of the work done by his department. Mr. Campbell stated that \$50,000 had been expended during the past year in "spreading the gospel" for the Dodge company. On the evening of the last day, the branch managers were guests of honor at a banquet at Hotel Mishawaka. M. W. Mix, president of the company, presided. A number of toasts were given, songs were sung and throughout the evening a most enthusiastic spirit prevailed. The Dodge orchestra furnished the music.

#### Interesting Statistics on the Lumber Industry of St. Louis

The following table, prepared by the Merchants Exchange of St. Louis, shows the receipts and shipments of lumber at St. Louis for the years 1908 and 1909. As will be seen there was an increase in 1909 in the total receipts by rail of 38,152 cars. By river 101,000 feet more were received in 1909 than in 1908. Quite a substantial increase is also shown in the total shipments by rail in 1909, while in the total number of feet shipped out by river in 1909 there was a decrease of 1,815,000 feet.

	RECEIPTS.

December .....	642,834	574,248

Totals ..... 6,539,794 7,724,687

The exchange inspected more oak in 1909 than any other lumber—2,200,485 feet; cypress comes next with 1,209,439 feet; gum, 938,614 feet; quartered oak, 916,831 feet; poplar, 886,576 feet; ash, 603,692 feet, and cottonwood, 237,461 feet.

#### Miscellaneous Notes

The Moline Pole & Shaft Company of Moline, Ill., has recently commenced operations in its new plant with a small force of men. Manager Laros of the company states that there is enough material on hand to begin turning out poles and shafts and that the working force will

be increased gradually as the machinery is tested and additional material is received, until the plant is operated with a capacity force.

The Naples Hardwood Lumber Company has been incorporated at Naples, Tex., with a capital stock of \$10,000 by G. H. Sibbell, A. B. Gallo-way and W. W. Robison.

The receivers for the Boydton Lumber & Manufacturing Company of Boydton, Va., have advertised the plant, together with ten acres of land, to be sold at auction on January 18, 1910. The plant has been rented since it went into the hands of receivers and the machinery is in good running order.

The Rotzien-Furber Lumber Company, capitalized at \$50,000, is a new concern for Minneapolis, Minn., organized by J. L. and Melva L. Furber, A. A. and Anna M. Rotzien and C. M. Way, all of Minneapolis.

The Honaker Lumber Company, builders of the new town of Honaker, W. Va., is erecting a saw-mill with a daily capacity of 150,000 feet. The company will have its own railroad which will be known as the Russell Fork Transportation Company.

The Hastings Cabinet Company of Hastings, Mich., has filed a certificate with the county clerk of increase of capital stock from \$30,000 to \$60,000. Since the company started its factory here the working force has been doubled and the business has increased remarkably.

Knapp & Scott of Bay City, Mich., recently received from the North twenty-nine cars laden with hardwood logs. These are said to be the finest seen in many a day.

The Mutual Wheel Company, manufacturers of carriages at Moline, Ill., has recently established a spoke factory at Paducah, Ky., its product to be used in the Moline plant.

The Phillips-Mahoney Company (Inc.) has entered the lumber business at Portsmouth, Va. Its maximum capital is \$75,000; minimum, \$25,000. J. W. Phillips is president of the company, A. N. Mahoney secretary and treasurer. C. M. Phillips and M. T. Mahoney of Portsmouth are also interested in the new concern.

The Chicago Veneering & Hardwood Door Company, capitalized at \$10,000, has been organized at Chicago to conduct the manufacture of doors and hardwood interior finish. The incorporators are D. W. Voltz, John L. Rodgers and Edmond W. Froehlich.

The Barry Lumber Company of Clarksville, Tex., has recently been incorporated with a capital stock of \$40,000 by J. D. Barry and C. O. Bollmann.

The Central Lumber Company's new plant at Waupaca, Wis., is now enclosed and is being rushed to completion. A fine mill is being built

and it will be as modern as the best machinery can make it. Five planing machines will be installed besides surfacing, matching, molding machines, saws and other machinery. The company's headquarters are located at Oshkosh, Wis.

The Brown Lumber Company has recently been organized at Traverse City, Mich., with a capital stock of \$30,000.

Fire recently damaged the offices and a portion of the lumber belonging to the Covington Lumber Company of Covington, Ky., to the extent of \$25,000. Loss is covered by insurance.

The Vogel Cabinet Company, Manhattan, has been organized to carry on a general cabinet work business. The capital stock is \$10,000 and the incorporators are Jacob Schlesinger, John Volk and William Weiss, all of New York.

The Arpin Lumber Company of Bruce, Wis., with headquarters at Grand Rapids, Mich., is becoming prominent as a developer in northern Wisconsin. It has built about forty miles of railroad and a fine mill near Bruce. It will also put in another large mill near Birchwood.

The R. K. Williams Lumber Company, Rexville, Hancock county, Mississippi, has recently been capitalized at \$50,000 by W. J. Gex and R. J. Williams.

Gillilan, Neill & Co. of May, Pocahontas county, West Virginia, is a new concern to deal in timber and lumber. The capital stock is \$400,000 and the incorporators are A. R. Neill, Elkins, W. Va., and G. C. Hamilton, R. H. Morris, Oscar Latt and C. J. Colburn of May, W. Va.

The J. S. Stearns Lumber Company with offices at Chicago, Ill., and Odanah, Wis., has increased its capital stock from \$150,000 to \$1,800,000.

A. A. Parsons of Memphis, Tenn., and E. K. Zimmerman of Ann Arbor, Mich., have purchased for \$250,000 all the interests of the Hardwood Lumber Company of Aiken county, South Carolina, and will begin active operations at once. The purchase included 75,000,000 feet of hardwood stumpage, an up-to-date saw and planing mill, creosoting plant, dry kilns and a large amount of lumber in the yards. The company will operate a steamboat line in connection with its mill. The officers of the new company are A. A. Parsons president and treasurer, F. E. Fleming vice-president, and J. D. Parsons secretary.

The Cabinet Veneer Company of Greenville, N. C., has recently increased its capital stock to \$100,000.

The Jones & Woolfolk Lumber Company recently commenced business at Hollow Rock, Tenn. Its headquarters are located at Lexington.

E. V. Babcock & Co., a well-known hardwood lumber concern of Pittsburg, Pa., has recently opened up an office in Cincinnati, O.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

D. G. Courtney, the eminent lumberman and stove manufacturer of Charleston, W. Va., was a Chicago visitor on December 30 and called on the RECORD. Mr. Courtney reports trade excellent and that his new Toledo enterprise, the Big Four Hardwood Company, for which he is sponsor, is doing a fine business.

W. H. Hopkins of Cincinnati, manager of the New River Lumber Company, was a Chicago visitor on December 29 and secured some handsome contracts in the city.

The RECORD had the pleasure of a call on December 29 from Ed A. Sprague of Cincinnati and Harry E. Sheldon of Fremont, Ohio, representatives of the Edward Hines Lumber Company. Accompanied by other salesmen of this big company, while here they had a consultation with the principals of the concern over trade conditions and policy for the opening of

the year. Both Messrs. Sheldon and Sprague had a big trade during 1909.

Among the welcome callers on the RECORD, December 28, was S. G. McClellan, manager of the Newhouse Mill & Lumber Company, Gould, Ark., and of the Gould-Southwestern railroad, allied with the Estabrook-Skeele Lumber Company, this city. Mr. McClellan spent a few days in town in consultation with his principals.

T. S. Estabrook and E. E. Skeele of the Estabrook-Skeele Lumber Company, city, spent several days last week in the northern peninsula of Michigan on a lumber purchasing expedition.

The twentieth annual meeting of the Illinois Retail Dealers' Association and of the Illinois Masons' Supply Association will be held at the La Salle Hotel, Chicago, on Wednesday, Thursday and Friday, February 16, 17 and 18. Important topics that will be taken up by these associations this time are: "Trade Relations"; "Shall we pay for our lumber before we see it?"; "Shall we accept twenty per cent of stock we

did not order?"; "Can we use short and odd lengths?"; "How best can we settle disputes—with the shipper or among ourselves?" J. W. Paddock, Pana, Ill., is president and George W. Hotchkiss, Chicago, is secretary of the Illinois Lumber Dealers' Association, an organization made up of the retail element of the state.

The Lumbermen's Club of Cincinnati has issued and has circulated widely a handsome pamphlet containing its constitution and by-laws, together with a list of members.

The Record is in receipt of an announcement from William W. Wilson, Jr., stating that he has severed his association as sales manager of Bemis & Vosburg of Pittsburg and that he is now identified with A. G. Breitweiser and will engage in the wholesale lumber business as the Breitweiser-Wilson Company, with temporary headquarters in room 315 Lewis block until the Oliver building is completed, when the company will be located in that structure.

The Record is in receipt of a handsome pamphlet issued by the Lumbermen's Club of St. Louis, containing a list of the officers, a roster of members and its constitution and by-laws.

A new concern launched in Chicago on January 1 is the Fullerton-Krueger Lumber Company, of which S. H. Fullerton of the Chicago Lumber & Coal Company, St. Louis, and the Fullerton-Powell Hardwood Lumber Company of South Bend, and J. H. Krueger, an old Chicago lumberman, are the principals. The incorporators of the new concern are C. M. Smalley of the Chicago Lumber & Coal Company, E. A. Thornton and H. D. Welch of the E. A. Thornton Lumber Company, all of Chicago. The company will handle yellow and white pine, hemlock, hardwoods and west coast products, specializing in the latter two departments. As yet it has not been decided where the offices will be located.

The many friends in the lumber business will sympathize with William M. Hopkins of the Theo. Fathauer Company on account of the sudden death of his wife, which occurred at the Henrotin hospital, Chicago, Sunday, December 26. Mrs. Hopkins had been at the hospital for two weeks and was thought to be improving when a sudden change for the worse took place on Saturday, resulting in her death the following day. She is survived by her husband and an infant son only a few days old.

The Chicago Hardwood Lumber Exchange did not hold any meeting in December, but will meet at the La Salle hotel on Saturday, January 15.

Roy Smith, Chicago representative of the Mason-Donaldson Lumber Company of Rhineland, Wis., spent the holidays at Wausau, Wis. George B. Mason of the same concern, but whose home is in Madison, Wis., accompanied by his wife, was a recent Chicago visitor.

L. H. Wheeler of the Wheeler-Timlin Lumber Company, this city, accompanied by Mrs. Wheeler, spent the holidays at Logansport, Ind., Mrs. Wheeler's former home.

Another lumberman to leave town with his wife for the holidays was F. de Anguera of the Anguera Lumber Company. They visited friends at Knoxville, Tenn.

W. E. Trainer of the Trainer Brothers Lumber Company returned to the city recently from a trip to Memphis and other southern points. Stocks throughout the South, he says, are hard to find and prices are firm, with a tendency toward advancement.

P. J. Attley of the Ross-Attley Lumber Company, Heth, Ark., spent the holidays with his family in Chicago. Mr. Attley is in charge of the mill at Heth.

A. D. Miller, Goshen, Ind., and well known to the cypress trade of the Middle West, recently became identified with the selling force of C. L. Cross, Chicago sales agent for the Louisiana Red Cypress Company of New Orleans, La.

G. H. Bulgrin, sales manager of the Brittingham & Young Company, Madison, Wis., spent last week with Chicago Manager A. C. Quixby.

taking an inventory of the stock of the local yard and reviewing the business of the year.

The Record is in receipt of an announcement from Mr. and Mrs. Horace J. Borham of Cincinnati, announcing the marriage of their daughter, Elizabeth, to Frank Rhodes Buck, deputy inspector of the National Hardwood Lumber Association. Mr. and Mrs. Buck will be at home after January 20 at 4146 Evanston avenue, Chicago. The Record extends congratulations.

David W. Walker, who for several years was sales manager for Markley & Miller, who recently closed their Chicago yard, has opened an office at 133 La Salle street, to handle hardwood and mahogany lumber and veneers as manufacturers' agent.

Charles A. Goodman, president of the Sawyer-Goodman Company of Marinette, Wis., was a Chicago visitor during the week.

W. C. Winchester of Grand Rapids, Mich., president of the Turtle Lake Lumber Company, was a visitor to the Chicago lumber trade recently.

E. C. Groesbeck, secretary of the Stearns Company, Grand Rapids, Mich., was a Chicago visitor on Friday last.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, with headquarters at Cincinnati, was a Chicago visitor on Saturday, en route home from attendance at the funeral services of the late John B. Ransom at Nashville. Mr. Doster says the details of the plans for the big convention of the Hardwood Manufacturers' Association, which is to be held at Cincinnati on February 1, 2 and 3, are yet under way and that the meeting promises to be the largest gathering of lumbermen ever held in the United States.

The Franklin Lumber Company, Real Estate Trust building, Philadelphia, Pa., announces that it has opened a sales office at Syracuse, N. Y., with F. M. Jobson as manager; and a buying office at Buckhannon, W. Va., with Perry C. Stemple in charge. The company reports it closed the year with a very satisfactory business and has added two salesmen to its force. The company handles a full line of building woods as well as hardwoods.

F. L. Johnson, Jr., of Smith & Johnson, this city, Arcanoper of the Concatenated Order of Hoo-Hoo, announces that he will hold a stag dinner on January 18 at 8 p. m. in room 309 Masonic Temple building. At this time it is proposed to talk over local Hoo-Hoo matters and have an evening's fun.

## NEW YORK

Secretary Lewis Doster of the Hardwood Manufacturers' Association of the United States spent several days in town between Christmas and New Year's at the local office of the association, on important association business. Mr. Doster is busily engaged rounding up matters for the coming annual meeting of his association at Cincinnati, O., on February 1, 2 and 3 and he looks for a big attendance and a very important meeting from the standpoint of discussion and action on leading hardwood topics of interest.

H. D. Billmeyer, hardwood timber specialist of Cumberland, Md., and head of the Billmeyer Lumber Company, was also here on a visit and closed some very choice orders. This company is doing a very large business in heavy hardwood timber, especially ship and dock material and he looks for a big trade in 1910.

William Newman Slater, president of the Port Chester Lumber Company, Port Chester, N. Y., died December 13 at his home at the age of thirty-seven years. Mr. Slater was one of the brightest and most capable lumbermen of the younger generation in the eastern territory and had a most successful future before him. His life terminating at such a young age makes the loss a keen one for his family, business associates and the town of Port Chester, in which he was held in high esteem.

Following the recent death of Robert Hoe, head of the big saw and printing press manufacturing firm of R. Hoe & Co., of this city, the surviving interests on December 31 incorporated under the laws of New York under the same name, with a capital of \$5,875,000, divided into \$3,250,000, six per cent accumulative preferred and \$2,625,000 common. The directors of the firm are Arthur C. James, Otto T. Bannard, John S. Hoyt, Robert Hoe, Arthur I. Hoe, Charles W. Parsons and William W. Carman of New York City.

The National Casket Company, big manufacturers, of Hoboken, N. J., Oneida, N. Y., and other leading cities, announces the removal of its lumber purchasing department, F. E. Longwell, manager, from Oneida, N. Y., to the general offices of the company at 3-5-7 West Twentieth street, to which point all communications should be addressed. This company buys in the neighborhood of 30,000,000 feet of hardwood a year through Mr. Longwell's activities, and his many friends in the trade are glad to welcome him back again to little old New York.

The recent deal, by which the C. H. O'Neill Lumber Company property in Jersey City was to have passed to the firm of the big Jersey City house of Vanderbeek & Sons, following the O'Neill fire on election day, has fallen through. As a result, G. F. Farrell, formerly head of the O'Neill company, has organized the O'Neill Lumber Company with a capital of \$100,000 to succeed to the business formerly carried on by the C. H. O'Neill Lumber Company. The premises are fast being rehabilitated and the new firm starts out under favorable auspices.

The big cabinet and trim works of E. B. Jordan & Co., 129 Degraw street, Brooklyn, was recently almost totally destroyed by fire, entailing a loss of from \$75,000 to \$100,000, fully covered by insurance.

The Stevens-Eaton Company, large wholesale house of 1 Madison avenue, has increased its selling staff through the appointment of W. A. Ruddick, who for several years past has been identified with the Edward Hines interests of Chicago, as eastern sales representative. Mr. Ruddick will represent the Stevens-Eaton Company in the northern New Jersey and the Metropolitan District trade, in which he is both well and favorably known.

John F. Cronin, the well-known hardwood lumberman of Utica, N. Y., spent several days in town during the fortnight on his way home to spend the holidays. He expressed himself optimistically in regard to the business situation and looks for a big hardwood year in 1910.

J. W. Darling of the J. W. Darling Lumber Company, Cincinnati, O., was another prominent visitor just before the holidays. He stated that he was enjoying good business with big prospects for 1910.

The large furniture manufacturing establishment of L. Zodikow, 334 Stanton street, Manhattan, was damaged by fire to the extent of \$75,000 last week, fully covered by insurance.

## BUFFALO

The scarcity of oak lumber is still the chief remark of the members of the Hugh McLean Lumber Company, in spite of the fact that its three mills in the Southwest are running as actively as possible. How will it be next spring?

There is a lot of lumber coming into the yard of F. W. Vetter, including a stock of oak and ash from the South. The demand is also good for the time of the year, and so the business of the year is sure to be fine.

The move of the Standard Hardwood Lumber Company to get a line of barges started this way from Kentucky and Tennessee will be all right, so far as amount of water is concerned. It has the lumber and that completes the arrangement.

President Beyer of the Pascola Lumber Com-

pany was made county treasurer at the beginning of the year.

It is plain that Scatcherd & Son are not yet discouraged over the snags in the timber-tract business, for it is learned that a new purchase is under way. At the same time, the Memphis mills are as active as ever.

There is plenty of business in the yard of O. E. Yeager, no matter if there is a holiday just disappearing around the corner. He is not only taking in a good lot of southern stock, but finds sales much better than he looked for.

The mill of G. Elias & Bro. has been about as busy all the season as it could be, till the cold weather cut the building out to some extent. It will get a good run of orders through the winter still, in spite of all drawbacks.

Business in the office and yard of the Buffalo Hardwood Lumber Company is quite good enough to warrant the heavy buying of stock that was reported a month or so ago. The bookings ahead and the orders for quick delivery are all heavy.

A. Miller gets a fine share of business in the general distribution of holiday favors, and he always has the lumber to meet it with. His special stock of hardwoods from Canada always comes in strong.

There is a pretty good area to the office and dock yards of T. Sullivan & Co., but it is found that there is not a bit of space to spare, though the demand for all sorts of stock promises to thin it out pretty soon.

I. N. Stewart & Bro. are getting back to their old lead in the cherry trade. It was quiet lately, but the report is now that a stir is in sight. In the meantime the West Virginia oak, chestnut and poplar are moving.

The purchasers of timber in British Columbia say it is such a good, promising investment that much more was bought than was at first outlined. The Yale Company organized by the Wall Brothers syndicate has been followed by a much larger purchase and it is quite likely that a second corporation will be set up to handle it by itself. All reports agree that lumber on the Pacific coast is doing much better than it was.

## PITTSBURG

J. J. and J. C. Linehan of the Linehan Lumber Company are both down East this week looking after 1910 contracts. Things look mighty good to them.

The Central Mill & Lumber Company, capital \$50,000, has been incorporated at Harrisburg, Pa., by B. H. Engle of Hummelstown, Pa., and others.

The Fredonia Planing Mill Company is getting a Pennsylvania charter, its incorporators being E. J. Bechdel, Carl C. Conkle, William H. Leischer and Jonas A. Baker of Pittsburg.

The H. V. Curll Lumber Company will apply for a Pennsylvania charter January 24. The incorporators are H. V., D. B. and H. M. Curll and W. H. DeBoss. All these men are well-known to the lumber trade of the central states, most of them being formerly connected with the old Curll & Lytle Lumber Company and later associated with H. V. Curll in the concern which bears his name. The combination is one of the strongest in the city and controls extensive timber and railroad interests in West Virginia.

John E. Dubois of Dubois, Pa., who is counted the largest individual lumber operator in the world, is cutting off a big tract near Dubois that will probably take three years to finish. It is one of the best timber tracts in central Pennsylvania. When he is done there Mr. Dubois will move to the West with his machinery where he owns 3,000,000 feet of timber.

J. N. Woollett, president of the Aberdeen Lumber Company, has started on another southern trip which will put him in touch with some splendid hardwood operations where he expects

to contract for this year's supply of lumber. The Aberdeen is coming right along, thank you, and excellent reports may be expected from it before April 1.

Louis Germain of the Germain Company took a vacation recently among the pine mills of Michigan near his former home at Saginaw. The company wound up 1909 with a very good showing and never had better nerve to face the coming year's market than at present.

Philip Oesterling, aged seventy-four, one of the oldest planing mill and lumber operators in western Pennsylvania, died at his home, December 26. He was born in Darmstadt, Germany, and came to this country at the age of thirteen. About 1870 he started in the planing mill business and was engaged in lumber operations until he retired ten years ago.

The plant of the Acme Manufacturing Company, which is managed by Samuel Hough and is located at Marshall and Irwin avenues, N. S., was damaged by fire January 5. The company employs about twenty hands and manufactures curtain stretchers, stepladders, etc. It is announced that the plant will be rebuilt in the near future. Loss was \$15,000.

William H. Schuette & Co., Inc., report that local yards are still buying with extreme caution, as they seem to fear a repetition of the overloading experience which they had last winter. They are, however, buying more lumber than three months ago, and are paying more attention to straight carloads instead of mixing their orders as they did last summer.

The Allegheny Lumber Company has added to its force of salesmen A. E. Emick, who will do Ohio river territory in West Virginia and western Pennsylvania.

President Nelson Bell of the Furnace Run Sawmill & Lumber Company has recently returned from a southern trip, where he contracted for a large amount of lumber for 1910. He reports that December was the best hardwood month the company ever had, and he anticipates a brisk trade in all the better grades of hardwood within a very few weeks.

Secretary Carl Van der Voort of the Pittsburg Lumbermen's Mutual Fire Insurance Company, announces that December was the best month that they have ever had. It suffered no fires in that month, and the business which it is connecting with through other agencies came along at the end of the year in a way that is giving it a big boost toward big totals in 1910.

The McDonald Lumber Company has added three well-known lumbermen to its staff this month. J. W. Hulse of the Pennsylvania Lumber Company will be sales manager. M. Thompson, also of the Pennsylvania, will cover the territory south and east of Pittsburg, and Edward Shew of the Wilson Brothers Lumber Company has come over to Mr. McDonald to travel down East. The McDonald company is especially strong on stocks this winter, due to some shrewd purchases in the early fall, and its salesmen have a big advantage when it comes to going out and quoting prices.

J. M. Hastings, president of the J. M. Hastings Lumber Company, is spending the week in New York. The company recently finished cutting out its oak tract at Jacksonburg, W. Va., and is giving up its charter in Wetzel county of that state, where it has operated for about six years.

I. F. Balsley, who will be sales manager of the newly organized Palmer-Semans Lumber Company, has jumped into the harness already and is down East this week among his old friends, getting contracts lined up for 1910 delivery. The Palmer-Semans concern is getting to be one of the big ones in Pittsburg. It has abundant financial backing, large timber assets, several mills, the best of lumber connections and a thoroughgoing lumberman at the Pittsburg end of its business.

The Breitweiser & Wilson Company is shaking hands with all its friends at its temporary

headquarters at 315 Lewis block. After April 1 this latest of Pittsburg's wholesale firms will be located at 445 Oliver building, the new twenty-five-story skyscraper. Its members are A. G. Breitweiser, the well-known South Side lumberman, who has been engaged many years in both wholesale and retail operations, and William W. Wilson, Jr., who was associated with the A. G. Breitweiser Company for three years prior to his recent four years' service with Bemis & Vosburgh as their sales manager. The new company is lining up some splendid connections in yellow pine, hemlock and hardwood. It will make a specialty of lath and maple flooring in addition to giving much attention to lumber for manufacturers.

The third annual convention of the Retail Lumber Dealers' Association of Pennsylvania, to be held January 27 and 28, in this city, is going to be a hummer. A. G. Breitweiser is chairman of the entertainment committee for the retailers and L. L. Salter holds the same position for the wholesalers, who are not going to be outdone in giving their old customers a royal good time. In the evening of January 27 the Pittsburg Wholesale Lumber Dealers' Association will banquet a big crowd at the Fort Pitt Athletic Club and also furnish high-class vaudeville entertainment.

## PHILADELPHIA

Samuel B. Vrooman of S. B. Vrooman & Co., Ltd., is emphatically optimistic as to possibilities for 1910. The company has been doing a rushing business up to advent of the blizzard.

Chapin L. Barr, secretary and treasurer of the Whiting Lumber Company, reports well sustained trading. The company is turning out some of the best No. 1 oak flooring seen on the market. It has recently added another office to better accommodate the increased official work.

Schofield Brothers are fast recovering from the effects of the fire, which destroyed the Salt-keatchie Lumber Company's mill at Schofield, S. C., which they control. The new machinery is being rapidly installed, and the plant will be in full working order in a very short time.

The booklet known as McIlvain's Lumber News, issued monthly by J. Gibson McIlvain & Co., deserves more than casual mention, as it not only furnishes a full stock list and sets forth the best of bargains in the various woods for its readers, but devotes considerable space to excerpts from the best authorities on the vital subjects and interests of the day. The contents of the December number will speak for its status.

Editorial.  
Railroad Ties Purchased in 1908.  
Resisting Power of Building Materials.  
Splendid Visitor from Afar (Malley's Comet).  
Bargains.  
Stock List.  
Sven Johnson.  
Sparks from the Yuletide Log.  
Chips and Sawdust.

Ralph Souder of Eli B. Hollowell & Co. says they are not pushed at this time, but have every reason to be satisfied with 1909 trading. He anticipates a comparative rush for the coming year, and in order to facilitate the work of the house offices have been established at Pittsburg, Pa., and Raleigh, S. C.

Charles B. Coles & Sons Company, Camden, N. J., reports the recent blizzard a considerable detriment to business, as it makes delivery of goods uncertain. Business has been good during 1909 and prospects for 1910 are luring.

William N. Lawton of the Tomb Lumber Company is complacent over last year's business. Trading is running smoothly at present, and the prospects point to a fat 1910.

The large plant at Summerdale, formerly occupied by the Wolff Process Leather Company, has been sold to Philip S. Smith, president of the recently organized Carlston Motor Vehicle Company. The plant cost about \$400,000 six years ago; the price paid by the Carlston Motor Ve-

bicle Company is believed to have been about \$150,000.

The Philadelphia Baby Carriage Factory, manufacturers of the Bloch go-carts and baby carriages, announces that the firm name has been changed to the Bloch Go-Cart Company. The personnel of the firm remains unchanged.

Jerome H. Sheip, the wholesale lumberman of this city, whose offices were formerly located in the Stephen Girard building, has moved to Suite 2026 Land Title building, where he will have much more commodious quarters and be more centrally located in the wholesale hardwood lumber community.

The planing mill of Adam P. Reid & Son, Parksburg, Pa., was recently destroyed by fire; loss, \$5,000.

The Woodpicker Lock Hammer Company, New Castle, was incorporated under Pennsylvania laws December 20 with a capital stock of \$20,000.

The Hermance Machine Company of Williamsport, Pa., reports a steady advance in trading. L. P. Monks of this house is most sanguine as to a record-breaking business for 1910.

The Central Pennsylvania Lumber Company, Williamsport, has closed one of the best business years since it started. A. W. Mallinson, secretary, says the usual holiday lull is on, but, judging from present signs, 1910 will see a full tide of business in the lumber field. This house, although a leader in the hemlock market, intends now to go strong into hardwoods.

James Mansel, a leader in hardwoods in Williamsport, Pa., has no fault to find with recent trading; things are all moving fairly well at this time.

The Williamsport Hardwood Lumber Company has been busy right along and is optimistic as to a lively trading in 1910.

A strong evidence of a settling prosperity is furnished by the fact that the Baldwin Locomotive Works is now employing 11,000 men on full time; scarcely a year ago the number of employes got down as low as 4,500. This means that 6,500 more men are now working in this greatest industrial establishment of its kind in the world than were employed there in 1908 and the earlier part of 1909. Of the 11,000 men now employed about 8,600 are working at the main plant, which stretches from Broad street to Eighteenth street, and from Pennsylvania avenue to Spring Garden street. About 2,500 are employed at Eddystone, near Chester, Pa., where the company owns 2180 acres. At Eddystone, they are getting out the raw material for the big locomotives for which orders are received from all parts of the world. The Baldwin Locomotive Works may be best appreciated as an economic factor when it is known that, taken in the aggregate, it means to this city from \$200,000 to \$250,000, distributed in gold and silver coin every Friday night. The works filed notice at Harrisburg recently of an increase in capital stock to \$20,000,000.

## BOSTON

A wholesale dealer in hardwoods, with his own mill connection, says he is not anxious to book orders for quartered oak at present. Last week he accepted an order for shipment during the first half of January and says he does not care if he does not sell another car until March. His mill is closely sold up and will not have a great deal of salable quartered oak for some time. He states he is getting top market prices for everything he sells now.

The Osgood-Bradley Car Company of Worcester, Mass., is planning to start erecting its new buildings at Greendale soon. Plans for an office, dryhouse and lumber sheds are being figured.

The Bingham Last Block Company has been incorporated at Portland, Me., with a capital stock of \$25,000. The incorporators are E. R.

Laird of Brockton, Mass.; J. J. Lander, Bingham, Me., and William M. Ayer of Oakland, Me.

The A. J. Morin Lumber Company has been incorporated with a capital stock of \$5,000. The incorporators are C. C. Streeter, president; Arthur J. Morin, Pawtucket, R. I., treasurer, and M. O'Horo.

Brown & McColey, manufacturers of chairs, Winchendon, Mass., moved into their new factory the first of December. Since moving into their new plant, business has been good and they have taken on additional help, and the plant has been running evenings.

The plant of Nelson Hall Company, Mont gomery Centre, Vt., was recently destroyed by fire, causing a loss of about \$100,000. Butternuts, sugar pails and veneers were manufactured.

The Barber Line is a new line of steamers to make Boston an outgoing port of call. This line runs between St. Johns, N. Y., and South America. In the past, steamers have stopped at Boston with cargo from South America, but never have called to take on cargo. The first steamer to leave here with a cargo carried a large amount of lumber for South American ports. There is a good export business done in oak, ash and pine with South America. Much of this lumber is shipped through Boston, a large part of it being carried by vessel.

Hon. William Engle of Bangor, Me., died at his home in that city late in December, aged fifty-nine years. Mr. Engle was one of the largest lumber operators in Maine.

The Palmer & Parker Company, large handlers of fancy hardwoods and manufacturers of veneers, reports a good business outlook for the coming year. Its mill is being operated steadily and trade is coming along in good shape.

## BALTIMORE

About the only statistics available regarding the lumber trade here are the records kept by the custom house, which shows the volume of exports. The December returns have not yet been added up, but they can be approximated, and the total thus secured supplies conclusive evidence of what has of course been known by shippers—that exporters have had a hard row to hoe during the past year. The slack demand and indifferent inquiry, together with the wagon oak difficulty during a large part of the year, served to keep down the custom house totals, though, as the figures show, there was no important retrogression either in volume or in prices, except with respect to logs, which are mostly hardwoods, and which dropped from \$61.808 in 1908 to \$26.687 last year. In timbers hewn and sawed there was also a shrinkage, while staves showed an increase in number but a loss in value, which is probably attributable to the fact that gum staves in considerable quantities were sent abroad, the demand for them being on the increase. Boards, deals and planks also show a loss, which amounts to nearly \$500,000 in value, and in this item the falling off in oak plank shipments probably changed the count. Exports, with the exception of items wherein hardwoods have no place at all or only a very small one, were as follows for the past two years:

### Lumber Exports from Baltimore, 1908-1909

	1908	1909
Logs and round timber...	\$ 61,808	\$ 26,687
Timbers hewn and sawed...	57,581	49,181
Staves .....	49,943	44,704
Doors .....	6,632	32,350
Furniture .....	96,826	70,233
Other manufactures.....	244,215	247,823
Boards, deals and planks.	1,317,939	847,839

Totals .....\$1,835,944 \$1,318,817  
Much interest is being manifested among hard-

wood men here in the question of a revision of inspection rules and the action of the Hardwood Manufacturers' Association in inviting consumers to its forthcoming annual. Frequent revisions of the rules are regarded as detrimental to the trade, but the opinion seems to prevail among hardwood men who are not manufacturers that changes should now be made.

Preparations for the next annual meeting of the National Lumber Exporters' Association, which will be held here January 19 and 20, are progressing. Programs and invitations have been sent out and there is every indication that the attendance will be large. The headquarters will be at the Hotel Belvedere, where most of the visiting members of the association will probably occupy rooms, and where the sessions will be held. Among the social features is a banquet, and the desirability of taking the visitors down to the Naval Academy at Annapolis is being discussed.

The Pigeon River Lumber Company's plant at Mt. Sterling, N. C., which shut down before the holidays, is about to resume, after some repairs, and the Messrs. James of this city, who are large stockholders, say the prospects are very promising.

Thomas Hughes, formerly of the hardwood firm of Carter, Hughes & Co. of this city, which was dissolved, and since then in charge of the mill operations of the Iron Mountain Lumber Company, at Troutdale, Va., and vicinity, was in Baltimore, his old home, on a visit for the holidays.

Mr. Healy, who has been representing John L. Alcock & Co. in the hardwood regions of West Virginia, spent the holidays in Baltimore.

Joseph Steinacker of the Joseph Steinacker Lumber Company, and his son, Joseph, Jr., are convalescing after attacks of typhoid fever. Both were stricken about the same time, and the father's condition for a time was serious.

## CHARLOTTE

Encouraging reports are made in the annual statement of the commissioner of labor of South Carolina. This report shows eighty-six mills in operation, with an aggregate amount of capital invested of over \$9,000,000. The sum of \$4,750,000 was paid out in wages by these mills to the 9,000 people employed. Value of the product of these factories for 1909 was \$9,000,000, or an increase of \$600,000 over the year 1905.

A hearing regarding lumber rates charged by the railroads of South Carolina will be held in Columbia, S. C., on January 12. Lumbermen of South Carolina will make a strong fight for the same rates as are charged lumbermen in Georgia.

The sawmill and entire timber lands of the late Joseph E. Hawks have been sold at auction at New Bern, N. C. H. S. Hancock took the property over for \$7,000. Property consists of a new mill on Trent river and 2,300 acres of timber lands.

The Cothran-Harrison Company of Greenwood, S. C., has just been chartered to do a general sawmill business; capital, \$10,000.

The Virginia-Carolina Timber Company of Sumpter, S. C., has been chartered with \$75,000 capital, to do a general lumber business. Officers are: President, R. T. Gates; vice-president, L. T. George; secretary and treasurer, L. T. Blizard.

The Hutton & Bourbonnais Company, with headquarters at Hickory, N. C., report a splendid business for the past year and good prospects. This concern manufactures building materials, boxes, hardwoods, bottle crates, fancy woods for decorating, etc. In the course of a year it handles about 20,000,000 feet of lumber. Branches are maintained at Morgantown, Lenoir and other points in western North Carolina. The concern carries, it is said, as large, if not a larger stock of oak, chestnut and hardwoods than any concern in this section.

The Cooper Lumber Company of Fayetteville, N. C., has been chartered with a capital of \$25,000 by Daniel Johnson and others.

The Empire Manufacturing Company of Goldsboro, N. C., has been chartered with \$200,000 capital, to do a general timber and milling business. Incorporators are: J. B. Edgerton, W. T. Aycock and others. The construction of logging railroads is specified in the charter of the company.

It is reported that the large lumber plant of the Kingsdale Lumber Company, recently destroyed by fire at Kingsdale, N. C., will be rebuilt and the plant removed to Lumberton, N. C.

W. G. and S. V. Muckenfuss, of Spartanburg, S. C., have already begun work on construction of their broom factory recently destroyed by fire. They hope to be able to commence operations by the middle of the month. They will have larger capacity than heretofore. Loss by destruction of the old plant was \$20,000 with \$15,000 insurance.

Furniture dealers of the Carolinas and Virginia met at Winston Salem, N. C., a few days ago and discussed problems confronting the industry. The question of raising rates on furniture of all grades ten per cent was discussed, and numerous manufacturers announced themselves as favoring the proposed increase, urging that same was necessary in the face of heavy advances in raw material. Nothing of a definite nature, however, was given out at this meeting.

A large lumber company which has just established offices at Asheville, N. C., is the Miltimore Lumber Company. J. F. Cleveland is in charge. He with K. V. Vail control this corporation, which has heavy timber holdings on the Murphy branch of the Southern, principally on Chambers Creek near Bushnell, N. C. The company operates large sawmills at Almond, N. C., and near Bushnell and does a big wholesale business in hardwood, making it necessary to open offices in some central point.

### CLEVELAND

Business with W. A. Cool & Son is very good, according to E. L. French, manager of the sales department, who says that January will prove one of the best months in a long time. The call for wide poplar boards for automobile bodies is especially strong. Oak, both plain and quartered, is also moving well at good prices. Mr. French has just returned from an extensive trip through West Virginia, where he was looking over the company's timber lands.

W. B. McAllister, president of the W. B. McAllister Company, which does some of the finest hardwood finishing in this part of the state, has been named by Mayor Baehr as a member of the commission which will report on the question of new high level bridges across the Cuyahoga valley. The McAllister Company is at present executing an important woodworking contract on the new Cuyahoga county courthouse.

The coeprage business in this section of the state is gradually assuming a better outlook after two years of disheartening experiences. Prices are firmer and more stock is being turned out than in thirty months. This is due largely to the general business revival which has taken place since the settlement of the tariff.

John H. Jenks, for many years connected with the Robert H. Jenks Lumber Company and with Robert H. Jenks in other business deals, closed his twenty-year connection with the firm on January 1. He has been vice-president of the company for a considerable length of time, and was practically in charge of the business. He contemplates going into business for himself. His place will not be filled at the present time, but his duties assumed by other officers of the company.

Mrs. Edmund Lambert, mother of A. B. Lambert, secretary-treasurer of the Robert H. Jenks Lumber Company, was killed a few days ago while crossing the railroad tracks at Wellington,

O. She was seventy-three years of age and an old resident of that town. A large floral wreath was sent by employees of the Robert H. Jenks Lumber Company.

The Martin-Barriss Company reports an increased demand in this territory for Circassian walnut. It is coming into favor for fine finishing work and for furniture. The call for better grades of wood for these purposes is being noted in proportion with the return of prosperity. The call for quartered oak is very heavy and it is expected that some difficulty will be experienced in getting first grades of this wood soon. The Martin-Barriss Company is busy making alterations and extensions to its plant in the central flats.

The new plant being built for the Simon Brothers Lumber Company at West Fifty-third street and Walworth Run is about completed and the company is now occupying its new quarters. A number of new buildings have been erected, the yard having good railroad transferring facilities. The old quarters of the concern have been leased to the Hine & Cook Lumber Company, which will take occasion to increase its stock of hardwoods, using the old sheds for storage purposes.

### COLUMBUS

The total value of buildings erected in Columbus during the year 1909, according to the report of the city building inspector, was \$119,128 more than for the preceding year. Permits were issued during the year for 1,783 structures at an estimated cost of \$3,599,401, as against 1,698 permits in 1908, having an estimated valuation of \$3,400,128. Fees collected by the building inspector during the year amounted to \$4,414.98. The value of buildings for which permits were issued during the month of December was \$77,175, a decrease over December, 1908, when the permits aggregated \$171,225. The decline is due to the severe weather which prevailed during the entire month.

The marriage of James Daniel Flee, a well-known lumber inspector in Columbus and Ohio, and Mrs. Maude Sampson Mason was solemnized December 28 at the home of the bride's parents, 353 West Eighth avenue. After the marriage the couple left for a wedding trip to Chicago and the Northwest, after which they will be at home at the bride's parents until spring.

At Vermillion, O., the Vermillion Lumber & Manufacturing Company will erect a number of new buildings to its plant. Additional machinery will also be installed.

J. E. Cummins, general manager of the Columbus Saw Mill Company, reports a much better demand for all kinds of hardwoods. He believes that the coming year will be one of the best in the history of the lumber business in Ohio. He also reports a better foreign demand, especially from Hamburg, Germany, to which point he makes numerous shipments.

The Federal Lumber Company has opened offices in the Outlook building, Columbus. It has a large timber tract on the Black Warrior river, Greene county, Alabama, which is being developed. Dr. H. B. Gooding of Tiffin, O., is president and treasurer; W. F. Felton of Columbus, vice-president, and William Cushing of Columbus, secretary.

Eugene H. Moore and Clifford M. Howser have become owners of the Prospect Lumber Company of Prospect, O.

At Newark, O., the main mill and dry kilns of the Jewett Car Works were destroyed by fire, entailing a loss of more than \$130,000. The plant will be rebuilt later.

At Dayton the Gebhart-Wuichet Lumber Company has been incorporated with an authorized capital of \$150,000 by Eugene Wuichet, Frank Wuichet, J. M. Phelps, J. Lane Reed and Edward L. Rowe.

E. B. Pryor, western sales manager for the

W. M. Ritter Lumber Company, recently called at the Columbus office of the concern after passing the holidays with his parents in Pennsylvania. Mr. Pryor reports a fair market for the season of the year.

A new jobbing concern has opened an office in the Columbus Savings & Trust building, styled the Middle States Lumber Company. Harry C. Bard is general manager of the company, which is the successor of the McFarland Lumber Company of Mansfield, which moved to Columbus. Mr. Bard is well known in jobbing lines in central Ohio.

John R. Gobey, head of the lumber company bearing his name, reports a fairly quiet market, with prices ruling firm. The company sent out its corps of traveling salesmen the first of the year. He looks for advances in hardwood quotations during the months of January and February.

A. C. Davis, president and general manager of the A. C. Davis Lumber Company, says prospects for the coming year are bright. He reports a tendency for prices to stiffen and that there is a disposition on the part of the trade to entertain offerings. The company has booked considerable business for delivery in January and February. George B. Jobson, secretary and sales manager of this concern, returned recently from a week's trip through West Virginia.

M. A. Hayward reports a good demand for flooring at this season. He says the prospects for active business in 1910 are exceedingly good.

The wholesalers of Columbus, O., have organized to entertain the members of the Union Association of Lumber Dealers when they meet in annual convention at the Southern hotel January 18, 19 and 20. The entertainment will consist principally of a theatrical performance to be given at the Southern theater Wednesday evening, January 19, when all members wearing badges will be admitted free.

While the program for the meeting has not been entirely completed, a number of features have been announced. Gifford Pinchot, chief forester, will be the principal speaker and he will talk on "Conservation." O. P. Gothlin, a member of the Ohio Railway Commission, will talk on traffic matters and especially demurrage. The first session will begin at 1:30 p. m., Tuesday, January 18.

M. A. Hayward is chairman of the committee on entertainment of members, and W. L. Whitacre is chairman of the committee on entertainment for the ladies. The officers of the Union Association of Lumber Dealers are: J. Elam Artz, Dayton, president; E. A. Hildreth, Columbus, vice-president; H. S. Adams, secretary, and F. D. Torrence, Xenia, treasurer.

R. F. Terry, a representative of the Mershon-Bacon Company of Bay City, Mich., was a caller at the office of the John R. Gobey Lumber Company recently.

H. D. Brasher reports a good demand for dimension and car stock lumber, with bright prospects for the future. A. L. Brasher of that company recently returned from a business trip to St. Louis.

W. L. Whitacre is of the opinion that prices will become firmer and that the demand will increase as the winter advances.

F. Everson Powell of the Powell Lumber Company reports steadiness in the hardwood market in all varieties and grades. He expects prices to be advanced from this time on.

The headquarters of H. J. Rinehard & Co., jobbers, will be removed to Winton Place, near Cincinnati in a few weeks. A contract has been closed whereby Rinehard & Co. become selling agent for the entire output of the mills of Williams & Robinson, located at Wartburg, Oakdale and Sunbright, Tenn. A yard will be established at Winton Place.

H. W. Collins, manager of sales for the central division for the W. M. Ritter Lumber Company, reports things progressing quietly.

He says that orders are coming in satisfactorily and the prospects for the year are exceedingly good. There has been no material change in prices recently.

W. M. Ritter left with Mrs. Ritter recently for a business and pleasure trip in the East.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, returned from a business trip to Chicago and Cleveland. He reports a good demand for timbers and railroad stocks with a tendency to advance quotations in some directions.

H. C. Buskirk of the General Lumber Company visited his parents at McArthur, O., over the holidays.

## CINCINNATI

The new year opened with good business, in fact the year 1909 closed good and continued right across the line into 1910. Business conditions are satisfactory and there is a tone of cheerful animation present everywhere.

Harry Freiberg, president of the Freiberg Lumber Company, has just returned from a six-weeks' sojourn in Mexico, visiting Laguna and the mahogany markets of Mexico. Mr. Freiberg spent the whole of his time in the selection of a cargo of mahogany logs for shipment to his mills in Cincinnati. He says that this will be the greatest shipment of mahogany ever brought to Cincinnati, containing over 300,000 log feet. Among the logs are many of the heaviest ever shipped from Mexico, there being quite a number that are five feet and over square, and many over thirty feet long. He was also fortunate in securing a large number of crotches and fine veneer logs. The first cars of the shipment are now arriving and being unloaded at the log yard. The Freiberg mill is especially equipped for cutting mahogany lumber, and recently machinery has been added for sawing veneers. There are also a number of Spanish cedar logs coming, so that the mill will be in continuous operation for many months. Mr. Freiberg is buying extensively fine white oak logs for quartering into veneer flitches.

A. A. Mason and S. B. Taylor of Buffalo, N. Y., were in the city the early days of the week. They were the guests of Fred W. Mowbray at the Lumbermen's Club meeting.

During the past fortnight the following visitors dropped into the headquarters of the Hardwood Manufacturers' Association: Peter Kunz, the well-known lumberman of Dayton, O.; J. A. Salmon of the Henley Lumber Company, Portsmouth, O.; T. M. Fannin of Keys, Fannin & Co., Ashland, Ky.; George Breece of the West Virginia Lumber Company, Charleston, W. Va.; S. B. Taylor of Taylor & Mason, Buffalo, N. Y.

Secretary Louis Doster returned from his trip South, straightened out affairs at headquarters in a few days and left for Philadelphia and the East, returning to Cincinnati and was back on his job with the opening of the New Year. The Hardwood Manufacturers' Association has done one good thing for Cincinnati in demonstrating what a large volume of business can be transacted by a real live man. The striking feature at headquarters is that everybody is busy, and busy all the time.

Ed Swaine of Karmire, Ky., of the Swain-Karmire Lumber Company was in the city for a few days, calling upon the various lumber concerns.

W. A. Bennett and Thomas J. Moffett have been appointed by President Cliff S. Walker as an arrangements committee to have charge of the convention of the National Wholesale Lumber Dealers' Association, which meets in Cincinnati March 2-3, at the Sinton hotel.

J. D. Farley of the Lyon Cypress Company returned from his sojourn at the plant of the company in Louisiana, in time to join in the festivities attending the wedding of his daughter at his home in Bellevue, Ky.

George M. Grump, Ohatchie, Ala., came to Cincinnati with Charles Ehman, to spend the holidays at Mr. Ehman's home. They have returned to the wilds of Alabama.

Tom White of Moline, Ill., formerly of Cincinnati, stopped over for a day or two while on his way to spend the holidays at his old home in Ripley, Ohio.

John Montana of Union City, Ind., spent some time in Cincinnati during the holiday week.

George C. Ehemann of Memphis, Tenn., the partner of W. A. Bennett, came to Cincinnati with his family to spend the holidays.

J. W. Pierce of Salt Springs, Ky., was in the city on the selling end during the week between Christmas and New Year.

Charles Henn of the Connersville (Ind.) Lumber Company dropped into the city last week and found things to his satisfaction.

S. T. Cobbett of London, England, was a guest of William Eckman at the meeting of the Lumbermen's Club. Mr. Cobbett is here on a business mission, and will visit various cities in the lumber section.

The annual banquet and dance of the Queen City Furniture Club at the Sinton hotel, on December 27, was a pronounced success. The lumbermen in attendance were B. F. Dulweber, E. L. Edwards (Dayton, O.), J. E. Tuthill, William F. Duhlmeier, C. G. Johnston, L. W. Radina, E. C. Feuss and Charles Feuss. This was the first time in which the ladies were invited to partake of the annual banquet, and the results were most enjoyable.

At the annual meeting of the Queen City Furniture Club reports of officers were heard, and a good balance in the treasury was reported, and officers for 1910 were installed as follows: President, W. J. Sextro; vice-president, Joseph A. Sprengard; treasurer, Louis Schneide; secretary, Wash Rees. Directors: Robert Onken, Charles Feuss, George W. Schutte, Julius Berger Herman Wessell.

Joseph Boiser has been appointed chairman of the General Entertainment Committee of the Lumbermen's Club for the convention of the Hardwood Manufacturers' Association of the United States.

Ralph McCracken, chairman of the Advertising Committee of the Lumbermen's Club, announced that he had arranged a plan for advertising the Cincinnati hardwood market, but owing to the large volume of business incident to the entertainment of the coming conventions deferred his report until the February meeting.

A fire recently destroyed the yard and plant of the Covington Lumber Company. The loss is estimated at about \$25,000, much of which is covered by insurance.

The following table shows a comparison of the figures for lumber transactions by rail in 1908 with those of 1909 and it is interesting to note the steady increase in 1909, month after month:

	1909		1908	
	Receipts, cars.	Shipments, cars.	Receipts, cars.	Shipments, cars.
January .....	5,348	3,861	3,856	3,483
February .....	5,404	4,525	3,969	2,866
March .....	6,929	5,977	4,738	3,195
April .....	6,719	5,288	5,584	3,561
May .....	6,319	4,865	5,104	3,594
June .....	6,571	5,109	6,209	4,065
July .....	6,244	4,991	5,733	3,184
August .....	6,454	4,909	5,956	4,110
September .....	7,113	6,179	5,615	4,286
October .....	7,011	5,731	6,356	4,461
November .....	6,769	5,552	5,478	4,021
December .....	5,633	5,062	6,506	5,118
Totals .....	77,534	63,049	65,104	45,947

The transactions by river are estimated at 8,000,000 feet.

Miss Annie Lloyd, for over forty-seven years in the employ of the Wiborg & Hanna Company, was murdered on her way home from work on December 3. She had worked her way to head bookkeeper and recently was elected secretary of the company. The police have found no clue to the murder, but it is thought that Miss Lloyd

was in possession of some valuable business secrets as the Wiborg & Hanna Company had gone through a number of business entanglements the past three years and she was bookkeeper through it all.

## TOLEDO

The Willis sawmill, a large concern at Washington C. H., O., was destroyed by fire recently. The loss is \$25,000, with \$6,500 insurance. Owing to there being snow on the ground, \$40,000 worth of sawed lumber and \$6,000 worth of logs at the factory were not damaged. The fire caught from waste in the engine room and spread rapidly. The mill will be rebuilt. One hundred men were employed by the concern.

The Booth Lumber Company of Toledo reports that business has been good all year and the demand for columns continues so strong that the company has been trying unsuccessfully for the past couple of weeks to close down for repairs. There is some complaint about the prices and it is said that nearly all manufacturers of columns throughout the country have been making very little profit on their work. With the meetings which are now being held by the various dealers throughout the United States there is a prospect of prices being some better so that a fair profit may be looked for next season. The Booth Company has an annual output of about 75,000 columns. The company has a large eastern trade and is now arranging with a special agent to handle its columns in the eastern states. The company will put in some new machinery soon, including a self-feed band rip saw and a turning machine. Poplar is used largely for exterior columns and oak, chestnut and yellow pine for interior use.

The annual report of the city building inspector shows that there was an increase of about a million dollars in the building business of the city for 1909 over that of 1908. The great majority of the permits were for modern homes of moderate size.

The Big Four Hardwood Company of Toledo reports business good. This company has just completed an addition to its plant where the manufacture of table topping, thin basswood and parquet flooring will be undertaken. About fifty men will be employed and the institution will be in running condition by January 15, if present plans do not miscarry.

Fremont capitalists and business men have incorporated the J. W. McLaughlin Lumber Company, with a capital stock of \$25,000. The company owns a large tract of land in Arkansas and will erect a sawmill and stave factory there.

The Skinner Bending Company of Toledo, reports that business during the past year was good and is still holding up in fine shape. The big demand just now is for carriage, wagon and automobile felloes. Oak and hickory is used almost exclusively for this work and the Skinner company reports no difficulty in securing plenty of stock.

E. G. McFillen, who conducts a business in hardwood floors and fretwork here, says that business just at present is rather quiet in his line but that this comes as a sort of relief after a very busy season. Business was far better than a year ago and prices have held up fairly well. In Toledo the demand has been for plain oak floors, rather than the inlaid variety, although there has been a good business in both grades of work. Fretwork is a trifle slow and seems to have gone out of favor considerably in the past year.

## INDIANAPOLIS

William F. Johnson of the Capitol Lumber Company has returned from a trip to Rushville. Ransom Griffin, local manager of the Central

Coal & Coke Company spent the holidays at Worthington.

An increase in capital stock from \$15,000 to \$25,000 has been made by the Tessellated Flooring Company of Edinburg.

P. W. Bowman, for some time office manager for the Greer-Houghton Lumber Company, has taken a traveling position with the company in Indiana territory.

Offices at 822 State Life building have recently been opened by W. C. Greer, formerly located at 407 Board of Trade building.

The circuit court has given the German Lumber Company permission to change its name to the Gemmer Lumber & Veneer Company. Recently the company purchased a veneer plant and increased its capital stock.

A meeting of the directors of the Wilkie Manufacturing Company, Anderson, manufacturers of hardwood and refrigerators, will be held January 13 to determine what disposition shall be made of the plant by the trustee in bankruptcy.

Stockholders of the Talge Mahogany Company have decided to increase the capital stock from \$200,000 to \$300,000. The company reports an exceptionally large business for 1909.

The Henry Brothers Lumber Company has moved its business from Wingate to Vrederburg, where it has a larger and more complete plant. Joseph S. Henry is president of the company.

The F. M. Bachman Company, hardwood and veneer manufacturers, has installed a smoke consuming device, to comply with the local anti-smoke ordinance.

James T. Eaglesfield, president of the Eaglesfield Company and of Eaglesfield & Shepard, hardwood concerns, has been named as a jury commissioner for this county during 1910. He served in a similar capacity during last year.

The Indiana Manufacturing Company of Peru is looking forward to the best trade in its history during 1910. The company has already booked orders for 25,000 refrigerators for 1910 delivery.

A substantial addition to its plant has just been completed by the Brookville Furniture Company of Brookville. It is a four-story brick building, 40 by 123 feet, and will be equipped with machinery operated by electric motors.

The Mohawk Lumber Company has been organized and incorporated with an authorized capitalization of \$10,000 and will establish a planing mill and lumber business at Mohawk. Members of the company are O. A. Newman, Arthur Kingley, Robert Steele and Adam H. De Shong.

With an authorized capitalization of \$50,000, the American Dry Kiln Company has been organized here and has begun the erection of a \$25,000 plant at Newman street and the Big Four railroad tracks. About 200 men will be employed as soon as the plant is completed. Edward Gerrard has been elected president; Ira A. Minnick, vice-president, and Lemuel A. McDonald as secretary and treasurer. The city council has granted the company permission to lay a switch.

## MEMPHIS

### The Follies of the Reds

Reds, your critics are legion,  
Unnumbered the faults that they name.  
O, where in the world is a legion  
More given to sin and to shame?  
But whether the critical volleys  
Are founded on fable or truth,  
Your faults are the follies and follies  
Of ignorant youth.

The oldest of all the professions  
Is practiced light-fettered and gay;

And numberless, nameless transgressions  
Committed by night and by day.  
But why should such matters disquiet,  
Why fear for the future, forsooth,  
When we know they are merely a riot  
Of radiant youth.

Though your sins be as seven times scarlet,  
We shall wash them with Somebody's Soap;  
Your future is star-eyed and starlit—  
At least we may venture to hope.  
Meanwhile we must scour and spank you,  
And bridle your turbulent blood,  
And see if somehow we can yank you  
From out of the mud.

—“The Blues.”

Building operations are shown to have been on a large scale during 1909. The total for the year was \$4,324,377 against \$3,300,508 the preceding year, a gain of \$1,023,869. Conservative authorities estimate that building operations for 1910 will be the largest by far ever known. There are enough projects already under way to insure several million dollars more than was reached during the past year, even if no other large projects are undertaken.

Russe & Burgess, Inc., have closed down their mill in North Memphis for a month, in order that they may make extensive repairs. Three Dutch ovens and two engines are being put in, and other improvements whereby the capacity of the plants will be increased about 25 per cent. are also being made. About \$5,000 will be expended on the improvements.

The box factories of the Anderson-Tully Company which were run on full time prior to Christmas were shut down throughout the Christmas holidays. They resumed January 3. The mill of the company has not yet shut down, but it may have to do so if the ice in the Mississippi does not soon disappear and make it possible to bring out more timber. In fact, all the mills depending on the river for their logs are confronted with a rather unfavorable situation. There is so much floating ice in the Mississippi that it is impossible for the timber to be brought down and some curtailment by the river mills is not unexpected. The recent cold wave has been very severe and a further drop in temperature is indicated at the present time.

The York Lumber & Manufacturing Company has succeeded the York-Browning Lumber Company and is now busily engaged in increasing the facilities at its plant. New machinery is being added and efforts are also being made to increase the capacity of that already installed. The company has recently secured the services of Frank Macey, formerly connected with the Macey Company, Grand Rapids, Mich., and will operate on a large scale.

The Nettleton Box & Lumber Company, Jonesboro, Ark., is making extensive improvements. These were begun with the first of the year. The cost will exceed \$200,000.

Charles W. Miller of the Michigan-Arkansas Lumber Company, Detroit, Mich., is erecting a big band mill at Nettleton, Ark., which will have a daily capacity of 60,000 feet. The company has recently been cutting a large amount of timber on its tract of 4,400 acres but announcement was made a few days ago that it would stop cutting until spring when it would be able to handle its timber to better advantage. The company, in the meantime, will proceed with the construction of the necessary tracks from its property to the St. Louis, Iron Mountain & Southern Railroad and with the erection of its mill.

Announcement is made that A. A. Parsons of Memphis, who is associated with E. K. Zimmerman of Ann Arbor, Mich., has purchased controlling interest in the plant of the Hardwood Lumber Company, Aiken, S. C. The purchase price is \$250,000. In addition to the box plant itself, there is a line of steamboats operating in connection therewith.

Miller & McHall of Indiana, some time ago acquired 800 acres of timber land near Bald Knob, Ark., and are erecting two large sawmills at that point for the development of the timber thereon.

The Morgan-Fuller Lumber Company has been incorporated at Lexington, Tenn. It has acquired and is developing 1,620 acres of hardwood timber lands. J. A. Morgan is president and A. H. Fuller secretary.

The East Union Lumber & Manufacturing Company, Brookhaven, Miss., has filed an amendment to its charter, increasing its capital stock from \$50,000 to \$200,000, all paid. This is a step preliminary to taking over the holdings of the Hammond Lumber Company, Ltd. of Hammond, La., including the Hammond & Holtenville Railroad Company. This is practically a consolidation of the two companies. The general offices will be located at Brookhaven. J. B. Nalty is president and L. D. Nalty secretary. T. H. Loggins is in charge of the sales department.

The Builders' Exchange of Memphis is considering plans for the erection of a home of its own. It does not regard its present quarters as entirely satisfactory and thinks its members are quite as able to own their home as those in other cities. Definite plans are expected very shortly.

The regular semi-monthly meeting of the Lumbermen's Club was postponed from January 1 to January 7, to be held at Hotel Gayoso. The retiring officers will deliver their reports and the newly elected ones will be installed. It is understood that President Crenshaw will deliver an address covering the principal features of his administration, while President-elect Major will outline the policy of the new officials.

U. S. Lambert, who has charge of the plant and office of the A. B. Nickey & Sons Company, Memphis, is back from his wedding trip. Mr. Lambert was married here early in December and has been away from Memphis the greater portion of the time since. He looks forward to an exceptionally good business here and the entire outlook from his standpoint is quite cheerful.

F. Zupke, second vice-president of the Darnell-Taenzer Lumber Company since it was formed here several years ago, has resigned his position. He has not decided definitely upon his plans for the future, but these will be matured at an early date. Mr. Zupke has had about twenty-four years' experience in the hardwood lumber trade. He was with E. E. Taenzer & Co. for about nine years and has traveled all over Europe, being familiar not only with the foreign hardwood business but also with that in this country.

## BRISTOL

A charter of incorporation was granted this week to the C. L. Ritter Lumber Company of Bristol, headed by C. L. Ritter of West Virginia, Edwin Mann of Bluefield, W. Va., and B. B. Burns of Bristol. The company's capital stock is \$200,000 and it will do a general lumber manufacturing business. The company recently acquired all of the Virginia holdings of the Yellow Poplar Lumber Company of Coal Grove, O., including the band mill at Whitewood, Va., together with a large area of timber land. The timber is some of the finest in this section. The Yellow Poplar Company will withdraw from Virginia.

A new band mill is being installed in Elk Valley, near Knoxville, Tenn., by Lee McChesney and Mr. Douglas of Bristol. Mr. McChesney is well known in the lumber business, having formerly been with the Crosby Beckley Lumber Company. They own a considerable boundary of timber in Elk Valley.

C. E. Paxton of the Paxton Lumber Company is in the North and Northwest calling on his company's trade. The company plans the biggest business in its history this year.

The installation of circular mills will be

begun at once by the Scutt-Lambert Lumber Company, recently organized at Elizabethton, Tenn., for the development of its hardwood timber in Carter county, Tennessee. The company already has its mills.

The W. M. Ritter Lumber Company of Columbus, O., which manufactures most of its hardwood stock in this section, is preparing for bigger operations than ever this year. In addition to the band mills and timber already owned in West Virginia, the company has recently made additional heavy purchases, while it has done likewise in western North Carolina, where it is installing another band mill. The band mill of the company, at Hampton, Tenn., made a fine record during 1909 and will continue to run to its capacity, undisturbed. The company owns a vast amount of virgin timber through this region.

Mr. McGruder, representing the Patton Lumber Company of Philadelphia; R. W. Lucius of the William H. Perry Lumber Company of Cincinnati, and L. M. Scifres of H. A. McCowan, Salem, Ind., were among the numerous hardwood buyers in Bristol this week.

"The weather has seriously interfered with the country mills thus far," said a well-known manufacturer. "The result is that they have been able to accomplish almost nothing for several weeks. However, much stock was hauled to the railroads before the roads got impassable and shipments will hold up fairly well for awhile. The larger mills are nearly all getting in full time, despite the zero weather."

After several months illness, H. M. Hoskins of the H. M. Hoskins Lumber Company has about recovered and will soon be able to attend to his duties at his office.

Local managers of numerous large eastern, western and foreign lumber concerns report that indications are that trade will be much heavier during the present year. The exporters say that the foreign market is not as promising as the domestic, though there is a good feeling as to the outlook for trade on all sides.

J. A. Wilkinson has materially increased his timber holdings lately and reports the outlook for trade most encouraging. Mr. Wilkinson has many country mills cutting on his timber and is shipping out a vast amount of stock. His plant here is running full time.

The plant of the Standard Oak Veneer Company at Johnson City, which was recently tied up by litigation, is again running and indications are that a brighter day has dawned for the company. New money and new blood has been put into it.

The completion of the band mill and railroad which O. H. Vial is building in Greene county, Tennessee, in a few weeks will be followed by the starting of another new and important lumber operation in east Tennessee. The Honaker Lumber Company, which is erecting three band mills in Russell County, Virginia, not far from Bristol, together with planing mills, dry kilns, etc., will be ready to start them about April 1.

The big band mill of the R. E. Wood Lumber Company at Buladeen, Tenn., near Bristol, made a fine record last year and will equal or eclipse it this year. The company has a large area of timber land in that section and some five years' cut remains. There is a large amount of stock on the yards and the mill is going full time.

E. V. Babcock & Co. have their mill at Tellico Plains, Tenn., running full time, with a large amount of stock in their Tellico yards.

Extensive lumber operations are being carried on in Polk county, east Tennessee. The Pendergrast Lumber Company of Marion, O., which recently started its new band and planing mills, is going forward, while the Consuaga Lumber Company, owning big mills and plenty of timber, is running to its capacity. Numerous other large mills in that county are making good records.

There seems to be little danger of an immediate car shortage in this section, despite the fact that the demand for coal and coke, which is one of the principal products of this section, besides lumber, is the heaviest ever known. The railroads are able to cope with the present situation without trouble, but have about all they can do to handle the big traffic. Numerous small lines of railroad are being erected and will be completed soon, while the completion of the new Carolina, Clinchfield & Ohio railroad, a trunk line to the south Atlantic seaboard, will serve to greatly relieve congested traffic and give better service to shippers and consignees. There seems to be a revival of the railroad building industry of late, as immense amounts of money are now being spent in this kind of construction.

## LOUISVILLE

The Hardwood Club has gotten down to business for the new year by appointing its standing committees, as follows:

Advertising—S. E. Booker, E. B. Norman & Co.; Claude Sears, Edward L. Davis Lumber Company; T. M. Brown, W. P. Brown & Sons, Lumber Company, and J. C. Wickliffe, C. C. Mengel & Bro. Company.

Transportation—E. B. Norman, E. B. Norman & Co.; T. M. Brown; H. J. Gates, Louisville Point Lumber Company; D. C. Harris, C. C. Mengel & Bro. Company.

Executive Entertaining—T. M. Brown, Claude Sears, and E. B. Norman.

The Entertainment Committee will get busy right away in connection with the convention of the National Hardwood Lumber Association, and is authorized to call on all the other members of the club to carry out any of its plans. They must do anything, as Secretary Harris phrased it, from sweeping out an office to contributing \$1,000.

Fred H. Behring of the Southern Railway attended a recent meeting of the club at the Seelbach hotel. Mr. Behring is assistant general freight agent of his road, and is in close touch with the hardwood situation. Mr. Cochran, a New York hardwood man, was down a week or so ago.

Most of the Hardwood Club men had enjoyable Christmases, though they have forgotten most of the details by this time. The weather consisted mostly of sleet and snow, and so the hunters in the crowd weren't able to pursue their accustomed avocations. C. R. Mengel stayed at home, while Victor Lamb, treasurer of the Mengel company, went to Memphis for the holidays. The Brown boys Christmased under the paternal roof-tree in Indianapolis. R. F. Smith of the Ohio River Saw Mill Company was snowbound, too, and didn't leave town. Claude Sears of the Edward L. Davis Lumber Company was called to Indianapolis shortly after Christmas by the serious illness of his aged father.

The W. P. Brown & Sons Lumber Company bought another big yard. This time it was that formerly occupied by the cooperage firm of Bergen & Meehan, located between Brook and Floyd, south of Shipp. It contains about six and a half acres of land, and has fine railroad facilities, a spur of the Louisville & Nashville connecting almost immediately with the Southern Railway. The yard will be used at once, and an additional office of the company may be started there also. It was announced that the purchase price was in the neighborhood of \$30,000. W. P. Brown, the retired head of the firm, has started a sawmill at Madisonville, in the western part of the state. It will have an annual capacity between 7,000,000 and 10,000,000 feet a year, and will manufacture principally oak, of which there is a good supply in the western part of the state.

E. B. Norman & Co. have been troubled a good deal by ice, the recent cold spell, one

of the most severe Louisville has experienced in a long time, having frozen the river over from shore to shore. When the freeze started the company had a lot of logs in the river, and these were gotten to harbor in the lee of the Six-Mile island without loss. The river has begun to loosen up considerably now. The sawmill of the company was closed during the coldest part of last week.

H. J. Gates of the Louisville Point Lumber Company said that business is fine and that his firm is being kept busy filling orders which have been on the books and which are coming in freely. Prices are considerably higher, he believes. Small stocks in the hands of consumers are indicated by the "rush" telegrams which the firm has been receiving. The mill ran through the cold weather. Mr. Gates, who recently returned from a trip to the mountains, where he found the supply of labor rather limited, had an automobile experience not long ago. Someone took his machine out for a spin, with his permission, and ran into a cab of the Louisville Carriage Company. The collision upset the nerves of the driver of the machine and he decamped. The police took the car into custody, and Mr. Gates wasn't able to reclaim it until he had done a good bit of explaining.

W. S. Bodley, a Louisville sash manufacturer, has developed a plan for the protection of the Point by the construction of a dike around that section. The dike, if built, would enable a large section now subject to overflow by the river to be used as factory sites.

D. E. Kline of the Louisville Veneer Mills, has now completed twenty years in his present location. He has grown enough in that line to feel pretty well pleased over it. He said that he is being kept busy, and that the demand in nearly all lines is good. Mr. Kline believes that prices will be much improved if the veneer men will only stand together.

The new office building of the Mengel Box Company is rapidly approaching completion, and it is likely that the official family of the company will be able to move into their new quarters by the end of this month.

C. C. Mengel, president of the C. C. Mengel & Bro. Company, is one of the nominees for the directorate of the Board of Trade, of which he is now a member. J. C. Wickliffe, secretary, is expected home in a few days. He was on the Maakon VII, south of Jamaica on Christmas day. The Mengels have been much interested in the announcement of H. N. Thompson, conservator of forests for Southern Nigeria, who says that his experiments show that mahogany trees grow four times as rapidly as others, adding a ring each season.

J. V. Steger of the Flanner-Steger Land & Lumber Company of Chicago has bought the controlling interest in the Smith & Nixon Piano Company of Louisville.

W. L. Burton of Burton, La., a prominent lumberman, who formerly had his home in Bowling Green, Ky., gave the Y.M. C. A. of the latter place \$250 as a Christmas gift, adding it to \$5,000, which he gave some time ago for the erection of a new building.

J. P. Jackson of Georgetown, Ky., has announced that he will dispose of his lumber yard at that place.

West Virginia coal operators, it is reported, have about closed a deal for 62,000 acres of coal and timber lands on Troublesome creek, in Perry and Leslie counties of Kentucky. If the property is acquired the C. & O. will build an extension into it, enabling both coal and timber to be marketed. The timber consists of oak and poplar.

A report from Lexington says that the Louisville & Atlantic, which was recently acquired by the Louisville & Nashville, will be pushed through the mountains of eastern Kentucky to Virginia. This would be of great interest to lumbermen. Thirteen counties rich in timber without any railroad facilities whatever and half

and the others which have hardly any rail lines would be opened up. The Washoto & Black Mountain Railroad, which is backed by a \$50,000,000 company, is believed to be under construction by the Louisville & Nashville. Reports of railroad construction for 1909 show that in Kentucky 88.5 miles were built and that for 1910 the prospect is that 116 miles will be built. Most of this is in the eastern part of the state. A new railroad just opened is the Madisonville, Hartford and Evansville. It is in western Kentucky.

Congressman Swagar Sherley is reported as declaring that Congress at this session will approve the general plan for the improvement of the Ohio river, and will undertake to bring about a nine-foot stage the year round from Pittsburg to Cairo by authorizing a system of continuous contracts, appropriating at the rate of over \$5,000,000 a year for twelve years until the work is finished.

The official slogan of Louisville is, "A Place to Live." The commercial organizations have decided upon it and asked all the business men of the city, including the lumbermen, to have it printed on their letterheads and envelopes.

Ninety-four permits, representing an outlay of \$79,437, were issued by the building inspector during December. There was a considerable decrease December, 1908, showing 127 permits with an estimated value of \$129,443.

The Kentucky Land, Lumber & Mineral Company has been incorporated here with a capital stock of \$20,000. It will trade in coal and timber lands, sell and buy real estate and cut timber. The stockholders are J. Levi, J. C. Hoskins and S. R. Wolf.

In order to dissolve partnership, the Brandstetter Planing Mill Company of Covington has been put into the hands of a receiver, W. A. Rabe, whose bond has been fixed at \$10,000. The company had a disastrous fire about a year ago.

According to estimates made by members of the Hardwood Club, receipts of hardwood lumber here in 1909 amounted to about 310,000,000 feet, of which 10,000,000 feet were mahogany. About that much mahogany was shipped out of Louisville to consumers, and about 200,000,000 feet of other hardwoods were shipped out, the remaining 100,000,000 feet being used in box making and in the building trade. These figures include the receipts of oak, poplar, chestnut, gum and cottonwood, and, while probably not more than approximately correct, they give an idea of the extent of the market.

### ST. LOUIS

The committee appointed at the recent meeting of the Lumbermen's Exchange of St. Louis, composed of Thomas E. Powe of the Thomas E. Powe Lumber Company, R. F. Krebs of the Krebs-Scheve Lumber Company, and Edward Wiese of the Thomas & Proetz Lumber Company, to draw up resolutions opposing the Bridge Arbitrary, has sent the following resolution to the City Council:

City of St. Louis, December 24, 1909—To the Honorable Council of the City of St. Louis:

At the annual meeting of the Lumbermen's Exchange of St. Louis held at the Missouri Athletic Club on December 21 the following resolutions were adopted:

Whereas, The Lumbermen's Exchange of St. Louis was organized for the purpose of fostering the business interests of St. Louis, and of upholding the lumber industry, and

Whereas, It is the opinion of the members of this exchange that the so-called bridge arbitrary is detrimental to the commercial interest of the city, be it

Resolved, That the Lumbermen's Exchange of St. Louis hereby endorse the action of the City Council in its stand to abolish finally and forever the so-called bridge arbitrary and demand that the commercial interests of St. Louis be put on a basis, equal to that of any other city in the country; and further, be it

Resolved, That the city should not grant any special privileges to the Terminal Railroad

Association, until the arbitrary is completely abolished.

Thomas E. Powe,  
Edward W. Wiese,  
Roland F. Krebs.

Among the new lumber companies in St. Louis and located in the Wright building is the Robinson Lumber Company. The company is a big yellow pine dealer, but also does a good sized hardwood trade.

The following hardwood lumber dealers joined the Lumbermen's Exchange of St. Louis during the year 1909: J. M. Bullard Lumber Company, Brewer-Laidley Lumber Company, Thomas E. Powe Lumber Company, Whaley Lumber Company, Tilden Lumber Company, Lorraine Lumber Company, O. H. Semple, International Hardwood Lumber Company, Kelly R. Chandler and the Alf. Bennett Lumber Company.

E. L. Page, the manager of the hardwood lumber department of the Alf. Bennett Lumber Company, is going right after business, and a big increase is being shown in the volume of the sales during the past few months. Alf. Bennett, president of the company, while on a recent trip through the South, made several new connections with hardwood mills.

E. M. Cain has opened up an office in the LaSalle building, under the name of the E. M. Cain Lumber Company. Mr. Cain was formerly connected with the O'Neil Lumber Company.

G. H. Barnes of the G. H. Barnes Hardwood Lumber Company returned from quite an extended business through the South just before the holidays. He reports conditions as being quite satisfactory. Business with him is fairly good, when one considers that the new year has just begun.

The Charles F. Luehrmann Hardwood Lumber Company gave a most satisfactory report on its business during the year just past. Sales were quite good and prices obtained were as good as could be expected. It looks forward to a good year during 1910 and is in fine shape to meet all calls that may be made.

J. R. Massengale of the Massengale Lumber Company, while he says business was quite good during the past year, there was much chance for an improvement and he believes the improvement will make its appearance during the present year.

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, is pretty well pleased with the volume of business done by the company during the past year but looks forward to a great year during 1910. Last year was one of the best that the company ever had in the way of sales.

After quite an extended trip through the South on a visit to the mills of the company, Charles E. Thomas of the Thomas & Proetz Lumber Company is back home and says conditions are looking good. He reports the mills are cutting freely, when weather conditions will permit.

### MILWAUKEE

The Cooper & Maxson Lumber Company, wholesalers of Milwaukee, is being dissolved. W. E. Cooper, president of the company, has opened two suites of offices at 1306-1307 Majestic building and is carrying on a general wholesale lumber business under his own name. G. M. Maxson, secretary, is engaged in the wholesale business at 915 Majestic building. The Cooper & Maxson Lumber Company was organized a few years ago to take over the wholesale business formerly carried on by W. E. Cooper.

The Cooper & Hughes Lumber Company of Neshotah has increased its capital stock from \$25,000 to \$75,000. The company has completed the erection of new sheds.

United States Senator Isaac Stephenson, while at Marinette during the holiday recess, started his sawmill, the N. Ludington mill, No. 1, on another season's sawing. This is the fifty-second time that he has performed a similar service and it is a record unequalled in the Wisconsin lumber business.

The Wisconsin Bark & Lumber Company or Antigo has changed its name to the Antigo Lumber Company and increased its capital stock from \$75,000 to \$200,000.

The Crane Log & Lumber Company has been incorporated at Crane by George D. Puffer, F. D. Abell and T. E. Ryan, with a capital stock of \$25,000.

G. Stanley Mitchell, retired lumberman and capitalist of Milwaukee, died on January 3, aged sixty years. He had been engaged in the lumber business at Stevens Point in former years and retained important lumber interests in Wisconsin and Michigan.

All of the large sawmills at Wausau, including the Barker & Stewart Company's plant, the Alexander Stewart Lumber Company, the Mortenson Lumber Company, the Schubring Lumber Company and the Brooks & Ross Company's mills, will be placed in operation this month.

The Plymouth Veneer Company has been incorporated at Plymouth with a capital stock of \$50,000 for the manufacture of veneer for furniture and interior finishings. A new three-story factory building will be erected.

The sawmill at Park Falls, owned by the Roddis Lumber & Veneer Company of Marshfield will be placed in operation at once. The season's cut will amount to 8,000,000 feet. This concern is operating its plant with a full force of 250 men.

The foundation work for the new sawmill of the Diamond Lumber Company of Green Bay has been completed and the superstructure work will soon be started. The plant will replace the one destroyed by fire some months ago.

H. P. Dutton, for the past seven years sales manager of the Worcester Lumber Company of Chassel, Mich., has resigned to become northern manager of the Estabrook-Steele Lumber Company of Chicago, with headquarters at Marinette, Wis.

A. C. Miller, formerly general sales agent of the Manitowoc branch of the American Seating Company, has identified himself with the Fond du Lac Church Furnishing Company of Fond du Lac.

The Raymond Log Loader Company of Marinette has made arrangements for the continual manufacture of its log loader at the plant of the Stevens Manufacturing Company.

The headquarters of the Northwestern Lumber Company have been moved from Eau Claire to Stanley, the location of the company's plant.

The Robbins Lumber Company of Rhinelander has completed the construction of the grading for seven miles of logging railroad.

The West Milwaukee car shops of the Chicago, Milwaukee & St. Paul Railway Company have just closed the busiest year in its history. Box-cars to the number of 5,685 and other pieces of freight equipment were turned out, as well as 90 locomotives. Nearly 70,000 freight cars were repaired at the shops.

The sawmill of J. Jennings & Co., at New London, has been placed in operation.

The Allis-Chalmers Company of Milwaukee is furnishing the entire electrical and sawmill equipment to the Union Lumber Company of Union Mills, Wash., for installation in the first lumber mill on the Pacific coast to be operated with electric motor drive.

### WAUSAU

An effort is being made to interest local capital in an enterprise which it is proposed shall be established in Marinette. The proposition is to build a factory for the manufacture of small wooden articles from the poorer grades of lumber and timber and the waste of saw mills.

The plant of the old A. W. Stevens Company in Marinette has been purchased by the Stevens Manufacturing Company at public auction and the reorganized concern will manufacture hardwood products.

The J. W. Wells Company of Menominee will soon build a large factory for the manufacture of hardwood flooring.

The J. Jennings sawmill in New London has commenced operations and has a stock of logs in sight to keep in steady operation for at least six months.

A great many Wisconsin woodworking institutions have found it impossible to close down their plants this month as is customary, for the purpose of taking inventory of stock. They are all rushed with orders which must be filled without delay.

The F. Schubring Lumber Company of Wausau has recently added new machinery to its plant.

H. A. Martin, who recently bought a sawmill in Spencer, will start the same in operation as soon as new machinery is installed.

The Wisconsin Handle Company is the name of a concern which will manufacture all kinds of handles in the city of Oconto. The Pankratz sawmill has been remodeled and equipped for that purpose.

The Bain Wagon Company of Racine is planning the erection of a four-story brick structure. This will greatly increase the company's facilities.

The Michigan Hoop & Stave Company of Marinette will build a dry kiln. The company is planning to get more piling ground spur tracks.

The Oelhafen & Lindquist Lumber Company is the title of a new concern which will engage in the wholesale lumber business in Green Bay. Arthur R. Oelhafen and Arthur Lindquist, two young men of Tomahawk, are the principal stockholders. Both have grown up in the lumber business. The former's father, John Oelhafen, is one of the oldest operators on the Wisconsin river.

The Smalley Manufacturing Company of Manitowoc, one of the city's oldest industrial concerns, has taken in W. C. Gallenger as general manager to succeed J. G. Kelley. Mr. Gallenger was formerly with the Appleton Manufacturing Company of Batavia, Ill. Nels Windingstad, general superintendent of the first mentioned company, has also retired. The company consumes a large quantity of different hardwoods yearly in the manufacture of implements. It is planning to enlarge its plant and increase the number of its salesmen.

At the annual meeting of the stockholders of the Shawano Lumber Company, held a few days ago, Peter Faust of Weyauwega was elected a new director. The board of directors chose E. H. Steger president to succeed the late Leander Choate of Oshkosh. J. C. Black was elected vice-president and J. J. Steiger secretary and treasurer. The capital stock was increased from \$15,000 to \$75,000.

The board of trade of La Crosse is raising \$100,000 to be invested in new factories. Over \$95,000 has thus far been subscribed. The money will be invested at the rate of \$25,000 per year, for the purpose of starting new manufacturing enterprises and strengthening those which may be in need of assistance for further development.

The Wisconsin Railway Commission recently ordered the Chicago & North-Western Railway Company to refund to the B. Heinemann Lumber Company of Wausau the sum of \$57.84 excess freight charges on five cars of lumber shipped from Rib Falls to Wausau.

During the past year a total of 29,500,000 feet of lumber was shipped by boat from the port of Marinette. At the same time 3,500,000 feet was imported.

The Barker & Stewart Lumber Company of Wausau will cut 1,000,000 feet of timber this winter on Copper river.

The Heinemann Lumber Company of Heinemann has just completed the building of an amusement hall for the benefit of its employees. It is 40x80 feet in size, steam heated and electric lighted.

The Roddis Lumber & Veneer Company of Marshfield now employs the largest crew in its

history—250 men. Its inlaid doors, in which it is the pioneer manufacturer, are meeting with a remarkable sale.

The Walter Alexander Timber Company of Wausau has bought of the E. J. Anderson & Son Timber Company a large tract of hardwood in Wisconsin and Michigan. The logs will be hauled to Wausau by rail and sawed in the mill of the Alexander Stewart Lumber Company.

Lotz & Gorman are cutting 1,000,000 feet of hardwood on Rib mountain and hauling the logs to the F. Schubring Lumber Company's mill in Wausau.

## SAGINAW VALLEY

Logging conditions are especially favorable the last ten days, the temperature having dropped sufficiently to freeze the ground and swamps so that roads can be made and maintained. Log hauling is going on to interior mills, and to centers of manufacture, such as Alpena, Cheboygan and Bay City. At the latter place one hundred carloads are brought down every twenty-four hours. A good many million feet are hauled to Alpena and the two large mills at Cheboygan obtain the greater portion of their stock by rail.

At Alpena the Island Mill Lumber Company is installing a battery of four boilers and when this work is finished and other repairs made the mill will resume cutting hardwood timber for the winter. The Loud-Hoelt Lumber Company, owning and operating on several thousand acres of hardwood timber near Rogers City and incorporated with \$150,000 capital, have 6,000,000 feet on the skids. This firm will employ a steam log loader and skidder. Messrs. Loud, of the H. M. Loud's Sons Company at Au Sable, are interested in this project. Three years ago they bought a large interest in timber in Presque Isle county with Paul H. Hoelt. The latter is treasurer and manager of the firm. H. N. Loud is president.

The maple flooring industry has improved materially both in the matter of demand and prices and every plant in the valley is active, while large quantities of manufactured stock are being shipped out by rail.

Saginaw parties have purchased a large oak flooring plant at Nashville, Tenn., and H. A. Batchelor, Jr., who has for some years been associated in the lumber business with his father and J. T. Wylie, left the first of the year for Nashville, to assume the management of the plant. His many friends in the valley are confident he will make good.

The John D. Mereshon Lumber Company at Saginaw, closed the first year of its business with the end of the year and did a fine and steadily increasing business in hardwood lumber products.

A portion of the machinery for the new Hanson-Ward flooring plant at Bay City has been installed and a portion of the plant will start operations about Feb. 1. If the delivery of machinery is not delayed the entire plant will be in operation in about thirty days. It is up-to-date and will employ over one hundred hands.

The Berst Manufacturing Company at Saginaw is using 4,000,000 feet of maple and birch in the production of toothpicks, the output amounting to 15,000,000 toothpicks a day.

The Kneeland-Bigelow and the Kneeland, Buell & Bigelow mill plants manufactured approximately 40,000,000 feet of lumber last year. The mill of the first named company is operated day and night the year through. The latter mill is to have a new battery of boilers installed early in April.

The annual meeting and banquet of the Saginaw Valley Lumber Dealers' Association was held at the Wagonah hotel, Bay City, Friday evening, January 7. Every lumber company in the valley is associated with this organization.

## CADILLAC

The worst storm of the season and one of the most severe that has visited this region for a number of years is now raging. For the time being, only the necessary outside work is being done and the railroads are having a hard time to keep their lines open.

All of the lumber manufacturers of Cadillac and vicinity are running full time and anticipate one of the best seasons in Michigan hardwoods and also hemlock.

This is the season when logs and tied wood are brought into Cadillac on sleighs in large quantities and a remarkably fine lot of maple is being logged and brought in.

Murphy & Diggins have a camp near Leetsville, at which point they are putting in a large quantity of hemlock and hardwoods which is brought into Cadillac over the G. R. & I. railway and manufactured here.

The annual meeting of the Williams Brothers Company was held a few days ago at Manton. At this meeting it was voted to increase the capital stock from \$75,000 to \$150,000, all the additional stock being taken by the present stockholders. This company has a saw plant in this city and also at Manton, lumbering being carried on at Mesick, Harrietta and Manton. The plant in this city is one of the best of the many local mills and employs about 100 men. The products of these plants are lumber, last blocks, and ten pins. The company has large holdings of timber land in Wexford, Missaukee and Grand Traverse counties, and a considerable amount of timber in the upper peninsula.

Cadillac has lost one of her best and good friends in the death of Wellington W. Cummer, which occurred at Jacksonville, Fla., December 25, 1909. Mr. Cummer was one of the men who came to Cadillac in the early days with his father, Jacob Cummer, entering into the manufacture of lumber under the name or Jacob Cummer & Son. He was also interested in other business firms, among them the Blodgett, Cummer & Diggins, and Cummer Lumber Company, which were finally merged into the present Cummer-Diggins Company.

In honor to his memory business in Cadillac was suspended from 2 to 4 p. m., the time of the funeral, and memorial services were held in the Congregational church simultaneous with the services that were held in Jacksonville. The mills of the city were also closed for the entire afternoon, and the church where the memorial services were held was filled with friends and associates of the former Cadillac man. Mr. Cummer leaves a wife and three children, Mrs. Mabel Roe, Arthur G. and Waldo E. Cummer, a sister, Mrs. F. A. Diggins, and his mother, Mrs. Jacob Cummer of this city.

The Michigan State Railway Commission has announced that it will not be governed by the Interstate Commerce Commission on the demurrage question, and it is expected that as the results of the action taken jurisdiction of the federal body will be taken into court for determination. Many shippers from all parts of the state have protested against any change in the present Michigan car service and demurrage rules, and the commission will be sustained by the majority of the large interests involved.

The Hillman branch of the Detroit & Mackinac Railway running between Hillman and Alpena has been opened. In order to celebrate the formal opening the Detroit & Mackinac Railway officials gave a free ride to 700 farmers and citizens from Hillman to Alpena. A special permit was granted by the State Railway Commissioners to allow the distribution of free rides for this purpose.

D. F. Clark of Osborne & Clark, Minneapolis, Minn., was in Cadillac this week on business connected with his firm.

Miss Marie Mitchell, daughter of Mr. and Mrs. W. W. Mitchell, has returned to her school at Washington, D. C. Her brother, C. T. Mitchell, accompanied her a part of the way, and is now visiting relatives at Hillsdale, Mich., for a few days.

## DETROIT

Local hardwood dealers complain of a shortage and congestion of railroad cars which has caused them great inconvenience and in many instances has meant a loss of business. H. W. Harding of the Harding Lumber Company informed the RECORD correspondent that for the past three weeks his company has been waiting for several cars of hardwood lumber held up somewhere in the state by the car congestion. J. M. Clifford of the J. M. Clifford Lumber Company, large dealers in hardwoods, says that the car situation is very serious and that no dependence can be placed in cars arriving on time. Furniture factories and local automobile plants have also suffered because of the lack of freight cars. The Cadillac Automobile Company has nearly 200 automobiles waiting to be shipped.

The Owen Motor Car Company has purchased the plant of the J. P. Waddell Shoe Case & Cabinet Company, North Grand boulevard and the Belt Line, together with the six acres of adjoining land. The factory is a three-story brick building, 150 by 60 feet, and will be remodeled to meet the requirements of the automobile company.

The residence of William E. Brownlee, in this city, was completely gutted a few days ago by a fire resulting from a defective chimney. Mr. Brownlee and his family were in bed when the fire started, it being early in the morning, and escaped from the burning building in scanty clothing. The loss is covered by insurance. Mr. Brownlee, who is a member of the hardwood lumber firm of Brownlee-Kelly Company, says that he will rebuild at once.

William Roche, aged seventy-six, a retired dealer in hardwoods, who lived at 334 Vinewood avenue in this city, died of heart failure a few days ago in a barber's chair. He was well known to hardwood dealers of Detroit and vicinity. He was formerly a partner in the firm of Leech, Roche & Co., who dealt extensively in hardwoods, but retired from active business a few years ago and up to the time of his death had been in good health.

Mr. Worcester of the Worcester Lumber Company of Chasswell, Mich., was in town for a few days last week. He said that conditions in the hardwood market were excellent and he looks for a big year's business.

Many of the local hardwood dealers and the factories have been busy the past few days taking inventory and are now in readiness for the business of the year. All are very optimistic. "Everything looks fine," is the report from E. W. Leech. "It looks like a banner year. If we can't do the business in 1910, we never can." Thomas Forman of the Thomas Forman Company is another optimist. "The outlook for the coming year is decidedly encouraging," he told the RECORD correspondent. "We are enjoying a good, brisk business, with every indication that it will continue." Many other dealers talked in similar strain, all agreeing that it should be a very busy year in the hardwood trade.

C. E. Myers of the Crescent Lumber Company of Meridian, Miss., was in Detroit on business last week.

"Basswood is still a little weak, but in all other lines of hardwoods there is a healthy demand and prices are fairly satisfactory," says J. M. Clifford.

J. H. P. Smith of the Hardwood Lumber Company of Cincinnati was a recent Detroit visitor.

Arthur Dunniss of Cincinnati dropped into

town for a few days last week visiting friends in the local trade.

Michael J. Theisen, a well-known local hardwood operator, is again in financial difficulties. He has just filed a bankruptcy petition in the local United States court, scheduling liabilities close to a quarter of a million dollars. In May, 1907, Mr. Theisen took over the business and the indebtedness of the Central Lumber Company and in December of that year made an assignment to creditors who were paid about fifteen per cent pro rata. The new petition in bankruptcy filed by Mr. Theisen shows over 100 creditors who have claims totaling \$223,044.87. His assets consist of an automobile, which he built himself, 1,000 shares of stock in the Snake River Mining Company, practically worthless, \$10 in cash, one \$10 share of stock in the Holmes Lumber Company and the household goods which, under the laws, are exempt. Of the liabilities, \$121,886.57 is due on unsecured claims; \$35,941.02 on notes and \$65,217.24 on accommodation paper.

The annual report of the department of build-

ings shows that during the year just closed permits for 3,646 new buildings to cost \$12,651,245 were issued. This is an increase of over \$3,000,000 over 1908.

C. H. Haberkorn has retired from active participation in the business of the C. H. Haberkorn & Co., table manufacturers, and Warren Williams, superintendent of the concern, becomes general manager. Mr. Haberkorn, however, will still retain the office of president.

The plant of the Charles Stearns Company, manufacturers of wagon wheels, at Pontiac, was damaged to the extent of \$9,000 by fire a few nights ago. The blaze is believed to have been of incendiary origin.

G. H. Jenkins of Chicago, who was in Detroit for a few days last week, says that, despite the rapid strides made by the automobile industry, the wagon-building industry is still prosperous. He says that in this industry as well as in the manufacture of automobiles the shortage of the wood supply is becoming a serious matter, as it is difficult to secure the right quality of hardwood in sufficient quantities.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

Owing to the holiday season and the exorable weather conditions that have prevailed in Chicago during the last fortnight, hardwood business has been featureless. A little lumber has been moved, but there has been no life in the trade. There is every prospect that there will be a renaissance of active trading with a good volume of business very soon. The furniture sales exposition has just opened in Chicago and there is promise of immense sale of all varieties of furniture at advanced prices over last year's quotations, which will surely induce a heavy demand from this source for many varieties of hardwoods.

There seems to be a lessening activity in local house and flat building owing to better trade conditions in general lines of commercial pursuits. However, the volume of building is still large. The local house trim and flooring people report that their plants are all busy and in some cases the output is sold ahead for several months.

### NEW YORK

There is no question as to the position which will be occupied by the good grade lumber market for the coming year. It can be stated upon the very best authority that, irrespective of demand, the price situation is going to be both high and bullish, by reason of the limited supplies of good lumber which will be available. This applies pretty much throughout the entire list. The outlook for good grade lumber was never more promising.

The phase of the situation which must engage the attention of the manufacturer is the low-grade market. Timber is producing more low-grade lumber every year and it is to that department that the most conservative principles must be applied. In regard to the outlook, there is every reason to expect that 1910 will absorb a great deal of common and low-grade hardwood lumber, but the market will have to be intelligently handled. If the ratio of common lumber for the next year is as much greater under the improved outlook as it was during the past year, with its somewhat more limited demands, there is little reason to expect any material change in prices. On the other hand, if the low-grade production is properly conserved, there is no reason why prices should not reach as high a level as they ever have.

### BUFFALO

Buffalo dealers have few men on the road and no one seems to be afraid to run slow now. Some of the better posted members of the trade say they would come out better if they had the courage to let the trade take care of itself till spring and then get the benefit of an advance.

There is no new light as to stock, unless it be from West Virginia. That territory has been worked quietly by a few dealers who always managed to get back there where they had been once, and now others are following. A hardwood dealer just from there reports finding basswood and poplar there as well as the better known oak and chestnut. Prices are stiff and they will be likely to remain so, but if the consumer of lumber wants hardwood hereafter he must pay for it.

Efforts to get in a stock of hardwood from south of the Ohio are met by a bad shortage of cars, which have cut out business a long time, and the supply does not improve as it has done in this territory of late. The big fall of snow has also hindered business somewhat.

### PITTSBURG

Local firms are well satisfied with 1909 totals—considering. They believe that 1910 will break all records in lumber selling in this district, and their officials are getting busy. Many changes are announced in the personnel of local concerns and more salesmen are being added every day. Good salesmen are mighty scarce. The man who knows the lumber business and can show a record of having "produced" can ask and get about his own price in this city at present. Wholesale lumbermen regard industrial conditions as especially favorable and believe that out of the enormous amount of construction work of every kind that is now on the boards there will come the largest sales of lumber that have ever been made in any one year. Also, they are taking most kindly to daily reports received from every section of the country which indicate that manufacturing operations in every line are going to reach high water mark and probably go above it. In short, Pittsburg is getting ready to do her best year's business in lumber selling. It only remains for her big lumber interests to get together on a fair and profitable basis and revise the price lists which have been prevailing here

for a year or more. In hardwood this is not going to be a difficult task for it is anticipated that just as soon as the weather breaks and spring operations begin the demand for hardwood lumber of all kinds will far outstrip the available supply of dry stock. Every mill is being put in condition to make its best record in 1910 but in spite of this hardwood stocks are not accumulating and the better grades of poplar and oak are being sought with rather indifferent success by anxious purchasers.

### BOSTON

Trading in the market for hardwoods has not shown any improvement since the first of the year, but dealers state they do not expect much new business during the first half of January. This is due greatly to the inventory season. Few consumers are carrying more than moderate sized stocks and, with the general business up to normal, the call for lumber should be good. Buyers realize there is nothing to be gained by withholding orders in hopes of lower prices. Instead of a decline, an advance is not at all unlikely. The outlook for a large spring trade is good. Interior house finish has been in active demand and manufacturers still have a good volume of unfilled orders. Piano manufacturers have had a good season and some are as busy today as they were a month ago. Furniture manufacturers are for the most part busy. Some of the chair manufacturers are running their plants nights in order to keep abreast of the demand. The yard trade has not been brisk, but flooring has had a good demand at firm prices.

Prices throughout the market are very firm, with the tendency to a higher level. Quartered oak is exceptionally firm and some manufacturers are so closely sold up that they have practically nothing to offer. One inch, ones and twos, is firm. Plain oak is decidedly stronger and offerings of dry lumber are small. Ash is well held. The demand for chestnut has been fair. Stocks are not large. A very fair business is now reported in the market for mahogany veneers. Other fancy hardwoods in veneers are selling better.

### BALTIMORE

New Year has come and gone, and the members of the hardwood trade, after taking inventories and striking balances, have had an opportunity to look around and come to some conclusion as to present conditions and what the near future may bring forth. They see nothing of a discouraging nature. Notwithstanding the holiday lull the gains previously made are maintained. In no direction has there been a sagging in values. Everybody expected that quiet would prevail at the end of the year and made allowances for this state. Hardwood men everywhere refrained from trying to force business, which would have meant offering material concessions.

High-grade dry stocks are almost scarce, and the demand for them has remained active, while the low grades are in liberal supply, though an appreciable improvement has taken place in this particular. The car shortage had the effect of stimulating the inquiry for serviceable lumber, for to hold back means to run the risk of being caught short. That this precaution was justified is shown by the fact that strenuous efforts on the part of representatives of firms to get out shipments of logs and lumber have had indifferent results. Mills generally shut down over the holidays, and they are starting up again after some overhauling of machinery. The advance in prices has caused not a few of the yardmen to hold off, but their necessities are likely to become so pressing before long that filling them cannot be any longer deferred. The export situation also presents an encouraging prospect.

So far the exporters have not been called on to make extensive forwardings, the inquiry is becoming more active, and general preparations in the way of securing stocks have been made to meet the revival, when it does set in. The prices paid by intending shippers are such as to demonstrate conclusively the high expectations entertained.

### CHARLOTTE

The new year starts off with the brightest of prospects to hardwood dealers of the Carolinas. Following the holidays, business was not so brisk, but the usual activity is again being witnessed. Since the first of the year many large concerns have held stockholders' meetings and declared dividends. The financial status of this section has been greatly enhanced by turning loose of large sums in dividends. In lumber construction work, the Carolinas have made good progress last year, and lumbermen have shared the benefits of this activity.

Furniture dealers of High Point and other manufacturing centers say the outlook for spring business is exceptionally good. Local dealers in hardwoods report all the business they can handle, at stiff prices. Especially have prices stiffened on certain grades of hardwoods, quartered oak, poplar, etc.

Numerous big land deals have been put through, which means that this year vast stores of rich hardwood timber lands will be made available to the markets. Railway lines into timber sections have been built and others are in course of construction, which, when completed, will greatly facilitate the hardwood trade.

Altogether the outlook for future business is bright and hardwood lumbermen are optimistic over the prospects.

### CLEVELAND

Business in this territory is remarkably good for this season of the year. The period following the holidays is usually somewhat dull in all lines, and the hardwood trade is no exception. This season, however, there seems to be a strong demand along all lines and the outlook for the year is bright.

Poplar is being eagerly sought. The volume of automobile business has much to do with this, for the wide clear stuff is snapped up as quick as offered. Both plain and quartered oak is in good demand, with prices inclined to strengthen. Circassian walnut is moving well, while mahogany is getting its full share of the interior finish and furniture business.

### COLUMBUS

While market conditions during the holidays were slow, because of the fact that all retailers took their inventories and many manufacturers did the same, still there was no weakening of prices in any varieties of hardwoods. Manufacturers and jobbers are united in the belief that the market will gain strength as the season advances, and they were not disposed to make any concessions to stimulate buying during the dull holiday season. Prices have been steadily on the advance and the indications are bright for a continuation of that trend of things. Stocks are not too plentiful and the demand is growing better day by day. On the whole, lumbermen in all departments of the trade believe that the year 1910 will be one of the most active in the history of the industry.

The car situation has improved. There appears to be a shortage of motive power on some railroads rather than a lack of transportation facilities. The storms of the past few weeks have had the effect of delaying shipments because of the vast amount of snow in some quarters. Lumbermen, however, look for an acute car

Westinghouse 25 gallon Glue Cookers

### Westinghouse Electrically-Heated Glue Cookers

shortage and preparations are being made to circumvent it if possible, or, at least, to lessen any inconveniences that might arise.

The demand for wide sizes of poplar is one of the features of the market. Dealers who have wide stocks can ask almost any price and sales have been made as high as \$145 per thousand. Prices for ordinary sizes are firm. Plain and quartered oak is strong and advances have been made in quotations. Hickory is also in good demand with firm quotations prevailing. There is a better demand for ash, which has been one of the weak woods on the market. Other hardwoods are steady.

### CINCINNATI

Indications are strong for a most prosperous year in the lumber trade. Furniture manufacturers closed the year with good business and the new year has opened up most auspicious orders for future delivery. The wagon, carriage and the automobile industries are in a flourishing condition. Prospects for a very heavy building season are good, and all of the architects are crowded with business.

There is every indication of an increase in the price of hardwoods during the year, already there is a tightening noticeable, this more especially in the price of oak, while chestnut and poplar are keeping closely up.

The year opens with but a small stock of high-grade quarter-sawn and plain white oak in sight and available. Good figured stuff is held at fancy prices, while narrow and low grades are not plentiful. The stocks of red oak, both quarter-sawn and plain, are good, with a strong and steadily increasing demand. Furniture manufacturers are using more red oak than formerly. Chestnut is in good supply for lengths below twelve feet, but twelve feet and over is not plentiful. One's and two's of twelve feet and over are in demand and readily disposed of to buyers for the eastern trade. Sound wormy is in fair supply, with a ready sale for all that the market produces. Poplar is in good demand, and leads the market in the volume of transactions; good, wide, clear stock is not plentiful and commands fancy prices. Medium grades are in good supply and in very active demand. The low-grade stock of lumber is heavy, but there has been an encouraging movement during the past month, owing to the heavy demand from the boxmaking industry. Ash is in good supply for all grades, but the stocks available, it is estimated, would not be sufficient to meet a rush year. Hickory is in good supply with sufficient stock available to meet the wants of the trade, but it is said by those that specialize in hickory that the visible supply would not be equal to the heavy demand that would be realized during the year. Red gum is rapidly forging its way to the front as a strong feature of the market, and inquiries are becoming more numerous, especially from manufacturers of furniture. Many concerns are adding red gum to their stock lists, while those who have been exploiting red gum in the past are feeling good over the interest which is being aroused.

### TOLEDO

The local hardwood market is reported in splendid shape and the trade is much gratified with present business and the outlook for the future. Prices are firm and indications point to higher figures in the near future. For the most part stocks are in tolerably good shape although there is a scarcity in firsts and seconds of all woods. Wide poplar is extremely scarce, bringing fancy prices. Plain oak is also scarce. Cypress is in good demand and prices have an upward tendency. Plain red oak and quarter-sawn white oak have had the lead, being in active call by furniture concerns and for house finishing. Vehicle and automobile concerns have

also been sending in a healthy call for hardwoods and dealers generally report business as being in fine shape.

### INDIANAPOLIS

The new year has started off well. Trade is brisk, considering the time of year, and prices are from ten to fifteen per cent higher than they were one year ago. Indications are that there will be still greater improvement during the year, and both hardwood dealers and manufacturers are pleased with the outlook.

At present, oak is the greatest in demand, quartered oak being the favorite. Furniture factories and vehicle plants are all busy, preparing for a larger business than they had in 1909. Shipments are moving nicely in hardwoods and no trouble is being encountered from car shortage.

### MEMPHIS

The demand for hardwood lumber is rather quiet at the moment as most of the firms here are engaged in taking stock and as a number of the important consuming and yarding interests in all parts of the country are engaged in similar activities. However, there is no element of weakness in the situation and the majority of the trade is not only looking forward to better prices but also to a very satisfactory business during 1910. The demand is particularly good for high-grade stock of all kind, while there is some tendency toward improvement in the lower grades. The supply of the former is generally light while the latter is plentiful enough to meet all requirements at the present time. The demand is strong for plain and quartered oak in the higher grades and No. 1 common is also actively wanted; prices are high and are showing a healthy undertone. The supply is by no means large and those who hold dry stock are having no difficulty in disposing thereof. The call for high-grade ash and cypress is good. In fact, cypress is moving well in all grades with the exception of No. 1 and No. 2 common. Cottonwood is in better demand in all grades but prices are not altogether satisfactory. Gum is moving rather better in all grades. Red is wanted on a fairly large scale and some interests report a better movement in sap gum. The box business continues to improve and this is reflected in a better feeling in both low-grade cottonwood and gum. The export situation is improving and there is an appreciable increase in the amount of lumber being sent abroad from the Memphis territory as well as from Memphis proper. There is very little poplar for sale in this market but such as is offered is readily taken at current quotations.

### LOUISVILLE

The hardwood situation is in good condition, the demand from all classes of consuming manufacturers being active. During the holidays and before the first of the year, when stocks were being taken by the factories, the demand slowed up a trifle, but it has resumed again with vigor. The character of orders received indicates that there is only a small amount of dry stocks held by consumers, and that purchases have heretofore been of a hand-to-mouth variety. Heavy buying on a rising market is therefore the prediction for the next few months. Plain and quartered oak and poplar are moving well, the common grades, as already noted, being in much better demand than for a long time. The building situation generally is improved, and this has stimulated the demand for mahogany, the manufacturers of which regard the market as favorable. Veneer manufacturers report conditions as satisfactory, with a heavy demand and prices stronger.

## INSURANCE COST

As a lumberman you carefully analyze the cost of your stumpage, manufacture and sales, but your insurance is usually bunched with "general expense."

We can convince you that fire insurance is worthy of even more careful analysis and attention than any other feature of your business.

We can also convince you that our form of insurance is the safe, logical and economical one.

Will you give us an opportunity to prove our claims?

## BRISTOL

The lumbermen in Bristol seem fairly well satisfied with the present condition of the trade, and encouraged at the prospects for business during the present year. Some had expected higher prices, especially on low-grade stock, by this time and are naturally a little disappointed that they do not advance more rapidly, but without the feeling is one of complete confidence. Shipments of late have been heavy, barring the holidays, and there are many orders on the books of the local lumber concerns, to be filled during the remainder of the winter and in the early spring months. The roads are in bad condition, as a result of continued rains, and the country mills are not able to accomplish much on account of the zero weather of the past two weeks.

## ST. LOUIS

Although the volume of the hardwood trade fell off during the last few days of the year, 1909 as a whole was most satisfactory and profitable. Conditions are such that there is every prospect that business will not be long in showing a revival. The demand for all items on the hardwood list is good. Plain white and quartered oak is holding its own and is most in demand of all the hardwoods. Plain red oak is also in good request. While the first and second grades have been in good demand for some time, the lower grades are coming to the front quite rapidly and there is a greater call for these than has been for many months. The lower grades which were hard to dispose of earlier in the season are now being called for and dealers having this grade of lumber on hand find no difficulty in placing it. Gum is called for in some quarters and there is every indication that it will revive in demand before long. Cottonwood, poplar, ash and other hardwoods are in fairly active demand. Cypress is holding its own and is quite a leading feature in the hardwood market. Dry stocks of this lumber are running short and mills are not cutting it, being handicapped by bad weather recently. This has caused stocks to run low and, with the recent heavy demand for it, will soon cause an advance in prices.

## MILWAUKEE

There is a temporary lull in the Milwaukee hardwood trade, due to the inventory season, but dealers are confident that soon after the middle of this month there will be a ready business. There is every indication that sash and door factories, hardwood flooring plants and interior finishing concerns will begin placing orders in preparation for the busy building season, which is expected early next spring. The furniture people have been placing fairly good orders until recently, but it is expected that trade from this source will be good from now on. The closing up of the year's business by lumbermen and manufacturers is proving that the total trade during the past twelve months was much better than had been anticipated. A general feeling of satisfaction seems to be everywhere and confidence is generally expressed that the business of the coming year will be of the best.

Oak is especially strong and prices are somewhat higher. Poplar is wanted and both basswood and birch are holding their own. Stocks in the high-grade lines are low.

## MINNEAPOLIS

The holiday season has made no interruption in the local demand for factory lumber. On account of the heavy building operations, the mill work people are busy right along on special

work and are using large quantities of stock, especially birch and basswood. Oak is not in very large demand, owing mainly to the fact that it has been scarce and high for some time, and builders have turned more to other woods. Flooring is a good proposition. The railroad troubles and the cold weather combined have killed country business for the present.

Operations in the woods will be started at a lively rate now. Some extreme cold has hindered, and recently snows have been heavy. As these settle they will make conditions fine for hauling. The indications are for logging in Wisconsin on a larger scale than usual this winter, as northern hardwood stocks are very low and prices such as to encourage operators. At the present time the outlook is for advances in hardwood stocks of factory grade.

## SAGINAW VALLEY

The recent snow and cold weather has been unfavorable for handling stock, but manufacturers and dealers have been taking an account of stock and balancing the business for the last year. The market is strong all along the list and the recent advance is being maintained. Dry stocks are reported scarce by every firm. The outlook for the new year is regarded as fine and the volume of business is expected to materially exceed that of 1909.

## DETROIT

The extremely cold weather of the past few days, which has somewhat delayed building operations, affected the hardwood market in this vicinity to some extent. A shortage of freight cars also added to the troubles of the dealers, but despite these handicaps the market is in fairly good condition and a healthy demand for all grades of hardwoods is reported. Maple, oak and poplar are still in strong demand. Continued activity in the flooring industry, the box factories and the veneer panel trade is noted. Dealers are very optimistic as to the trade the new year will bring.

## LIVERPOOL

Trade here has gone very quiet, probably on account of the holidays and the early election. The keenness of the fight and the undoubted closeness of the two great parties in the country naturally make the matter very upsetting to business. One of the big questions to be decided at this election is the Tariff Reform, and if, as seems likely, the Conservative party obtains a small majority, a change will be necessary from the old fiscal policy in Britain of free trade. This will involve a tariff and many classes of American lumber, varying from five to fifteen per cent, and there is no doubt that a tariff will be placed upon sawn planks and planed and sawn boards, turned handles and spokes, varying between these two percentages. It seems probable that all kinds of logs will be admitted on the free list, whether square, round or hewn. American shippers are advised, although it is difficult to prophesy thus early as to the outcome, if they see a conservative victory not to hesitate to send goods to this market.

Mahogany has slightly weakened during the past month, the list of arrivals here being heavier than the demand, with the result that prices have eased off. Ash and hickory logs have arrived in moderate quantities, and in every case the prices realized have been records, as far as this market is concerned. Dry stock is very scarce here; dry ash planks and poplar boards being in urgent demand and realizing high prices. Birch and maple are in fair demand, the former having recovered from its somewhat weak position of the past twelve months.

**OAK FLOORING** An artistic volume by Henry H. Gibson, Editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text book on this important subject. Of special interest to architects, builders, house owners and women. Price 50 cents. A limited number have been purchased by leading oak floor manufacturers who authorize distribution FREE until supply is exhausted. Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick! Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

## BARGAINS IN REBUILT WOOD WORKING MACHINERY

Every Machine Thoroughly Overhauled and Tested Before Leaving Our Shops

1 30-in. 3-Drum Invenible Sander  
1 30-in. Single Drum Bertin Sander  
1 Iron Double Circular Saw Table  
1 44-in. McDonough Band Resaw  
4 x16 Baldwin 36 in. Gauge Locomotives  
60 miles relaying rails  
5000 Boilers, Engines and other Machines

Complete stock of Structural Steel and Iron. Shuffling, Belting and Pulleys

Send for list, also our new 500 Page Catalog No. 946

**CHICAGO HOUSE WRECKING CO.**  
35th and Iron Streets, CHICAGO

## COUNTERFEIT CHECKS

are frequent except where our

Two Piece Geometrical Barter Coin

is in use, then imitation isn't possible. Sample if you ask for it.

S. D. CHILDS & CO.  
Chicago

We also make Time Checks, Stencils and Log Hammers.

## Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

For one insertion ..... 20 cents a line  
For two insertions ..... 35 cents a line  
For three insertions ..... 50 cents a line

9	Cypress		Persimmon, Sycamore.
10	Elm	19	Dimension stock
11	Gum	20	Veneers and panel stock

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## This Handy Calculator and Real Leather Case Prepaid—To You For 25c

**Y**OU will find it invaluable—once you use the Dodge Calculator. It is the handiest and most useful article we've seen in many a day. The price is no indication of its worth. It actually costs us 25c for the calculator and real leather pocket case—but we gladly pay the cost of postage, handling and packing in order that you may have one.

We know how useful you will find the Dodge Calculator. We know it will please you so well you will remember where it came from. Thousands of engineers and factory men already have the Dodge Calculator, and are more than pleased with it.

## We Have Several Thousand But They Won't Last Long

at the rate they are going now. So send us the 25c and we will mail you one at once. After you get it—if you don't think it is worth 25c to you—mail it back and we'll gladly refund your money. But to practical factory men—engineers and men who understand—it's worth many times 25c. Send the 25 cents with coupon and receive the Dodge Calculator by return mail. Remember you get your money back if you are not satisfied.

Send in a trial order and let us do the rest. Catalog on application.

# **Flanders Style Turnings, Square Chair Legs, Etc.**

Can be made successfully and economically only on the special machine we build for this class of work.

We have the only arrangement that will turn a back post after it is bent—a big advantage over having to use dowels or splicing. Also permits of turned parts being made larger in diameter than the plain square portion.

This machine is not only a wonderful labor-saver, but its unlimited possibilities in the way of styles and shapes of work produced gives you the advantage of working out designs that your competitor, without the same up-to-date tool, cannot follow.

*Let us tell you more about it*

## **C. MATTISON MACHINE WORKS**

897 Fifth Street

BELOIT, WISCONSIN

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address :

**THE SINKER-DAVIS COMPANY, Indianapolis, Indiana**

## DO YOU HAVE TROUBLE WITH YOUR GLUED UP STOCK OPENING UP AT THE ENDS?

If so, let us tell you in our illustrated booklet how you can overcome this difficulty by the use of our **New Continuous Feed Glue Jointer**. With this machine, you can make what is known as a "**Spring Joint**"—joint slightly concave, so that, when your stock is glued and pressed together it cannot open up afterwards.

The illustration will give you an idea of the feeding mechanism of our No. 217 which consists of a traveling chain, composed of detachable links. The chain runs over two octagon wheels, one at each end of machine with finished faces and flanged at the lower edge to support the chain—a gib is provided, running full length of the chain—not part way only—insuring perfect alignment. The feed is driven by a 3-step clutch cone operated by a lever close at hand. The feeding power is transmitted by a large bronze worm wheel and steel worm running in oil, absolutely noiseless. **Ball Bearings** are provided for end thrust of worm.

WRITE FOR GLUE JOINTER BOOKLET.

**J. A. FAY & EGAN CO.**

414-434 W. FRONT ST., - - CINCINNATI, OHIO

any machine is the **average** in all kinds of timber, scattered growth and from the long haul as well as the short haul. It's in the **final results** that the **CLYDE SKIDDER** outclasses them all. Let's send our testimonial booklet giving such results from scores of customers.

## CLYDE IRON WORKS

Building,  
Savannah, Ga.

C-105

## RESULTS

in steam skidding depend largely on keeping the machine busy **at skidding** and in getting the logs up to track at the **nearest** spot.

Frequent moves from one point to another are accomplished quickly by the

### CLYDE SELF-PROPELLING STEAM SKIDDER

and require no more time than walking down the track.

The steam guying-drums enable a set to be made while the tongs are being taken out to the first log.

These important features are exclusive in the **Clyde Skidder** and are what determine the **average results** for the month, the year or any other period.

A half million may be skidded with our machine in a single day, with large logs, in thick timber, close to track but the **correct test** of

The Best Skidding Engines are none too good for the service demanded.

This is the principle that has guided our design and construction.

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

# A WEDGE DOVETAIL

(PATENT APPLIED FOR)

OUR  
NEWEST  
FEATURE  
FORCES THE  
GLUE INTO  
THE PORES  
OF THE WOOD

The LINDERMAN  
AUTOMATIC DOVETAIL  
GLUE JOINTER is a

JOINTER AND JOINER. IT PERFORMS  
IN ONE OPERATION and ONE HANDLING

all the operations necessary to complete a glue joint as jointing, glueing,  
clamping, unclamping and edging to width.

Eliminates the delay of getting jointed stock to the finishing or veneer  
room. Saves time, labor, lumber and glue, yet delivers the finished product  
with a reinforced WEDGE DOVETAIL which is a permanent clamp.

May we send you samples and information of this new important feature?

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock **THAT IS IN SHAPE TO GLUE.**

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. **THE GLUE WE USE IS GUARANTEED HIDE STOCK.**

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed **THE BEST.**

## A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances without adjustment. It has many other good features, but we've no more room to describe them.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

(Incorporated)

WOODWORKING MACHINERY MERCHANTS

CHICAGO, ILLINOIS

No. 35 SINGLE SURFACE PONY PLANNER

Planes 24 inches wide and 6 inches thick. Table slides on outside of frame so it is steady and the work will not be wavy or have clipped off ends. Two rates of feed driven from cylinder, one regulating the other.

## MOST PERFECT

## DOUBLE HEAD DOWEL MACHINE

These machines have two spindles running side by side, both spindles operated at the same time and by the same operator. Double No. 1 cuts from ¼-in. to 1-in. diameter; double No. 2 cuts up to 2-in. in diameter; double No. 3 cuts up to 3-in. in diameter. These machines are designed for the rapid production of round rods for all purposes, and have a capacity of 7,000 feet per hour and larger when required. Waste stock and every grade of stock may be turned without danger of it twisting off or clogging in the cutter head.

PATENTED

# Results Are What Count

'09 Special All-Steel Combined Skidder and Loader

**A Combined Skidding and Loading Machine that will clear up the largest area at a setting** and can be moved and set up ready for business in the shortest possible time will get the best results.

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money.

Note the new method of suspending skidding sheaves. They

are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines, one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading. The uppermost leg of jib has a spring connection to tower reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever.

Machine is raised and lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines, with stiff or swinging boom.

Constructed entirely of steel, except loading boom.

Is without question the strongest and fastest machine of the day.

A Russel Donkey Skidder

# GIBSON TALLY BOOK

Special, patented, triplicate tally tickets supplied, printed on waterproofed paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability, convenience, accuracy, and for systematizing the inspection and measurement of lumber.

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets— $4\frac{1}{8} \times 8\frac{5}{8}$  inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket.

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

## PRICE LIST

Aluminum Tally Covers, each.....	\$ 1.00

Secretary.

GEORGE F. CRAIG,  
President.

#### NATIONAL LUMBER MANUFACTURERS' ASSOCIATION

The Board of Governors of the above association have fixed the dates for the 1910 annual meeting for April 19 and 20 at New Orleans, La.

GEORGE E. SMITH,  
Secretary.

EDWARD HINES,  
President.

### General Market Conditions

Every prospect for an increased volume of business has been sadly interfered with during the past fortnight by the continuation of the general storm of snow and sleet that has spread over the entire

north country from Denver to Portland, Me. The railroads have had hard work to get their passenger trains through and little has been accomplished in the way of moving lumber freight. The demand from all sources is assuredly in excess of anything that could possibly be supplied from dry stock. Northern stock is practically stripped of dry lumber. The same can be said of the south country in good end of the product. Plans are well under way looking for a considerable increase in hardwood production, but it is going to be mid-summer before the supply is up to the demand on any desirable items of most varieties of hardwoods.

The furniture expositions at Chicago and Grand Rapids are just about closing and thus far the sales have been disappointing. Furniture people have been obliged to advance their prices materially and while the number of people at these shows has been larger than ever, the total sales do not foot up nearly as great as was expected. The business is surely coming, but it is not coming in the rush that was anticipated.

The hardwood flooring people report an active trade in both oak and maple.

The veneer manufacturers say that trade was never as good as at the present time.

Hardwood interior finish mills are generally busy.

There is a growing call and a corresponding increase in output on hardwood dimension stock and this feature of the business promises to become a very important factor in the aggregate of lumber transactions before very long. Today prices on this material are much lower than they should be, but if the user of this material can be educated up to paying a decent price for it, it will be a good thing both for him and for the producer.

### The Record's Daily at Cincinnati

HARDWOOD RECORD regards the forthcoming Cincinnati meeting of the Hardwood Manufacturers' Association of the United States and its affiliated interests of so much importance that it will put out daily issues of the paper on the first, second and third of February, at Cincinnati. This paper will have fifty-two pages, more than one-half the size of the regular issues of the publication, and will contain an account of the daily "doings" at the meetings and a roster of attendants. A number will be shown opposite each name corresponding with the number on the badges worn by the delegates. Thus it will be easy for those not acquainted to find out who is who. The paper will contain considerable editorial matter, numerous caricatures of prominent hardwood lumbermen and a lot of miscellaneous piffle and spoof that will at least add to the gaiety of the occasion.

HARDWOOD RECORD office headquarters at Cincinnati will be in Room 909 on the same floor with the Convention Hall and next door to the Assembly Room. Here a portion of the editorial staff will be stationed to carry on the work of the daily.

At this time an exhibition will be made, for any who are not familiar with it, of HARDWOOD RECORD's Bulletin System, involving the buyers of hardwood lumber, veneers and panels and dimension stock, together with their annual requirements, with which many RECORD advertisers are already familiar.

There will also be shown at these offices the new Gibson Hardwood Tally Book, which it is hoped will there meet with as much interest

as it has already received from those who have seen this advanced form of making hardwood tallies.

All visitors will be welcome at HARDWOOD RECORD headquarters.

## Wonderful Changes in Hardwood Requirements

As is well known to the average HARDWOOD RECORD patron, this paper has been engaged for several years in collecting and collating information involving the annual hardwood requirements of the majority of the concerns in the United States and Canada which use in their various lines of production hardwood lumber in wholesale quantities. At regular intervals this information is printed in bulletin form and supplied to advertising clients.

At least annually the sundry paragraphs in these bulletins are forwarded to the lumber buyers of the various concerns with the request that, if the information does not accurately represent their requirements at the time, they correct it. During the last few days the old requirements, accompanied by an explanatory letter, have been sent out to the full list of houses embodied in all the bulletins except information received during the past ninety days. At the present time the RECORD is receiving more than 500 letters and corrected reports daily from these manufacturing institutions, and within the next ten days a large and comprehensive correction bulletin will be issued, which will show the hardwood requirements of these various wholesale consumers for the year 1910.

The astonishing feature of these reports is the wonderful transformation that has taken place during the past year in the range of kinds and quantities of lumber that is to be purchased during 1910. In a good many cases concerns which were large buyers of many of the well-known and standard varieties of hardwoods have eliminated their use entirely, and others have reduced the quantities materially, and in nearly every case substitution is taking place for many previously esteemed woods; in some cases the requirements are largely confined to these substitute woods.

There is a tremendous increase in the requisitions for inch, 24 to 28-inch panel poplar; there is a marvelous increase in the inquiries for red and sap gum; there is a decided increase in requisitions for red birch; a marked increase in the call for the gray elm of the North, and a considerable increase in the call for inch, sound, wormy chestnut. There seems to be a diminution in the call in some localities for oak of all varieties, and there is a marked decrease in the demand for white and black ash. Not more than twenty-five of the thousands of concerns reporting advise that their lumber contracts are made for the year, and a good many make specific requests for immediate offers, with the statement of how large quantities can be supplied.

The RECORD is rushing this correction bulletin to press as fast as possible so that its advertising clients may at once have the benefit of the marked changes in requisition, and to enable them to get in prompt touch with the buyers.

Incident to the publication of this interesting and valuable bul-

letin, the RECORD wishes to advise its contemporary that advertises that it is "the only weekly paper that covers the southern field," to take notice that this document will be copyrighted, and that steps will be taken to fully protect the publishers against the pilfering of the information therein contained.

## A New Tally Book

HARDWOOD RECORD has been asked times without number to suggest some better and more logical scheme than that now in vogue for the tallying of hardwood lumber, and making authentic and satisfactory records of the same. With this end in view, the editor has combined with the best features of tally books and tally sheets now in use some original ideas of his own, and about February 1 a new and unique form of tally book will be put on the market by HARDWOOD RECORD. Illustrations showing the convenient way these covers are held in the hand, and of the pages of the book will be found in an advertisement on page 7 of this issue of the RECORD. These three-throw tally ticket covers are made from sheets of twenty-gauge aluminum, hinged together at one edge and accommodating four tally tickets  $4\frac{1}{8} \times 8\frac{5}{8}$  inches in size. The cover is held in the hand and is readily closed or opened; the center leaf may be thrown backward or forward by inserting the thumb and the fingers through rubber bands fastened to hooks on the outside of both the front and back covers. The covers fold compactly to less than a quarter of an inch in thickness, and fit the side or inside coat pocket. The four aluminum pages give an opportunity to employ four tickets at a time if need be for complicated tallies, or a straight grade may be registered on one or two pages.

The device accommodates any form of tally sheet desired, but an especially convenient form is a patented triplicate tally ticket, which is printed on waterproof paper of different colors with carbon backs. Thus no loose carbon sheets are necessary. Tallies made on these tickets are unalterable, and their use enables the inspector to retain his triplicate ticket, and to forward the original and duplicate tickets to the office. This gives the general

office an opportunity to hold the original tally as a matter of record, and to attach the duplicate to invoice. In the event that a lumberman does not desire a duplicate or triplicate to invoice, single tally sheets may be employed. Both the padded triplicate tickets and the single tickets are held in place by rubber bands slipped into notches on the corners of the aluminum leaves.

The tally books have been experimented with by several leading manufacturers and jobbers, who have placed orders with the RECORD for a quantity for their use. It is believed that they will be found absolutely perfect, durable, convenient and accurate for the tallying of lumber.

A patent for the device has been applied for, the entire work copyrighted, and the triplicate tally sheets are made under special license from the General Manifold Company, the owner of the patent thereof.

## FELLOWSHIP

When a man ain't got a cent, an' he's feeling  
kind of blue,  
An' the clouds hang dark and heavy, an' won't  
let the sunshine through,  
It's a great thing, O my brethren, for a feller just  
to lay  
His hand upon your shoulder in a friendly  
sort of way!  
It makes a man feel queerish; it makes the tear  
drops start,  
An' you sort o' feel a flutter in the region of  
the heart;  
You can't look up and meet his eyes: you don't  
know what to say,  
When his hand is on your shoulder in a friendly  
sort of way.  
O, the world's a curious compound, with its  
honey and its gall,  
With its cares and bitter crosses, but a good  
world after all;  
An' a good God must have made it—leastwise,  
that is what I say,  
When a hand is on your shoulder in a friendly  
sort of way.

JAMES WHITCOMB RILEY

Specimen forms of these tally tickets will be mailed to any one interested on application, and the covers will be sold on approval to responsible concerns.

## Laborers Should Become Trained Workmen

Melville W. Mix, head of the big industrial plant of the Dodge Manufacturing Company at Mishawaka, Ind., last week sounded a warning to manufacturers of this country in an address made before the Indiana Engineering Society. He alleged that manufacturers do not try to make expert workmen out of their employees, but that they put men at work in their shops whether they have any ability or not, just so they can turn out the work. He expressed the fear that this system would have a deplorable effect upon the industrial world.

Mr. Mix in the course of his address said that manufacturing establishments all over the state of Indiana are working overtime, and that every vestige of the panic of 1907 and 1908 has disappeared, and that the number of factory employes now engaged exceeds any previous record. He stated that the reduced volume of business of these panic years gave a long needed opportunity for making changes in plants and improvements in products, and that this action is being reflected in the enormous production that is now being made in many lines. He prophesied that 1910 will prove the banner year in manufacturing production in the Hoosier State. He also referred to the many plants and extensions to plants that are now in progress of construction, notably at Indianapolis, Anderson, Terre Haute, Evansville, Ft. Wayne, Muncie, LaPorte, South Bend, Mishawaka, Gary and other points. He stated that the investment in these improvements will involve fully \$100,000,000.

Continuing, Mr. Mix said that it is a much debated question whether we are bringing along with sufficient rapidity the class of mechanics that is required to maintain the high mechanical standard of these industries. In times like the present very poor mechanics are able to command the wages of the skilled and educated artisans, which is certainly destructive to individual initiative and ambition, and to the personal interest that the mechanic should receive before being placed in charge of important work. The tendency seems to be anything to man the shop, regardless of ability or development of future service, and he thinks the harvest will be anything but a desirable one.

Mr. Mix regards Indiana with its natural resources as commanding a strategic position in the matter of assembling materials and distributing manufactured goods, and there is no reason why the state should not occupy a commanding position in the engineering and manufacturing world. He referred to the universities and manual training schools of the state, which are equipped with the very latest laboratory equipment, manned by competent, energetic instructors, who are thoroughly investigating the mechanical development throughout the state as second to none. This he commends.

The information and warning of this resourceful and energetic head of the big Mishawaka manufacturing institution are worthy of consideration, not only by manufacturers of machinery and mechanical appliances, but by lumber manufacturers and the numerous individuals engaged in manufacturing lines which consume large quantities of lumber. Mr. Mix's position is well taken—that it pays to educate employes of all classes to the highest efficiency.

## The Big Cincinnati Hardwood Meeting

Unless all the signs of the times go amiss, the eighth annual meeting of the Hardwood Manufacturers' Association to be held at the Sinton Hotel, on February 1, 2 and 3, is going to be a record breaker both in point of attendance and in the character of the legislation prevailing.

All divisions of the hardwood industry, the manufacturers, jobbers and wholesale consumers, seem to be intensely interested in the affair. Cincinnati is making a great effort to entertain the convention royally and practically every man connected with the business there is participating in preparations for the event. Nearly every

body of wholesale consumers of hardwoods in the country has pledged delegates and on the whole the interest is so manifest that undeniably it will be the largest gathering of hardwood hosts ever assembled in the history of the trade.

The invitation that has been sent out by the association is so general that it covers every phase of hardwood production, marketing and utilization. The three days set aside for the sessions will certainly be full of work.

The program has not been completely arranged except as noted below:

### PROGRAM

#### MONDAY, JANUARY 31

10 a. m.—Meeting of the Executive Grading Commission in the assembly room, together with representatives of the different consumers' organizations, as well as individual buying interests, to continue all day.

8 p. m.—Meeting of the Executive Board.

#### TUESDAY, FEBRUARY 1

##### FORMAL OPENING OF THE CONVENTION

10:30 a. m.—Address of welcome by Hon. Louis Schwab, mayor of Cincinnati.

Address of welcome by James J. Heekin, president of the Chamber of Commerce.

Address of welcome by A. J. Conroy, president of the Business Men's Club.

Address of welcome by C. S. Walker, president Cincinnati Lumbermen's Club.

Response in behalf of the association.

Annual address of the president, R. M. Carrier.

Report of the treasurer, C. M. Crawford.

Report of the secretary, Lewis Doster.

Appointment of committee to consider reports of officers.

Recess.

7:45 p. m.—"A Talk on Mountain Lumbering" (Conventional Hall), by H. H. Gibson, editor of the *HARDWOOD RECORD*, illustrated by numerous stereopticon and moving pictures of scenery, forest trees, woods work, splash damming, saw milling, mountaineers, moonshiners and feudists.

This part of program to be called as time and conditions justify.

##### REPORT OF COMMITTEE ON OFFICERS' REPORTS

Address, "Wooden Packages," B. F. Masters.

Address, "Organization by Consumer," O. B. Bannister.

Address, "Costs of Manufacture," Frank F. Fee.

Address, "The Functions of a Lumber Newspaper," J. H. Baird.

Address, "Stain in Gum, etc.," Dr. Herman Von Schrenk.

Address, "Furniture Consumption(?)," George P. Hummer.

Address, "Improvement of Waterways," Hon. Albert Bettinger.

##### REPORTS OF THE STANDING COMMITTEES AS FOLLOWS

Finances, George E. W. Luehrmann, chairman.

Transportation and Increase in Freights, R. L. McClelland, chairman.

Drainage and Improvement of Waterways, S. B. Anderson, chairman.

Terms of Inspection or Selling Code, W. A. Gilchrist, chairman.

Car and Construction Oak Rules, R. G. Page, chairman.

Insignia of association by a representative of the committee.

Standard Weights of Hardwood Lumber, W. E. DeLaney, chairman.

Forestry, W. B. Townsend, chairman.

In Memoriam—John B. Ransom, Nashville, Tenn.; J. E. Defebaugh, Chicago, Ill.; F. S. Hendrickson, Chicago, Ill.

This part of program to be called exactly as time indicates.

#### WEDNESDAY, FEBRUARY 2

Dr. Herman Von Schrenk (Conventional Hall), expert on timber preservation, will continue his former talk by giving a stereopticon illustration of defective parts of woods.

4 p. m.—Trading on the Floor (Assembly Room, same floor as Convention Hall). A new feature. Will be the order of business from 4 to 6 in the Assembly Room in the afternoon of Wednesday, when producers and purchasers may, in open meeting, meet and get acquainted. All order of business of association is suspended until Thursday, 10:30 a. m.

#### WEDNESDAY NIGHT

6:30 p. m.—In Convention Hall, has been promised to the Cincinnati lumbermen, who have arranged to do their very best, and they will insure a royally good time with a banquet, music, vaudeville and smoker. It is requested that notice be given that this is strictly informal as to dress. All to be given within the Sinton Hotel.

#### THURSDAY, FEBRUARY 3

10:30 a. m.—Report of Executive Grading Commission.

Reports of committees.

Election of officers for the ensuing year.

Time shown on program will be promptly carried out. Owing to the enormous amount of work, it is requested that all interested will be prompt in attendance.

## Pert, Pertinent and Impertinent

### Lots o' Them

A certain class of men, we guess,  
Are very much like drums.  
From heads that hide most emptiness  
The greatest uproar comes.  
—Catholic Standard and Times.

### Jack and Jill

Jack and Jill went up the hill  
To get a pail of water;  
Said Jack: "My dear, I wish 'twas beer."  
Said Jill: "You hadn't oughter."

"I never see a woman that would chaw tobacco or a man that would kiss a poodle dog."—JUDGE.

In a woman's weakness lies her strength.

It is all right to refrain from telling the truth when silence is better.

It's one thing to run into debt and another to crawl out.

Drifting with the tide is one way to get where you don't want to go.

Women who don't believe what they hear about others are fond of repeating it.

Retrospection is a great toe-stumper of progress.

It is difficult to figure your expenses in advance, as fully one-half of them are unexpected.

Think three times before you speak and thus give the other fellow a chance to make a fool of himself.

You can easily flatter some men by asking their opinion of something they know nothing about.

### Human Nature

Oh, this would be a funny world if built upon a plan that suited each inhabitant—woman, child and man; 'twould be a topsy-turvy mass, a queer patched-up affair, with zero weather in July and gold bricks on the square. We'd take a day off every week and change things all about; we'd turn the north pole upside down, and the equator inside out; and when we had it all fixed up we'd start a general row, and every one of us would kick lots more than we do now.

### Little Troubles

Our little troubles of today,  
How big they are, how gloom and gray;  
They fill our somber hearts with dread,  
And cloud the bright sun overhead.

Our little troubles of today,  
It seems as if they'd always stay,  
Tomorrow comes new thoughts to stir—  
We almost wonder what they were.

—Boston Herald.

## On to Cincinnati

It looks as though the greatest convention in hardwood history was coming off at Cincinnati, February 1, 2 and 3.

An old toper says it's a shame the way society women waste good alcohol by burning it under a chafing-dish.

A man may know his wife like a book, but he can't shut her up like one; and a woman may know her husband like a book, but she isn't necessarily satisfied with the knowledge she has acquired.

A man usually gets what he deserves in the end, but he often gets a lot of good things that he doesn't deserve in the meantime.

The sacrifice you are glad to make is seldom a sacrifice.

The man with the muck rake is behind the times. What he needs is a steam shovel.  
—LIFE.

It's a pity a man can't put a plaster on his conscience when it hurts him.

Some people are so formal that they even hesitate when it comes to bowing to the inevitable without an introduction.

It is usually the blunt man who says the sharpest things.

### At the Doctor's Expense

"Doctor," said the patient, who had been ailing for a long time, "be frank with me. Why do you demand such a large fee for cutting out my appendix?"

"Well, the truth is," explained the frank M. D., "when I remove that appendix I cut off my chief source of revenue."—Tit-Bits.

Medical Professor—What is the result, young gentlemen, when a patient's temperature goes down as far as it can?

Student—Why er—he gets cold feet!—Cleveland Leader.

A Philadelphian, who has since then fortunately regained his health, was last year the subject of an extended examination by specialists.

"The examination seems to have delighted Dr. Blank," said the patient to one of the doctors when they were alone for a moment, "for I have noticed that his eyes are positively beaming. I assume, then, that my case is not a

grave one."

"Well," hesitated the physician addressed, "I hardly feel justified in saying that. But I understand from Dr. Blank that he is going to perform a number of interesting operations on you."  
—Lippincott's.

She—Why don't you consult a doctor about your insomnia?

He—What? And run up more bills? Why, it's because of what I owe him now that I can't sleep.—Leslie's Weekly.

# AMERICAN FOREST TREES

## EIGHTIETH PAPER

### Post Oak

*Quercus Minor* (Marsh) Sargent.

Post oak is botanically and commercially a white oak and is seldom distinguished from the true white oak, *Quercus alba*, in commerce. It is seen at its best in the uplands of the Mississippi basin and in the Gulf states west of the Mississippi, where it attains a considerable size. In the northeastern states and in Florida it is small, becoming shrubby in some localities, and more or less of local growth. Limestone uplands or dry, sandy or gravelly soils seem to offer the best conditions for its existence, where it grows in company with Black Jack, red and white oak, sassafras, dogwood, gums and red cedar.

The range of growth of post oak extends from New Brunswick south through the Atlantic states into Florida; west through the Gulf states and throughout the Mississippi River system, growing west brokenly to Montana. It is the common oak of Texas but in the North is rather scarce, becoming more plentiful in the lower Appalachians.

Post oak is the most common name for this tree but various sections of its range have given it their own names which probably have local significance. The following names are in use in the localities denoted: post oak in the eastern and Gulf states, Connecticut to Texas and in Arkansas and West Virginia; box white oak in Rhode Island; iron oak in Delaware, Mississippi and Nebraska; chène étoile in Quebec; overcup oak in Florida; white oak in Kentucky and Indiana; box oak and brash oak in Maryland.

The broad, dense, round-topped crown of the post oak with its peculiar foliage make it very noticeable in the woods, even to the casual observer. The tree has an average height of sixty to eighty feet and is about two feet in diameter, but in exceptional cases it reaches one hundred feet in height and has a diameter of three feet. It has a moderately thick, dark brown bark with a reddish tinge and deep fissures, the broad ridges being covered with thin scales. On the branches it becomes much thinner and lighter in color, the branchlets being unfissured and glabrous in the second year, although fuzzy at first. They are rather heavy and rounded and terminate in short round buds with conspicuous scales. A noticeable feature of the tree is the peculiar branching. The branches are heavy and crooked, separating often, with wide angles, forming knees which when big enough, have a commercial value.

When the tree is in foliage the tufted appearance of the leaves grouped on the ends of the twigs gives it a distinctive look. The leaves are five to seven inches long usually, but in some cases, especially on young specimens, are ten inches or more in length. They are dark, shiny green and on a short petiole, the veins and mid-rib being heavy and con-

The post oak is a monoecious tree and flowers in May. The staminate flowers are in aments three to four inches long, the calyx yellow and hirsute, while the pistillate flowers are either sessile or stalked and have ovate scales, hirsute on the margins, and red stigmas.

Like the other white oak acorns, those of the post oak are sweet and edible, occurring every year. They are usually sessile, are broadly ovate and about three-quarter inches long, being covered for two-thirds of the length with the scaly cup. The crop is usually profuse and in 1900 this was the only mast oak.

When cut this tree shows a light to dark brown heart and a thick, lighter colored sap. The wood is close grained, hard, strong and durable in contact with the soil. In seasoning it is liable to check, and great care must be taken to get good results. It is adaptable to the same uses as true white oak, its distinct medullary rays giving it an excellent figure, and when used as lumber it is often quarter-sawn. Its hardness and durability give it an extensive use in cooperage, as wagon and furniture stock, for construction purposes and for fencing, for agricultural implements, ties, poles and other uses which require oak of high character. Its use as fuel is general.

One cubic foot of the seasoned wood weighs 52 pounds, and one thousand board feet about 4,350 pounds; the specific gravity is .3367. Based on kilograms and square centimeters, the coefficient of elasticity is 83257; the modulus of rupture is 872; and the longitudinal resistance is 487. The post oak comes under the classification of ring-porous woods and shows rather small rings of annual growth.

Of the two other botanical names for this tree, *Quercus obtusiloba* (Michx.) is inspired by the blunt, rounded lobes of the leaves, and *Quercus stellata* (Wang.) might be derived from the star-like leaf clusters at the ends of the twigs or from the peculiar, five pronged branching of the hairs on the upper leaf surface, as seen under a glass.

The half-tone picture of the forest type of growth of post oak shown in connection with this article is from a photograph made by the editor of HARDWOOD RECORD in Morgan county, Kentucky.

The leaf shown in connection with this article is a half-tone made directly from a post oak leaf from a tree which grew in the

FOREST TYPE POST OAK, MORGAN COUNTY, KENTUCKY.

spicuous. The identification of these leaves is easy as they are heavy in texture, are bi-laterally developed with a large, obtuse lobe on each side about in the middle, giving them a maltese cross effect, a triangular basal section, deep sinuses and rounded lobes. They are very persistent, staying on the tree until the new leaves push them off in the spring.

Appalachian Mountains in North Carolina. The large square lobes in the middle and the triangular basal section are very noticeable.

#### Glossary of Technical Terms Used

**Ament:** A spike of flowers of one sex, usually falling from the tree in one piece.  
**Bilaterally developed:** Developed along a central axis; similarly on both sides.  
**Calyx:** The usually green exterior part of a flower, generally joined to the stalk.  
**Glabrous:** Smooth.  
**Hirsute:** Coarsely hairy.  
**Lobe:** The division of an organ.  
**Mast:** The fruit of the oak, beech and other trees. While such trees produce some fruit every year, it is only at regular intervals that the crop is profuse. These periods vary with different trees.  
**Medullary rays:** The familiar "flashes" or "mirrors" shown in quarter sawing some woods. They are used by the tree as store-houses for starch.  
**Monococious:** Having both sexes on the same specimen.  
**Obtuse:** Blunt or rounded at the apex.  
**Ovate:** Shaped like the outline of a hen's egg; having the broad end at the base.  
**Persistent:** Staying on through the winter.  
**Petiole:** The stalk of a leaf.  
**Pistillate:** Referring to a flower without male organs.  
**Ring-porous wood:** Having annual rings made distinct by large pores in the spring wood, denser summer wood alternating.  
**Sessile:** Without any stem or stalk.  
**Staminate:** Denoting flowers without female organs.

LEAF FORM OF POST OAK.

## Builders of Lumber History

NUMBER LXXXVIII

WILLIAM A. BENNETT

(See portrait supplement.)

There is without doubt no one connected with the hardwood industry of this country, who is wider known and whose life work is more closely interwoven with its history and its associations than William A. Bennett of Cincinnati, O.

After this sweeping assertion, a little personal history in its support might not prove uninteresting to the coming generation of lumbermen, as well as those who are now its most active representatives.

W. A. Bennett first saw the light of day in the little town of Dover, Mason County, Ky., January 8, 1854. Mason County is famous the world over as the center of the great tobacco-producing belt of Kentucky. Young Bennett attended school in Mason county, and continued to Kentucky University, where he finished his education.

He then went to Cincinnati, and on August 1, 1872, commenced his career as a lumberman by entering the employ of C. W. & S. G. Boyd, then the oldest and largest hardwood operators of the Queen City. He remained with the Boyds until January 14, 1884, when, with the late Charles Witte, also employed by C. W. & S. G. Boyd, he formed the copartnership of Bennett & Witte, and opened an office at No. 8 Public Landing, on the river front. Here the firm remained until 1886, and then moved its offices uptown to No. 9 West Fourth street, in the Mitchell building, where it remained until 1894, when the present suit of offices in the Methodist Book Concern Building, No. 220 West Fourth street, was secured.

The firm prospered and expanded, and in order to meet more expeditiously the growing demands of its business, an office was

opened at Memphis, Tenn., in 1901, with George C. Ehemann, the bookkeeper of the Cincinnati office, as manager, and a most successful branch business established.

Bennett & Witte have always been closely identified with the hardwood business, and in connection with their Memphis branch have storage yards at that city. They also operate a retail yard at Greenfield, Ohio.

William A. Bennett was married on December 17, 1879, to Miss Alice E. Henry of Clinton county, Ohio, and has one daughter, Miss Julia A. Bennett. He resides in Avondale and is fond of his family and home, where conditions are ideal.

Notwithstanding the demands of his own business, Mr. Bennett's supreme delight in life seems to be in lending a hand to others. He is never so happy as when giving advice on knotty and almost insurmountable problems occurring in the lives of his fellow business men. He is approachable at all times and gives with a ready ear to all, but he is not easily imposed upon. Whoever goes to him with a clear and well-defined case finds a ready listener, but let a person suggest one item that even approaches a shady proceeding, and his dismissal is so prompt that it makes his head swim. Always open, free and above board in all his business transactions, he can see no reason to go under cover on any project, and once his ire is aroused the unfortunate who has occasioned it will never forget the scolding he has received.

Mr. Bennett has always been deeply interested in the progress of the hardwood trade, and has been identified with every movement to bring about association and intelligent discussion of all subjects that are

interesting to those engaged in the lumber business. He was one of the charter members of the Cincinnati Lumbermen's Club, and was its second president, in 1897. He was present and aided in the organization of the National Hardwood Lumber Association at Chicago, on April 8, 1898, and was its president for three terms. He is a member of the National Wholesale Lumber Dealers' Association and is a member of the Indiana Hardwood Association.

Mr. Bennett was chairman of the committee of the National Hardwood Lumber Association which arranged for and carried out the hardwood exhibit at the Paris Exposition in 1900. Through his instrumentality the funds were raised, the project financed and carried to a successful fruition, with the hearty co-operation of John W. Williams.

Mr. Bennett was elected president of the Cincinnati Chamber of Commerce in 1907, and refused a renomination owing to press of private business. He is also a member of the Cincinnati Business Men's Club, the most influential business body in the state.

Notwithstanding his long standing and honorable career in business life, Mr. Bennett shrinks from publicity, and while willing at all times to aid with his knowledge any matter of public welfare he always requests that his name be not used.

In conclusion, it may be well to add a few words which show the esteem in which Mr. Bennett is held by the business fraternity and men of affairs in this vicinity. On numerous occasions he has been called upon by the courts to act as receiver for various business enterprises whose methods have led them to the bar for solution. It is a noteworthy fact that on all such occasions his work has been so successful that the clouds have been cleared away and the business restored to a sound basis. He was at one time acting as receiver for three immense enterprises, and the labor involved was such as to seriously interfere with his own private affairs, yet he stuck to his post and successfully cleared them all. He was called upon to act again by the courts, but was compelled to ask to be relieved from further duty as receiver, as he was sadly in need of rest, and the court reluctantly acceded to his request.

#### Big San Francisco Hardwood House

The RECORD is in receipt of the January stock list of White Brothers, San Francisco, Cal. The first page of this big list is embellished with a picture of the big Japanese steamer M. S. Dollar, discharging a cargo of oak logs from Mororan, recently received by this concern. The stock is manufactured at Petaluma, thirty-seven miles from San Francisco, where they also saw West Coast mahogany, genezero, Spanish cedar and primavera.

White Brothers' list of stock and general hardwoods is said to be the largest west of Chicago. The house aims to carry everything there is in hardwoods of both domestic and foreign varieties. They are large buyers of lumber from the Mississippi valley section. Included in their stock is a complete assortment of oak and maple flooring.

CINCINNATI, O

# A Forestry Student's Letters to His Father

## THIRD SERIES

DARMSTADT, Germany, Dec. 23.

My Dear Father: Well, I sure do miss your letters. What is the matter? I have not heard from you for over ten days now. I think quite a few of our letters do not arrive at all, for I have written you twice a week and you said you do not receive half of them.

Things are going fine with me, and last Monday I took my identification exam., on which hinged my degree in forestry. I passed one hundred in it, and stuck Dr. Schenck on one tree, so I am now assured of my degree, having passed every exam. in the Biltmore Forest School. Will finish my courses about February fifteenth and will stay here until about the twenty-eighth, leaving for Genoa at that time to meet you on the third of March. We will have a great trip together, although I am anxious already to see the good old U. S. A.

I have had a great time since we have been over here. The things I have seen and learned cannot be told in a letter, and I am so anxious to talk to you both about it all. Have worked harder in the school than I ever did before. Our entire day is taken up at work, and at night we have to write our diaries and then are too tired for anything else. Exercise! we sure do get our fill of it; average ten miles every day in walking, and when it's over mountains and through the woods it seems much longer. I feel fine, too, and am in better health than I ever was.

The climate here in Darmstadt is awful. The sun has only been out for two days since we have been here, and in the morning you cannot see across the street because of the mist.

I have a great friend in an English forester here. He is working under Schlick in Oxford and comes from Cape Town, South Africa, a fine fellow, interested in our practical and financial side of forestry. Have had him at our school and he says Schenck has it all over Schlick. He intends joining the school in three years, after he has completed his course under Schlick.

English foresters in India get great pay. They draw at the start two thousand per year, advancing as they gain practical experience. At the end of twenty years they are pensioned and retired at a salary of five thousand per year. They are not as well equipped in forestry as we are either, according to them. Their work, though, is merely government work, and they do not seem to bother with the financial end, which is the most interesting, it seems to me.

I just purchased a set of Schlick's books on Forestry, costing twenty-five dollars. They are good ones and will make a great asset to the library at home. Have been reading his sylviculture lately, which helps a lot in the work under Schenck. This trip to Europe has been of much benefit to me in forestry. It makes one who knows and has lived under our lumber conditions realize more than ever what a great thing it is for our country to be blessed with a supply of wood which can be made everlasting without the planting of trees, if we only keep out the fires. Here fires are unknown, and hence the natural regeneration amounts to almost as much as the artificial. It also makes one realize the serious waste of timber that is going on at home. That is the most important item in conservation, it seems to me. Why can't we use veneered furniture just as well as the solid stuff? It costs less and makes a better article, a fact which is proven here. I wish, Dad, you could be here for about a month; it sure would open your eyes.

Please do not send this letter to the Editor

of the HARDWOOD RECORD, as I have already sent him a lot of dope.

I haven't seen an American girl to talk to since I left the States, and the Dutch girls are awful.

Will probably run down to Munich with Jerry Sullivan at the end of this month, as my work is about finished here. May take a few short trips to Heidelberg, Weisbaden, etc. Trains run to all those nearby towns every hour, and it costs but fifty cents fare, third class. Will also walk down to the Rhine Valley some Sunday. Last week while working we explored a couple of old castles built in the year 800 A. D. They were interesting and were different from those you usually see because they are out of the way of the tourists' route, hence no flim-flam about them. I rambled into the dungeon of one, and it gave me the jimmies. On this trip to the Rhine I intend to look at every one of them. They are always on the top of a mountain.

Next week we go to the Black Forest. Will do some estimating work there, which will be very interesting.

We all are following the advice written by a Biltmore graduate recently. I tell you, one can't do better than follow "the man who looks like the Kaiser."

Follow, follow, follow the man over the mountain trail,  
Follow him fast and follow him far,  
Follow his distant hall;  
Beat through the brush, through briars and sedge,  
Scale the rocks of the craggy ledge,  
Hustle, rush and stick is the rule  
When you hit the trail with the Forest School.

Through second growth, through the virgin woods,

Follow the man with the "forest goods,"  
Over the ridge and down the slope,  
Tearing along at a tireless lope,  
Stumble, grumble, cuss and swear,  
But stick to the man with scanty hair,  
From two p. m. till six at night,  
Scrambling on in rugged flight,  
Skip and trip on mossy banks,  
It's work and sweat with little thanks  
When you hit the trail with Doctor "Shanks."

Say—stick it out, you're going, kid;  
There is no doubt you never did  
Hit work like this, believe me, boys,  
Tho' all ain't bliss it has its joys,  
So beat it with 'em o'er the sea,  
And keep your eye on Germany;  
The paths you'll find are rough enough  
To show the bunch you've got the stuff.  
Hang to the crowd and don't be shook;  
Cold feet won't warm in cozy nooks  
And foreign fuss and far away  
Don't change the "Foresters, U. S. A."  
Remember, boys, no one's a fool  
Who trails with Schenck and his Forest School.  
Yip!

Let me know your trip through Europe, so I can leave instructions where the fellows can send my trunk with books and old clothes when they leave here April sixth. That trunk is so heavy it would cost my passage to lug it around. When I go to England I'll visit my Oxford friend.

Must close now, with love. Write soon, and send me two hundred dollars.

—  
ST. MORITZ, Switzerland, Dec. 26.

Dear Father: Received your cablegram last night just as I finished my Christmas dinner, and I wanted to whoop with joy when it came. Am having the time of my life up here among the Alps. We left Darmstadt day before yesterday, missed our connections at Basel, so consequently spent Christmas eve riding third class, having to go through a tunnel three miles and a half long. Fifteen foresters are with me here. Am going down a toboggan tomorrow of four miles; we also go for a ten-mile sleigh ride to see a big glazier. They have snow here all year round on the mountains; it is now up to your waist. We went out on skees today; it was great

sport. This is the finest spot in all Europe, it is claimed. The Grand Hotel, where I am stopping, is as fine as any I have ever seen and is jammed with people from all parts of the world; we had a hard time getting in. What do you think, I met a Theta Delta Chi man from Williams College here last evening; it seemed like a real Christmas present from home. Will attend a dance here this evening and will write you later. I missed you so much Christmas; without father and mother it is no Christmas at all. We return to Darmstadt Tuesday evening; then begins another siege of work until you come.

—  
DARMSTADT, Germany, Dec. 29.

My Dear Father: I arrived home here yesterday, Wednesday, after an all day's ride from St. Moritz. It sure was great to find your letters and mother's waiting for me. I had the time of my life at St. Moritz. Twelve of us left Saturday morning for there. I did not decide to go until the last minute, but the thought of being alone here in Darmstadt over Christmas was too much, so I decided to go where we could get some good sport as well as see the greatest scenery in the world. You cannot imagine the grandeur of the Alps. They are certainly great! To see one-half of them covered with green foliage and the other half all snow—it sure is wonderful.

We arrived at St. Moritz Christmas morning and had a hard time getting into a hotel, as all the rooms were taken in all the hotels. We finally managed to get in the Grand, one of the best, after they put two beds in each single room for us. Fun, I do not believe I ever enjoyed anything more than this! That night we had our Christmas dinner in full dress (everybody does at St. Moritz), and just after dinner I received your cablegram, which made me feel fine.

Next morning we were up early and went skeeing on snow three feet deep. It was fun to watch the fellows fall on their necks. I did not do much because of my game knee, but it was great sport. In the afternoon we went skating on the largest and best ice rink I have ever been on. Each hotel there has its own rink, with elevators to take the guests down to them. Here we met some fine English married ladies (introduced ourselves), who took us up to the hotel and introduced us to the "ultra" of the Grand. The next day we went tobogganing in the morning on a run three miles long, and may be it wasn't great sport. In the afternoon we hired a sleigh and hitched five bobs on behind it, and went out to a large glacier. There is an ice cave in this glacier, so we went inside of it. The trip out and back (twenty miles) was sure fun, as every once in a while some fellow would get dumped off his sled and then the gang would beat up the horses to leave him behind. That night we had a dance, but we did not swing to amount to anything, as they are too dignified here to dance much.

That's the way it went each day until we left, and when we did go we had English, French, Germans and Spanish, also Russian people, begging us to stay longer.

We sang for them, beat ragtime on the piano, etc., to the words of "Ripping, don't you know, old boy," from the "Bally Englishmen."

Got back here last night and was on the job in school this morning. Dr. Schenck had us out today on a deuce of a long and hard field trip. We walked about five miles, and I am pretty tired tonight after the exertion, so will close now and go to bed.

Please tell mother not to give my letters to the editor of HARDWOOD RECORD. I heard from Dr. Schenck that he is publishing them, and they are not what I want published.

# THE STORY OF YELLOW POPLAR

Illustrations from Photographs by Editor Hardwood Record

IN THE BREAKS OF THE BIG SANDY, SHOWING ONE OF THE YELLOW POPLAR  
LUMBER COMPANY'S LOG DUMPS

## CHAPTER II

The Big Sandy river, or according to its own Indian name, the Chattarawha, has been famous in lumber history ever since the manufacture of yellow poplar became a commercial pursuit. Other mighty good poplar grows in the Alleghenies, the Blue Ridge and the lower Appalachians, but no concrete growth in any locality has approximated in stand per acre, in thin sap and yellow heart, in splendid texture or average size the poplar of the Big Sandy.

This great stream flowing into the Ohio river at Catlettsburg, Ky., just above Ashland, and opposite Coal Grove, the milling and general headquarters of the Yellow Poplar Lumber Company, for a distance of about one hundred and fifty miles, forms the boundary line between eastern Kentucky and western West Virginia. In its upper branches it extends through a half dozen counties of eastern Kentucky and has other branches in Buchanan, Dickenson and Wise counties, Virginia. Along its lower reaches it has minor branches, but on the West Virginia side of the river the watershed is narrow and most of the water from that region flows eastward into the Guyandotte river.

As near as can be estimated, the average cut per acre of poplar timber on the Big Sandy and its tributaries has averaged about 2,500 feet. This area involves a territory approximately 40 by 150 miles—6,000 square miles, or 3,840,000 acres—which would show, at a rough guess, the total poplar stand of the past and the comparatively small amount of the present to be in the neighborhood of nine and a half billion feet.

Of course, the lower reaches of the river are old and practically exhausted timber sections, and the greater portion of the timber tributary to the streams that grew in Kentucky and West Virginia has been cut.

Levisa Fork, penetrating Lawrence, Johnson, Floyd and Pike counties, is one of the chief branches of the Sandy river and in that

territory is regarded as the main stream of the river. However, the other fork, making the dividing line between West Virginia and Kentucky, is equally as well known as the Big Sandy. The stream has its main fork at Levisa. The Levisa forks again above Pikeville, in Pike county, the main stem being Russell Fork, which has its sources over in Virginia. This section of the river breaks through the Cumberland mountains at the state line which is known as the "Breaks of the Big Sandy."

This is a tremendous and picturesque chasm strewn with rocks often as big as a good sized house and has embattling cliffs rising to a height in some places of fifteen hundred feet. While there has been a good deal of poplar timber of as fine quality as has ever been cut above this gorge, it has remained for the Yellow Poplar Lumber Company to devise means of getting this timber down to the rafting water above Pikeville. From the Pikeville regions to the mouth of the river, the Big Sandy is an ideal, well-banked and comparatively placid mountain river. It has the finest log running stream in the mountain country.

The Yellow Poplar Lumber Company some years ago in supplementing its timber holdings, purchased large areas of land in Dickinson and adjoining counties in Virginia, anticipating that a railroad would eventually be completed up the Big Sandy to the coal regions in old Virginia. The Chesapeake & Ohio railroad built a line as far as Elkhorn City and there, at least temporarily, extension has ceased.

It came about then that the Yellow Poplar Lumber Company had to devise means to stock its mills and it was necessary to drive the bigbear the breaks of the Big Sandy—with its logs. Early in March of last year the company put in a logging operation, with headquarters at Barts Lick, Dickinson county, Va., which is some thirteen miles from the terminus of the Chesapeake & Ohio railroad at Elkhorn City and across two mountain ridges. Men, live stock, machinery and supplies were moved in and camp and tram-

road building commenced. At the end of November the company had ten million feet of splendid poplar dropped into the river along the "breaks," and thirty million feet in one immense log dump above the "breaks." Contemporaneous with this work it commenced the construction of an immense splash dam, heretofore described in *HARDWOOD RECORD*, below the big log dump. This splash dam is now in successful operation and a large portion of the forty million foot log crop for 1910 is now splashed either through the "breaks" to rafting water or is far enough advanced to show that the company is going to have the biggest crop of poplar logs ever manufactured by any one concern in a single year in the history of the trade.

The picture at the head of this article shows one of the wildest places in the "breaks" of the river. The cliff at the right rises to a height of about fifteen hundred feet and the one at the bend of the river in the distance is not of much less altitude. At the left, utilizing a small cove, a log road was constructed and the great poplar sticks are seen rolled down the side of the bank and partially into the river bottom from the rollway. The area pictured is so great that the big poplar timbers look like matches, but they will average more than seven hundred and fifty feet to the stick.

The picture on the right-hand page is typical of the Yellow Poplar Lumber Company's operations and shows the cutting of the kerf of the big tree previous to felling it with the cross-cut saw.

The final picture shows a splendid poplar tree that has been felled and cut to the lengths in which it is transported to the river.

In the next chapter of this story will be analyzed the engineering difficulties and the tremendous cost involved in getting poplar timber out of as rough and forbidding a country as this to the company's sawmilling point in the mouth of the Big Sandy. To the lumberman not familiar with rough country operations it would be appalling both in cost and the tremendous labor involved.

The average user of poplar lumber seems to be of the impression just now that poplar is getting "pretty high." Before the buyer has finished reading this series of articles covering the immense cost involved in securing this timber from the remote and only remaining regions where it now exists, he will be surprised that the price of the wood still remains as low as it does. White pine lumber of not nearly so large sizes as are obtainable in poplar commands a much higher price and has for years. Ordinary white pine ship decking, which is only a three-faced material, three by four inches in size, is worth about \$180 per thousand at the Atlantic seaboard today. Surely poplar lumber of the texture and width in which it is supplied, in comparison to white pine, is still a very low-priced commodity.

Getting out poplar logs from timber regions like this is "rush-and-hurry-up" work from start to finish. After the swamping for the railroad is made it has to be built with the crude materials at hand. Steel rails are not employed because the railroad haul and teaming across the mountains of the steel rails alone would figure more than the entire cost of building wooden tramroads, which last long enough to clean the timber from the desired territory.

During the last year this company has taken poplar from over fifteen thousand acres, and has started the work veritably from the ground up. The several locomotives employed were dismantled and taken apart at the end of the railroad and hauled in sections over the two mountain ridges referred to. Hundreds of teams have been at work ever since the first of last March until a recent date in hauling machinery, supplies, concrete, dynamite and other things necessary to keep the work going.

It is no city-desk job for the laborers in lumber operations in Dickerson county. Every man is on the job at four o'clock in the morning (eastern time), and after the work is well started the log trains are never stopped during the twenty-four hours, and even Sunday is not entirely respected. This means rising at three o'clock. High wages of necessity have to be paid, but every man on the job is a worker and is just as enthusiastic in getting the monumental task accomplished as are the principals of the concern themselves.

In all the writer's woods experience he never has seen such fast work accomplished in logging as has been done at the Yellow Poplar Lumber Company's operations during the year 1909 and thus far during 1910.

CUTTING THE KERF

A BIG YELLOW POPLAR FELLED AND CUT TO LENGTH

# Third Annual Hardwood Manufacturers of Wisconsin

The Hardwood Manufacturers of Wisconsin convened for their third annual meeting at the Hotel Pfister on Friday, January 21. The meeting was highly successful and was replete with interesting discussions. President Goodman occupied the chair and Secretary Chapman recorded.

The hardwood meeting was preceded by the annual of the Northwestern Hemlock Association, at which a movement was inaugurated to dissolve this association and consolidate with the Hardwood Manufacturers, all moneys to be turned over to the new body, which is to be called the Northern Hemlock and Hardwood Manufacturers' Association. It was decided by the Committee on Consolidation that the constitution of the Hardwood Association was better adapted to the new requirements, hence it was recommended by them for adoption, with suitable amendments until changed by proper authority. The question was left until the afternoon session to be voted upon.

The regular hardwood meeting was brought to order by President Goodman at half-past eleven, without adjourning from the previous meeting. The roll call was dispensed with.

was an excess in the appropriation of \$266, which would be entered to the credit of the various members interested. In speaking of getting reports of sales from members, the speaker said that it was pretty hard to get them to respond. To simplify things, he decided to get out regular forms to be filled in. A copy is shown below:

We hereby apply for membership in the Hardwood Lumber Manufacturers of Wisconsin or its successor, and if our application is accepted by the association to continue as members from year to year and until we notify the proper officer of our withdrawal. The first of each year we agree to furnish the secretary an estimate on which we are to pay quarterly assessments in accordance with Article XIII of the constitution and at the end of the year will make a final settlement as provided for by the same article.

Signed.....  
Address.....  
Dated.....1911..  
For the year 1910 we estimate our sales at  
.....M hardwood lumber.  
.....M hemlock lumber.

He said that some members had complained of the assessment of four cents for every thousand feet shipped as being too large, and said that, while he firmly believed that the association is worth even more than that to its members, still it was his wish to get it down as low as possible. He advocated making the assessment on hardwood in the new association higher than that on hemlock and recommended, stating that he was talking merely as an individual, that the rate on hardwood be three cents per thousand feet shipped and on hemlock one cent and a half. This would provide a revenue of \$10,000 annually, which would provide for all expenses.

The membership for last year was reported as sixty-five, representing a total sale of 150,000,000 feet, the secretary expressing his belief that there should be a sale of 175,000,000 feet at the end of this year. The report closed with an appeal for prompt responses to all requests for information, it being pointed out that general stock sheets can be sent out two weeks after requests for reports if everybody is prompt.

The chair requested the secretary to read a telegram from Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, dated Chicago, in which Secretary Doster extended his greeting and invited the Wisconsin association to the meeting in Cincinnati on February 1, 2 and 3.

Chairman Pardwell of the Special Railroad Committee, which was discharged last August, reported that they had asked a 4½-cent reduction to eastern trunk lines, but had obtained but three cents. He said that Minnesota and central Wisconsin points were not allowed a proportional less rate, but that the matter had been reopened and the railroads gave assurance of action in the near future.

Chairman Landon of the Legislative Committee reported that on October 20, at a meeting to show why the burning of slashings should not be compelled by law, State Forester Griffith reported that, while he had estimated that it would cost 60 cents a thousand feet, actual experiments showed that intelligent burning would cost from \$1.46 to \$1.92 per thousand feet. He admitted that no experiment had been made when the bill was advocated.

Chairman Owen of the Committee on Consolidation reported a recommendation by the Board of Directors that the Bureau of Grades be increased from five to seven men, to include both hemlock and hardwood men.

## Constitution for the Consolidated Organization Adopted

Secretary Chapman, a member of this committee said that they had met in Milwaukee a month ago and spent a whole day in discussing

the subject and had adopted the Hardwood Constitution with the following changes:

CHANGES IN THE CONSTITUTION TO BE OFFERED AND VOTED ON AT THE ANNUAL MEETING OF THE HARDWOOD LUMBER MANUFACTURERS OF WISCONSIN AT MILWAUKEE, FRIDAY, JANUARY 21, 1910.

Article 1. This article to be changed so as to read as follows:

"The name of this association shall be "The Northern Hemlock & Hardwood Manufacturers' Association."

Art. 2. This article to be changed so that it will cover manufacturers of both hardwood and hemlock lumber and to read as follows:

"Individuals, firms or corporations actually manufacturing hemlock and hardwood lumber, or either, and who manufacture at least half as much as their total sales in the states of Wisconsin, Minnesota and the upper peninsula of Michigan shall be eligible to membership in this association upon the payment of the assessment which may be levied by the Board of Directors.

"The Board of Directors shall pass upon the

W. C. LANDON, WAUSAU, PRESIDENT.

and after the minutes of the last meeting were read President Goodman gave a short talk, in which he prophesied a prosperous year for both branches of the new association and expressed himself as anxious to systematize grading rules.

The next order of business was the appointment of a Nominating Committee, to select officers for the ensuing year. The members appointed were A. F. Osborn, chairman, M. J. Quinlan and J. R. Davis.

The Committee on Market Conditions, composed of Messrs. Buswell, Chapman, Landon and Brightman, was next appointed.

## Secretary's Report

Secretary Chapman read the report of the treasurer, a summary of which showed a balance at the beginning of the year of \$178, receipts during the year amounting to \$5,840, making a total of \$6,018. Total expenses were \$5,271, leaving a balance on hand of \$747. The report was accepted.

The secretary's report followed. His financial report showed a balance of \$958. Secretary Chapman stated that some of the members did not report as great a volume of business as had been estimated and as a consequence there

GEORGE E. FOSTER, MELLEN, TREASURER.

eligibility of applicants for membership."

Art. 6. This article on the election of officers to be changed to read as follows:

"At least thirty days before the date of the annual meeting, it shall be the duty of the president to appoint a Nominating Committee of three members who will submit to the members at the annual meeting nominations for the offices of president, vice-president, treasurer and four directors. This report shall then be submitted to the members for vote."

The balance of this Article 6 is not changed.

Art. 12. A paragraph is to be added to this article which provides for an auditor, which shall read as follows:

"It shall be the duty of the auditor to examine and sign all vouchers."

All other articles. There are no changes offered in any other articles of the constitution and they are to remain as adopted December 15, 1906, except Article 13, which was amended at a later meeting held in Wausau.

## AFTERNOON SESSION

Following the recess the convention reassembled at 2 o'clock. Chairman Owen of the Bureau of Grades was the first to report.

Mr. President and Gentlemen: In the early

part of last year shipments by the members of this association were light and demands on the Inspection Bureau were not as heavy as we could wish. Late in the year shipments have been much better, and indications are that the volume will increase. From all information we are able to obtain, the outlook for the present year is bright. The demand for all kinds of hardwood lumber seems to be larger and more persistent. Prices are stronger and in some cases advancing. The low end of our stock is, if anything, stronger and there are indications that it would stand an advance.

The necessity for some arrangement with the National Hardwood Manufacturers' Association in regard to our inspectors acting as national inspectors under certain conditions is assuming more importance. We, however, cannot report any progress in this matter, but we hope eventually to have this arranged in a satisfactory manner.

#### MEMBERSHIP

We are now supervising the grading of hardwood lumber at sixty-five plants, an increase of four over the preceding year.

#### INSPECTION

We notice an increased demand for our inspection of carload lots prior to shipment. We believe that this indicates a growing confidence in our methods and fairness. As already indicated, shipments being light the early part of last year, we did not handle as much lumber as we could conveniently have done. We, however, inspected during the year 2,126,599 feet in 331 calls. We found "no shipping" in 152 of these; 288,477 feet of lumber was handled at special requests in nine separate inspections.

We wish to impress upon all members the importance of reporting promptly any slackness on the part of inspectors and of making such suggestions as they believe will increase the efficiency of this service.

At the call for general stock sheets returns from forty-eight members showed a total of 86,008,000 feet on hand.

After the acceptance of this report the chair called on President Agler of the National Hardwood Lumber Association, who gave his assurances that he would do everything possible to have the inspectors of the Wisconsin association recognized as National inspectors. He prophesied a busy year for the lumber trade and closed with an invitation to the Louisville convention in June.

Chairman Buswell of the Market Conditions Committee reported the recommendations of that body as to hardwood prices for the coming year.

#### Election of Officers

The Nominating Committee made their report and Chairman Osborn submitted the following names:

President—W. C. Landon.  
Vice-president—R. E. McLane.  
Treasurer—George Foster.  
Directors—O. W. Brightman, G. H. Atwood, L. Rowlands and J. H. Johannes.

Bureau of Grades—A. R. Owen, C. A. Phelps, C. A. Goodman, M. J. Quinlan, J. D. Brownson, M. P. McCullough and J. T. Phillips.

It was moved and carried that the secretary cast a unanimous ballot, which he was instructed to do by the chairman, who then yielded to the new president. President Landon delivered a short talk suitable to the occasion and called on Leonard Bronson, manager of the National Lumber Manufacturers' Association, who gave an absorbing talk on the work and principles of that body. He told of some of the important things that organization is working on at present, as proper transportation facilities for lumber, the Corporation Tax Law, conservation, uniform state laws, timber tax, and cutting regulations. Mr. Bronson pointed out that successfully meeting public antagonism is their hardest duty and is really the keynote to everything they undertake and begged the earnest co-operation of all lumber interests. He deplored the "Trust" cry which has worked such great hardship and the many foolish state and federal regulations. Manager Bronson stated that the association realized that concessions must be made by the trade and that it was their duty to see that such concessions be wisely made.

President Landon made the remark that after listening to Mr. Bronson's talk he felt it more

imperative than ever that the Wisconsin body join the National Lumber Manufacturers' Association. He then called on ex-President Osborn of the Hemlock Association, who submitted the following motions:

First—That the Hemlock and Hardwood Manufacturers' Association of Wisconsin affiliate with the National Lumber Manufacturers' Association, fees to be paid quarterly.

Second—That delegates be appointed to go to New Orleans and that a sufficient appropriation be made for expenses.

Third—That the National Manufacturers' Association be requested to get a decision from the United States courts proving the unconstitutionality of the state law of Illinois requiring foreign corporations to secure licenses.

These motions were all duly seconded and carried in order.

The next important business was the decision to secure a secretary to give his entire time to the association work and to receive a salary commensurate with services rendered.

The Bureau of Grades was changed to the Committee of Grades and Information at the suggestion of ex-President Goodman. He was followed by Mr. Osborn, who told of the requirements of the experiment station at Madison and it was decided that the association arrange to provide necessary material to the station.

This closed the regular business and after announcement of the meeting of directors and Bureau of Grades the association adjourned.

Following is a list of those in attendance:

A. S. Osborne, Medford Lumber Company, Medford, Wis.  
H. S. Childs, secretary, Minneapolis, Minn.  
Scott W. Chambers, Northwestern Lumber Company, Stanley, Wis.  
W. C. Landon, Barker & Stewart Lumber Company, Wausau, Wis.  
W. A. Holt, Holt Lumber Company, Oconto.  
J. H. Johannes, Jacob Mortenson Lumber Company, Wausau, Wis.  
G. H. Chapman, Northwestern Lumber Company, Stanley, Wis.  
F. H. Pardoe, Fenwood Lumber Company, Wausau, Wis.  
W. P. McCullough, Brooks & Ross Lumber Company, Schofield, Wis.  
E. P. Arpin, Arpin Hardwood Lumber Company, Grand Rapids, Wis.  
G. H. Earle, Wisconsin Land & Lumber Company, Hermansville, Mich.  
W. J. Wagstaff, Oshkosh, Wis.  
J. R. Davis, John R. Davis Lumber Company, Phillips, Wis.  
John Weyerhaeuser, Atwood Manufacturing Company, Park Falls, Wis.  
George E. Foster, Foster-Latimer Lumber Company, Mellen, Wis.  
W. H. Atwood, Atwood Manufacturing Company, Park Falls, Wis.  
A. R. Owen, John S. Owen Lumber Company, Owen, Wis.  
A. R. Week, John Week Lumber Company, Stevens Point, Wis.  
George H. Lusk, Nye, Lusk & Hudson Co., Thorpe.  
S. W. Hollister, Hollister-Amos & Co., Oshkosh.  
M. J. Quinlan, Menominee Bay Shore Lumber Company, Soperton, Wis.  
C. F. Stout, Rice Lake Lumber Company, Rice Lake, Wis.  
George C. Willson, W. J. Maxwell Lumber Company, Rosholt.  
W. J. Maxwell, W. J. Maxwell Lumber Company, Galesville.  
L. W. Gibson, Medford Lumber Company, Medford, Wis.  
H. H. Heinemann, Heinemann Lumber Company, Heinemann, Wis.  
William A. Smith, Oconto, Wis.  
G. H. Plato, Northland Lumber Company, Green Bay, Wis.  
N. C. Johnson, Northland Lumber Company, Green Bay, Wis.  
R. T. Doud, Doud Sons & Company, Winneconne, Wis.  
James O'Callaghan, The O. C. Lumber Company, Vulcan, Mich.  
C. H. Weber, The Wilson-Weber Lumber Company, Menomonie, Wis.  
E. J. Young, Brittingham & Young, Madison.  
H. H. Stolle, Stolle-Barndt Lumber Company, Tripoli, Wis.  
L. W. Edwards, L. W. Edwards Lumber Company, Antigo, Wis.  
Andrew Oelhofen, John Oelhofen Lumber Company, Tomahawk, Wis.  
E. A. Gooding, Gooding & Mylea Lumber Company, Wausau, Wis.

E. J. Gillouly, Foster-Latimer Lumber Company, Mellen, Wis.  
J. E. Collins, Crocker Chair Company, Elton, Wis.  
L. A. Rousseau, H. W. Wright Lumber Company, Merrill, Wis.  
W. A. Schneider, Brooks & Ross Lumber Company, Schofield, Wis.  
J. E. Dougherty, Fullerton-Krueger Lumber Company, Minneapolis, Minn.  
J. J. Lingle, Westboro Lumber Company, Westboro, Wis.  
E. H. Hamar, Worcester Lumber Company, Chassell, Mich.  
G. B. Knox, Perley Lowe & Company, Peshtigo, Wis.  
J. L. Wells, Girard Lumber Company, Dunbar.  
A. C. Wens, Bird & Wens, Menominee, Mich.  
E. K. Hughey, Yellow River Lumber Company, Stillwater, Wis.  
S. W. Chambers, Northwestern Lumber Company, Stanley, Wis.  
C. F. Lusk, Owen, Wis.  
W. H. Holt, Holt Lumber Company, Oconto, Wis.  
K. C. Schulz, Goodman Lumber Company, Goodman, Wis.  
R. B. Goodman, Goodman Lumber Company, Goodman, Wis.  
Charles A. Goodman, Sawyer-Goodman Company, Marinette, Wis.  
Eugene Shaw, Daniel Shaw Lumber Company, Eau Claire, Wis.  
S. C. Ryenbeck, Hackley-Phelps-Bonnell Co., Milwaukee.  
C. K. Ellingson, Ellingson Lumber Company, Hawkins.  
J. D. Brownson, Yellow River Lumber Company, Stillwater.  
F. W. Buswell, Buswell Lumber & Manufacturing Company, Buswell, Wis.  
Howard S. Weiss, Forest Products Laboratory, Madison.  
E. W. Meeker, HARDWOOD RECORD, Chicago, Ill.  
Albert LaBorg, Stetsonville.  
W. T. McGuire, Rietbrock Land & Lumber Company, Milwaukee, Wis.  
W. C. Rowe, American Lumberman, Chicago.  
F. E. Worden, F. E. Worden Lumber Company, Oshkosh, Wis.  
O. O. Agler, Upham & Agler, Chicago, Ill.  
Leonard Bronson, National Lumber Manufacturers' Association, Chicago, Ill.

#### Success of Big Splash Dam

The Yellow Poplar Lumber Company continues to have the best sort of luck in handling its splash dam in Russell Fork of the Big Sandy in Dickenson county, Virginia.

There have been no heavy rains—in fact, very little rain on the upper ridges of the Big Sandy—but still the company is able to fill the dam with a good deal of frequency and has succeeded in splashing out a good share of its logs to rafting water between Elkhorn City and Pikeville. There has been no ice in the Big Sandy this season, and now that the heavy ice in the upper Ohio has gone out the company will turn its rafts loose down the Big Sandy and will probably commence sawing within a few days. This big dam insures the Yellow Poplar Lumber Company its full crop of forty million feet for the year's sawing.

#### Semiannual New York Lumber Trade Assn.

The regular semiannual meeting of the New York Lumber Trade Association was held at the association rooms, 18 Broadway, on January 11, and was followed by a regular meeting of the Board of Trustees. Important business was transacted, and the following were elected to membership: E. E. Dey & Sons Company, Fifty-sixth street and Eleventh avenue; Henderson-Murphree Company, 1 Madison avenue; Chicago Lumber & Coal Company, 1 Broadway; Palmer & Semars Lumber Company, 540 West Fifty-seventh street, New York, and Geo. F. Craig & Co., Philadelphia, Pa. The association voted to send delegates to the annual meeting of the National Wholesale Lumber Dealers' Association. New rules were adopted governing the inspection of short leaf pine.

Resolutions were passed concerning the death of the following members: Norris H. Norden; Charles I. McAllister of H. B. Murchie & Co.; Thomas Rae of Crane & Clark; Francis I. Vanderbeck, of Vanderbeck & Sons.

The annual banquet of the association will be held at the Waldorf-Astoria February 3.

# Annual National Lumber Exporters' Association

The tenth annual meeting of the National Lumber Exporters' Association was held at the Hotel Rennert, Baltimore, Md., January 19 and 20, with about twenty-five members from various parts of the country present. The association was organized in Baltimore in January, 1900, so that it was particularly appropriate that the tenth annual should also have been held in that city.

The deliberations of the meeting were not open to the public, as was decided some time ago by the association in view of the delicate nature of some of the matters discussed, it being thought wiser to admit only those directly interested.

President Harvey M. Dickson of the Dickson Lumber Company, Norfolk, Va., occupied the chair and Secretary E. M. Terry recorded.

In his annual address to the association President Dickson spoke of the depression which has existed in the exporting business during the past two years, saying that this is nearly at an end and predicting improvement for 1910; in fact, he declared that improvement was already in evidence. He pointed out that shipbuilding on the Clyde, and wagon building throughout Great Britain are gradually reviving, and that members of the association may look for improved trade as the result of this condition.

Mr. Dickson stated that the association has had a very successful year, that the membership has increased and it is now larger than at any time since the organization of the association. Finances are in excellent condition and the agreements with the steamship lines have worked satisfactorily.

Mr. Dickson also reported that an excellent insurance policy had been arranged with a prominent company and that a majority of the members have availed themselves of it, thereby getting the benefit of especially favorable rates. The question of measurements has been taken up with the foreign markets and satisfactory progress. Mr. Dickson said, has been made in this direction. He also said that the association is taking aggressive action in regard to the Italian government's classification of gum as a cabinet wood, and said that the State Department at Washington has promised to make renewed representations to the Italian government in this matter.

Continuing, Mr. Dickson said that the agreement which the New Orleans transportation lines had proposed would be taken up at the next day's session. This relates to the counting of lumber and to clean bills of lading, in order that the liability of the common carrier for shortages, etc., may be determined. In concluding Mr. Dickson referred to the appropriateness of holding the meeting at Baltimore this year, and stated that the original promoters of the organization, with one exception, are all living.

Secretary E. M. Terry in his annual report set forth in detail the work of the year in securing agreements with the railroad and steamship companies for handling the product of the members of the organization. He also referred to the book of rules for all ports with which business is being done. This book was compiled from very complete data and is a valuable feature of the association's work. It was distributed a week or two ago. Mr. Terry stated that there are now sixty-nine members of the association.

Treasurer Richard W. Price of Price & Heald, Baltimore, reported a substantial balance in the bank, and stated that this amount is about double that on hand last year.

L. Palmer, assistant secretary of the association, who is stationed at New Orleans, La., reported on the work that is being done in his territory.

Next in the order of business was the presentation of committee reports covering details of the various departments of association work during the year. The reports were received with enthusiasm and showed that the organization is in good condition and is serving the trade well.

A committee was appointed to consider a form of contract for use in governing sales with the United Kingdom. This committee

was instructed to learn the sentiment of the members on the subject and to report any suggestions received to the Board of Directors. The committee consists of Richard W. Price, chairman; F. F. Fee, George D. Burgess, C. F. Korn, John L. Alcock, S. Menzies, George M. Spiegle and D. T. Rees.

A resolution was presented and adopted urging upon the members the necessity of curtailing promiscuous consignments of hardwoods to foreign markets as much as possible.

After luncheon the time was taken up largely with the most important business which came before the meeting, that of revising the constitution and by-laws. A committee consisting of W. H. Russe, Memphis, Tenn.; John L. Alcock, Baltimore, and E. E. Taenzer, Memphis, had been appointed to draw up a new draft of the by-laws for approval by the association. The new constitution and by-laws were submitted section by

HARVEY M. DICKSON, NORFOLK, VA., RE-ELECTED PRESIDENT.

section and brought forth much interesting discussion. Excellent progress was made, however, and by 6:30 in the evening the work had been completed. Two of the important changes made are the charge of an initiation fee of \$50 from new members and the insertion of a new by-law to cover the difficulty which has been experienced in the past by reason of some members using the brands of others. This law reads as follows: "Any member using the brand of another member knowingly, whether the brand be registered or not, shall be subject to expulsion."

## SECOND DAY'S SESSIONS

Sessions were held in the morning and afternoon of the second day. At the morning session a resolution urging President Taft to send a message to Congress in favor of the repeal of the publicity clause in the new Corporation Tax Law in so far as it applies to small corporations was adopted.

The question of admitting foreign firms to membership was brought up and was finally referred to a committee which will report at a special meeting of the association at a future date to be fixed.

The agreement submitted by the transportation lines at New Orleans for adoption by the association, which provides for the counting of lumber put on ships and for fixing the responsibility for loss or damage touched on in President Dickson's address, was referred to the Committee on Transportation.

It was decided to take up with the Kansas City Southern and the Iron Mountain railroads the complaint that they are discriminating against the hardwood exporters by the imposition of a higher rate on lumber, from producing points in the state of Louisiana to New Orleans, when intended for domestic use than when designed for export.

Election of officers resulted as follows: President, Harvey M. Dickson, Dickson Lumber Company, Norfolk, Va.; first vice-president, Fred Arm, J. M. Card Lumber Company, Chattanooga, Tenn.; second vice-president, Edward Barber, Illingworth, Ingham & Co., Ltd., Cincinnati, Ohio; treasurer, Richard W. Price, Price & Heald, Baltimore; secretary, E. M. Terry, Baltimore; assistant secretary, L. Palmer, New Orleans.

The directors elected were: D. T. Rees, Rees-Scott Lumber Company, New Orleans; Ludwig Haymann, Hugo Forchheimer, New Orleans; Richard P. Baer, R. P. Baer & Co., Baltimore; John L. Alcock, John L. Alcock & Co., Baltimore; George M. Spiegle, George M. Spiegle & Co., Philadelphia; Gustav A. Farver, Russe & Burgess, Memphis; W. M. Ritter, W. M. Ritter Lumber Company, Columbus, Ohio; W. H. Russe, Russe & Burgess, Memphis; Chester F. Korn, Farrin-Korn Lumber Company, Cincinnati; F. F. Fee, Fee-Crayton Hardwood Company, Little Rock; Walter T. Hart, Price & Hart, New York, and T. B. Allen, T. B. Allen & Co., Galveston, Tex. The last four are new members, the others having been re-elected.

## Social Features

The social features during the convention were all most enjoyable. The principal event was the banquet given on the evening of the first day at the Merchants' Club. The dining hall was decorated with palms, evergreens and flowers and an orchestra rendered delightful music during the evening. The members and guests assembled in a lower room and proceeded in a body to the banquet hall, where covers were laid at small tables seating four. This gave a homelike and congenial aspect to the occasion, which was particularly enjoyable because of its informality. After a most delightful repast, embodying a number of characteristic Baltimore delicacies, Richard W. Price, who acted as toastmaster, in a very happy fashion welcomed the members in place of the mayor of Baltimore, whom he had expected to perform this pleasant duty. Among the speakers of the evening were Lewis Dill and E. F. Perry of the National Wholesale Lumber Dealers' Association, and W. D. Gill, W. M. Borgan and Henry D. Duker, ex-presidents of the Baltimore Lumber Exchange. There were a number of invited guests present and the affair was voted most delightful.

A luncheon at 1 o'clock on the first day of the convention was another very enjoyable feature of the meeting. A number of traffic men, lumbermen of national prominence and ex-presidents of the Baltimore Lumber Exchange were present. The luncheon was served at the Rennert.

aristocracy of money. And his name today is one that by right once was higher than that of any Aldrich or Ballinger, but today is synonymous with that of "traitor" and "dog"—a thing for every honest American to spit upon, as when Arnold is mentioned.

It is just a question of time in this country when the pioneers are properly honored and the would-be betrayers properly condemned. Gifford Pinchot can well afford to bide his time. And the time of the Ballingers will come.

It is the country that cannot afford to wait too long.

President Taft could have done nothing else except dismiss Pinchot from his position as chief forester. It was rank and deliberate insubordination when Mr. Pinchot wrote his letter to Senator Dolliver, to be read in the Senate, in direct disobedience of executive instructions. It forced the hand of President Taft. Pinchot knew what he was doing. And President Taft knew what he was bound to do in self-respect and consonance with his official dignity.

And the fine thing for patriotic Americans to consider is the way that Pinchot and Taft have faced each other and fenced and finished, with politeness and respect for each other's motives preserved, while respect for each other's judgment long ago had disappeared.

During the congressional investigation of Mr. Ballinger we shall have many occasions to explain the meaning and the causes thereof, and just why the attempted monopolization of Alaska by the Hill-Morgan-Harriman-Guggenheim-Standard Oil holders of illegal claims affects every citizen of New England, Pennsylvania and the gulf states as personally as it does the taxpayer of Seattle or Los Angeles.

For present understanding of the situation in Washington, it is enough to say that President Taft could not have done otherwise than dismiss from the government service Mr. Pinchot when he did, and that Mr. Pinchot could not sanely have done other than what he did, in view of his devotion to the cause of conservation, of which he is the creator and to which he has devoted his life and private fortune.

Pinchot simply has focused a fight and prevented a diversion. The planned whitewash of Ballinger and his allies conducted by committees packed by Cannon's caucus and Sherman and Aldrich would have been made easy by shifting all investigation toward discrediting Pinchot and the Forestry Department. Pinchot forces his own disappearance. The investigation henceforth must be full, fair and clear or there will be an outcry from the country.

Pinchot deliberately became insubordinate toward the President, whose honorable intent he still respects, but whom he believes deluded and misguided, simply because Pinchot believes the cause to which he has devoted his life of more importance to the nation than

## The Dismissal of Pinchot

Inasmuch as the following article from the Philadelphia North American so fully concurs with the previously expressed opinion of the RECORD in regard to the loss which this country has sustained through the ousting of Gifford Pinchot from the position of head of the United States Forestry Service, it is printed in full:

A man named Gifford Pinchot, a one-ideal fanatic, a lank, lean, long-legged American, who happened to be born the heir of several millions of dollars without tendencies toward the purchase of chorus girls and vintage wines; who happened to be born with ideals and a tendency toward concentration of his abilities; who happened to be a big man, a fanatical fighter at the crucial moment when a nation, in its awkward age, needed "scrappy" scious, has just been kicked out of his chance to do the work that he chose as his day's work because it was the work that he loved best.

We have waited almost a full week to talk about Gifford Pinchot and Taft. And the reason of that delay has been because we think that we know Pinchot and our President.

Let us confess. Our comment has been hesitant. Our conclusion is that neither the President nor the chief forester could have done otherwise than both have done, in view of the happenings of the preceding months.

We do no more than express the sentiment of most of the millions of the \$0,000,000 of Americans when we say that the enforced retirement of Gifford Pinchot from the nation's service means the infliction of a loss to this country that would be irreparable if we did not know that the official retirement of Pinchot meant only that he had "just begun to fight."

Pinchot is not a personage nor a politician. He is just an economic issue personified. He has been "fired" from office—and properly so. But he is the first man in America's political history who has forced himself to be "fired" from office in order to strengthen a cause. Therefore, Mr. Pinchot, private citizen, presents today an interesting study of

citizenship as contrasted with other citizens of officially higher rank.

We are ready and willing to face with facts and figures any citizen who would dare deny that in the enforced retirement of Pinchot from the public service the country has sustained a loss well-nigh irreparable.

No one citizen of America, from Washington to Roosevelt, fathered, fostered and disseminated an idea fertile with such future possibilities and fallow with such far-reaching value to this nation as did Pinchot when he preached and taught and nagged Roosevelt into setting up as the highest, whitest monument of the public life of Roosevelt the conservation of the national resources.

Viewing things broadly, real Americans can well afford to look into each other's eyes and exchange "straight-flung words and few," and, knowing that the wrong passes but the right persists, talk to each other as "neither children nor gods, but men in a world of men."

Fools may think that Aldrich and Cannon and Ballinger and Hitchcock are winners because Gifford Pinchot has been "fired." Other near-sighted folk may wonder why the North American does not promptly denounce President Taft as a tool of the copper Guggenheims and Tom Lawson, because they are the only ones who have indorsed unequivocally the inchoate Taft trust program as outlined in a tentative message.

Here is our talk to those who regard Gifford Pinchot as discredited:

Daniel Boone and Simon Kenton, and Lewis and Clarke, and Crockett and Bowie and Houston were regarded as crazy, trouble-stirring fanatics when they started out in their empire-winning work for this nation. They gave their lives to win. But they won. They got no gain. But their country stands strong among the world powers today because of them.

Aaron Burr was a cabinet officer in his day. He never went into the wilderness. He sailed smoothly down the Ohio and landed at Blennerhasset's island. He had imperial dreams, too—an empire of privilege and an

any man or any administration.

Gifford Pinchot is right. He has done well. He has sought official immolation as young Glavis did months ago. Both men blocked for a time at least the completion of a long-planned thievery of a billion dollars from the American people.

Both Pinchot and his devoted co-workers know and have known all along that there is one thing more vital to the welfare of the country than the continuation of the work of Pinchot and that is to keep thieves from

stealing the nation's wealth in such surety as to make useless all future effort of patriots of the Pinchot brand.

To be sure the president has done the best thing he could in such a bad situation and doubtless has appointed the best man available for the position, Henry S. Graves, director of the Yale Forest School, who will become chief of the Forestry Service on February 1. Mr. Graves is thoroughly in sympathy with the work as it has been carried on in the past by Mr. Pinchot, and if he is left untrammelled

by political grafters, he will doubtless serve the country fairly well. At the same time he has not had the breadth of training that his predecessor has enjoyed and is not nearly as well equipped to carry on the work as was Mr. Pinchot.

The RECORD wishes Mr. Graves the best possible fortune in his new position. It trusts that if he does not get a fair deal he will do exactly as Gifford Pinchot did and make things so unpleasant for the administration that he also will get the "run."

## Meeting Michigan Hardwood Manufacturers' Assn.

The winter quarterly meeting of the Michigan Hardwood Manufacturers' Association was held at the Pontchartrain Hotel, Detroit, on Thursday, January 20, and called out the largest attendance ever present at one of these meetings.

The session was called to order in one of the clubrooms of the hotel at 10:30 a. m. President Charles A. Bigelow presided and Secretary Knox recorded.

The roll-call developed the presence of representatives of more than forty members.

After calling the meeting to order President Bigelow announced that he had no speech prepared, but stated that the association was in good financial condition and that it had increased its membership by a total of two since the last meeting.

The secretary announced new members of the association as follows: Brownlee-Kelly Company, Detroit; David Ward estate, Bay City; Lake Independence Lumber Company, Big Bay; Nadeau Bros., Nadeau, and Robinson Lumber Company, Goodard.

The secretary read the minutes of the last meeting, held on October 28, which were approved. The secretary then read the report of the treasurer, which showed that the association had a balance on hand on October 1 last of \$770.51, and that on January 1 it had a balance of \$5,921.17. Expenditures since that time were \$950.56, leaving a balance on hand at the present time of \$4,970.91. The report was accepted and approved.

The secretary read his report, which was accepted.

### Secretary's Report

To the Officers, Directors and Members of the Michigan Hardwood Manufacturers' Association: Gentlemen—Another year has rolled around and we are met again to compare notes and discuss problems that mean a great deal to every manufacturer of lumber in Michigan at this time, and the outlook seems very promising. The lumber industry of Michigan is one of the most if not the most important of any of the manufacturing interests of the state.

According to government statistics for 1908 Michigan ranked seventh in the list of states producing lumber. Michigan ranked first in production of maple, having a percentage of 46.1; first in production of beech, with a percentage of 20.9; first in production of ash, percentage 9.4; second in production of basswood, percentage 15.6; second in production of elm, percentage 17.7; third in production of birch, percentage 13.2; third in production of cedar, percentage 11.9; third in production of hemlock, percentage 19.6; sixth in production of white pine, percentage 6.1.

Michigan, a state so long in the lead in white pine production, was surpassed by three New England states, New Hampshire, Maine and Massachusetts, which were supposed to have been cut out years ago. It is true that there is little original timber left in New England, and it is a noteworthy fact that the cut in New England states is from second growth timber.

Because of unusual conditions surrounding the lumber market, especially in hardwoods, it was deemed best to call our midwinter meeting at the earliest possible date or as soon as the stock reports for the quarter ending December 31, 1909, could be prepared.

Owing to so many of our members being extremely busy closing up their books for 1909 and getting ready for 1910, we have had considerable trouble in getting our report ready for this meeting, and it was not until a week ago we saw

over the snowdrift the meeting date as January 20. So if your company has been importuned by the secretary for your different reports you will appreciate the difficulty of getting a full report of the membership.

Notwithstanding none of our members have discontinued operations and a number have withdrawn from the association, we come before you with a report showing an increase of two over a year ago. We believe the stock report and comparative figures given you today represent the far greater amount of Michigan hardwoods, and the Market Conditions Committee will cover the amount of stocks and values in their report.

The Jerry Madden Shingle Company, who were enrolled at the October meeting, have sold their hardwood lands and withdrawn from us.

We are pleased to advise that the assessment levied on hardwood lumber and manufactured lumber that entered into flooring has been almost entirely collected in. The amount netted the association is \$4,741.70 on 316,295,574 feet at 11 1/2 cents per thousand feet. This amount will carry the association through the year 1910, with a balance for the following year, under present conditions.

A new feature has been added to our work during the last few months in endeavoring to place the manufacturing members in touch with the consuming manufacturer and dealer. The secretary mailed blanks headed "Stocks Wanted"

C. A. BIGELOW, CADILLAC, PRESIDENT.

and received a large amount of inquiries and has asked our members having the stocks to handle direct with the party desiring such stock. There are quite a few inquiries that were received during the time that we were compiling stock lists that have not been answered. These will be cared for just as soon as we can get to it. It is hoped this feature will be the means of helping the members and your cooperation is solicited. There is no intention on the part of this office to come between buyer and seller.

One of the subjects to be considered today is report of Grading Rules Committee on uniform grading rules for hemlock lumber. Some little information has been gathered and it is hoped a basis fair to all members will be the outcome.

Another topic for discussion is the question of furnishing car stakes.

It is with regret that we record the death of

Arthur Hill and Wellington W. Cummer, prominent lumbermen in this state.

The above report is respectfully submitted.

J. C. KNOX, Secretary.

A letter addressed to ex-President Diggins from the president and secretary of the National Wholesale Lumber Dealers' Association dated December 21 was read. The letter recited that the adverse decision by the Interstate Commerce Commission in the matter of the car stake and equipment complaint had made it incumbent on the National Wholesale Lumber Dealers' Association to appoint a committee to consider the feasibility and advisability of carrying out one of the suggestions contained in the report submitted to the complainant associations by Counsel Ross and his associates. After careful consideration this committee decided that the only practical line of action lay in an effort to obtain from Congress an amendment to the Hepburn Act which would compel the railroads to furnish the car stakes and other necessary equipment for the transportation of lumber and similar commodities upon flat and gondola cars. It was recited that a bill had been obtained, prepared and introduced in the House of Representatives at the last session of Congress known as House Bill No. 27528, but had not yet been considered.

The committee was instructed to take steps to have this bill presented at the next session of Congress and make an effort to accomplish its passage. The association asked the Michigan Hardwood Manufacturers' Association, which originally joined in the old car stake and equipment complaint matter, to join with them in forwarding this necessary legislation.

Leonard Bronson, manager of the National Lumber Manufacturers' Association, President Bigelow and others joined in approval of this measure, and on motion the chair was instructed to appoint a committee to draw a resolution of approval and have it addressed to every member of the Senate and the Lower House from the state of Michigan, and ask assistance in having this law passed.

The chair appointed as such committee F. L. Richardson, W. L. Saunders, R. Hanson and Leonard Bronson. Later this committee presented a report in accordance with its instructions, which was adopted.

On invitation, Leonard Bronson, manager of the National Lumber Manufacturers' Association, addressed the meeting on the subject of joining the organization which he represents. He recited the work that the association had done in the past and the plans they had for future work on broad national lines.

In approval of Mr. Bronson's proposal, Mr. Richardson and others made brief addresses.

Mr. Gibson, editor of HARDWOOD RECORD, said that the Michigan Hardwood Manufacturers' Association would recall that four and a half years ago their association was formed at his suggestion and that all conceded it was a great success. He stated that a great deal of Michigan money is invested in timber holdings and in the lumber industry in many other states and that the association now had an opportunity of connecting itself in a big National association which would

help it in every state in which the members have interests. He stated that joining the National Lumber Manufacturers' Association would be worth its entire cost to more than fifty lumbermen in the state of Michigan, and inasmuch as they had approved of the speaker's judgment in the organization of the Michigan body, he hoped they would also take his judgment and join the big National lumber manufacturing institution.

On motion of W. L. Martin, supported by John S. Weidman, the organization joined the National Lumber Manufacturers' Association.

On invitation of the president, Mr. Gibson of HARDWOOD RECORD stated that his publication had been engaged for several years in collecting and collating information pertaining to the prospective annual requirements of wholesale consumers; that he recently had sent out a request for correction of this information covering annual requirements for 1910, and that the reports were coming in at the rate of five hundred to a thousand a day, with every indication that prospective requirements in many cases of double that in the year 1909. He further stated that apparently there was no call for rock elm and ash, but there was a marked increase in demand for all other hardwoods manufactured in Michigan. The call for maple and birch is apparently double that of last year, while the call for basswood, elm and beech had increased from thirty to fifty per cent.

#### Report of Market Conditions Committee

Bruce Odell, chairman of the Committee on Market Conditions, then read the report of that committee:

Your committee on market conditions is pleased to report as follows:

We believe that conditions as reported by this committee at the October, 1909, meeting apply to conditions today, except that conditions as regards Michigan hard maple are growing stronger daily, and that the shortage of this wood is more apparent at present than at any time in the past.

All the northern hardwoods seem in good demand, especially in the better grades, and we believe that the prices recommended in October are conservative, except for 4/4 Michigan hard maple, which we believe should meet with ready sale at \$1 per thousand higher for better grades than No. 3 common.

The January, 1910, stock report shows that only 11,000,000 feet of 4/4 Michigan hard maple, including the grades of 1sts and 2nds, No. 1 common and No. 2 common, in the hands of the members of this association unsold, a smaller amount of unsold stock of this size and grades than shown by any previous January report. It is apparent, also, that an unusually large amount of this season's cut of Michigan hard maple, especially of the flooring stock, is now under contract.

It is a well known fact among manufacturers of maple flooring that they have for years sold their product at lower prices than it should bring and for this reason their margin of profits have been narrow, but it is equally as well known that the demand for and the real intrinsic value of maple flooring warranted much higher prices, and there is no good reason why the manufacturers of maple flooring should be made to suffer because of the business methods of the maple flooring manufacturers.

The conditions as reported the lower grades of northern hardwoods are typical of the conditions following a period of general low prices, and it is the opinion of this committee that as the price of the better grades advance, the demand for the lower grades will increase. While we do not recommend higher prices for No. 3 common hardwoods at present, we do believe the conditions have strengthened materially during the past three months.

#### HEMLOCK

From the secretary's report we find a continued improvement as regards stock on hand, there being reported 117,000,000 of piece stuff, as against 132,000,000, and 34,000,000 of boards, as against 38,000,000 a year ago, or a total of 19,000,000 less of stock on hand unsold than reported January 1, 1909.

This would indicate an improvement in hemlock conditions generally, and we believe that the market should be strong at prices recommended at our October, 1909, meeting.

Respectfully submitted,

BRUCE ODELL.  
D. M. KNEELAND.  
JOHN C. ROSS.  
G. VON PLATEN.  
OSCAR L. LARSON.  
F. L. RICHARDSON.  
W. C. HULL.

On motion the report was accepted.

D. H. Day, chairman of the Committee on Grading Rules of Hemlock, then presented a specific report of sundry grades that his committee recommended.

At 12 o'clock the meeting adjourned for lunch.

#### AFTERNOON SESSION

The meeting reconvened at 2 p. m. and a thorough discussion was made of the report of the Hemlock Grading Committee.

On motion of Mr. Richardson the report was accepted and the secretary was asked to have the rules put in printed form and distributed among the members, and that each member be requested to try them out for three months, and at the next meeting report any necessary change that their experience and their use would think desirable.

The committee was continued and asked to prepare a supplemental report at the next meeting.

On motion of Bruce Odell the chair was elected to a position on the Board of Governors of the National Lumber Manufacturers' Association and was instructed to appoint the delegates to which the Michigan Hardwood Manufacturers' Association is entitled.

J. C. KNOX, CADILLAC, SECRETARY

On motion of Mr. Hull it was decided that the next meeting of the association would be held at the Ponchartrain Hotel, Detroit, some time during the month of April.

Mr. Bronson then addressed the association and stated that it was one of the hopes of the National Lumber Manufacturers' Association to endow a chair of forestry and lumbering at Yale with an endowment of \$100,000. He stated that \$65,000 of this sum had already been raised and that one individual had agreed to contribute \$10,000 when \$25,000 more had been pledged. He said he hoped that the public spirit of the Michigan lumbermen would induce them to make contributions to this fund.

The meeting then adjourned.

There were present:

Anderson, A. F., Cadillac, Mich. Mill, South Boardman.  
Bigelow, Charles A., Kneeland-Bigelow Company, Bay City, Mich.

# Annual Indiana Hardwood Lumbermen's Association

The eleventh annual convention of the Indiana Hardwood Lumbermen's Association assembled in the Denison hotel, Indianapolis, Thursday, January 13, at 2 o'clock p. m. The meeting was called to order by the president of the association, John M. Pritchard. It was the best and largest attended meeting ever held by the association.

The President, Gentlemen: It is now my privilege to call this convention to order.

I have never thought that it was proper for a person to apologize when he had a duty to perform, but the circumstances are such today that I am sure that you will agree with me that apologies are not altogether in bad taste. In the first place, inasmuch as I was compelled to leave the state shortly after being elected to office, it seems an imposition that I should be allowed to return and have the honor to preside at this meeting. In the second place, my worthy predecessors have had the ability to give you, in addition to a very good report which was due the membership, some very good poetry, which I am utterly unable to do.

Now we are glad today that we have such a large attendance of our own members, and we are especially pleased that we have so many of our friends to whom we extend the full privi-

and "has come up smiling."

A notable thing about this panic has been the optimistic view of business men at all times. At first it was generally said that it was only a "Wall Street flurry," and would not last to exceed three months; but at periods of about three months ever since it has been predicted that the next three months would see the end. While these predictions, made from time to time, did not prove to be wholly correct, they at least proved that it pays to continue to look upon the bright side of things, and undoubtedly tended to shorten the period of depression. We need not dwell upon the conditions that have prevailed for the past two years, but we may profitably use the lessons we have learned, and surely we now find all conditions favorable for a period of general prosperity. I predict that the year 1910 will be a profitable and satisfactory one for lumbermen.

A point of great interest to lumbermen at the present time is the conservation of our natural resources, and there is not a day but that we read in the daily press something concerning this subject. The public is aroused and is demanding that our legislators pass proper laws and make the necessary appropriations to conserve our great natural resources for posterity as well as for our own wealth, health and happiness.

Among the chief natural resources are our forests, which we, as lumbermen, are rapidly denuding, but on the other hand, as citizens, we are intensely interested in seeing that proper steps be taken by states and nation to preserve the forests, and to reforest along practical lines. We might be asked to reconcile these statements, and in reply may say that we live in an age of civilization which demands homes and furniture, and that the lumbermen are legitimately and properly supplying this demand by converting the forests into lumber. Mr. S. Burkholder, who represents our association on the State Board of Forestry, will later give you a report of what has been accomplished in forestry in our state during the past year.

Next to forestry in interest to lumbermen is the development of our waterways, and we urge every member of this association to give careful consideration to all projects for improvement of waterway transportation of freight and express his views to his congressman. Waterway transportation of freight offers a practical way of keeping the rates on rail transportation at a reasonable basis. This is a vital question to lumbermen, and we should urge that our state and government proceed with all reasonable dispatch to improve our waterways along practical lines.

At a former meeting of this association a resolution was passed unanimously endorsing a bill known as the Ilburn Bill, pending in Congress, being an act to strengthen the powers of the Interstate Commerce Commission, which measure, after being amended somewhat, was finally passed. Although the railway corporations vigorously opposed the passage of this measure, its operation has proven to be of as much, if not more, benefit to the railroads than to the shippers, for doing away with rebates and free passes has been a source of much revenue to the railroads. During the present session of Congress efforts will be made to pass a bill to further strengthen the powers of the Interstate Commerce Commission. This bill, if passed, will be a great improvement to the interests of shippers. Our transportation committee will probably call your attention to the particulars of this bill, and I urge your careful consideration of the same.

A question of continued interest to lumbermen is that of uniform inspection. The products of our forests are being drawn upon from almost every country on the globe, and the requirements of our home markets are enormous and are increasing, despite the introduction of substitutes for wood in all kinds of construction work, manufacture of farm machinery, automobiles, furniture, etc. Several years ago lumbermen saw the desirability of the single standard of inspection for all markets, and by organization established a set of inspection rules to be uniformly applied in grading our lumber, and upon which should be founded a fair and impartial system of adjusting complaints. You are all familiar with the progress which has been made and know of the difficulties encountered in harmonizing the views of all interests in the trade. That great progress has been made toward uniformity, and the old chaotic conditions much improved, cannot be denied.

The National Hardwood Lumber Association was first in the field with inspection rules, but at periods of revision all views could not be satisfied, and subsequently the Hardwood Manufacturers' Association of the United States was formed and adopted a set of inspection rules. Later the United States Hardwood Inspection Rules were adopted in New York, as neither the

National rules nor the Manufacturers' rules were strict enough to suit some of the lumbermen in the New York district. I do not question the integrity or the right of the organizations other than the National association to adopt inspection rules, and I believe that generally the differences of opinion have been dealt with as honest differences. There has been much discussion on the rules problem, and today the demand for uniformity is greater than ever. This problem must eventually be solved by lumbermen, and, in my opinion, will be solved by them, but time and patience are required.

While the rules may not suit all of us in all particulars, I do not believe that there is any great demand for a revision at this time, unless it should be for the purpose of establishing a single set of rules. Our association has had a prominent part in rule making, and has always stood for harmony and uniformity. We have members in both the National and Manufacturers' Associations, and we should continue to exert our influence for harmony and for one set of inspection rules.

The Lumbermen's Club of Memphis has filed a complaint with the Western Classification Committee, with relation to existing rates on articles shipped in straw and fibre board boxes, versus like articles shipped in wooden boxes. Today the Memphis lumbermen and others are meeting with the Western Classification Committee at San Antonio, Texas. A proper classification of rates on articles shipped in wooden boxes means a market for much low-grade lumber which is now allowed to go to waste. Hence, this is an important matter for lumbermen, and

J. M. PRITCHARD, MEMPHIS, TENN. RI-  
TIRING PRESIDENT AND DIRECTOR.

L. A. SWAIN, SHELBYVILLE, PRESIDENT.

leges of this convention. We hope that you will feel perfectly free to take part in the proceedings and make yourselves at home.

Mr. Pritchard then gave his annual address as follows:

## President Pritchard's Address

Gentlemen and friends of the Indiana Hardwood Lumbermen's Association: I congratulate you upon this, the eleventh birthday of this association. Your achievements since the organization are such that all of you may, and should, feel justly proud. A brief review of our history will show that our membership has increased from nine to 140, that we have at all times expressed a position of fairness on all questions, as they arose, which directly affected the hardwood lumber business, and that our views, when once decided upon, have been earnestly but courteously urged and that almost without exception we have gained our points.

I further congratulate you that the new year which has recently begun undoubtedly marks the end of what will probably be known in history as the money panic of 1907. We have had more than two years to study the causes of this panic, and have all experienced the results, but, while the conditions which have prevailed during the past two years have been especially hard upon the lumber business, I am proud to state that, so far as my knowledge goes, there has not been a single member of this association but has paid one hundred cents on the dollar

I recommend that this association endorse this movement of the Memphis Lumbermen's Club.

Conditions have changed wonderfully in the past twenty years. It has been a period of formation of all classes of men into organizations. Lumbermen's organizations have proven of much benefit to the members, for by organization all may receive the benefit of the best thought of the best men. Views may be crystallized, and when expressed have the power of numbers back of them. It has proven so in our organization, and, above all that has just been said, the greatest thing to us is the social feature. The value of our acquaintances and friendships thus formed is inestimable, and no matter what the status of the rules problem, or the transportation problem, or any other problem may be, I am sure this association will never make the mistake of taking itself too seriously, and that Indiana lumbermen will continue to make sociability a special feature of their annual meetings.

I want to thank our efficient secretary, each member of the board and each member of the association for his loyalty to me as an officer, and I bespeak for my successor the same kindnesses you have always shown me. My regret at leaving my native state is lessened by the fact that I know that you will always have these delightful annual gatherings, which will afford me and scores of others an opportunity to journey to our old home once a year to see you. To this association is like a big family, and I am proud that I have the honor to be a

ember, and as long as my health and circumstances will permit I expect to be present at the annual meetings of the Indiana Hardwood Lumbermen's Association and to enjoy the good fellowship which always prevails.

The President: Gentlemen, we will next hear the report of the secretary.

Secretary Kramer then read his report, as follows:

#### Report of the Secretary

Mr. President, fellow members of the Indiana Hardwood Lumbermen's Association, gentlemen: Another year's page has been turned and the seventh annual convention confronts us. In submitting you this report it is needless for me to say that the past year has been quiet in most part and uneventful; trade conditions have been improving all during the year and our members generally are very well satisfied. With the approach of the holidays, marketing became more quiet. Thus far in the new year we note some increase, and as we near the warmer months of spring, markets likewise will be warming up.

During the year your board of managers held two meetings, one at Detroit during the annual convention of the National Hardwood Lumber Association and the other at Indianapolis in November. Association matters were gone into with interest at each meeting, optimistic feeling prevailed among the board, and so far as I have been able to learn the same feeling has prevailed among a goodly number of our association members. Some woods have advanced more per thousand feet than was anticipated, some have

opportunity affords. We should use our influence and efforts to increase our membership.

We have a few delinquents, some of whom will square up at this meeting; all others we hope will bring up their arrearages soon. The small sum of our annual dues should not keep away anyone who is eligible to membership in our association.

#### TRADE ETHICS

This association was not represented by delegates at the Trade Ethics Conference, but as an association we participated with them in a financial way. To each of our members I mailed a copy of the Code of Ethics that was formulated and adopted by that conference. No fair-minded lumberman will question but that a great deal of good would result through the observance of the code as formulated. We therefore recommend the endorsement of same by our association.

#### INSPECTION RULES.

The chairman of our Inspection Rules Committee will give you his report later. In connection would like to add that this association, as most of you know, has been the pioneer in the matter of inspection and has been quite a factor in bringing out the basic principles found in the rules of the National Hardwood Lumber Association, and has caused a great deal of good to the lumberman; this association, as an individual association, does not want or care to issue a set of rules, but we do want uniformity and not fluctuating of grades—if any fluctuating let it be in price.

#### DEMURRAGE.

One question, in which all of you are very greatly interested, one which this association has rubbed up against and fought for, one that has caused more unpleasant feeling, more dissatisfaction among the shipping interests; one, I feel safe in saying, that has been the cause of more claims being filed with the railroad companies, is that of demurrage or car service. In this I feel we are going to be relieved to a very marked degree. You no doubt have noted the Uniform Code as adopted by the National Association of Railway Commissioners at Washington in November last, and we find our own State Railway Commission taking the lead in accepting the plan as adopted by the national commission and ruling that said plan become effective March 1, next.

The results attained through this ruling will be largely beneficial to the shipper and consignee, although they are not as yet perfectly satisfactory. Would cite you to one paragraph, namely, Paragraph C, under Rule 9, average agreement, wherein freight cars are put in two classes, thus barring credit on box cars, including refrigerator cars, against freight cars of all other description, or vice versa.

It has been my purpose to give to you at this meeting a stock report, giving you in total the amount of lumber on hand for 1908 as against that of 1909, the tendency of changes in price and the indications as to increasing or decreasing the output of 1910 over 1908 and 1909, but owing to the very few reports handed in, I am unable to present it.

I thank you for your attention, and bespeak for my successor your loyal support.

C. H. KRAMER, Secretary.

The President: I wish Mr. Barnaby would see that the door is closed back there, and barred, so that no one can pass out. It has been stated to me that the association is becoming very suspicious of the treasurer. I don't know whether he is present or not, but if he is I hope you will see that he doesn't escape. We will now receive the report of the treasurer, Charles Wood.

#### Treasurer's Report

Mr. Wood: Mr. President and Gentlemen—There are only two things about this treasurer's report to state: I am required to report here some sixteen dollars that Mr. Pritchard is supposed to have, and some two hundred and fifty dollars that the secretary is supposed to have. [Laughter.] I haven't seen either amount. I think, too, that it is well the door be barred. We had on hand at the close of our last meeting, \$53.78. We collected for dues and from other sources, \$370. From tickets sold for the banquet, \$34, and Mr. Pritchard actually paid me \$8.90, and Mr. Kramer \$10. Putting in the \$16 that Mr. Pritchard says he will pay me, and the \$250 that the secretary promises to turn over, make total receipts of \$747.68. We paid out last year, for stenographer, \$15; for banquet, \$234.90; printing, \$37.95; to the Retail Lumber Dealers' Association, \$50; total, \$337.85; showing that we should have on hand \$409.83.

Well, I've got the eighty-three cents. [Laughter and applause.]

The chair then appointed as a committee to pass upon the reports of the officers: Van B. Perrine, chairman; W. W. Knight and Charles H. Barnaby.

#### Reports of Standing Committees

The President: Next in order will be the reports of the standing committees. The first committee is that on Inspection Rules. As I am chairman of that committee I have to report that the Inspection Rules Committee had a meeting, but have no written report prepared. The sentiment of the committee is that at present it is desirable that there be stability to the rules, and that no changes or revisions be asked, unless it be in the nature of bringing about a single set of inspection rules. That is the sentiment of your Committee on Inspection Rules.

If anyone has anything to say with reference to this matter an opportunity will be afforded under the head of new business.

The next report to be received is that of the transportation committee, W. A. Guthrie, chairman.

Mr. Guthrie: The committee has nothing special to report. We will have some suggestions

VAN B. PERRINE, FORT WAYNE, VICE-PRESIDENT.

C. H. KRAMER, RICHMOND, SECRETARY.

not advanced as much per thousand feet as was expected. It seems that the time is not far distant when most of our woods will move in the market with, if not a fair margin, at least a small margin of profit.

We cannot advise too marked increase in output, too great overtime duty, or double shifts at the mills, but as this association or any member of it, as far as I can learn, is not a member of a lumber trust or combination or in any way connected with a combination, each member will increase or decrease his output as he sees or feels his market will require.

Since our last annual meeting we have lost seven members: two by being out of the state, two by going out of the lumber business, three simply declining to remain members. I have, however, to present to you for your approval for membership, the Board of Managers having already acted upon them, the applications of: J. H. Pritchard Lumber Company, Memphis, Tenn.; The Hoosier Veneer Company, Ladoga, Ind.; R. A. Hooton Lumber Company, Indianapolis; Bommer Veneer & Lumber Manufacturing Company, Indianapolis; Fred J. Bosler, Indianapolis; F. P. Ice & Son, Mount Summit, Indiana; James B. Eaton & Co., Bluffton; L. C. Collier, Campbellburg; W. J. Hare, North Vernon; J. M. Personett Lumber Company; Tessellated Flooring Company, Edinburg, and Fred Wade, Indianapolis.

Many other applications could be had if each member of the association would form a committee of one and forward this proposition when

to make under the head of new business.

President Pritchard then appointed as a Nominating Committee: Claude Maley, Bedna Young and Clyde Roach.

The President: We have with us today a member of our association who is a member of the State Board of Forestry, Samuel Burkholder, and we would like to have him give us a report of what has been done in regard to the forest work of our state.

Mr. Burkholder: Mr. President and Gentlemen—In regard to what the state board has been doing, I have nothing to say at this time, because their report for the year is now in the hands of the state printer, and if you will send me your address I shall be glad to send you a copy of it as soon as it comes from his hands.

Mr. Burkholder then reported as the chairman of the Forestry Committee as follows:

#### Mr. Burkholder's Report for the Forestry Committee

To the president and the members of the Indiana Hardwood Lumbermen's Association: When the lumbermen of the United States first began cutting there were 850 million acres of timber, containing about 5,000 billion board

feet of lumber. Today there are about 550 million acres, with less than half the amount of timber there was in the beginning. At our present rate we are cutting and using about 20 billion cubic feet every year, while the forests that we have left are not growing over 7 billion cubic feet. If things are allowed to run along as they have been it will not be very many years before we will be up against a timber famine. The question at present is, "What should be done?"

It is a recognized fact that no matter how much other material is used as a substitute for wood our increasing population will keep the total amount used to about the same as now. The only remedies are reforestation and conservative lumbering.

Reforestation is made more practical by the fact that over 25 per cent of the land of the United States is too rough to grow anything successfully but timber. The very magnitude of the proposition and the long wait for financial returns makes it a government work.

Lumbering is far more conservative than formerly and will continue to be more conservative as the price of lumber rises and makes it pay.

There are two ways that hardwoods today are being wasted that I wish to call to your attention.

The first is the cutting of all lumber into even lengths. By far the greater part of hardwoods is cut up into small pieces after it reaches the factory. The consumer is not a loser, as he can use the odd length. Then what difference

of Mr. Burkholder in regard to the lengths of hardwoods, I do not think is at all out of place. So much hardwood is used for cutting up purposes, and if the lumber shipped, as to percentage of cutting, is suitable for the purpose into which it is to be manufactured, it does not seem to me to make any difference whether a board is eleven feet long or twelve feet long, if it cuts up right, and no matter how some like to have their piles trimmed up nicely in their yards, or are accustomed to the old system of ten, twelve, fourteen and sixteen-foot lengths. If we are going to help the future generations to have a supply of hardwood, and at the same time enable the hardwood dealers to put upon the market goods that will not be exorbitant in price, it certainly seems wise that wherever a tree will cut to advantage in odd lengths, that those odd lengths should be utilized, and not trimmed off and left in the woods to rot. I am glad that this association has always taken such an interest in the matter of forestry, and has kept its place as an advocate of forest preservation, and has retained in office its old standby and defender, to do what he could to represent the association in matters of forest preservation and of reforestation. I thank you, gentlemen. [Applause.]

Mr. Burkholder: Mr. President, I have here a resolution which I desire to offer for the consideration of the convention.

#### Resolution Commending Gifford Pinchot's Work Adopted

Whereas, The Indiana Hardwood Lumbermen's Association, being in the heartiest sympathy and fullest accord with the work of the Forest Service of the United States Department of Agriculture, as fostered and furthered by the recently deposed head of that service, Gifford Pinchot, that it be hereby

Resolved, That this association goes on record as endorsing the past policy of the Forest Service and the work of Gifford Pinchot in the effort to preserve for the mass of the American people the natural resources of the public domain; and in the effort to restrain the graft of individuals and corporations from control of timber, grazing privileges, water power and mines, without adequate compensation to the government; and be it further

Resolved, That a vote of thanks be tendered to Gifford Pinchot for his able, patriotic and unselfish services on behalf of the people of this country.

The President: Gentlemen, it has been moved and seconded that the resolutions, as read, be adopted. Is there any discussion? We would like to hear an expression of opinion on this matter.

Mr. Underhill: Mr. President, you will pardon me if I take this opportunity to say something that may start someone else to talking on this subject. There is no subject under consideration or under discussion by the Congress or administration of the United States today more important than that of forestry. It means so much to the coming generations that our forests be properly cared for. We are not so much alarmed today about any depredations that are being made by men upon the forests as we are by the possibilities of forest fires, which destroy annually, approximately, as much as the lumbermen cut off; and if there is one man in the United States who has done a work that is worthy of the praise of every citizen of this country, if there is one man who has given thought and care and his life to arousing not only lumbermen to act with caution as to how they go into their woodlands, but to arouse the whole nation to think upon the subject of forest preservation and the conservation of other natural resources, that man is Gifford Pinchot, and he deserves all the honor and praise that we are able to give him. If by adopting this memorial we can in any way show that the lumbermen of the United States appreciate the work he has done in the past, it seems to me that it is a small thing for this association to do, recognizing the splendid stand that he has taken and the great work that he has accomplished.

Now there may be differences of opinion among those of this body as to whether Mr. Pinchot has acted wisely, or not, in connection with the controversy that led up to his dismissal, but there can be no difference of opinion as to the fact that he has given years of his life to doing a great work for the people of the United States in connection with the Forest Service, and that if the Forest Service is effective today, and is doing anything for the future generations of our people, it is largely due to the thought and care, the energy and the wisdom of Gifford Pinchot. [Applause.]

Mr. Shepard: Mr. President, we hear a good deal of hot air about what we ought to do, and everybody says, "Amen," but I doubt if many of us here have planted any trees during the past year, or really tried to keep any from being cut down. I think that probably most of us are more instrumental in cutting down trees than we are in planting them. Now this man referred to in these resolutions has either done something or he has not, and I think it is very important that, we should commend a man who has really done something. I think these resolutions should be adopted. Here is a chance for

JAMES BUCKLEY, BROOKVILLE,  
TREASURER.

does it make if the board is an odd instead of an even length?

The second is in the sawing. The pine manufacturers cut their stock inch thick for inch, but we hardwood manufacturers cut our stock inch and one-sixteenth for inch. Every time we ship a car of 10,000 feet we practically give away 625 feet. I think I may safely say that lumber cut inch thick will in the majority of cases work just as well as the lumber cut inch and one-sixteenth. It does in pine. Why won't it in hardwoods?

The President: We would like to have a little discussion with reference to this forestry report submitted by Mr. Burkholder.

F. S. Underhill: Mr. President, I want to say that I have been much interested in the report made by Mr. Burkholder, and I think that if there is any part of the forest in our United States that we ought to be careful of, it is that part in which this body is interested. I believe that it will be many years before we will suffer anything like a famine in the soft woods, but we are having a very heavy demand today for all classes of hardwood. It is so heavy that even the substitute hardwoods are coming into demand, in place of the old reliable oak, walnut and mahogany, and even those substitutes are now in some cases hard to procure. Men are gunning for gum, and that is something that a few years ago we would hardly have thought was coming so soon upon us. The suggestion

G. O. WORLAND, EVANSVILLE, WHO INSTI-  
GATED INTERESTING DISCUSSION  
ON MANUFACTURING COSTS.

us to commend some real action, not "hot air." [Applause.]

The president put the question on the motion to adopt the resolutions as read. The motion prevailed.

The President: I would inquire if the committee on the reports of officers is ready to report?

Van B. Perrine: Mr. President, the committee recommends and suggests that the reports of the officers be approved as made.

The report of the committee was adopted.

The President: We will now take up the next order of business, which is new business. Has anyone anything to offer?

#### Discussion on the Corporation Tax Law

J. V. Stimson: Mr. President, I believe that the communication I have here comes under that head. This is a letter from the Illinois Manufacturers' Association, with reference to the corporation tax law. Business associations all over the country are taking some action with reference to this matter, and there seems to be a general disposition to oppose and to recommend the repeal of that law. The Illinois association gives three reasons for opposing the law:

FIRST. The undue and unnecessary publicity required by Paragraph 6, which provides that the schedules shall be filed in the office of the Commissioner of Internal Revenue and shall constitute public records and be open to inspection as such.

SECOND. The injustice of the government compelling members of this association, as well as others throughout the United States, to file their schedules in two months' time, when it has taken the government four months to prepare its explanation of the law.

THIRD. The inventory which it will be necessary to make and which is required by the instructions from the Treasury Department will cost more in money and loss of time and business than the tax itself.

This communication was handed to me and I was requested to bring it before the convention. I think it should be freely discussed, and no person present should hesitate to express himself fully. It seems to me that one of the chief objections to the law is its inquisitorial nature; going into the details of private business, the conditions of which vary greatly from year to year. I don't know anything about the constitutionality of the law. They seem to be able to make laws to apply almost anywhere they choose to put them. It seems to me that this matter should be thoroughly discussed here, and that such action should be taken as you may think is necessary.

In order to bring the matter before the convention, I move you, Mr. Chairman, that it be the sense of this convention that we are opposed to the corporation tax law, as enacted by the last national Congress, and that we urge its repeal.

The motion was seconded.

The President: Gentlemen, you have heard the remarks made by Mr. Stimson. We would like to have you express yourselves on this proposition.

Mr. Elledge: Mr. Chairman, while I am merely here as a visitor, I want to say that it seems to me that there is one objection to this corporation tax law that is not mentioned in that letter. It is an objection which I, as an individual citizen, have had to the law since its inception, and that is the unfair way in which it is made to apply—it is not made to apply to partnership business. Partnerships are one thing and corporations another, and the firm of Smith, Jones & Brown might be carrying on a partnership business extensively, and making large profits, and while they are enjoying the benefits of the protection of the government, they are immune from any taxation under this corporation law.

The President: We are glad to have heard from you, Mr. Elledge.

James H. Baird: Mr. Chairman, I would like to ask Mr. Stimson if, in his talk with lumbermen, he doesn't find that there is a misapprehension as to what it really calls for—if they don't think that it calls for a statement of the assets and liabilities of their business? I have talked with several of the lumbermen at Memphis and they undoubtedly have that idea—they supposed that they were to make a statement of their assets and liabilities, and that this was required by the law. That is not my understanding of the law. The letter read by Mr. Stimson has been received down at Memphis and has been quite extensively discussed. Some considerable feeling has arisen over the letter and telegrams were being sent to Washington by individuals and corporations down there, and some action was contemplated by different organizations. I have just thought that such a misapprehension was causing some men considerable trouble. It does not seem to me that any organization will be in any particularly strong position in asking at the hands of Congress that this clause be stricken out, because any return for taxation is a part of the public records, and to ask that it be not made so, is simply, in effect, to ask that the dealings of a certain portion of the public be kept secret from the rest of the public, and it don't strike me

that that would be a very strong position for us to assume. Of course I need not add that I am not in favor of the corporation tax. I think of all the foolish, vicious and unnecessary pieces of legislation I have ever seen, it takes the rag off the bush. [Applause.]

J. V. Stimson: The corporation has got to file its inventory, Mr. Baird.

Mr. Baird: I don't quite agree with you in your view of the matter, or else I am mistaken.

The President: Gentlemen, you have heard Mr. Stimson's motion, that this association go on record as opposing the corporation tax law, and urging its repeal. The motion has been duly seconded. All those in favor of the motion will signify the same by saying Aye; those opposed, No. The Ayes have it and the motion is carried.

Now has anyone else anything under the order of new business?

W. A. Guthrie: Mr. President, C. C. McCann, chairman of the Trunk Line Association, has issued a pamphlet setting forth reasons why railroad rates should be advanced ten per cent. This pamphlet has been distributed throughout the country by the different railroads, showing that they had some particular interest in doing this. Now, in October last, there was a mass meeting at Cincinnati of various shipping interests and commercial clubs and persons interested in freight rates, and at that meeting resolutions of disapproval were adopted.

The object of the Cincinnati meeting was to educate people along a line opposite to that upon which the railroads are seeking to educate them. Now I was asked to bring this matter before the convention, and they would like to have the moral support of this association. Anyone who takes the trouble to look into the matter will find that the profits of the railroads are enormous, in spite of the large amount of watered stock that they have had to pay dividends upon. The railroads argue that they are not making profits, and in support of that argument they point to a road like the Erie, for instance, whose stock has been watered excessively, and refer to the earnings on that watered stock. It is not sufficient to pay the fixed charges and leave a reasonable return for the stockholders. These men who met in Cincinnati answer that by taking up the case of the B. & O., which is making large profits and paying all their fixed charges and all their improvements.

Mr. President, I move you that this association give to this Shippers' Publicity Bureau its moral support and assistance in carrying out the ideas advanced in the meeting at Cincinnati.

The motion was seconded and prevailed.

The President: Has anyone else anything to bring up under the head of new business?

G. O. Worland gave an interesting talk upon the costs of producing lumber from the time the log is taken off the car until the product is in the pile. He stated that the total cost was \$4.80 per thousand.

J. V. Stimson stated that he had found the cost to be a little less than four dollars per thousand, at Huntingburg, Ind.

The President: If no one else has anything to offer in the way of new business, we will hear the report of the committee on nominations.

Bedna Young read to the convention the report of the Committee on Nominations, as follows:

#### Election of Officers

Your committee respectfully nominates for the various offices of the association, for the ensuing year, the following named members:

For president, Ed Swain; for vice-president, Van B. Perrine; for secretary, C. H. Kramer; for treasurer, James Buckley; for directors, C. Maley, B. F. Swain, C. A. Wood, Samuel Burkholder, J. V. Stimson, W. A. Guthrie, Geo. Palmer, J. M. Pritchard and C. H. Barnaby.

The President: Gentlemen, you have heard the report of the Committee on Nominations. What is your pleasure with reference to that report?

Mr. Rief: Mr. Chairman, I move you that the report of the Committee on Nominations be adopted, and that the gentlemen placed in nomination by the committee be elected by acclamation and be declared the officers of the association for the ensuing year.

The motion was seconded.

The President: Gentlemen, it has been moved and seconded that the report of the Committee on Nominations be adopted, and that the officers nominated be elected to serve for the ensuing year. All those in favor of the motion will signify the same by saying Aye; contrary, No. The Ayes have it, and the gentlemen nominated are declared elected to their respective offices.

And now, gentlemen, this will close my career as president of this association. I want to repeat what I said in my opening remarks this afternoon, that one of the most pleasant experiences of my life has been my connection with this association. There is nothing that I would exchange for the friendships that I have formed in this association. I think it is true, that it has always been the purpose of this organization to make friends, and to try to spread the harmonious feeling that should prevail among lumbermen. We have enlarged upon the social side of the organization, and I am proud that I have the honor of being an official. And now, gentlemen, that it is time for me to turn the office over to my successor, I take great pleasure in presenting to you your new president, Mr. Ed Swain, who is known to you all. [Applause.]

President Swain: Fellow members of the Indiana Hardwood Lumbermen's Association—it is with a great deal of pleasure that I accept the honor which you have conferred upon me today, and I fully realize the magnitude of the task before me, following, as I do, in the footsteps of such efficient and capable predecessors. I ask your earnest coöperation and support, that we maintain the present high standard of our association. I thank you. [Applause.]

We will now hear from our new vice-president, Van Perrine. [Applause.]

Van B. Perrine: Gentlemen—Although I could not hear what Mr. Swain said, I heartily subscribe to his remarks as an entirety. [Laughter and applause.]

President Swain: We will now pass, gentlemen, to the order of business, "The Good of the Order." Has anyone anything to offer under that head? If not, Mr. Stimson has something that he desires to present at this time.

#### In Memory of Departed Lumbermen

J. V. Stimson: Mr. President, I have a painful duty to perform. The Grim Reaper has been busy among the lumbermen during the last few months, and I have been requested to note the deaths of James E. Defebaugh, editor of the American Lumberman; D. A. Sanders, editor of the Sanders & Egbert of Goshen; John B. Ransom of Nashville, Tenn.; and George W. Stoneman, who died in St. Louis, I believe, day before yesterday.

These were men with whom you were all acquainted, and with whose merit and worth you were all familiar. They were men who had accomplished a great deal in their lives, and it is fitting that we recognize their departure at this time, remembering their worthiness and the works they have performed. It does not often happen that so many of our friends have responded to the last call within such a short time. Mr. Sanders, I believe, was approaching the age of sixty-eight or seventy, and the other men were all much younger and seemed to have years of active life before them. But this is a call to which we shall all, sooner or later, have to respond, and this is an office which others

will, after a while, perform for us. We remember these men as being of a high order of integrity and intelligence, men of clean lives, men of usefulness in the communities in which they lived. We knew them as good fellows here, and I believe they will be good fellows there. Gentlemen, I thank you.

President Swain: Gentlemen, we have with us here today a man whose experience will qualify him to make us an interesting talk. We would, I am sure, be glad to hear from Mr. Doster.

Mr. Doster: Mr. President and Gentlemen—Hearing Mr. Stimson's remarks has brought upon me such a feeling that I do not believe I can talk. I had the painful duty to perform of attending the funeral of Mr. Ransom last week, representing the association and experiencing as well a strong feeling of personal loss.

Now I am glad to be with you at your Indiana meeting. I was asked today why I came here. I'll tell you frankly, gentlemen, I came here to get tips on how to run an association meeting. We always move our meeting back until after the Indiana meeting has been held, so that we will know what to do and how to do it. Your organization can not be compared with any other state lumbermen's association in this country, that I know of. You have visitors here from the far West, from the East, from the North and from the South, and I think you should be proud, indeed, that you have such a drawing card in this association. I not only meet Indiana men when I come to these gatherings, but men from Michigan, New Orleans, and all over the country. But I want to tell you, gentlemen, look out for those Louisville men. They're great pluggers and boosters, and if you aren't very careful they'll be having your meeting over in Louisville next year! [Laughter and applause.] I want to say, for myself, that I am from Cincinnati, and am here to extend to your organization an invitation from the Hardwood Manufacturers' Association to attend our next meeting in that city on February 1, 2, and 3. In extending this invitation I do so as an official and as a friend of the lumber industry. Now, if by some mishap you should not receive a personal invitation, just consider this one and come and be with us.

I think I have consumed about as much of your time as I should, and I again repeat that I am glad to be here and would appreciate receiving another invitation next year. [Laughter and applause.]

The President: If there is no further business to come before the meeting a motion to adjourn is in order.

On motion, duly seconded, the convention adjourned sine die.

#### The Banquet

At 7:30 members and guests reassembled in the main dining room of the Denison for the banquet. The tables were arranged in the form of a large T, running the entire length of the room, three smaller tables being necessary to seat everybody. While dinner was being served the orchestra and quartet offered various pleasing selections.

#### THE MENU.

Celery	Olives	Radishes
	Martini Cocktails	
	Cream of Chicken	
	Salted Almonds	
Filletts of Halibut, Vin Blanc		
Potatoes Duchesse		
Sauterne

Roquefort Cheese	Coffee	Cigars

After the coffee Charles Barnaby arose and in a characteristic speech introduced the new president, E. A. Swain, who was welcomed with cheers and applause. After a short speech in which he expressed his

appreciation of the honor which he had received, the chairman called on F. A. Diggins of Cadillac, whose talk was replete with amusing stories and was well received.

He expressed his surprise at the size and spirit of the Indiana organization, ranking it as the most important state association in this country, and then went on to tell of the way they run things at Cadillac. There the lumbermen are like one big firm, always working together for the general good of all. They meet once a month and have a general, open discussion of business questions, nothing being secret and nobody being barred. An invitation to these meetings was extended to any who could avail themselves of it, the speaker saying that he believed it would be for the good of state and national organizations to follow the Cadillac policy.

At the close of this speech the president expressed a wish that the speaker be made a member of the Indiana association. A motion to that effect was made, seconded and duly carried, the vote being unanimous.

The chair next called on Edward Buckley of Manistee, Mich., who in a few words expressed his pleasure at being present. He was followed by E. B. Norman, the jovial Louisville lumberman, who told of the work the lumbermen's club is trying to do in that city. He extended an invitation to the Indiana lumbermen to attend the national convention, which will be at Louisville next June.

Edward L. Davis, also of Louisville, was the next speaker, and he repeated the invitation to the June convention and promised that inasmuch as this was the first time the South had been honored in this way and it was up to Louisville to make good, nobody would regret the trip.

After the quartet performed the chairman called on Frank Fish, secretary of the National Hardwood Lumber Association, who, in behalf of the organization, seconded the invitation to Louisville, expressing his belief that getting together is the one thing of most benefit to the lumber trade. The Indiana association was highly complimented by the speaker, who said that he had never before seen a meeting where all the lumber states were represented.

The next speaker was Lewis Doster, secretary of the Hardwood Manufacturers' Association, who, after a few appreciative remarks, told what lumber organizations should stand for. The two points he touched on most were, first, the necessity for an accurate working knowledge of conservation from a practical point of view, and, second, that the legality of organization must be established before the people who are now very ready to believe that any getting together of lumbermen means the existence of a trust. It is due to this feeling that the trade has had to stand a great deal of injustice and it is up to the lumbermen to counteract it.

According to Secretary Doster the point

toward which lumbermen should strive in their operations is to get every possible foot of lumber from an acre of land and by encouraging the use of veneers and thin lumber and minimizing in waste, to do all in their power to perpetuate the present supply of timber and the lumber industry. The popular belief in an approaching lumber famine was ridiculed by the speaker, who pointed out that the many substitutes for wood which are more extensively used every day, together with the increasing interest in conservation will do wonders in lengthening the life of the forests. The speaker believes that efforts should be made, not so much with the idea of reproducing the trees for this generation or even for the next as of saving what now stand.

Further, relative to the existence of a trust, it was pointed out that during the recent panic prices on some kinds of lumber advanced, while others went down. It is not reasonable to suppose that this would have occurred if there was a trust.

Secretary Doster announced the coming meeting of his association at Cincinnati, February 1, 2 and 3, stating that there will be additional features of attraction this year which will make it well worth attending. It is intended to make a study of the mechanical end of the lumber business, from the log up, and to illustrate there will be a series of stereopticon and moving pictures taken from the actual work and showing all the stages of operation.

The speaker closed with a general "bid" to the convention and gave way to "The Lumberman Poet," Douglas Malloch of the American Lumberman, who kept his audience in a constant howl with his volley of stories and his clever knocks at the expense of some of the men present.

Ex-President Pritchard, who recently moved to Memphis, praised the men he found there and to show that he had good cause called on Captain Barksdale, a "real Memphis man." Captain Barksdale got off a string of stories in the real old southern style and also gave an interesting account of his own start and rise in the lumber business and concluded with some amusing reminiscences of his initiation into Hoo-Hoo.

A. H. Barnard, president of the Northwestern Hardwood Lumbermen's Association, told of the work and spirit of that organization, stating that its watchword is "Get Together."

F. S. Underhill of Philadelphia was the last speaker of the evening and his Irish jokes were a good panacea for indigestion. His efforts were rewarded by a motion, which was seconded and carried, to admit him as a member of the association.

The program was concluded with a solo effectively rendered by E. V. Stewart, followed by a selection by the quartet.

## Features of Conservation Week

Although no resolutions along those lines were adopted, it seems to have been the sentiment of the conference of governors held on January 19, at Washington, that state control of water power within their borders should be maintained.

Governor Willson of Kentucky opened up the matter, declaring that there are three distinct owners of power-producing streams, enumerating as follows: the private owner holding riparian rights; the state controlling water power; the federal government having control of streams for navigable purposes. Governor Willson declared that water power can be made to pay the expense of the states and that Kentucky alone could maintain the southern states with that source of revenue.

Governor Quimby of New Hampshire indorsed the new forest reserve bill fathered by Ballinger and Weeks, declaring that conservation in time would yield a profit to all concerned.

Governor Hughes of New York insisted on state control of water power, private parties merely having the right to lease such power. His views were supported by Governor Weeks of Connecticut. This principle was opposed in the afternoon session by Governor Brooks of Wyoming and Shafroth of Colorado.

In the evening the governors were dined at the White House by the President.

At the afternoon session of the National Civic Federation on January 19 a special committee submitted resolutions endorsing conservation of American forests and declaring for uniform state laws on forest taxation and for protection against forest fires.

The American Forestry Association at the close of its annual meeting reflected President Guild of Massachusetts.

State control over private lumber cutting was extensively discussed, recent court decisions pertaining to this subject being reviewed. It was pointed out that such control is very limited.

Forester Carey of New York recommended abolishing the present system of forest taxation. He recommended that lumbermen be consulted relative to local conditions prior to initiating new laws.

The association endorsed the principle of taxing timber separately, the Weeks forestry bill, larger state and national appropriations for forestry, and reforestation. It declared in support of Gifford Pinchot and his methods.

Pinchot earned warm applause when he declared that, while no longer connected with the service, he was sure of the work going on as efficiently as ever. He said that forestry has risen above the individual and has reached a point where it is bound to go, and expressed full confidence in Harry S. Graves.

At the annual banquet of the American Forestry Association held on the evening of January 18 President Guild endorsed Harry S. Graves and President Taft's approval of the Weeks bill.

The feature of the National Civic Federation

meeting was Gifford Pinchot's speech, which ran in part as follows:

"The policies now grouped under the name of conservation are of various ages. Some, like forest preservation, have been advocated by Americans for more than 100 years. Some, like the control of water power monopoly in the common interest, are younger than the present century.

"All of them today are in the valley of decision. We have come at last to the point of action, and we must either go forward or fall back.

"These conservation questions are today the overshadowing problems before the states and before the people. How they are settled will affect every man now alive and every citizen of this nation as long as it shall endure.

"Public sentiment is prepared and awake. For the second time a President of the United States has endorsed these principles in a message to Congress. Most of the recommendations which the recent message contains are well known to the friends of conservation and well approved. If it has omissions or passages with which I disagree, I have no concern with them today.

"Today the first consideration is this—that the friends of conservation must not be divided. The issues at stake far transcend every personal question. The plain duty of all the friends of conservation is to sink their differences, to unite on essentials, and to demand, with a unanimous voice, that Congress shall act on the President's recommendations, and act wisely and without delay.

"The President urges that the measures he recommends shall be taken up and disposed of promptly, without awaiting the investigation which has been determined upon. I echo his desire.

"Our duty is clear to look beyond and above all lesser strife in a common effort to reach objects of such transcendent importance to all the people. Now is the time for all good men to come to the help of the conservation movement, without regard to party, or prejudice, or any personal consideration whatsoever. The public good comes first."

C. L. Peck of New Jersey deplored the present destructive forest taxation and urged that that question be kept apart from politics.

The National Lumber Manufacturers' Association strongly endorsed similar views in a set of resolutions which declared that timber should be taxed only as cut, thus inducing conservative methods.

Similar resolutions were proposed by the National Conservation Association, they also declaring in favor of forest fire protection.

President McFarland, American Civic Association, declared that ninety-nine per cent of private timber land is destructively cut. He urged state control of such cuttings in the interests of conservation.

# Luncheon Chicago Hardwood Lumber Exchange

The Chicago Hardwood Lumber Exchange convened for its regular monthly meeting at the LaSalle Hotel at 12:30 p. m., January 17. After a delightful luncheon the meeting was called to order by President Brown, Secretary Dion recording. There was an attendance of fifty-eight.

The reports of the standing committees on membership and entertainment were the chief business to come before the meeting.

After the roll call and reading of the minutes of the meeting of November 27, which was attended by thirty members, President Brown in an effective way expressed his regret on the recent deaths in lumber ranks. He tendered the sympathy of the exchange to W. H. Hopkins, of the Theodore Fathauer Company, whose wife recently passed away.

The secretary was instructed to read the following communication to the Chicago Hardwood Lumber Exchange from J. D. Bolton, of the Hayden & Westcott Lumber Company, of Chicago, who, as a personal friend of the late Foreman S. Hendrickson, expressed his appreciation of the character of the deceased. The tribute is as follows:

Whereas, The Ruler of us all in His wisdom has called for our ranks a worthy comrade, and we realize that our associate and friend, F. S. Hendrickson, will never again meet with us and extend wise counsel and good cheer, it is with a sense of personal loss that we mourn and bow to the inevitable.

None there was who met him, either casually or often, but was honored by his hall of good fellowship, and they knew the smile, which was ever a part of his greeting, was from the heart. His success reached beyond the commercial or financial phase. While alert and active in everything pertaining to his business, it was in his home, with wife, children and neighbors, that his memory will be cherished when the paths of business and daily routine become dimmed.

It is proper, therefore, that the members of the Chicago Hardwood Lumber Exchange, of which he was an honored member, should express their deep sense of loss and appreciation of his many noble qualities.

Therefore, Be it resolved, that this body has recognized in F. S. Hendrickson a character that is rare and of exceptional attributes; further, that these expressions of high regard and farewell be incorporated as a part of the records of this exchange, and a copy sent to the bereaved family and to the lumber press of the country.

The resolutions on the death of Mr. Hendrickson, which were adopted by the exchange at a special meeting, were printed in the last issue of the RECORD.

At the death of George W. Stoneman, of the Stoneman-Zearing Lumber Company, Devall's Bluff, Ark., the exchange convened for a special session to pass suitable resolutions, which were read by the secretary, which were as follows:

Whereas, The members of the Chicago Hardwood Lumber Exchange have heard with deep regret of the untimely death of George W. Stoneman, a highly valued fellow member and one who has long been favorably known and held in much esteem by the trade generally; and

Whereas, We regard with deep respect the recollection of his uprightness of character and straightforwardness of purpose, and regretfully recall the memory of his sympathetic nature and genial disposition; therefore, be it

Resolved, That we extend our sincerest sympathy to his bereaved family, and

Resolved, That our secretary is hereby instructed to send a copy of these resolutions to them and to each of the lumber trade journals.

Earl Palmer,  
O. O. Agler,  
F. F. Fish,  
A. R. Vinnedge,  
Committee.

Following the reading of the resolutions President Brown expressed his pleasure at being able to report results already from the use of the stickers adopted at the last meeting. He said he had received eleven communications himself that were direct results of the use of this advertising, and he instructed the secretary to read several which had been received by the exchange.

Charles Westcott, chairman of the Member-

ship Committee, was the first to report on the work of standing committees. The following new members were admitted since the last meeting:

S. C. Bennett, Hardwood Mills Company.  
F. M. Baker, Hardwood Mills Company.  
W. A. Eager, Fisher building.  
A. H. Schoen, Columbia Hardwood Lumber Company.  
G. C. Pratt, G. C. Pratt Lumber & Tie Company.

Chairman Westcott suggested that each of the new members give the exchange a chance to see what he looked like, which suggestion the chair promptly put in action, the initiates responding in the order given, all uniting in tribute to the ability of the chairman to fill his office.

Before calling for the report of the Entertainment Committee, President Brown gave a short talk on the policy of the administration. He said that it is the plan to extend the membership to as many local lumbermen as can possibly be reached—he wants to get everybody in.

Chairman Lane of the Entertainment Committee, said that the large attendance at the meeting was a compliment to the president rather than his committee. He suggested in the form of a motion that the exchange have a banquet and evening of entertainment in the near future, to be given either at a hotel or club, the ladies to be invited. The president opened the question for discussion, and it was finally decided that the Board of Managers meet with the Entertainment Committee and go into the matter thoroughly, their report to decide the question. At the call of the chair, all who would promise to attend such a function stood, the recorder counting twenty-two.

An amusing discussion between two members took place when the question as to whether the affair should be formal or informal was being debated upon. The first member, in a tone of deep disgust, said that no lumberman ought to wear even a tuxedo, and moved that they be cut out. Whereupon his neighbor very mildly suggested that some people did look pretty badly in that kind of dress. But the plain citizen was not to be sat on so easily and came back with the remark that perhaps his neighbor could hire or borrow a suit more easily than he (the speaker) could.

The question was left in that condition, the president giving his assurance that the entertainment would not be attempted unless success was assured.

Chairman Trainer, of the Market Conditions Committee, reported that there was no market, or at least that it couldn't be reached on account of the heavy snow storms.

The following open letter from President Brown was passed around during the meeting:

Chicago, December 24, 1909.

To the members of the Chicago Hardwood Lumber Exchange: It is with pleasure that I initiate the first practical result of the labors of our Publicity Committee and trust through the liberal and judicious use of these seals by our membership that much benefit may be derived. This is the beginning of a series of efforts to enlarge the scope of Chicago as a lumber market and to increase the respect with which the lumber fraternity of this city is held in various parts of the country. The standing of our organization is nothing more nor less than the individual character of any concern connected with it. Therefore it is earnestly hoped that our code of business ethics may be such as to inspire trust and confidence in the manufacturer as well as consumer and dealer of hardwood lumber. To accomplish these ends the earnest efforts of every member of our exchange are required and there is no doubt that same will be expressed.

Thanking you most heartily for the support you have given this cause and the ready response with which every request has been met, I earnestly solicit your suggestion for the benefit of any phase of this work as it must be a success.

Extending compliments to you of the New Year, I am,  
Sincerely yours  
(Signed) F. L. Brown,  
President.

Those present were as follows:

O. O. Agler, Upham & Agler.  
H. W. Baker, Holly-Baker Lumber Company.  
F. M. Baker, Hardwood Mills Lumber Company.  
John S. Benedict, John S. Benedict.  
S. C. Bennett, Hardwood Mills Lumber Company.  
J. C. Bennett, Upham & Agler.  
Fred W. Black, Fred W. Black Lumber Company.  
H. W. Black, Fred W. Black Lumber Company.  
Frederick L. Brown, Crandall & Brown.  
C. T. Cross.  
C. E. Crawford, J. L. Lane & Co.  
E. H. Detebaugh, The Barrel & Box.  
J. H. Dion, Maisey & Dion.  
H. B. Darlington, American Lumberman.  
Wm. A. Eager.  
Theo. Fathauer, Theo. Fathauer Company.  
L. E. Fuller, Lumber World.  
J. J. Fink, Fink-Heidler Company.  
D. B. Fox, St. Louis Lumberman.  
Q. Y. Hamilton, Lumber Shippers' Storage & Commission Company.  
H. S. Hayden, Hayden & Westcott Lumber Company.  
F. J. Heidler, Fink-Heidler Company.  
C. F. Holle, Heath-Witbeck Company.  
R. C. Hook, Southern Lumberman.  
W. O. King, W. O. King & Co.  
J. L. Lane, J. L. Lane & Co.  
H. H. McLaughlin, McLaughlin Lumber Company.  
Robert Maisey, Maisey & Dion.  
J. G. Mark, G. C. Pratt Lumber & Tie Company.  
F. B. McMullen, Fullerton-Powell, Hardwood Lumber Company.  
J. G. Marsh, Huddleston-Marsh Lumber Company.  
E. F. Marshall, Kerns-Utley Lumber Company.  
E. W. Meeker, HARDWOOD RECORD.  
T. A. Moore, T. A. Moore & Co.  
F. C. Norstrand, Cotton Belt Lumber Company.  
G. H. Ostrander, D. K. Jeffries & Co.  
G. C. Pratt, G. C. Pratt Lumber & Tie Company.  
Thos. B. Roy, Theo. Fathauer Company.  
Paul Schmechel.  
Alfred Schmechel, Empire Lumber Company.  
Alexander H. Schoen, Columbia Hardwood Lumber Company.  
W. C. Schrieber, H. H. Hettler Lumber Company.  
F. D. Smith, Fred D. Smith.  
L. A. Smith, Fullerton-Powell Hardwood Lumber Company.  
F. B. Sprague, F. B. Sprague Lumber Company.  
G. R. Thamer, Empire Lumber Company.  
W. E. Trainer, Trainer Bros. Lumber Company.  
J. S. Trainer, Trainer Bros. Lumber Company.  
A. R. Vinnedge, A. R. Vinnedge Lumber Company.  
D. W. Walker.  
J. C. Walsh, Upham & Agler.  
Charles Westcott, Hayden & Westcott Lumber Company.  
H. D. Welsh, E. A. Thornton Lumber Company.  
C. A. Wolfe, Heath-Witbeck Company.

The J. W. Wells Lumber Company of Menominee, Mich., has been dissolved, and in its place has been organized the J. W. Wells Flooring Company, which will operate the largest factory in the world for the manufacture of hardwood flooring.

Fire of unknown origin on January 12 destroyed much valuable lumber belonging to the Crescent Hardwood Lumber Company of Memphis, Tenn. The loss will amount to several thousand dollars. It is thought that the fire was of incendiary origin.

The Cherry Lumber Company recently began business at Union City, Pa. It will conduct a wholesale cherry lumber business.

The Wisconsin Handle Company, manufacturers of broom handles, recently started operations at Sturgeon Bay, Wis.

## Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

### Wants White Oak Dimension

MUSKEGON, MICH., Jan. 15.—Editor HARDWOOD RECORD: If you know of anyone who is in a position to cut white oak dimension stock at this time we will be very glad to have him take up the matter with us.—COMPANY.

Such hardwood patrons as are interested in opening a trade with a high-class manufacturing house can have the address of the writer of the above letter on application.—EDITOR.

### Distinctly Complimentary

MORRIS SCHOOL, Jan. 16.—Editor HARDWOOD RECORD: I cannot resist the impulse to tell you how much I appreciate your unflinching interest in helping me to a liberal education on the subject I am responsible to the city of Chicago for.

The last number of HARDWOOD RECORD was especially made for me, and I welcomed it as warmly as I should a human romance.

Thanking you most sincerely, I am, very truly yours.—L. HEINROTH, Principal.

Mr. Heinroth is engaged in the study of forestry, silviculture and kindred pursuits, and makes a specialty of imparting information on these subjects to the students of the Chicago public schools. He is enthusiastic on these subjects, and undeniably is performing in a very capable way an excellent and praiseworthy service.—EDITOR.

### Amends the Statement

ANTWERP, (Belgium), Jan. 7, 1910.  
20, rue de la Commune.

Editor HARDWOOD RECORD, Chicago: Your favor of December 22 to hand and contents noted.

From one of my American friends I received a clipping of your esteemed paper, concerning the dissolution of my old firm and which read as follows, under the head of "Chicago":

"The RECORD is advised that the firm of Brants, Franck & Co., Antwerp, Belgium, was dissolved on October 1, and the business will be continued under the style of Amédée C. Franck & Co."

The advice you received concerning the liquidation and dissolution of Brants, Franck & Co. certainly emanates from a false source, and as ex-active partner of the firm in question I beg you respectfully herewith to insert in your first next issue following correct report:

"Brants, Franck & Co., in liquidation, Antwerp, Belgium, will have no successor at all; hence, the new firms, August Brants or A. C. Franck, are not at all entitled to use the misleading style of 'successor of Brants, Franck & Co.' The fact is that both ex-partners, Mr. Brants and Mr. Franck, are establishing a business separately of their own."

This is the truth concerning the dissolution of B. F. & Co., and I beg you respectfully to have your erroneous report corrected by the above mentioned lines.

I beg to inclose you herewith official statement of dissolution of my firm in question.

My subscription to your esteemed paper will follow by one of the next mails.

Thanking you in anticipation for your prompt attention to this matter, I remain, yours truly.—AUGUST BRANTS.

Referring to the above communication, it

may be stated that the information on which the paragraph in question was based was received from Amédée C. Franck. It transpires that Mr. Brants does not entirely agree with Mr. Franck on the subject involved.—EDITOR.

### Looking for the "Lumber Queen"

Mrs. Emma A. Chamblis of Memphis, Tenn., writes the editor a letter, asking for information about Mrs. Effie Rolston of Kentucky. The lady incloses a letter from Hampton's Magazine, stating that it is extremely anxious to hear at an early date in regard to the apple woman, and that it has just learned that Mrs. Rolston is one of the largest lumber dealers in the world, generally known as the "lumber queen."

Mrs. Chamblis is anxious to get information for this magazine about the mythical lumber queen in question. She has been advised that Mrs. Rolston may be one of the foremost apple women in the world, but she is not generally known in the lumber trade, and undeniably is not "one of the largest lumber dealers in the world." As a matter of fact, the lady is unknown in the HARDWOOD RECORD office.—EDITOR.

### Wants Large Flake Quartered Oak and Cherry

The following letter is self-explanatory, and anyone desiring to get in touch with this wholesale consumer can have the address by writing this office.—EDITOR.

GRAND HAVEN, MICH., Jan. 17.—Editor HARDWOOD RECORD: We have always had considerable trouble in getting quarter-sawed oak with a nice, large flake. Our trade insists on quarter-sawed oak well figured and with large flakes. Will you advise us in what manner or from whom we can purchase quarter-sawed oak so that we shall obtain the kind desired. We use the No. 1 common grade in 4/4, 5/4 and 6/4 thicknesses. Will you advise also where we can buy to the best advantage No. 1 common cherry in 4/4, 5/4 and 6/4 thicknesses?  
COMPANY.

### Miscellaneous Exploitation of Lumber

GRAND RAPIDS, MICH., Jan. 18.—Editor HARDWOOD RECORD: In response to your favor of the 14th inst., directing attention to the proof sheet of our annual requirements of hardwood lumber, etc., and asking whether or not it is necessary for you to make any corrections on same, beg to advise that as you have enumerated our requirements here they appear to be quite correct.

We might take this occasion to say, despite this fact, however, we do receive many letters in the course of a day quoting us on lumber that we do not use, and we are in hopes that with our requirements correctly before the lumbermen, we will soon feel the good effects of your system.

Thanking you for your kind attention always, we beg to remain.—BISSELL CARPET SWEEPER COMPANY, J. W. Shanahan, Supt.

The above refers to a letter sent to the Bissell Carpet Sweeper Company, and to many thousands of wholesale consumers of hardwoods who are listed in the RECORD's Bulletin Service, asking them to make any changes or corrections necessary in their record of annual

requirements as listed in this service.

The RECORD finds that the majority of wholesale consumers have amended the items of stock they will buy during 1910 to a remarkable extent, but the Bissell people have a line of production which is standard, and in which they do not change materials from year to year.

The paragraph in the letter which is particularly important to hardwood manufacturers and dealers is that pertaining to the fact that they receive many letters in the course of the day making prices on lumber that they do not employ. This is a general complaint among manufacturers of hardwood lumber, and militates very seriously against the making of sales by concerns who keep in close touch with the HARDWOOD RECORD Bulletin Service (and by so doing know exactly what the prospective requirements of each concern is) and thus quote only on items of stock employed.

It is a point well worth the consideration of houses who send out miscellaneous literature without this advance knowledge. Such circulars, stock-lists and price-lists become simply a nuisance, besides taking a lot of time and postage, and do not contribute to the desired end, the making of sales.—EDITOR.

### Interested to Know How the Fight Came Out

SHEBOYGAN, WIS., Jan. 12.—Editor HARDWOOD RECORD: Those letters from the young man who is studying forestry in Germany make a "hit" with us. Let's have some more of 'em. Am anxious to know how the boxing match came out which the American boys were going to pull off for the benefit of the "Choi-mans." How did they like it? —

The letters of one of Dr. Schenck's forestry students engaged now in the study of German forests is certainly receiving a lot of encomiums from HARDWOOD RECORD readers. The editor of the RECORD envies every one of the boys. Each one is having the time of his life, and there is a lot of knowledge being picked up by all of them, in spite of the good time they are having.—EDITOR.

### One on the Record

Last mid-summer the C. L. Ritter Lumber Company of Huntington, W. Va., with several milling plants throughout the mountain country, purchased a mill of the Yellow Poplar Lumber Company located at Whitewood, Va., and in addition took over a large area of timber land nearby from which the Yellow Poplar Lumber Company had exhausted the poplar timber. This is all there is to the transaction.

Ever since that time the country press of the entire West Virginia and mountain country has been pregnant with stories stating that the C. L. Ritter Lumber Company had practically bought out the Yellow Poplar Lumber Company at Coal Grove, O., and had acquired the timber holdings of this company, etc. The RECORD was entirely cognizant of the transaction for months and has been practically laughing in its sleeve at the way the lumber press was being worked by these palpably inaccurate statements. Much to the

editor's diagram and disgust there passed through his hands and those of the copy editor an item of the same tenor emanating from the Bristol correspondent. The RECORD does its best to check up news matter for accuracy and insists that its numerous correspondents shall verify the statements they make, and their matter is ordinarily carefully perused to protect the possibility of misstatements, but in this case the item simply got away from us.

We therefore wish to apologize to the Yellow Poplar Lumber Company of Coal Grove, Ohio, who to the best of the writer's belief is the largest producer of yellow poplar in the known world, and probably will remain so for years to come.

### Who Is Interested in Holly?

LEBANON, KY., Jan. 14 Editor HARDWOOD RECORD: Will you kindly supply me with the names and addresses of as many lumber dealers as you can that carry holly lumber in stock? — & Co.

Holly does not seem to be carried in stock by but comparatively few concerns. The RECORD has supplied the inquirer with the names of a few institutions that carry it, but would like to supplement this list with everyone who can furnish this material. On receipt of this information it will list it in the RECORD's Card Index System and thus give the handlers of this wood the benefit of considerable additional publicity.—EDITOR.

### Some Splendid Mahogany Logs

Shown on this page is a small illustration of ten Sapeli logs, hewed square, the property of J. F. Miller & Sohn of Hamburg, Germany. The logs weighed eighty-five tons and contained sixty-two and one-half cubic meters, Hamburg square measure. The concern stated in a letter which accompanied the photograph from which this illustration was made, that these were the biggest mahogany logs ever landed on its yards, and were sold immediately upon receipt. This timber is particularly interesting since mahogany lumber is always gotten out without the aid of machinery, and handling large logs such as these by animal labor is a very expensive and arduous undertaking.

TEN FINE SAPELI LOGS.

### Preparations for Cincinnati Convention

The one theme of conversation among the members of the Cincinnati Lumbermen's Club is the convention of the Hardwood Manufacturers' Association of the United States, to be held at the Sinton Hotel February 1, 2 and 3.

A general Committee of Entertainment, composed of members of the lumbermen's organizations and those connected with the allied business concerns, is composed of Clif S. Walker, chairman; W. A. Bennett, W. E. DeLaney, B. F. Dulweber, George Puchta, Fred Mowbray, J. N. Hobart, Joseph Bolser, T. J. Moffett, Chester F. Korn and G. Clif Ault. This committee has been divided into sub-committees, as follows:

Entertainment—W. E. DeLaney, chairman; Joseph Bolser and George Puchta.

Finance—Fred W. Mowbray, chairman; B. F. Dulweber, T. J. Moffett, W. E. DeLaney and Chester F. Korn.

Publicity and Printing—Jos. Bolser, chairman; B. F. Dulweber, J. N. Hobart.

Banquet and Admission Tickets—Chester F. Korn, chairman; George Puchta and G. Clif Ault.

The General Committee meets every Friday at the Business Men's Club, and the sub-committees have been busy every day. The Finance Committee reported ample funds secured. The Entertainment Committee report arrangements complete for the grand banquet which will be tendered to those attending the convention on Wednesday, February 2, at 7:30 p. m. The banquet will be set in the great hall of the Sinton Hotel, and ample arrangements have been made for seating all who attend, and from present indications more than 500 will be entertained at the dinner. Following the dinner there will be a great vaudeville show on the stage of the hotel ballroom, in which there will be numbers from all the best shows in the city, the whole affair being arranged by Manager Schoettle of the Columbia Theater. While the dinner is being served Esberger's orchestra will give a select program of music. The lumbermen of Cincinnati are using every effort to make the coming convention the most memorable in the history of the lumber trade.

### Cincinnati Convention Headquarters

The forthcoming convention of the Hardwood Manufacturers' Association to be held on February 1, 2 and 3, Cincinnati, is at least going to have high-class hotel accommodations for this event. The accompanying picture is that of the Sinton Hotel, in the big Convention Hall on the ninth floor of which the several sessions of the meeting will be held. On the same floor is a large assembly hall, which will also be em-

ployed for sundry meetings that will be carried out simultaneously with the general convention. In this convention hall will also be held the open trading session which is a new feature of lumber conventions.

Although the Sinton is a large, modern and high-class hotel, its capacity will surely be taxed to the utmost to provide accommodations for the crowd that will be in attendance at this meeting, and reservations should be made by wire quick.

The RECORD offices during the convention will be Room 909 on the convention floor of the hotel. This will be general headquarters of the DAILY HARDWOOD RECORD, which will be issued

THE SINTON HOTEL, CINCINNATI.

during the convention and at the offices will be exhibited the RECORD's "Selling Lumber by Mail" system, and the new Gibson Tally Book.

All visitors are invited to call and make themselves at home.

### Obituary

Through the death of George W. Stoneman of the Stoneman-Zearing Lumber Company of Chicago, Ill., and De Valls Bluff, Ark., the lumber trade has suffered an irreparable loss. Mr. Stoneman passed away on January 10, at the residence of his father-in-law, R. S. Fleming, 5276 Washington avenue, St. Louis, at the age of forty-five years. He had operated successfully in the southern field for many years and was among the most highly respected and best known hardwood lumbermen.

Mr. Stoneman was initiated into the lumber business in the early 80's, starting in the employ of Thomas McParland, who then had a yard on Kinzie street, near Halsted, in Chicago. In 1888 he formed what proved to be a successful partnership with H. L. Parmelee under the style of Parmelee & Stoneman. After a lapse of several successful years Mr. Parmelee, on account of poor health, sold out his interest to his partner, who conducted the business alone until his association with George B. Zearing under the firm name of the Stoneman-Zearing Lumber Company. This concern did a manufacturing and wholesale business in hardwoods and, besides its Chicago connections, had offices and mills at De Valls Bluff, Ark. Mr. Zearing died several months ago, but Mr. Stoneman carried on the business up to the time of his death. He was at one time treasurer of the Chicago Hardwood Lumber Exchange and when he died was a director in the National Hardwood Lumber Association, and had always been known as an energetic and loyal worker in the hardwood trade.

His wife, Cora Fleming Stoneman, died four years ago, and he leaves three children, Evelyn, Robert and Paul.

Services were held Wednesday, January 12, at 1:30 o'clock, from the Second Baptist Church of Chicago, where Mr. Stoneman had been a mem-

ber for eighteen years. Although not living in Chicago at the time of his death, he was a trustee and took an active interest in church affairs. Interment was at Forest Home Cemetery.

The services were largely attended by business friends and the many floral pieces from Chicago and out of town were a silent tribute to the character of the deceased and showed the respect in which he had always been held by his associates.

THE LATE GEORGE W. STONEMAN.

On announcement of Mr. Stoneman's death the Lumbermen's Club of St. Louis held a special meeting to appoint a committee to draw up suitable resolutions.

### The Broad Invitation of the Hardwood Manufacturers' Association

Without doubt, the forthcoming annual convention of the Hardwood Manufacturers' Association of the United States, to be held at the Sinton Hotel, February 1, 2 and 3, will be the largest, most successful, and most enthusiastic hardwood meeting ever held. Something of the effort that is being put forth by the officers of the organization to make a success of this occasion is manifest in the "Official Call and Invitation," which is given herewith. The invitation has been sent out broadcast to manufacturers, wholesalers and consumers of hardwood lumber, and it goes without saying that there will be a large and enthusiastic response:

#### TO THE HARDWOOD INDUSTRY:

Dear Sirs: It becomes our pleasure to extend to you a cordial invitation to attend the annual meeting of this association, to be held at the Sinton Hotel, in Cincinnati, on February 1, 2 and 3, 1910.

This, our eighth annual meeting, promises to be the best convention that has ever been held of hardwood interests, in view of the fact that a large number of associations of buyers have signified their intention to attend, and other reasons which we would be glad to outline to you as follows:

#### THE PROGRAM

Our program this year will be one of unusual interest to every one interested in hardwood lumber; the papers to be read cover subjects of immediate and vital importance, and will be handled by men who have spent their entire lives in the work about which they will talk.

We will have addresses -

On costs of manufacture, by a successful manufacturer of hardwood lumber, well known to every one in the trade.

On gum manufacture and curing, by an expert in wood chemistry.

On wooden packages, by a prominent member of the box industry.

On hickory manufacture and uses, by a prominent vehicle man who has long been interested in this line of work.

And on other phases of questions of live interest to all branches of the hardwood trade from the stump to the finished product.

#### TRADING ON THE FLOOR

This year we will institute a new feature which has been suggested as one that would be of considerable value to all who will attend. This is the matter of trading on the floor, where items of stock will be offered for sale publicly, but not at auction, and those in the room who desire to buy the same will have the opportunity. Large blackboards will be at hand to make this work of the greatest possible benefit to those who desire to take advantage of this opportunity to dispose of some of their stock, and to this end every manufacturer should bring with him his latest stock sheet, especially covering items which he may desire to move quickly. Consumers also will no doubt have their wants in such shape that they may be spread before the assembly for offerings, and they are invited to do so. We believe that this feature will be well worth your attending the meeting, and it may be that you can take care of the expenses of the trip in this way.

#### COMMITTEE REPORTS

The various standing committees of the association will report to the convention on the work done during the year, and there will be some important developments without doubt in this part of the program. We especially refer to the committees:

- On Forestry.
- On Selling Systems.
- On Drainage and Improvement of Waterways.
- On the Official Insignia.
- On Transportation and Increase in Freight Rates.

On Standard Weights of Hardwood Lumber, and other pertinent subjects.

#### THE EXECUTIVE GRADING COMMISSION

You are perhaps aware of the canvass started by the lumber press regarding the advisability of the entire hardwood fraternity formulating and adopting one grading rule. This matter, so far as it has been taken up by this association, has been handled by our Executive Grading Commission, Mr. R. H. Vansant, chairman, and a full report will be made at this convention. We might add that the Executive Grading Commission will hold an all day session on January 31, at the Sinton Hotel, for the purpose of discussing this and other important subjects connected with our Bureau of Grades and Inspection Department.

#### ENTERTAINMENT

The entertainment of the visitors is in the hands of the Cincinnati lumbermen and allied interests. We are assured of royal entertainment during any and all leisure time that may be available, details of which will be made known later, but will state at this time that Mr. H. H. Gibson, editor of the HARDWOOD RECORD, will give a talk on mountain lumbering, illustrated by stereopticon and moving pictures of scenery, mountaineers, woodwork, feudists, etc.

Also, Dr. Hermann Von Schrenk will exhibit a number of stereopticon views and will accompany the same with his inimitable and exhaustive explanations, which are always of value and interest to our visitors.

#### HOTEL ACCOMMODATIONS

The Sinton Hotel will be our headquarters. Therefore, it will be necessary for you to immediately take steps to secure what accommodations you desire for the period of our convention. The rates are \$2 per day and up, European plan only, and you can no doubt get any kind of room you may desire, at proportionate prices.

This convention is the beginning of a mutual consideration for universal methods and it is hoped to bring the hardwood industry up to a plane of the highest standard and to keep it there.

We want you with us to assist to this and we are assured of a large attendance at the present time. The producer is vitally interested and we can not bring out the fact too plainly that he must be represented. The purchaser, in all of the various classes, must also be represented to get into operation the proper specific laws that will govern his future commercial welfare.

#### IMPORTANT

We want the buyers of lumber to understand in coming to this meeting, it is not with the intention that efforts will be made to go into the details of either purchasing or selling. The idea which we have to bring out is the fact that the consumer of lumber is a long way from the producer. The men who are in the timber and the heads of the sawmill departments are studying more thoroughly the wants of the buyer and only through the medium of an exchange of this kind can they meet on mutual grounds and learn by personal consultation the wants of the consumer.

It is the idea of the manufacturer to produce exactly what is desired and when the purchaser develops such information it will be a benefit to all.

We hope you will realize that the larger the number and the more varied the industries that

will be represented from the purchasing and consuming departments the greater the benefit will be to you. We want to bring out this fact very prominently to insure the purchasing element that it will be of great interest, not only at this meeting, but developments therefrom will redound to their benefit.

The officers and members of the association want you to attend and invite your hearty cooperation. Cordially yours,

R. M. CARRIER, President.

LEWIS DOSTER, Secretary.

Cincinnati, Ohio, January 15, 1910.

### Annual Philadelphia Wholesale Association

The Wholesale Lumber Dealers' Association of Philadelphia convened in annual session in the Union League building, Philadelphia, on January 13. More than thirty of the city's most prominent lumbermen attended the meeting, which was marked by general enthusiasm and good fellowship.

The most important business to come before the meeting was the election of officers for the ensuing year. B. Franklin Betts, who has most competently served two years as president of the association was not a candidate for re-election. There was no contest for any of the offices and the following were chosen for the coming year: F. S. Underhill, president; Horace A. Reeves, Jr., vice-president; Owen M. Bruner, secretary-treasurer. Three directors were chosen, each to serve a three-year period. They were William H. Fritz, Ralph Souder and Horace A. Reeves, Jr.

At the conclusion of the usual delightful dinner entertaining speeches were given by George F. Craig, president of the National Wholesale Lumber Dealers' Association, and E. F. Perry, secretary of the same organization. Mr. Craig

FREDERICK S. UNDERHILL, THE NEW PRESIDENT.

spoke at considerable length of the good work accomplished by the organization over which he presides, and also outlined plans for the future, which he predicted, when followed out, will prove of great benefit to the trade at large. He also took up fully the Car Stake and Equipment Complaint, and urged that as many members as possible go to Washington when a hearing is given this matter before a congressional committee.

Mr. Perry, secretary of the National Wholesale Lumber Dealers' Association, followed Mr. Craig and gave one of the most entertaining and interesting talks he has ever made.

The association decided to subscribe a minimum sum of \$100 to the National Wholesale

association to aid in its effort to carry the appeal of the adverse decision in regard to the Car Stake and Equipment Complaint. Reports of the various standing committees of the organization were read and approved. The work of the year as revealed in these reports shows that progress is being made in all directions, and that work is being accomplished that is of real importance to the members of the association. One firm was admitted to membership: T. B. Rayner & Co., recently organized, with headquarters in the Arcade building.

Those present were: George F. Craig, E. F. Perry, W. Whelpton, W. T. Betts, C. Walter Betts, B. Franklin Betts, Emil Guenther, Samuel H. Shearer, Edmund A. Souder, R. W. Wislar, John T. Riley, Thomas B. Hammer, I. W. Varner, Harry S. Field, Horace A. Reeves, Jr., D. Bush, Frederick C. Righter, John H. Hillman, Horace G. Hazard, W. H. Friebe, Killam E. Bennett, Franklin A. Smith, Jr., C. E. Lloyd, Jr., F. E. S. Troth, J. Randall Williams, Jr., H. G. Blatchley, Charles F. Fritz, M. Bennett, E. E. Slocum and E. Smith.

### Monthly Meeting Lumbermen's Exchange of Philadelphia

The Lumbermen's Exchange of Philadelphia held its regular monthly meeting on January 6, President Herbert P. Robinson in the chair. After the transaction of routine business, the report of Samuel B. Vrooman, chairman of the committee representing the exchange at the annual meeting of the National Rivers and Harbors Congress, was read, Mr. Vrooman being absent, by Secretary John H. Lank. Mr. Vrooman states in his report that the meeting was the largest and most enthusiastic ever held and that considerable progress has been made in this most important matter. The unpreparedness of the city of Philadelphia to handle the business that will accrue on the passing of this bill was dwelt upon in the report. There are no public wharves here to facilitate traffic, and incidentally mention was made of the action taken in Baltimore, where with great wisdom \$50,000,000 have been appropriated for this purpose.

Robert, C. Lippincott of this committee, corroborating fully this report, made some interesting remarks on the subject, after which Frederick S. Underhill, also a member of the committee, proposed the following resolution, to be laid on the table, and notices sent to the members of the exchange that the same would be brought before the next meeting for discussion and action:

Whereas, There is urgent need of immediate improvement of some of our important waterways as a measure to the prompt development of the commerce of our nation and to effective economical transportation; therefore be it

Resolved, That the Lumbermen's Exchange of Philadelphia heartily endorses the policy advocated by the National Rivers and Harbors Congress, etc., that a bond issue be provided for, by Congress, of fifty million dollars, with the proceeds of which work shall at once be commenced upon the improvement called for by the most meritorious of the waterway projects now under consideration, with the recommendation, however, that only such projects be supported from the fund as have been approved by the United States engineers, and concerning which it shall be required that the states and cities upon the waterways to be improved shall guarantee to provide facilities to care for the shipping, by the adequate improvement of their water fronts.

A letter was read at this meeting from Henry Palmer, vice-president and chairman of the Entertainment Committee of the Pennsylvania Lumbermen's Association, stating that the association had decided to hold the next meeting at the Hotel Walton, Philadelphia, on January 27 and 28, and that on the 28th a luncheon would be given, to which the members of the exchange would be invited. A letter received from the Philadelphia Car Demurrage Bureau showed that in November, 1909, 1,489 cars of lumber were

reported to this department by the various stations of all lines of railroads within the city of Philadelphia. These cars contained 22,335,000 feet of lumber. In November, 1908, there were 1,224 cars, or 18,360,000 feet reported, showing an increase over the previous year of 265 cars, or 3,975,000 feet.

At this meeting the secretary of the exchange was directed to notify the secretary of the National Wholesale Lumber Dealers' Association that the exchange will co-operate with them and send delegates to Washington, when the bill to compel railroads to furnish car stakes and other equipment necessary for the transportation of lumber and similar commodities on flat and gondola cars shall come up.

The Lumbermen's Exchange has interested itself in the subject of unheated street cars by the adoption of resolutions of disapproval of the Philadelphia Rapid Transit Company's practice of running insufficiently heated cars, and petitioning the Pennsylvania State Railroad Commission to use its best efforts to compel this company to furnish a sufficient amount of heat in all its cars at all hours of the day and night.

The following resolutions, relative to the death of J. E. Defebaugh, editor and owner of the American Lumberman, Chicago, were adopted:

The Lumbermen's Exchange of the city of Philadelphia, having learned of the death of Mr. J. E. Defebaugh, and being desirous of having in their minutes a record of same, the president appointed a committee to prepare suitable resolutions:

Whereas, Our friend, Mr. J. E. Defebaugh, who has been interested for many years with the lumber trade, has been called home;

Resolved, That in his death the lumber trade has suffered a great loss and one which will be deeply felt. We shall also miss his genial companionship, and the trade his useful services;

Resolved, That a copy be sent to the American Lumberman.

S. B. VROOMAN,  
J. W. DIFENDERFER,  
OWEN M. BRUNER.

### Monthly Meeting Lumbermen's Club of St. Louis

The regular monthly meeting and dinner of the Lumbermen's Club of St. Louis was held at the Mercantile Club on the evening of January 11. There was a large attendance. Besides, the address of Charles Huttig, president of the Third National Bank and also of the Huttig Sash & Door Company, there were several interesting matters brought up.

At the conclusion of the dinner President O'Reilly called the business meeting to order and announced that the regular order would be set aside and that Mr. Huttig would address the attendants.

He also announced that besides Mr. Huttig there were several guests present, among them A. G. Ruthman, B. F. Swain, W. H. Sill, A. C. Johnson, Charles C. Curry, Aug. E. Brooker and R. H. Hawes.

Mr. Huttig, after some introductory remarks, gave his address on "How a Bank May Build Up Its Deposits." The address was most interesting and showed how diplomatic and wise a bank president Mr. Huttig is.

When he had finished the club extended him a vote of thanks for his interesting talk.

T. W. Fry of the Charles F. Luehrmann Hardwood Lumber Company stated that he had just learned of the death of George W. Stoneman of the Stoneman-Zearing Lumber Company of De Valls Bluff, Ark., and that, while Mr. Stoneman was not a member of the club, he was a well-known lumberman and he moved that a committee be appointed to draft resolutions on his death.

Before proceeding with the business meeting there were a series of stereopticon views, pen sketches and caricatures of the newly elected officers and the chairmen of the various committees. The one that made the biggest hit was

that of President O'Reilly, who was shown as a "Paddy" twirling a shilolah. All were greatly enjoyed.

The regular order of business was then taken up. The minutes of the previous meeting were read and approved. The reports of the various committees were then called for.

The Membership Committee reported the names of the following gentlemen for membership, and they were read by Secretary Kessler and were afterwards elected unanimously to membership:

C. C. Curry of the G. W. Gates Lumber Company, Portland, Ore.; E. M. Cain of the E. M. Cain Lumber Company; E. M. Hubbard of the Tiger Tail Mill & Land Company and W. H. Sumption of the Robinson Lumber Company; Walter S. Grant of the Grayson-McLeod Lumber Company.

Julius Seidel of the Julius Seiden Lumber Company, chairman of the Entertainment Committee, reported that a picnic on the same order as the one given last season will be given the coming summer, as the last one was so successful. He also said that several other matters of interest in the way of entertainments are being considered.

R. F. Krebs of the Krebs-Scheve Lumber Company, chairman of the Traffic Committee, gave the report of the committee in the matter of increased terminal facilities, "arbitrary" charges, etc. The report concluded with the following resolutions which the committee recommended for adoption by the club:

Whereas, There will be introduced in the House of Delegates in the near future a bill granting to the Terminal Railroad Association the use of the streets and alleys in the so-called Rankin tract, in return for which the Terminal Railroad Association agrees to pay into the city treasury the following:

One hundred and fifty thousand dollars in lieu of the Clark avenue viaduct promised.

One hundred and fifty thousand dollars in excess of the actual requirement for a passenger station in North St. Louis.

Two hundred thousand dollars for the 40 feet taken from Market street when building the Union Station.

And they also agree to put up a \$50,000 station in North St. Louis and spend \$500,000 in eliminating grade crossings of the Terminal Company in the city as the street commissioner directs; and further, to pay \$1,000,000 for streets and alleys in the Rankin tract into the city treasury;

Be It Resolved, That the Lumbermen's Club of St. Louis hereby expresses its desire that such a bill should pass our Municipal Assembly without insisting on the immediate abolition of the remaining so-called "Arbitrary" charges at this time;

Resolved, That the Lumbermen's Club, having full confidence in the capacity and integrity of the Municipal Terminals Commission, we look to that body to endeavor to obtain at as early date as possible such further reduction in the charges for bringing freight and passengers into and out of St. Louis as can be secured by fair and just means, until we trust the proposed Municipal Bridge will make this service as nearly gratis as can be done.

Should this report be accepted by the club and the above resolution pass, we suggest that a copy of this report and resolution be mailed to each member of the Municipal Assembly and to each of the civic and business organizations of St. Louis, as well as to every newspaper of the city.

The report brought out quite an animated discussion.

J. E. Gatewood of the St. Louis Lumberman was one of the principal speakers. He spoke at length on the operations of the Bridge Arbitrary for the past few years and said that the Terminal Association injured St. Louis not only by its arbitrary but by its poor service; that it offered only what could be obtained by law, and that the time had now come to stand by the city council in its fight against the Terminal Association.

Mr. Krebs said that it was not what the Terminal Association had done but what it would do that interested the club.

C. L. A. Beckers of the Beckers-Schnell Lumber Company said that the passing of a resolution would not remedy matters; the best thing

would be to appoint a traffic man to suggest remedies.

After a great deal of discussion the report of the Traffic Committee was accepted and the resolution embodied in it was passed.

Then followed the reading of several communications, among them one in regard to the resolutions adopted by the club on the death of J. E. Defebaugh of the American Lumberman, a report of the Auditing Committee appointed at the last meeting, in which it was stated that the finances of the club are in good shape, and a letter from the Merchants' Exchange, asking for a report from the club on lumber conditions. The meeting then adjourned.

### Monthly Meeting Memphis Lumbermen's Club

The regular semi-monthly meeting of the Lumbermen's Club of Memphis was held at the Hotel Gayoso January 22. The usual luncheon was served and the attendance was exceptionally large. S. C. Major was in the chair.

One of the features of the meeting was report of the special committee, headed by W. B. Morgan, secretary-treasurer of the Anderson-Tully Company, which went to San Antonio to appear before the Western Classification Committee in connection with the proposed increase in the rates on packages made of pasteboard and other substitutes for gum and cottonwood lumber. This committee stated that it made a request that the matter be left over until the midsummer meeting of the classification committee, at which time it will be taken up further. Lumbermen here are much interested in this matter because of the important bearing it will have, in its final solution, upon the market for low-grade lumber, with particular reference to cottonwood and gum.

C. D. Hendrickson of the C. D. Hendrickson Lumber Company moved the appointment of a special committee to seek new consuming factories for Memphis in order that the consumption of hardwood lumber in Memphis may be radically increased, in keeping with its importance as the largest hardwood producing market in the world. The motion, however, after much discussion, was amended in such a way that, instead of the appointment of a special committee for the purpose, the subject was referred to the publicity committee, one of the standing committees of the organization.

N. Butley Haynes brought forward again the proposition looking to the establishment of a lumber exchange in Memphis for the furtherance of trading among local lumbermen for both immediate and future delivery and for the formulation of rules governing inspection in keeping with the character of the lumber remaining in the Memphis territory. He believes that such a step would be of vast benefit to lumbermen and to the lumber industry of this section, and has asked for early action thereon. The matter was referred to the board of directors and they will, after due consideration, advise the members by letter of their views in regard thereto. Then a date will be set at which this subject will be made one of the special orders of business.

W. R. Barksdale, chairman of the entertainment committee, recommended that the annual banquet be held in February and that, contrary to precedent, members be allowed to bring their wives, daughters or sweethearts. This is an entirely new departure, but the members accepted the suggestion most readily and the committee was authorized to proceed along the lines indicated. Mr. Barksdale promised that the affair would be of a kind to provide keen enjoyment not only for the club members but for the ladies whom they may have the pleasure of having as their guests. The exact date has not yet been decided upon, this being left to the discretion of the entertainment committee.

Resolutions were read, adopted, ordered spread upon the minutes and copies ordered forwarded to the families of the deceased in the case of the

following prominent lumbermen who have recently died: John B. Ransom, Nashville, who was president of the Gayoso Lumber Company, Memphis; F. S. Hendrickson of the F. S. Hendrickson Lumber Company, Chicago; George W. Stoneman of the Stoneman-Zearing Lumber Company, De Valls Bluff, Ark., and M. R. Perkins, Memphis.

A letter was read by Secretary Thompson from Mrs. Edith Gray Hendrickson of Chicago, thanking the club for the handsome floral tribute sent to Chicago on the occasion of the recent death of her husband, F. S. Hendrickson.

W. R. Barksdale, on behalf of members of the club, presented to James M. Thompson, secretary-treasurer, a check for a handsome sum in token of appreciation of the splendid service he has rendered the club during the past year. The position is entirely honorary, the constitution and by-laws making no provision for the payment of a salary, despite the large amount of work that has to be done.

### An Important Toledo Concern

A conspicuous figure in the lumber trade of Toledo, O., is the Frank Spangler Company, manufacturer and dealer in porch columns, composition capitals, wood turning and hardwood lumber. This business has grown from the modest beginning made by Frank Spangler in January, 1897, when he started to manufacture porch columns and wood turnings in a very

FRANK SPANGLER, TOLEDO, O.

small way, to its present enviable position in the trade.

For a short time these goods were sold as a side line in marketing lumber, but very soon both these lines of production prospered beyond one man's capacity to take care of them. In 1904, the business having grown to a remarkable extent, the Frank Spangler Company was incorporated with the originator of the business at the head and a few of his most trusted employees as associates. The past few years has seen an extensive growth as well as considerable branching out in the business of the company. The present officers are, Frank S. Spangler, president and general manager; Emily A. Frutiger, secretary, and A. D. Terbune, general salesman. The company is also well represented by traveling salesmen.

In porch column work the company gives special attention to the large colonial styles usually made to architects' directions. This phase of the company's business has increased so that the Toledo factory is no longer capable of tak-

ing care of the trade, and much of the work is now done under contract in Chicago and Detroit. At the latter city the company has a large warehouse where it keeps on hand always stock columns ready for quick shipment. The column department is in charge of Miss Frutiger, whose four years of training have made her very efficient in this work, as shown by the growth of her end of the business. Miss Frutiger is also office manager.

The most important feature of the Spangler business is the lumber department, which is under the supervision of the president of the company. Mr. Spangler enjoys the distinction of being a successful experimenter in woods in his city. About twelve years ago he undertook to introduce cypress as a substitute for white pine in his territory, and he built up an extensive demand for this wood and now takes the cypress cut of several mills and buys quite heavily in other directions as well. Three years ago he began advocating the use of tupelo for yellow poplar. While this plan has not worked out as successfully as the cypress innovation, the concern now handles several million feet of tupelo a year. Oak, gum, cottonwood, poplar and other hardwoods are also handled by the company.

The company, owing to its rapidly increasing business, for the convenience of the large office force and customers who frequently visit its place of business, has moved its office from 113 Maumee street to Suite 6 and 7, Smith & Baker building. Here more commodious quarters have been secured in a building located in the heart of the business district of Toledo.

The dominant figure in this enterprising Toledo concern is Frank Spangler, a lumberman of experience and foresight and a business manager of great ability.

With a strong determination to succeed, with energy and push and a well chosen motto, "Economy, industry and good habits," he has made of a small and modest beginning a large and successful business.

### Interesting Lumber Exhibit at Indianapolis

There was held in connection with the meeting of the Retail Lumber Dealers' Association of Indiana at Indianapolis recently a lumber exhibit which was very interesting and reflected great credit on the concerns participating. The affair was given on the eighth floor of the Claypool Hotel, and hardwood and softwood manufacturers from various sections of the country were well represented and showed some attractive displays.

The Greer-Wilkinson Company, Indianapolis, Ind., had an extensive line of doors, trim, stair-work, etc., and showed samples of all the necessary appurtenances to that class of work, such as varnishes and stains, brass trimmings, stained and ground glass. This concern is a firm believer in gum, most of its samples being of that wood. The company has put out an interesting little pamphlet entitled "Buy Gum, By-Gum." In this publication it does not attempt to prove the quality of gum by its own arguments, but quotes unsolicited indorsements received from dealers and private parties who have purchased its product or are using or have used that wood. The company's showing was very creditable.

The M. B. Farrin Lumber Company of Cincinnati laid particular stress on its excellent "Century Oak Flooring." The samples of "clear" of all sizes showed perfection of manufacture and of quality, while the No. 1 common was good enough to use anywhere. This concern also deals extensively in all forms of poplar, rough, dressed, bevel and drop siding principally, and in oak and other hardwoods.

For beauty of display the Rockford Manufacturing Company, Rockford, O., was easily in the lead with an unusually fine exhibition of figured veneers and fancy woods, "from quartered oak up," as their representative expressed

it. They do not confine themselves to veneers, but will figure on stairwork, trim and other solid work. S. J. Lewis was the able representative in charge of the company's display.

The Foster-Munger Company of Chicago had an elaborate exhibit, filling a suite of several rooms, one room being set aside for the convenience of visitors and containing check-room, writing-desk and other helpful features. This company showed an excellent line of redwood doors, trim, columns and stairwork, the only hardwoods in evidence being oak and birch.

The W. M. Ritter Lumber Company had representatives present, but showed no exhibit.

The Wildberg Lumber Company sent two representatives who presented visitors to its headquarters with leather-covered memorandum books bearing the firm name. This company does a hardwood business in Cincinnati.

### Further Acknowledgments

The HARDWOOD RECORD is in receipt of the following New Year's reminders, and wishes to thank the donors for them and to convey its best wishes for a prosperous New Year:

From Patricio Fargas, wood agent at Barcelona, Spain, came a handsome engraved card bearing wishes for a Happy and Prosperous New Year.

The Cherry River Boom & Lumber Company, manufacturer of West Virginia spruce, hemlock and hardwoods, with headquarters at Scranton, Pa., sent a handsome little pocket blank book bound in black leather. The preliminary pages are taken up with rates of postage, points of constitutional law, various useful hints for cleaning purposes, list of largest cities in the United States, some valuable tables, rules for computing interest, etc., and the remainder of the book is ruled to accommodate memoranda.

Robert C. Lippincott of Philadelphia, in sending their old reliable calendar, call attention to their increased facilities for supplying the trade with yellow pine flooring and yellow pine dimension timbers; also West Virginia spruce.

From Oscar Gartner of New Orleans, La., representative of Carl Gartner of Hamburg, Germany, came an artistic little calendar bearing a reproduction of a painting, "Nearing Port," by B. Kreutzer. This concern is a buyer and exporter of all kinds of lumber and logs.

S. N. Bradley, manufacturer of lumber, railroad ties, timber, shingles, staves, tan-bark and hickory billets, at Morehead, Ky., sent a large wall hanging showing a reproduction of a painting by A. Wood Hardy, entitled "The Morning Ride."

An artistic wall hanging, the calendar pad printed in large, bold figures, came from the Southern Pine Company of Georgia, whose headquarters are at Savannah, Ga.

Tickle-Bell & Co., shippers of African mahogany and Ceylonian walnut, with headquarters at Liverpool, England, sent an artistic calendar showing a picture of "the church where Shakespeare sleeps." It is well printed in soft colors and mounted on a stiff cream pasteboard mat.

C. C. Mengel & Bro. Company, the famous exploiters of mahogany, with factories at Louisville, Ky., Chicago, Ill., at various points in Mexico, at Belize, British Honduras, and Axim, Gold Coast, West Africa, has sent out a useful calendar bearing a picture of its great mahogany plant.

The Nichols & Cox Lumber Company of Grand Rapids, Mich., manufacturers of American hardwoods and Nichols' "Everlasting" maple flooring, sent an artistic wall hanging, a reproduction of a painting, entitled "Bess," by W. H. McEntee.

Another attractive calendar came from the Palmer-Hunter Lumber Company, handlers of hardwoods, at Boston, Mass. This calendar is of large size and the calendar pad is printed in good, large figures, easily read at a distance.

The Stevens & Jarvis Lumber Company, Eau Claire, Wis., showed a practical turn of mind in the selection of their calendar, which is of large size and printed in good, bold figures in black and red. The calendar also has a number of especially convenient features, such as the moon phases, a small calendar for the same month of next year on each sheet, and the days of the year are numbered from 1 to 365.

The Buffalo Hardwood Lumber Company, Buffalo, N. Y., manufacturers and dealers in hardwood lumber and veneer, sent the most unique calendar yet seen this season. It is one of the perpetual kind and has separate cards showing the month, the day and the year. These cards are printed on both sides so that when the different cards are turned back the reverse side shows an advertisement of the company's line of goods. The cards are mounted on a board of quarter-sawn oak, and the whole makes an attractive and useful addition to any office.

The Bellgrade Lumber Company, manufacturers of southern hardwoods, with mills at Bellgrade, Miss., and offices at Memphis, Tenn., sent a large and handsome calendar bearing a reproduction of a painting, entitled "A Glimpse of the sound from Montauk," by Thomas Moran.

### Late Liverpool Market

The trade here is quite a secondary consideration, as the general election is now in full swing. It is difficult to say what the result of this will be; in all probability the majority attained by either side will be so small as to be unimportant. If the tariff reform or conservative party obtain a majority they will undoubtedly place a tariff on all manufactured goods. It is difficult to say how far sawn lumber can be acquired as manufactured, but there is no doubt that five per cent will be placed on sawn lumber, ten per cent on planed boards and fifteen per cent on the fully manufactured wheels, furniture, etc. Of course it is more than possible that the Liberal or Fall Trade party may obtain a majority, but American hardwood dealers can be assured that tariff reform will come sooner or later.

The hardwood market is moderately firm and prices on many stocks have advanced. Wide canary whitewood is in much demand and shippers do not seem inclined to offer stock. Birch and maple seem stronger than previously and oak has undoubtedly had a substantial lift. Ash and hickory have arrived in large shipments and gone into consumption at high prices. Buyers are still crying out anxiously for shipments, and it is said that the shipper who would boldly send his wood to this port could obtain a small fortune. The mahogany position is much the same as when last reported. The position is hard to weigh up; the stock comes forward in plenty, but all goes into consumption. Whether the demand will continue is perhaps the question which provides the clue to the situation. The cotton trade in Lancashire, which is the leading spirit of the Liverpool trade, has been much hit by the high price of cotton, with the result that most of the mills are working short time.

### Miscellaneous Notes

The Nelson Mills Lumber & Manufacturing Company has filed articles of incorporation, with a capital stock of \$75,000. The company's headquarters will be located at St. Clair, Mich. Myron W. Mills, Dr. W. B. James and John Allen are interested in the new concern. It will buy, sell and manufacture all kinds of lumber, wood products and supplies.

W. H. Baker of Grand View, Ark., is contemplating establishing a hardwood timber plant in Harrison, Ark. Several business men of Harrison have agreed to take stock in the enterprise and indications are that a \$20,000 plant will be

put in soon. The new company proposes to finish wagon timber, plow handles, veneering, etc., and the plant will be of such capacity as to handle the output of several small mills throughout the country.

The Texas & Louisiana Lumber Company of Houston, Tex., is planning to add to its present plant new lumber sheds, wharves and more machine room. This concern is a wholesaler and retailer of yellow pine, hardwood and cypress lumber, and its business is increasing daily.

The Empire Manufacturing Company has been incorporated at Goldsboro, N. C., with a capital stock of \$200,000. The company will handle lumber of all kinds.

The Keyser Table Manufacturing Company, capitalized at \$10,000, has been organized at Keyser, W. Va., with the following officers: J. T. Sincell, president; W. C. Long, vice-president and manager; W. C. Bowden, secretary and H. L. Arnold, treasurer.

The Christiansen Lumber Company has been organized in Chicago to manufacture and deal in lumber and other forest products. The capital stock is \$20,000 and the incorporators are C. M. Christiansen, Jesse Lowenbaupt and A. Lamb.

E. G. Henkel, L. E. Sauter and R. P. Hollett have organized the Veneer Manufacturing Company at Chicago, with a capital stock of \$10,000.

Minnzger Brothers, operating large camps on Gratiot river in Keweenaw county, Michigan, will just about strip the last oak and pine timber in the forests of the copper country during the present winter. This firm is cutting for the Wisconsin Veneer Company and hauls its product to Lac la Bell, from where it is rafted to Ashland, Wis., by tugs. During the present winter it will cut 1,500,000 feet of pine, employing about 110 men in its camps.

The McGehee Hardwood Company at McGehee, Ark., has been dissolved by the withdrawal of J. K. and J. T. Jones. The business will be conducted by L. H. Alexander and S. H. Wright, retaining the firm name.

The plant of the Michigan Elm Hoop Company at Marinette, Wis., will be enlarged to manufacture fruit baskets and butter dishes in the early future, as well as staves, etc.

A large real estate deal was consummated recently, when the W. P. Brown & Sons Lumber Company purchased the old plant of Bergen, Meehan & Co., comprising six acres, in South Louisville. The transaction was negotiated by the real estate department of the Columbia Trust Company and the consideration was said to be in the neighborhood of \$30,000.

The holding secured by the Brown company is situated between Brook and Floyd streets, south of Shipp avenue. It is connected with both the Louisville & Nashville and Southern railroads. The new owners plan to raze a number of small buildings on the site and convert the big tract into a large lumber yard.

The Standard Handle & Lumber Company, Townsend, Mass., has been incorporated with a capital stock of \$26,000 by N. W. Davis, Fitchburg, Mass.; F. J. Piper, Townsend, Mass., and others.

Hageman Brothers, 1635 West Michigan street, Indianapolis, Ind., announce that they have completed arrangements with the National Veneer & Lumber Company of Indianapolis, to have charge of the sales of their entire output of quartered oak veneer. This arrangement will also permit Hageman Brothers to continue the selling of all kinds of veneer and enables them to supply the increasing demand for superior quality, well manufactured stock.

The Sands-Heydon Lumber Company of Grand Rapids has been incorporated at Lansing with a capitalization of \$100,000, of which \$50,000 has been subscribed. It is largely a timber proposition, the articles though giving the right to manufacture, buy and sell lumber and forest products. The company has holdings in the upper peninsula and other places. Charles A.

Sands, William Heydon and McGeorge Bundy are interested in the concern.

The Webster-Whipple Lumber Company, Minne-

apolis, Minn., has been capitalized at \$150,000 by H. Webster, V. A. Whipple and G. B. Webster of Minneapolis.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

A. R. Vansickle of A. R. Vansickle & Son, dealers in lumber and building material, at Tamms, Ill., was in the city yesterday calling on his many friends among the trade and paid the RECORD a welcome call.

A. B. Klise, the well-known hardwood lumberman of Sturgeon Bay, Mich., was in town visiting his friends in the trade last Saturday.

John E. Williams, for some years editor of the New Orleans Lumber Trade Journal, has moved to Chicago and joined the forces of the American Lumberman, and will hereafter be one of the editors of that publication. Mr. Williams is one of the best posted lumber newspaper writers of the country and his connection with this contemporary will insure continued conservatism in editorial policy and discussion.

W. W. Dings, secretary and sales manager of the Garetson-Greaser Lumber Company, is at St. Louis, having just returned from an extended Pacific coast trip, where he has been visiting his wife and family, who are wintering at Santa Barbara, Cal. He will be back at his desk in the Fisher building within a few days.

W. A. Gilchrist of the Three States Lumber Company, Memphis, Tenn., was a Chicago visitor on January 20.

I. F. Balsley, manager of the new Palmer-Semans Lumber Company of Pittsburg, made the RECORD a call January 19. The Palmer-Semans Lumber Company has engaged attractive offices in the Oliver building in Pittsburg, which it will occupy very shortly. Mr. Balsley was accompanied by Mr. Aldrich, one of his corps of salesmen.

A welcome RECORD caller on January 18 was R. K. Allison, president of the Cardwell Mill & Lumber Company of Cardwell, Mo. Mr. Allison says that business is active and that orders are taxing the present capacity of the company's mill.

About 150 of the employees of the Seaman, Kent Company, Limited, of Meaford, Ontario, lately enjoyed an elegant spread at the Hotel Meaford, the occasion being the first annual banquet tendered the factory hands by the company. Splendid toasts, songs and music made the evening pass only too quickly. Mr. Kent announced that a co-operative plan was being devised whereby those who had been in the company's employ for a certain number of years—probably five—would get something more than a banquet out of it a year from now. The Seaman, Kent Company and its employees are to be congratulated on their harmonious relations.

Burdiss Anderson, head of the big veneer plant, the Great Lakes Veneer Company, of Munising, Mich., was a welcome Chicago visitor on January 22.

R. G. Page of the Licking River Lumber Company, Huntington, W. Va., was a Chicago visitor January 21. Mr. Page reports having enough business on hand to keep his mills and oak flooring plant working at full capacity.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, spent Friday and Saturday of last week in Chicago on business in connection with the forthcoming Cincinnati meeting.

M. B. Reeder, representing the W. H. White Company of Boyne City, Mich., was a Chicago visitor January 15. Mr. Reeder reports that his concern is sold up close for this time of year, and will have comparatively little stock to offer until opening of navigation.

F. L. May of the May Bending Works, Steubenville, O., was a Chicago visitor January 15. Mr. May's institution produces vehicle and furniture woodstock.

E. D. Galloway, president of the Galloway-Pease Company, Cincinnati, spent several days in Chicago last week. Mr. Galloway is building up a handsome oak trade in this market.

J. F. Shaw, well-known lumber salesman, formerly associated with the Robert H. Jenks Lumber Company, Cleveland, O., is now engaged in the wholesale lumber business on his own account at 170 South East street, Grand Rapids, Mich.

The RECORD had the pleasure, a few days ago, of a call from A. A. Fredericks, purchasing agent of the Oliver Chilled Plow Works of South Bend, Ind. Mr. Fredericks' concern is one of the largest consumers of oak in the South Bend district.

J. D. Lacey of the big timber firm of J. D. Lacey & Co., this city, is making his headquarters at New Orleans for the winter and keeping track of the affairs at the office the concern maintains in that city. Wood Beal of the same concern is just back from a trip to some of the northeastern British provinces, where he has been on a timber cruise.

The Chicago Wholesale Lumber Dealer's Association is holding its annual election of officers in the Grill Room of the University Club today.

C. Crane, the big hardwood magnate of Cincinnati, was in town for a day last week.

The business of the F. S. Hendrickson Lumber Company, Masonic Temple, Chicago, will be conducted by the late Mr. Hendrickson's associates and on the same lines as it has been carried on in the past. The offices will be continued in the Masonic Temple.

C. L. Willey, the big Chicago veneer man, has just received a part of a shipment of 400 mahogany logs which he purchased at the Liverpool sales. Mr. Willey regards this last shipment as one of the best he has ever made, as quite a portion of the logs are turning out remarkably fine.

The Continental Planing and Lumber Company, which handles heavy red and white oak for construction and similar purposes, declares that there is absolutely no market at present for that class of stock. This concern is looking forward to a general opening up in spring.

G. C. Pratt of the G. C. Pratt Lumber & Tie Company of Chicago attended the Wisconsin Manufacturers' convention at Milwaukee last Friday. He reports doing enough business to at least pay the expenses of the trip. He reports it rather difficult to find birch.

The Estabrook-Skeele Lumber Company reports upper grades of birch and maple, especially maple, very active.

The Chicago Car Lumber Company, which does a large railroad business in ties, car stock, etc., reports that its business in that line is practically tied up.

This condition of affairs is attributed entirely to the uncertainty as to the policy of the administration at Washington. The railroads do not want to go ahead on improvements until they know whether or not they are going to be left alone, and declare that if they are going to be hit, they would rather be hit now and get it over with than to be kept in uncertainty.

The McParland & Konzen Lumber Company reports having placed several large orders at the recent annual meeting of the Indiana Hardwood Lumbermen's Association at Indianapolis.

The RECORD has received the annual report for

1908 of the Board of Regents of the Smithsonian Institution at Washington, D. C. This report is well printed and profusely illustrated with half-tone engravings and shows the operations, expenditures and conditions of the institution for the year ending June 30, 1908. It is bound in green cloth and is, indeed, a handsome and worthy representation of the work which is being carried on by this institution.

### NEW YORK

Doscher, Cardner & Co., well known wholesale cypress house of 11 Broadway, with branch at Jacksonville, Fla., has been incorporated under the style of the Doscher-Gardner Company, with a capital of \$200,000. No change other than that in name and enlarging of the business is comprehended in this change.

The Winchester County Lumber Dealers held their annual banquet at the Hotel Manhattan, this city, on the evening of January 21, at which time a large attendance enjoyed an interesting and entertaining evening.

I. F. Balsley, well-known Pittsburg lumberman, who recently changed his activity to the management of the new Palmer & Seamans Lumber Company, of that city, was in town during the fortnight on business.

O. H. Babcock of E. V. Babcock & Co., Pittsburg, visited Manager H. J. Gott at the local office of the firm, 43 Wall street.

E. L. Hunter of the Hoban-Hunter-Feitner Company, wholesale cypress, 1 Madison avenue, has just returned from a trip to the South, where he visited a number of the cypress mill connections. On his return M. J. E. Hoban of the company departed for the South.

The annual meeting of the Lumber Underwriters, well-known trade fire insurance organization conducted by leading wholesale lumbermen identified with the National Wholesale Lumber Dealers' Organization, was held at the local headquarters, 66 Broadway, on January 13, with all the underwriters present. Reports of the year showed large increase in business and premium account and a successful year all around in the work of the organization in the matter of reduced fire insurance rates to lumbermen and woodworkers exclusively.

A petition in bankruptcy has been filed here against the Hammond Lumber Company of Deming, N. Y., lumber manufacturers, by the Binghamton Trust Company, a creditor for \$2,646 loans, alleging insolvency, etc.

The Lumberman's Club of New York, which has now been in successful operation for several months, has decided through action taken at a recent meeting to move at an early date from present headquarters, 6 West 24th street, Manhattan, to much larger and more commodious quarters in the Hoffman House, corner of Broadway and 25th street. The Board of Governors has secured a fine layout here, which will practically give them exclusive quarters of a much more attractive character and at the same time the equipment and services of the popular Hoffman House. Constitution and by-laws were also adopted to perfect the incorporation of the club, and its future activities will, it is believed, result in a great development in the social life of the local trade.

George C. Lavery of Collins, Lavery & Co., of Jersey City and New York, sails on January 27 for his annual vacation, which he will spend at Jamaica.

Morris H. Gatchel, formerly with W. M. Crombie & Co., 81 New street, has severed his connection to join forces with the Campbell-MacLaurin Lumber Company, 1 Madison avenue, New York, and Montreal, Can. Mr. Gatchel will assist Arthur H. Campbell of the company in soliciting the local trade.

The large saw and printing press manufacturing company of R. Hoe & Co., this city, has, following the recent death of Robert Hoe, been

incorporated with a capital of \$5,875,000, for the purpose of continuing the business along the same lines as heretofore.

F. T. Sullivan, who for some years past has been connected with the sales department of T. Sullivan & Co., Buffalo, has severed his connection with that firm to join forces with H. H. Salmon & Co., wholesale house, at 88 Wall street, New York, for whom he will maintain Buffalo headquarters.

The C. O. Shepherd Lumber Company of 1 Madison avenue is about to go out of business. C. O. Shepherd is interested in and managing director of the Davison Lumber Company, Bridge-water, Nova Scotia, with office in room 10027 same building.

The Marshall-Polhemus Company, successor to Uptegrove & Polhemus, 1 Madison avenue, reports things in shape for sharp trading. The company occupies the office of its predecessor and has been in business a little over a month. The officers are J. A. Polhemus, president; John Knox Marshall, treasurer. Mr. Knox pronounces the outlook for 1910 very promising.

### BUFFALO

J. M. Briggs has been appointed Hoo-Hoo Vicegerent for this district and is preparing to hold a big concatenation at Rochester on January 25. Charles Allen and Charles Crouch of the order there are assisting in the work and promise about twenty new members. It is expected that about twenty Hoo-Hoos will go down from here to attend the concatenation.

Frank T. Sullivan, for several years connected with T. Sullivan & Co. as salesman and special manager, has engaged with the New York lumber house of H. Salmon & Co. J. Leo Throm has taken his place.

Miss Eugenia Vetter, daughter of F. W. Vetter, was married to Leo A. Weter in Holy Angels' Church at 11 o'clock on January 15. Lumbermen and others were profuse with wedding presents.

O. E. Yeager was away last week on a western trip that included attendance at a meeting of the trustees of the National Hardwood Association in Chicago. The yard reports active business.

T. Sullivan & Co. are prepared to look with calmness on the big snow falls of the winter, for they got everything in pile and inventory taken a day or two before the big snow came. A large stock is reported and demand for it good.

The business of the Buffalo Hardwood Lumber Company is improving and there is every indication of a big season ahead. J. B. Wall made a short business trip to Mount Clemens, Mich., recently.

The Buffalo members of the Hugh McLean Lumber Company, who, with their salesmen, paid a visit to the southwestern mills of the McLean interests, have returned quite well pleased with the operations under way, as they insure a good oak supply.

Scatcherd & Son are having a good many demands for stock from the Scatcherd hardwood door mill at Batavia, which is very active now. They are cutting out as much oak as possible at Memphis, but do not claim that they have enough.

A. W. Kreinheder of the Standard Hardwood Lumber Company finished about the most active campaign of his life—Manufacturers' Club exposition, politics, sickness in his family, with two weeks of the grip—but is out again and doing business.

G. Elias & Bro. would fairly be excused in thinking that the big snows were for their "benefit," for it caught them with a big lot of lake lumber not piled up, but they have hustled and are getting it into shape. Mill business has been good.

when asked of the prospect of a good lumber season. Business is increasing in all hardwoods. H. A. Stewart is in Pennsylvania, shipping in a lot of red oak that the firm has down there.

### PHILADELPHIA

Henry Whelpton, secretary and treasurer of the Owen M. Bruner Company, says that, notwithstanding the usual holiday lull and the asperity of the season, there has been a fair activity and the outlook is promising. Owen M. Bruner, president, has just returned from a trip through Virginia, the object of which was to size up conditions in the mill centers.

Charles G. Blake, manager E. V. Babcock & Co., reports a lapse of activity at this time due to the heavy weather. He is confident, however, the trade of 1910 will round up well and when the weather begins to settle orders undoubtedly will begin to come in. Horace A. Reeves, Jr., of R. B. Wheeler & Co., says that in spite of the blizzard, which has interfered more or less with the desired prompt shipment, business has kept up well and the outlook is encouraging. He warns the hardwood users that the scarcity of these woods is becoming more and more pronounced and that it behooves the buyers to protect themselves while they have the opportunity.

The Brown-Pates Company, wholesale lumber, Stephen Girard building, is the latest to enter the field. The personnel is composed of hustlers long known to the trade throughout the East. It was incorporated under New York laws with a capital stock of \$50,000. It will do a general lumber business, making a specialty of white, North Carolina and yellow pine, spruce, hemlock, cypress shingles, maple flooring, hardwoods and mouldings. The interests joining in the formation of the company are those representing White, Gratwick & Mitchell, Inc., North Tonawanda, and the Stevens-Eaton Company of New York City. G. A. Mitchell is president of the new concern, G. W. Brown vice-president, H. E. Bates secretary and G. M. Stevens, Jr., treasurer. Mr. Brown represented the Stevens-Eaton Company in Philadelphia for some time. G. M. Stevens, Jr., is of the New York house. A. Mitchell of Gratwick & Mitchell, Inc., and H. E. Bates was for many years with Wistar, Underhill & Co., of Philadelphia. Mr. Bates is making a tour of the southern lumber camps, visiting the mills with which the company is connected and getting a line on general conditions.

The Tomb Lumber Company states that it has had the best year's trading in its history and anticipates a shining record for 1910. Harry B. Tomb, president, says the company has purchased another Climax locomotive from the Climax Manufacturing Company, Corry, Pa., and has also added some new cars. There has been a general rearrangement of machinery at the company's mill at Watoga, W. Va., which will increase the output by about 3,000,000 feet of lumber per annum. The company is receiving very desirable orders from the Middle West, which territory is covered by W. A. Murray, formerly of W. M. Ritter Lumber Company. Mr. Murray is visiting the company's mill and will incidentally close some important contracts while traveling through the South.

Daniel B. Curl is much pleased over the wind-up of last year's business. He has just returned from a trip to the mill in Glenray, W. Va., in which he is interested and reports a decided improvement in the car shortage difficulty, which will enable him to promise prompt shipments. H. M. Curl, general manager of the Commonwealth Lumber Company, a brother of Daniel B., recently stopped in Philadelphia on his way to Pittsburgh. He had come directly from the West Virginia mill and testified to a general betterment all along the line.

A fleet of thirty-six barges, all from points in North and South Carolina and Virginia, laden

with lumber, railroad ties and mine props are icebound at Canton Hollow Anchorage, Baltimore. All are bound for Philadelphia and when they move towards the Chesapeake and Delaware canal it will take over a week to lock them through.

The Hickory Lumber & Handle Company of Benton has bought a 700-acre hickory forest near Danville, Pa., for \$25,000.

The Sharp-Arrow Automobile Company has awarded the contract for the building of its works in East Stroudsburg, Pa. W. B. Easton, president, and William H. Sharp, inventor and manager, say that work will be pushed on the new building. This concern was incorporated on January 11 with a capital stock of \$75,000.

A unique table composed of 10,060 pieces of wood of 115 different kinds, fitted together, is the work of Levi M. Lomemaker, a man seventy-three years old. He did most of the work with a pocket knife, a hand saw and a hammer, completing the job in 911 hours. The wood was obtained in a number of different countries, some of it being taken from historic spots. Several pieces of oak and pine are from the old wooden bridge which formerly spanned the Susquehanna at Columbia and which was blown down in a cyclone in 1896.

The Franklin Lumber Company, Real Estate Trust building, Philadelphia, knowing the propensity of the lumbermen for a good smoke, has presented an appropriate souvenir of the New Year in the shape of a neat and artistic match box, on which appears the significant inscription, "Let's Get Acquainted."

The planing mill of the Rightmire-Shriver Company, Morgantown, W. Va., was burned on January 11; loss \$50,000.

The Times Square Automobile Company, Philadelphia, was incorporated January 8 under Pennsylvania laws; capital \$5,000.

The Anthracite Motor Car Company, Scranton, was incorporated under Pennsylvania laws on January 12; capital \$10,000.

The Summit Lumber Manufacturing Company, to own, buy, sell, lease and deal in standing timber and timber lands, obtained a charter January 10 under Delaware laws. The incorporators are: Thomas McAlister, M. G. Ryan and John Barrett, all of Philadelphia. The company is capitalized at \$25,000.

The American Engine & Motor Company was incorporated January 10, with a capital stock of \$1,000,000. It will buy, sell, manufacture and set up rotary engines, automobiles, motor vehicles and power boats.

The Union Stair-Building Company, Newark, N. J., was incorporated January 18 under New Jersey laws with a capital of \$50,000.

### PITTSBURG

The Breitwieser & Wilson Company is getting well established in its temporary office in the Lewis block preparatory to moving to the fourth floor of the new Oliver skyscraper when it is completed. A. G. Breitwieser and William W. Wilson, Jr., the members of this firm, are so well known in Pittsburgh and have such an intimate knowledge of the lumber trade in the middle and southern states that they are starting right off with good prospects and steady sales.

C. Stitzinger & Bro. of New Castle, Pa., have bought 9,000 acres of hardwood timber in Preston county, West Virginia, for about \$200,000. They will build a standard gauge railroad up the Cheat river from Rowlesburg to develop the tract.

President John M. Hastings of the J. M. Hastings Lumber Company looks a little askance at the threatened legislation regarding corporations, as he fears that this, together with labor troubles, which are rather imminent, may unsettle the industrial and business situation this spring. He has spent much of his time

the past month in New York and finds business steadily getting better in that part of the country.

Secretary J. H. Henderson of the Kendall Lumber Company says that the mills of that concern were down a few days on account of deep snows. They have now resumed and are getting under full headway.

J. C. Linehan of the Linehan Lumber Company is in the South this week, and J. J. Linehan of the same company is down East, both hunting 1910 contracts.

President J. L. Lytle of the J. L. Lytle Lumber Company has been spending considerable time in West Virginia the past two weeks, where he booked up some very nice connections. His partner, W. H. De Voss of Greenfield, O., was over to look at Pittsburg prospects one day last week.

The Mead & Speer Company is doing a very steady winter's business at its Strange Creek plant in West Virginia. Both members of this company believe that 1910 is going to be an exceedingly good year for hardwood men and that the concern with dry stocks will be able to name its own prices in a few months.

W. D. Johnston, president of the American Lumber & Manufacturing Company, has gone South for a three weeks' trip. The American is pushing its red gum or American mahogany which it manufactures at its "Ayden" mill.

The L. L. Sattler Lumber Company looks with much favor upon this year's prospects so far. Mr. Sattler is arranging to make a larger cut at the plant at Blackstone, Va., than ever before.

The Acme Manufacturing Company, whose curtain stretcher and step-ladder factory on the north side was burned recently, is arranging to rebuild its plant as soon as possible. The present address of the company is 1221 Pennsylvania avenue.

The West Virginia Lumber Company has been very busy with its operations in northern Pennsylvania and will bring down considerable lumber on the Allegheny river as soon as weather conditions are favorable. Its office manager, B. W. Cross, reports a very brisk demand for white oak.

Bemis & Vosburgh are very hopeful of the situation for this year. Their 1909 business was satisfactory as business went last year, and their plans are all in good shape to make a record this winter.

Albert Strouss of Ashtabula, O., has bought from the receiver of the Texas & Ohio Lumber Company the entire timber holdings of that concern in Texas for about \$35,000. The members of the company are all Ashtabula county, Ohio, capitalists.

J. N. Woollett of the Aberdeen Lumber Company has returned from a long trip through the South and Southwest, where he contracted for the output of three band mills, which will furnish him gum and cottonwood. No man in Pittsburg is better posted on this trade than Mr. Woollett, his long experience as manager of the gum and cottonwood department of the American having brought him in close touch with both manufacturers and purchasers.

The Altoona Lumber Company has disposed of its lumber holdings in West Virginia, including about 8,000 acres of timber land, a sawmill and several miles of railroad. Albert Gohn, formerly of Windber, Pa., but now of Houston, Tex., was vice-president of the company.

The J. C. Donges Lumber Company is a new wholesale concern in the Lewis block which will be located on the ninth floor of the Oliver skyscraper for April 1. Mr. Donges represented W. W. Dempsey of Johnstown in Pittsburg for more than ten years, and has a very intimate knowledge of the lumber business and lumber connections in this district. His concern will handle hemlock, pine and hardwood, and is starting off with very nice prospects.

I. F. Balsley, sales manager of the Palmer-Semans Lumber Company, has been down East

for nearly two weeks getting a good line on the situation for this year. The company is keeping its general business offices at Uniontown, Pa., but will establish its sales office in the Oliver skyscraper at the earliest possible date, and there Mr. Balsley will be located.

The Pittsburg wholesalers who are shaping up the program of entertainment for the Pennsylvania State Retailers, who meet here January 27 and 28 in annual convention, are L. L. Sattler of the L. L. Sattler Lumber Company, J. B. Montgomery of the American Lumber & Manufacturing Company, W. W. Wilson Jr. of the Breitwieser & Wilson Company, J. P. Garling of the Empire Lumber Company and A. J. Diebold of the Forest Lumber Company. The banquet, smoker and vaudeville entertainment which they will tender the Retailers at the Fort Pitt Athletic Club January 27 is going to be "some doings" and more than 500 acceptances have already been secured.

The car stake matter, in which Pittsburg wholesalers have taken the foremost part from the start, is again agitated in congress. Next week E. V. and F. R. Babcock of E. V. Babcock & Co. will be heard before the Committee on Interstate Commerce. These men will make a very strong argument in favor of the railroads providing adequate stakes and fastenings for shipping lumber. The first argument made before the committee in this session of Congress was by Representative W. H. Graham of Allegheny, who spoke on the matter January 18. Ex-Governor William E. Stone of Pennsylvania was retained some two years ago as counsel for the lumber interests which had fought this fight almost to a successful finish, and the march of battle which the governor laid out is going to bring victory very soon, Pittsburgers think.

## BALTIMORE

Robert McLean, general manager of the Norva Land & Lumber Company, which operates a mill at Wallacetown, Va., states that business so far this year has been quite active. Inquiries are decidedly greater. Recently he placed white gum at a higher price than he ever before received in his business experience—an advance of not less than \$2 per thousand feet in the past three weeks being quoted. The interest in oak and other hardwoods is also decidedly on the increase.

R. P. Baer of R. P. Baer & Co. has gone on a business trip to the South. While away he will get in touch with millmen and study trade conditions at first hand.

Another Baltimore hardwood man who is out in the woods is David T. Carter, a wholesale dealer in the Calvert building. Mr. Carter started last Tuesday to take in western North Carolina, eastern Tennessee and parts of Virginia. He went with the desire to place orders for stocks, and expects to see a number of the millmen.

George G. Barr of Belcher & Barr, Pottsville, Pa., and Ben May of Adler, May & Co., Atlanta, Ga., were among the visitors here the past week. They stated that business was gradually picking up.

A petition was filed on January 5 in the circuit court at Hagerstown, Md., asking that a receiver be appointed for the Hagerstown Spoke & Bending Company. The petitioners allege that the factory is mortgaged to the Mechanics' Loan & Savings Institute for \$6,000, and that banks and individuals hold notes and open accounts against the concern for \$40,000 more.

The large sawmill of the Juniata Lumber Company at Midlothian, Allegheny county, Maryland, has been put in operation within the past ten days. The plant draws its timber from a tract estimated to contain about 15,000,000 feet, and several miles of tram road will be built so as to bring the logs to the mill, which is almost in the heart of the little town.

Stuart D. Walker, of Gouverneur E. Smith & Co., wholesale lumber dealers at 17 Battery place, New York, was in town last week. He had been to West Virginia after hardwoods, and it was his intention to go south from here. He stated that he found the millmen busy and expectant of an excellent year.

E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association, accompanied by Lewis Dill of the Board of Trustees, was in Washington yesterday looking after matters of interest to the association.

## BOSTON

Jonas P. Sawin, purchasing agent for the Heywood Bros. & Wakefield Company, Gardiner, Mass., for the past thirty-eight years, has resigned his position and has been succeeded by his assistant, Lewis A. Wright. Mr. Sawin has applied himself closely to business for the past forty-five years and will now take a long needed rest abroad.

Carl F. Vail of the Miltimore Lumber Company has opened an office in Boston at 70 Kilby street. The company's mill is at Asheville, N. C., where it manufactures hardwood lumber.

George Stone of the Stone Lumber Company, Boston, is expected home from an extended European trip during February. He has been away for several months.

H. W. Blanchard of the Blanchard Lumber Company states that the company has removed its New York office to the Bowling Green building, where it has larger quarters.

R. D. Redfern of the Owen Bearse & Son Company, dealers in mahogany, is in the West attending the exposition of furniture manufacturers in the different cities.

A report from New London, Conn., says that the boat building industry in that section has been rather quiet this season. Orders for new boats have come forward rather slowly, but there has been considerable repair work done.

M. J. Gibbud, who operates a woodworking plant in Hartford, Conn., has purchased a piece of property in that city and will build a new plant. It is estimated that the cost will be about \$30,000.

H. M. Bickford and Frank B. Wetherbee of the H. M. Bickford Company, Boston, returned early this month from a southern trip.

The woodworking plant at North Carver, Mass., was recently sold at auction. It was purchased by Melvin L. Fuller, who will continue the business.

## CLEVELAND

The Miller-Wells Lumber Company is the name of a new lumber concern in Cleveland. It has been organized by C. W. Miller, formerly with the Robert H. Jenks Lumber Company, and Daniel Wells of Detroit, who is the son of J. W. Wells, a prominent Michigan lumber manufacturer. The new company will engage in a general wholesale lumber business throughout this territory.

The Martin-Barriss Company reports an unusually active trade in hardwoods for this time of the year. Considerable hardwood finish is being furnished for use in big vessels now in dry dock here. The call for hardwood panels for cabinet and car work is also quite active. The concern looks for a big year's business.

Mrs. Mary S. Jenks, mother of Owen, John and Benjamin Jenks and a sister-in-law of Robert H. Jenks, recently died at the home of her daughter in Ypsilanti, Mich.

The Peters Millwork Company has leased the second floor of the large mill of the Mills-Carleton Company, containing nearly 18,000 square feet of space. It adjoins the present factory of the concern and is to be fitted up for service as rapidly as possible. It will double the capac-

ity of the plant. A new mill with electrically driven machinery is to be installed at once.

The Lake Erie Lumber Company finds its business expanding so that it has been necessary to acquire a lot 100 by 300 feet in size on Marquette avenue adjoining its general yards. This will be used for switching and yardage purposes.

C. H. Foote is back from Chase City, Va., where he assisted in arrangements for the dismantling of the mill of the Saw Mill Company. The machinery is being sold and the affairs of the concern closed up.

Officials of the Republic Lumber Company, which was incorporated a short time ago for \$10,000, have been opened at 718 Citizens' building. Owen T. Jenks is president of the company; George E. Anderson, vice-president; Thomas E. Gafney, secretary, and Thomas J. Rochford, treasurer. The directorate consists of these gentlemen and A. F. Gaughon. Rochford & Gafney have dissolved their partnership to become members of the new company.

The Advance Lumber Company, in the Rockefeller building, has been enjoying an unusually good business during the past two or three months, according to officers of the concern. The hardwood business has been particularly brisk.

W. A. Cool & Son say that the call for wide poplar boards continues for use in the automobile trade. Prices are quite firm, as the demand is very brisk. The only fear now entertained is that the wide clear stock will become so scarce that the automobile body makers will be driven to use some other material from which to construct their product.

L. A. Wilson, manager of the Cleveland Building Trades Credit Association, to which most of the lumber companies belong, reports that about 400 investigations were made each month during the past year, and that the association has nearly doubled its size. During the year about \$600,000 worth of attested accounts were filed in the courts, two-thirds being in behalf of the association members.

A new lumber concern in Cleveland is the Great Lakes Lumber Company, which was recently incorporated for \$10,000. It will engage in a general retail and wholesale business. W. H. Richardson is president of the organization, R. S. Thomas is treasurer and S. H. Thomas, secretary. Offices have been opened in the Williamson building.

A number of Cleveland lumbermen are in attendance this week at the annual meeting of the Union Association of Lumber Dealers at Columbus.

Visitors to Cleveland during the past few days have been H. P. Wilson of Duluth, E. P. Flowers of Montgomery, Ala., B. P. Wheadon of Bay City, Mich., and Charles Nagley of New Philadelphia, O.

## COLUMBUS

The coming of about 500 retail lumbermen, including traveling salesmen, to Columbus during the week of January 17-20, to attend the annual meeting of the Union Association of Lumber Dealers, had the effect of making the hardwood lumber trade quiet. There was not as much time devoted to selling lumber as in making acquaintances, entertaining the visiting members and in good fellowship generally. The hardwood jobbers and manufacturers represented in central Ohio united to entertain the delegates, which was done to the satisfaction of all who attended the meeting.

The C. T. Nelson Company has erected a flooring mill at its plant on Dublin avenue, where it will manufacture hardwood flooring in the future. The company has started its planing mill after a lay-off of several weeks to permit the machinery to be overhauled. C. T. Nelson, head of the concern, reports a nice run of orders, with good prospects for the spring

trade. J. H. Heyl of the company is in the South purchasing stocks.

John R. Gobey reports a lively demand for all kinds of hardwoods, with bright prospects for the spring. He says it looks like the fall of 1906 or the spring of 1907, which were the most prosperous times in the lumber trade. Mr. Gobey will leave after the meeting of the Union Association of Lumber Dealers for Mississippi and Louisiana to buy stocks for the Columbus concern.

W. L. Whitacre reports a quiet market, with good indications for improvement as the season advances.

H. G. Horton of the W. M. Ritter Lumber Company says the market is good since the inventory period has past and that prices in every direction are strong. He says manufacturing establishments are in the market for supplies, although many purchased before the first of the year for delivery during January. H. W. Collins, sales manager of the Columbus division of the Ritter company, was called to Pittsburg on business early in the week. W. M. Ritter is enjoying a several weeks' hunting trip in Georgia.

W. M. Boyer of the McLaughlin-Hoffman Lumber Company reports excellent conditions in the hardwood trade. He says prices show a tendency to advance and that orders and inquiries are coming in nicely. C. G. McLaughlin, general manager of the company, will soon return from a ten-days' buying trip through several southern states.

H. D. Brasher reports a quiet market in most lines. He says manufacturers are putting in good time and that they will soon be in the market for a larger supply of raw materials.

George B. Jobson, secretary of the A. C. Davis Lumber Company, has returned from a trip to Chicago and the Northwest. He reports unfavorable weather conditions in that section, which has had a bad effect on the lumber trade.

H. W. Putnam, president of the General Lumber Company, says the hardwood market is steady. Prices have not weakened under the influence of the inventory period. He says the car situation has improved considerably and that jobbers are now catching up in their orders. The General Lumber Company will start operations at its mill at Ashland, Ky., as soon as the water in the Ohio and Big Sandy rivers will allow the movement of a large number of logs which have been cut on the timber tract near Whitehouse, Ky. The mill at the timber tract is being operated on full time.

H. C. Buskirk, sales manager of the General Lumber Company, will visit the mills next week.

The John C. Shaeffer Handle Works at Delphos, O., were damaged to the extent of \$3,000 by a fire recently. The loss is fully covered by insurance.

The W. F. Kramer Company of Dayton has increased its capital stock from \$10,000 to \$50,000.

The Osborn & Sexton Company of Columbus has secured the contract to install machinery in the new plant of the Jewett Car Works at Newark, N. J. The new plant consists of a planing mill. The contract calls for \$26,000.

Reports compiled from Ohio, West Virginia and western Pennsylvania for the week ending January 12 show that contracts awarded amounted to \$583,000, as compared with \$1,172,000 for the corresponding week in 1909.

B. R. Johnson, formerly connected with the E. J. Robinson Company of Detroit, has taken a position as traveling salesman for the H. R. Allen Lumber Company of Columbus. He will cover northern Ohio territory.

G. O. McFarland, one of the partners in the Middle States Lumber Company, is in Louisiana, buying stocks. B. O. McFarland, another partner, is on the road. Both came here from Mansfield, O., where they conducted the McFarland Lumber Company.

J. E. Cummins, general manager of the Co-

lumbus Saw Mill Company, reports a very bright outlook in the hardwood trade. He believes that the year 1910 will be the most active in the history of the lumber business in Ohio. Mr. Cummins reports a good demand from every section, especially from Hamburg, Germany, to which point he ships a large amount of walnut.

At the annual stockholders' meeting of the Henry Holtzman & Sons Company, manufacturers of piano furniture, Frank P. Holtzman was elected president and general manager; W. C. Holtzman, vice-president, and Louis A. Holtzman, secretary-treasurer. The company recently completed several dry kilns and will erect a large addition to its plant in the spring. Mr. Holtzman reports a very bright outlook for the future.

At Washington Court House, O., the J. W. Willis Lumber Company, which sustained the loss of a planing mill by fire, will replace it at once.

A large number of retailers, wholesalers and manufacturers of hardwoods gathered in Columbus to attend the annual meeting of the Union Association of Lumber Dealers, January 18 to 20. One of the features of the entertainment of the 600 delegates was the theatrical performance given by the Columbus wholesalers at the Southern theater on Tuesday evening. The men contributing to the entertainment and acting as hosts during the convention were: H. R. Allen, H. C. Creith, A. C. Davis, H. H. Geisey, John R. Gobey, H. W. Putnam, M. A. Hayward, J. H. Hyle, E. H. Hammond, Messrs. McLaughlin and Hoffman, Rowell and Rowe, W. M. Ritter, H. W. Collins, F. P. Rogers, Thorp and Martin, W. L. Whitacre, J. W. Taylor and others.

## CINCINNATI

Secretary Lewis Doster of the Hardwood Manufacturers' Association is the busy man. Just dropped into the office Monday and Chief Executive Clerk Heaton says Mr. Doster left last night for Ashland, Ky., and will probably visit the meeting of the Union Lumber Association at Columbus, O. Mr. Doster returned Wednesday evening, arranged affairs at the office and left Tuesday evening for Chicago. This is going some, besides managing the office force and arranging correspondence and looking after the arrangements for the biggest convention ever held in the lumber trade's history.

The estate of Miss Annie Lloyd, the murdered secretary of the Wiborg & Hanna Lumber Company, was brought into the probate court and an administrator appointed. She had left no will and the estate will be distributed to brother and sisters. No clue nor any solution to her murder has yet been found.

Max Kosse, president of the K. & P. Lumber Company, has just been elected a member of the Board of Directors of the Metropolitan Bank & Trust Company of Cincinnati, O.

An old case in bankruptcy was settled in the United States court recently when Referee William H. Whittaker presented a record of the proceedings in the matter of the Borcharding Lumber Company of Cincinnati. The action was first instituted in 1906, but owing to litigation in the South in the interest of the creditors, but which terminated unsuccessfully, delay was caused in closing up the case. The creditors received two dividends, aggregating eight per cent.

The H. L. Mickle Lumber Company, for many years at the Mitchell building, on West Fourth street, will move about February 1 to a fine suite of offices in the new building of the Provident Savings Bank & Trust Company, at Seventh and Vine streets.

J. R. Davidson, formerly with the Cincinnati Northern Railroad freight department, is another railroad man to break into the lumber business. Mr. Davidson is now a member of the firm of

Doran & Co., with offices at 209 Bell block, at Sixth and Vine streets.

H. W. Fagin, formerly with the Dwight-Hinckley Lumber Company, has severed his connection with that concern and has formed an alliance known as Kirkpatrick & Fagin. The new firm has offices in the Provident building, at Seventh and Vine.

Col. Stanberry of the Chicago Coal and Lumber Company, is now in his new suite of offices in the Provident building. He was one of the early tenants of the building, moving in December 1, and occupied temporary quarters until the present suite was prepared.

The Swann-Day Lumber Company is having a special suite of offices prepared in the second National Bank building, at Ninth and Main streets. C. M. Clark is the Cincinnati manager. He is spending a few days at the plant of the company in Clay City, Ky., but will be at the offices early next week.

John S. Hurd of Chicago passed through the city last week on his way to his former home in Watkins Glen, N. Y. He called on numerous acquaintances while here.

Fred Fisher, manager of the Central Box & Shook Company, has severed his connection with that concern and will leave for Richmond, Va., where he will assume the position of manager of the plant of David M. Lea on February 1.

M. Chamberlin of the John M. Woods Company, Boston, Mass., was a visitor at the Hardwood Manufacturers' headquarters the past week.

E. J. Thoman, office manager of Bennett & Witte, returned recently from a trip to the Greenfield Lumber Company, in which Bennett & Witte are interested.

The Queen City Furniture Club will be represented in the conference of the Grading Commission of the United States, which meets in the Sinton Hotel on Monday, January 31, by George W. Schuette and W. J. Sextro, furniture manufacturers.

The severe winter weather of the past month has had a heavy effect on the lumber interests on the Ohio river. C. Crane & Co. have log rafts tied to the shores of the Ohio river for miles, and when the river froze solid the rafts became hard property to take care of. Last week the break-up came and with it a heavy rise in the river. The rafts were torn from their moorings and about 25,000 logs started on a wild run. The towboats of C. Crane & Co. in the harbor were started out and succeeded in landing a large number before they got many miles down the stream. The river is now rising rapidly and threatening much damage to property along the river front, especially that mile or more occupied by the big mill plant of C. Crane & Co.

An old log house has been discovered in the suburbs of Cincinnati which is over one hundred years old, and is made entirely of walnut logs and lumber inside and out, and the wood is said to be in perfect condition. It would cost something to put up a house like that at the present price of walnut. It is said that the site was formerly a walnut grove.

George E. Breen of the West Virginia Timber Company, Charleston, W. Va., was in the city last week looking after the disposal of the company's stock of hardwoods.

Harry Robinson, formerly well known in Cincinnati but now of the Stone-Robinson Lumber Company of Detroit, Mich., while on his way South, stopped over for a short while, looking up old friends.

D. R. Schoolfield of South Pittsburg, Tenn., was a sojourner in this city the past week, taking in the Cincinnati hardwood market.

The Ohio Veneer Company on Colerain avenue has just received the last of a shipment of high-grade mahogany logs, besides a large stock of rare woods, to be manufactured into veneers. Fred Bosken says that the company is now

cutting a great variety of fine wood veneers, and while it cuts a great deal of mahogany lumber, its veneer business is growing greater constantly.

President C. S. Walker of the Bayou Land & Lumber Company is very busy since his return from New York, whither he went to interest capital in his new land and lumber deal in Concordia parish, La. Mr. Walker is very enthusiastic over the new company's prospects, as he says the land is covered with an excellent growth of hardwoods, principally oak, and it is his intention to have the work of cutting on the tract commenced at the earliest possible date. The plant will be equipped with all the latest improved mill machinery, with every modern appliance to handle the timber and lumber to the best possible advantage.

## TOLEDO

A local contract which will furnish a market for considerable hardwood during the coming season is the new Toledo postoffice, which is now well under way. Under the contract the structure is to be completed by December 1, and it is said the building will be ready to turn over by that time.

At the home of his son in Toledo, recently, occurred the death of Michael Rosenberger. In 1852, with a company of twenty men, he went to California by the overland route, and he was the last man of the company to pass away. Four years later he returned to Ohio and was well known to hardwood men of this section, having engaged in lumber business extensively in Ohio and northern Michigan.

Mr. and Mrs. A. M. Chesborough of Toledo are enjoying an outing at their lumber camp in northern Michigan.

Mrs. James Huling, who for many years resided near Bellefontaine, O., was recently buried in a cedar casket made from a tree which had shaded her old home. Sixty years ago, when she was a child, she watched her grandfather plant the tree and jokingly remarked: "When I die this slip will have grown to be a large cedar tree and the timber will serve as my coffin." About a year ago she had the tree cut down and the lumber made into a casket, which was stored in her home.

Hardwood dealers all over Ohio are much interested in the appeal of the State Railroad Commission from the courts of Franklin county in favor of twenty-four railroads doing business in Ohio, which was filed in the supreme court recently. The lower courts held that the commission has no legal authority to enforce its orders or regulations regarding car service, demurrage and charges upon roads doing an interstate business. As most of their commodities are of an interstate character, they are peculiarly interested in the decision, which is awaited from the supreme court.

## INDIANAPOLIS

The Sanders & Egbert Company at Goshen has increased its capital stock to \$90,000.

William A. Guthrie, one of the wealthiest hardwood men in Indiana, is being mentioned for chairman of the Republican state committee, the election to be held February 3.

Frank C. Cline of this city and Fred E. Mustard of Anderson have purchased the yards and mill at Anderson, which were owned by the late George E. Springer.

The business of the National Veneer Products Company at Mishawaka has been incorporated with an authorized capitalization of \$10,000. Directors are Charles Endlich, M. W. Mix and F. P. Howlett.

Within a short time the name of the Columbia Creosoting Company at Shirley will be changed to the American Creosoting Company.

In 1909 the company creosoted 603,000 ties and treated 2,000,000 feet of lumber.

Francis P. Bailey, vice-president of the L. W. Ott Manufacturing Company, died recently at his home in this city from complications resulting from ptomaine poisoning. He was fifty-four years old.

The Talge Mahogany Company has recently increased its capital stock from \$200,000 to \$300,000. At this time the company is enjoying a big business and is looking forward to an exceptionally good year.

On January 31 the property of the Wilkie Manufacturing Company of Anderson will be sold at receiver's sale by order of H. C. Sheridan, referee in bankruptcy. The real estate will be sold for the benefit of bond holders. A debt of \$100,000 loaned to the company by stockholders has been stricken out of the entire indebtedness. The company is a manufacturer of hardwoods and refrigerators.

Articles of incorporation have recently been filed by the Dresden & Stanfield Lumber Company which has been in business at South Bend for a number of years. The directors are Henry C. Dresden, Howard S. Stanfield and Flora S. Stanfield, and the authorized capitalization is \$20,000.

The Madison Handle Company of Madison and the Columbus Handle Company of Columbus, under practically the same ownership, have purchased 250,000 feet of standing timber on the grounds of Hanover College at Hanover. Much of the timber is ash.

George L. Maas of the Maas-Neimeyer Lumber Company has recently purchased twenty-one acres of ground south of Garfield Park for the sum of \$13,750.

The Gemmer Lumber Company, by authority of the circuit court, has changed its name to the Gemmer Veneer & Lumber Company.

## MEMPHIS

Production of hardwood lumber throughout the Memphis territory is on a small scale compared with normal for this time of year, owing to the recent bad weather conditions. A heavy snowstorm tied up most of the mills during the preceding week and there has been a great deal of rainfall recently, with the result that but little lumber has been turned out. The woods are now very wet, making it almost impossible to do any work. An enormous amount of floating ice in the Mississippi makes it impossible for the mills here, which receive their timber by water, to make any progress whatever. There is a strong desire on the part of manufacturers to operate, and all mills that can be run are working, but a large number find it impossible to accomplish anything.

The Nickey Brothers Hardwood Lumber Company is erecting a plant here for the manufacture of hardwood lumber. It is located in North Memphis, on a large tract of land so situated as to give ready access to six lines of railway, thus making shipping and receiving conditions practically ideal. This firm is composed of the same gentlemen who operated at Galloway, Tenn., under the name of the Nickey-Dickson Lumber Company. The change of location to Memphis has been made because of the superior transportation facilities here, and also because the supply of timber on the company's land at Galloway has been exhausted. S. M. Nickey is president and W. E. Nickey is secretary. A. B. Nickey of the A. B. Nickey & Sons Company, is vice-president. The Nickey interests in Memphis will be materially augmented by the erection of the new mill, which is to be completed by the time the president of the company returns from his present European tour.

George M. Brasfield, president of the Brasfield-Thompson Lumber Company, which has a large mill at Biscoe, Ark., states that it will be placed in operation again within the next few days.

This plant has been shut down for some time. The company is an extensive manufacturer of gum lumber, owning timber lands in the Cache river valley.

The plant of J. W. Wheeler & Co., Madison, Ark., has resumed operations again. The company was handicapped for a long time by the absence of sufficient water to enable it to bring out its timber, but it reports that there is water enough and to spare for all practical purposes.

C. D. Hendrickson of the C. D. Hendrickson Lumber Company has accepted the position of manager of the operating department of the Banks Lumber Company. George Banks of Banks & Co., Hernando, Miss., looked after the lumber business of the latter firm prior to his death a few weeks ago, but there are now two firms, Banks & Co. and the Banks Lumber Company. The latter will handle all of the lumber business and will, under the direction of Mr. Hendrickson, operate the band mill at Lost Lake, Miss., and the two circular mills located at Ezra and Payne, Miss., respectively. It will also take the cut of a large band mill in Louisiana. Mr. Hendrickson has secured the services of E. E. Sweet and, owing to this fact, will be able to divide his time between the business of the Banks Lumber Company and that of the C. D. Hendrickson Lumber Company. D. W. Baird, who has for some time been sales agent for the old firm of Banks & Co., will continue to look after the selling end of the business for the new firm. His offices, however, will be located in Memphis, where the company opened yards a short time ago.

C. B. Dudley of the Dudley Lumber Company and J. W. Thompson of the J. W. Thompson Lumber Company have recently returned from a business trip to Chicago and other northern points. Since his return Mr. Thompson has been confined to his home with rheumatism.

F. B. Robertson, manager of the lumber sales department of the Anderson-Tully Company, is back from St. Louis, Chicago and other northern points.

## NASHVILLE

The will of Nashville's lumber king, John B. Ransom, written on the 19th day of last May, has been probated. It was witnessed by his brother, Arthur B. Ransom, Sam T. Meyers and W. J. McFerrin, all business associates. Mr. Ransom left an estate worth close to a million dollars. In fact, the face value of the stock he owned in various concerns, added to realty values and \$100,000 in life insurance, footed up \$800,000. In the firm of John B. Ransom & Co. the deceased owned \$315,000 worth of stock. He owned large blocks of stock in the Nashville Hardwood Flooring Company, in the Gayoso Lumber Company, the W. J. Cude Land & Lumber Company, the Conasauga Lumber Company, the Tennessee Realty & Warehouse Company, and smaller holdings in the Gray & Dudley Hardware Company, American National Bank, and Carnegie Trust Company. His home on West End avenue was worth \$50,000. Another place on West End he owned was worth \$20,000; one on the Harding road, \$50,000, and improved real estate \$27,000.

To his brother, George T. Ransom, the lumber king left \$10,000. To his brothers Arthur, Sam, Marvin, McEwen and Street and to his sisters Lizzie May and Anna he left \$2,500 each. He left the same to his old father, George W. Ransom; to the Protestant Orphans' Home, \$2,000; to the Old Womans' Home, \$2,000, and to the United Charities, \$2,000. To his widow he leaves one-third of his entire estate, including whatever insurance policies may be directed to her; also the home place and household effects. The rest of the estate is divided equally between his four children, Kate, John B. Jr., Mary and Elizabeth. He expresses the desire that the firm of John B. Ransom & Co. shall be continued in business and

that his son, John B. Ransom Jr., shall have at least one-half of testator's stock in the firm, the same to be duly charged to his share in the estate and charged at its book value. The son, John B. Ransom Jr., is given the option of taking stock in the Hardwood Flooring Company instead if he prefers.

The Nashville Trust Company is named as executor of the will and is instructed to hold one-fourth of the estate going to the widow and children in trust for ten years. At the end of that time the trust is to be dissolved.

Since the death of John B. Ransom his brother, Arthur B. Ransom, has been elected president of John B. Ransom & Co., thus succeeding his brother as the head of the company, and also president of the Nashville Hardwood Flooring Company. Arthur Ransom has also been elected a director in the American National Bank, thus filling that vacancy caused by the death of his older brother.

H. A. Batchelor Jr. of Saginaw, Mich., has taken out a permit for the erection of a big hardwood flooring plant to be erected in East Nashville, adjoining the plant of the Davidson, Hicks & Greene Company. The first building will cost \$10,000, and it is the intention of the company to be ready for work in a few months, in the spring anyway. Mr. Batchelor has already moved to Nashville and is making his home in the Seminole apartments.

A disastrous fire at the plant of the E. & N. Manufacturing Company was averted this week through the efficacy of a sprinkling plant. The fire originated in the varnish and paint room of the big plant, but it had gained little headway when a sprinkler cap burst and extinguished it. The most damage resulted from the water.

At the annual meeting of the Nashville Builders' Exchange, R. T. Creighton was unanimously reelected president; E. T. Lewis and W. J. Wallace were elected vice-presidents; John Oman Jr., treasurer, and Secretary Evans was reelected.

It is estimated that the present tide in Cumberland river will bring down at least a million feet of timber, and this will be enough to start all the dealers sawing. The subsequent tides are counted upon to bring down enough additional timber to keep the mills busy for many months in the year. Most of the timber to arrive anyway was contracted for some time ago.

The Nashville Tie & Cedar Company has just sent down a tow of 30,000 ties to Cairo, Ill.

In the inventory of its business for 1909 the Standard Lumber & Box Company reports a net gain over 1908 of thirty-three and one-third per cent. The last six months of the past year were within ten per cent of the heaviest business ever done by the company.

The Standard Furniture Company reports a most successful year and this company starts into 1910 with the expectation of increasing its business at least a third.

The Davidson, Hicks & Greene Company has recently doubled its capital stock to the half-million mark and is preparing to develop vast timber holdings in Overton and Fentress counties in the Cumberland mountains. The company owns about 15,000 acres of land in that region and a seven-mile railway has been built into the heart of the section. M. F. Greene of this firm is with his family at his winter home, Rockledge, Fla., and W. V. Davidson and family are spending the winter season at Cocoa, Fla.

J. A. Stovall has acquired the interest of J. A. Friddle in the woodworking plant of Friddle, Stevens & Co., and the name of the concern has been changed to the Nashville Woodenware Company.

The Nashville Y. M. C. A., the Board of Trade, the American National Bank, the Watauga Club, and other institutions with which the late John B. Ransom was prominently connected, have all adopted resolutions expressing sympathy and deploring the death of so useful a man to any community.

A recent visitor to the city was Lockhart H. Wallis of the Willow Lumber Company of Galveston, Tex. His firm does a big export business to Cuba, Mexico and South American countries, and at present is building a big viaduct across Galveston bay to facilitate its shipping. This viaduct will be of concrete and will accommodate four railroad tracks parallel to each other.

The Nashville Builders' Exchange held a big "house warming" at its new quarters on the night of January 4. Several prominent speakers were heard and a delightful repast was served. Secretary T. H. Evans submitted a review of the work for the past year. Resolutions were adopted deploring the then serious illness of John B. Ransom, and Dr. W. M. Anderson offered a special prayer for him. Mayor Howse was a special guest of the occasion and made a short talk to the gathering.

A special from Cookeville, Tenn., announces that the Nashville Tie & Cedar Company had just closed a deal, selling 40,000 cross ties to the Tennessee Central railroad. The deal was put through by S. R. Brinkley, representing the Nashville Tie & Cedar Company, and he stated that his company had contracted to furnish 100,000 more ties later on. The Tennessee Central has put in about 60,000 ties in the past year.

Another big deal is on to sell the immense land, timber and ore holdings of the Bon Air Coal & Iron Company. A syndicate composed of A. H. Robinson, Edgar Jones and E. C. Lewis has secured options on a majority of the stock and will endeavor to sell the same to an eastern syndicate. This company owns thousands of acres of rich timber land. There is \$1,880,266 of preferred stock issued and a like amount of common.

A Christmas fire cracker was the cause of the destruction of the Leathers Handle Factory at Dickson, Tenn., and caused a fire which did \$14,000 damage. The factory is being rebuilt and it is hoped to have it ready for operation soon after March 1. There was not a dollar of insurance, either on the handle factory or the grocery store adjoining, both of which were destroyed.

An annual review of the business done in Nashville during the past year in its various lines shows that \$9,700,000 was the total of the lumber transactions and \$4,000,000 of the furniture. The building permits in Nashville for the year 1909 exceeded those of 1908 by more than \$100,000.

A special from Harstville, Tenn., announces the death there of Major John G. Lowe, a prominent log handler of that section. Major Lowe was seventy-nine years of age and served with distinction as an officer in the Confederate army.

General Manager C. L. McConnell of the Nashville Hardwood Flooring Company was the recipient of a handsome gold watch and chain during the holidays, the gift of the employees of the plant and a token of their esteem.

## CHATTANOOGA

S. A. Williams of the Williams & Voris Lumber Company spent the holiday season in Indiana, combining pleasure with business.

J. M. Card of the J. M. Card Lumber Company has just returned from a business trip to Tuscaloosa, Ala. While away he bought a large tract of timber. A new band mill is being built, which will be equipped with all modern appliances. The main office will be at the office in Chattanooga, from which the business will be transacted.

A small tide in the river brought in some logs, which were sold to the local millmen at good prices, enabling some of them to start their mills. Reports from the upper Tennessee river and tributaries are to the effect that a large amount of timber will be cut and rafted this season.

O. V. Crabtree, a hardwood man from Boli-gee, Ala., was in the city recently on business connected with the Crabtree Lumber Company.

The salesmen of the McLean Lumber Company of Buffalo, N. Y., were in the city recently on a tour of inspection of the company's mills at Chattanooga, Memphis and Birmingham. Among the out of town visitors were C. B. Cox of New York, R. E. Bond of Springfield, W. W. Tyler of Buffalo, James Chamberlain of Toronto, Can., T. W. Nealin and Hugh McLean of Buffalo, N. Y.

A deal was closed in Knoxville recently by the representatives of an English syndicate for the purchase of 30,000 acres of virgin timber lands in the Smoky mountains near the Knoxville, Sevierville & Eastern railway. The deal involved a cash consideration of \$500,000. Large sawmills are to be erected and the timber, consisting mostly of poplar, oak and pine, will be worked into lumber.

### CHARLESTON

The decision of the Supreme Court of the United States early this month affirming the decision of Judge Dayton of the United States District Court, in the case of Abraham Acord and some fifty others against the Western Pochontas Corporation paved the way for one of the largest deals in timber lands in the history of West Virginia. The final adjudication of the suit gave the corporation title to some 69,000 acres of timber lands in Raleigh and Wyoming counties, West Virginia, and a deal has been consummated by which the W. M. Ritter Lumber Company became the owner of about 28,000 acres for a consideration said to be \$1,000,000.

Fourteen years ago the Western Pochontas Corporation instituted suits against the claimants, alleging that they were in possession of the property through the tenants, and that by the formation of the Citizens' Union they illegally conspired to defraud the corporation of the lands in question. The court was asked to set aside the alleged fraudulent deeds, which Judge Dayton did. The claimants carried the case to the highest court, which sustained Judge Dayton. The lands are rich in poplar, oak and hemlock and will be worked by the Ritter company through its Mabon and Fitzpatrick mills.

Another important timber deal in this estate was the sale of two tracts in Preston and Tucker counties, aggregating 9,520 acres, by James S. Lakin and O. C. Crane, of Terra Alta, W. Va., to G. G. Stitzinger of Newcastle, Pa., who already had large timber interests in this state. The consideration was \$197,000. The land is located along the tributaries of Cheat river, along a proposed railway from Rowlesburg on the Baltimore & Ohio to Parsons on the Western Maryland. The tracts are rich in poplar, oak, cherry and other hardwoods, with some hemlock. The tracts reach within six miles of the Baltimore & Ohio at Rowlesburg and already the purchaser has arranged to construct a switch and erect two large mills on the property, which is practically virgin forest.

The Honaker Lumber Company is making progress in the erection of its triple band mill at Honaker, near the Virginia line. The company owns a large tract in Buchanan and Russell counties Virginia, and is at work on a line of railway to develop the property. Altogether it will be necessary to construct forty miles of railway. There will be no waste of natural resources at this mill, as all products will be marketed except the sawdust which will be used for fuel.

A charter issued by the secretary of state to the Cole-Crane Land Company of Huntington, W. Va., with chief works in Logan county indicates a reorganization of C. Crane & Co., who for several years have been large operators in southern West Virginia. The new com-

pany has a capital stock of \$600,000, all paid, and owns 60,000 acres of timber lands. The incorporators are Clinton Crane of Cincinnati, who owns 2,998 shares of stock; James O. Cole of Peru, Ind., with 2,999 shares; John E. C. Kohlsaat, Charles H. Crane of Cincinnati, and Jules Omar Crane of Huntington, with one share each.

The Campbell-Brown-Davis Timber Company has been organized in Huntington, W. Va., with chief works in Logan county. The capital stock is \$20,000 and the incorporators are C. W. Campbell, William H. Gideon, D. W. Brown and C. N. Davis of Huntington; D. C. T. Davis of Charleston.

F. Lory & Sons have been capitalized at \$25,000 at Charleston, W. Va., to deal in lumber and operate planing and saw mills.

The Ball Land & Lumber Company, incorporated under the laws of Arizona with a capital stock of \$500,000, has been admitted to this state.

### BRISTOL

Among the visitors to Bristol this week was J. F. Pierpont of Chicago, general freight agent of the Chicago, Milwaukee & St. Paul, who came here to attend a meeting of the directors of the Paxton Lumber Company, in which he is interested. C. E. Paxton, in charge of the company's western territory, came over from Cincinnati for the same purpose.

J. P. McCain of W. G. McCain & Sons, Neva, Tenn., was a Bristol visitor last week. He reports his firm's band mill at that place has been closed for a few weeks, on account of the bad weather.

"The prospects for business this year are good, indeed," said F. C. Knight, sales manager of the Tug River Lumber Company. "Orders are coming in well and the situation is very encouraging."

Among the visitors to Bristol last week was William S. Whiting of the Whiting Manufacturing Company, who was on his way to his company's band mill near Bristol. Mr. Whiting said the situation is gratifying and he thinks the improvement that has recently characterized the lumber trade will continue. J. M. Lacy, superintendent of the company, was here on his way to western North Carolina, to look after the installation of new mills for the development of the company's extensive timber holdings in that section.

R. D. Loftis, superintendent of the east Tennessee mill of the W. M. Ritter Lumber Company, visited Bristol lumbermen last week.

The Carolina, Clinchfield & Ohio railroad, which is being built by George L. Carter of this city is rapidly extending its lines through Dickinson county, Virginia to Elkhorn City, Ky. While under construction the road in that section will be known as the Elkhorn City Southern, but is in reality a western extension of the new Clinchfield route. The road penetrates a timber region rich in poplar and hardwoods. Its construction will give Dickinson county, which is rich in virgin hardwood timber, its first railroad, and it is believed that it will be followed by greater activity in lumber manufacturing in that section. Already extensive logging operations are going on in Dickinson county and the Big Sandy river.

J. A. Wilkinson, the well-known Bristol manufacturer, reports a splendid business outlook for 1910. During the past year Mr. Wilkinson has materially augmented his timber holdings in Virginia and West Virginia.

Bird M. Robinson of New York, who, with his associates, is heavily interested in coal and timber lands in east Tennessee, was in Bristol this week and stated that the outlook for the more rapid development of these properties was good. Mr. Robinson has extended the new Tennessee railroad, from Oneida, Tenn., into a

rich timber region, where several large mills have been installed, along Little river.

E. Stringer Boggess of Clarksburg, W. Va., and J. B. Gray of the same place were visitors on the Bristol hardwood market this week, and spent several days conferring with local lumbermen.

H. M. Hoskins of the H. M. Hoskins Lumber Company is the proud father of a second daughter, at his home in this city.

J. W. Henniger, the well-known manufacturer and exporter of Chilhowie, Va., was a visitor among the Bristol lumbermen this week.

The Paxton Lumber Company reports a purchase of 1,000,000 feet of high-grade dry yellow poplar stock in western North Carolina.

Most of the band mills in this section are running straight through the winter. Only a few have suspended on account of the bad weather, while very few of the country mills are trying to do anything at all until the weather opens up. The roads in this section, especially in the rural districts, are almost impassable at this season of the year, though much stock which was hauled to the railroads last fall is being shipped out.

### LOUISVILLE

Transportation by rail and river has been the subject of most interest at the recent Hardwood Club meetings. On January 11, the club was addressed by Fred H. Behring, assistant general freight agent of the Southern Road, and by R. L. McKellar, freight traffic manager of the same system. Both discussed freight rates in an interesting manner. Visitors at the meeting were Mr. Chamberlain of John M. Woods & Co., Boston; W. D. Johnson of the American Lumber & Manufacturing Company, Pittsburg, and Hugh McLean of the Hugh McLean Lumber Company, Buffalo.

The following gentlemen formed a committee that took a trip to Indianapolis for a day last week to invite the Hardwood Club of that city to attend the convention of the National Hardwood Lumber Association, which meets here this year: H. J. Gates and Ed. D. Shippen of the Louisville Point Lumber Company; E. L. Davis of the Edward L. Davis Lumber Company; Barry Norman of E. B. Norman & Co., and T. M. Brown of W. P. Brown & Sons Lumber Company. At the last meeting the matter of entertaining the convention was discussed in an informal way, and is very probable that the convention will be held the first half of June.

While business has been most satisfactory, considering weather conditions and the time of the year, Mark Brown of W. P. Brown & Sons Lumber Company stated that January 17 was really their first good day that is the first day that had really taxed their capacity. There is a big pick-up in low grades, he reports, and, while the prices are not any too good, there has been more sold during this month than at any time during the last six months.

D. E. Kline of the Louisville Veneer Mills is well pleased not only with business conditions during the past month, but looks forward to the best year of his long career. Mr. Kline has taken a trip South in the interest of the firm, and expects to do a nice business.

E. B. Norman & Co. suffered some loss in the logs that they had stored at Six-Mile Island, part of them having been washed away in the breaking up of the ice. The company is receiving plenty of orders and is kept busy, its only trouble being difficulty in shipping lumber. Mr. Norman says that almost everyone whom they had quoted recently had ordered and he feels sure of a big business for 1910.

The best indication of the feeling of confidence in the prospects for a big year is found in the preparations that different firms are making to handle the business that they expect. The

Norman Lumber Company will occupy a big lot on Magnolia between Ninth and Tenth, some time during the summer, which will double the room it now has. Mr. Norman is very enthusiastic and feels that he is justified in taking over the new ground.

E. L. Davis of the Edward L. Davis Lumber Company states, without hesitating, that Louisville will handle lots of lumber this year. Business is very good with this firm and the most substantial way it can show it is by adding to its present holdings the plant that the Norman Lumber Company will vacate in the summer.

At the Ohio River Saw Mill Company, R. F. Smith has just finished putting in a new 50-horsepower motor and expects business will be much better than normal.

Mr. Spicker of the C. C. Mengel & Bro. Company says the company has made arrangements for a big business in 1910. The importations of mahogany into the United States in 1909 were in the neighborhood of 37,000,000 feet and this concern has already contracted for importations amounting to 12,000,000 feet, or practically one-third of the entire amount of mahogany imported into this country last year, in twelve shipments averaging 1,000,000 feet per month. Mr. Spicker states that the first cargo is on its way now and will be here any day.

D. C. Harris, secretary of the Hardwood Club, was in Chicago the greater part of last week and, while not in the best of health on his return, was busy at his desk Tuesday morning.

H. J. Gates of the Louisville Point Lumber Company reports plenty of orders on hand. He regards prospects for 1910 very optimistically.

The Ohio river has been a matter of much concern to the lumber industry in this section during the last month, especially since the thaw set in about ten days ago. An ice gorge which formed about eighty-five miles below Louisville, at a point called Wolfe Creek, caused an unnatural rise in the river of some twenty feet. C. C. Mengel, chairman of the Louisville Board of Trade, River Navigation Committee, sent a telegram to Senator Bradley and Representative Swager Sherkey at Washington, urging them to seek immediate relief from the Secretary of War and to have him give orders to local government engineers to have the gorge dynamited. Luckily, the thaw beat the dynamite, and unless heavy rains continue above, the danger is now over with.

Business men in general in Louisville and vicinity are so well pleased at the news from Washington, concerning the agreement for the appropriation for the improvement of the Ohio river, that the Commercial Club will arrange a big jollification to celebrate what is considered a great victory. The Commercial Club has sent a telegram thanking President Taft for the interest he has shown in the improvement in the Ohio in his message to Congress.

According to the agreement reached in the Rivers & Harbors Committee on Ohio river improvements, \$60,000,000 will be spent on an average of \$5,000,000 a year for twelve years.

The report of the Louisville & Nashville Railroad, for the part of the fiscal year beginning July 1 and ending January 31, shows an increase in the earnings of \$2,443,798, and a later statement of the controller of the road shows that the revenue for the first week of January of this year was \$104,255 more than for the same week of 1909.

At a public meeting at the Galt House February 3, under the auspices of the Kentucky Railroad Commission, the proposed new car service and demurrage rules, urged by the Interstate Commerce Commission will be discussed. It is very probable that the new code, which differs but little from the old one in effect here, will be accepted, as very good reports come from Indiana, where they are now in force. The new rules differ from those now in effect in that they incorporate what is known as the

average agreement. It means that if a shipper takes only twenty-four hours in which to unload a car, instead of forty-eight, he will be given credit for one day in unloading another car of the same kind of merchandise.

John Hancock, engaged in the lumber business at Rumsey, Ky., and one of the best known lumbermen in the Green River Section, died recently at Evansville, Ind., aged fifty-two years.

## ASHLAND

The W. H. Dawkins Lumber Company elected the following officers at its annual meeting: W. H. Dawkins, president; D. G. Dawkins, vice-president, and W. E. Berger, secretary and treasurer. This company reports 1909 as a very satisfactory year of business, having sawed over 10,000,000 feet of poplar lumber. It has on hand at the present time a large stock of lumber and a nice lot of orders at prices much more satisfactory than sixty days ago.

The Licking River Lumber Company received advice from its Farmers, Ky., office that it has on a very high tide in Licking river and is receiving large amounts of timber in addition to the large supply it already has on hand. The company has had its sawmill closed for the last three weeks on account of heavy ice, but expects as soon as weather conditions are more favorable to run steadily, as a nice lot of orders for car stock, planking, etc., have been booked. The hardwood flooring factory at Huntington, W. Va., is running steadily and turning out large amounts of flooring which are being shipped to regular customers. The company is erecting another new dry kiln, which will materially increase its present capacity in turning out oak flooring.

The Wright-Saulsberry Lumber Company will be known as the Giles Wright Lumber Company. E. L. Saulsberry disposed of his stock to the other stockholders of the company and will retire from the lumber business after April 1. Mr. Saulsberry will remain in the employ of the company until that time looking after its timber interests up the Big Sandy. The company was organized this week as follows: Giles Wright, president; Charles Kitchen, Jr., vice-president and treasurer, and John Burke, secretary. The management of the company will remain as before. Recently the company installed a new electric plant of its own, which will enable it to operate the mill any extra time necessary. The company reports business very satisfactory and is starting off very encouragingly for the year 1910.

John C. King of the Greenbrier Lumber Company, Neola, W. Va., was a recent business caller here, en route to the company's operations from a business trip through the East. He advises business satisfactory and prospects encouraging for this year.

L. C. Smith of the Cranor-Smith Lumber Company, Prestonburg, Ky., called on our lumbermen, returning home from a trip through Ohio and Michigan. Mr. Smith advises that the buyers are more free with their orders, and prices are more satisfactory than they have been.

Leon Isaacson of the Yellow Poplar Lumber Company, Coal Grove, Ohio, was a business caller in our city, en route to Elkhorn and surrounding territory, looking after the timber interests of the company. Mr. Isaacson says the company is expecting a large run of timber and is working its timber operations very heavily at this time in order that it may have a large supply of logs for this season's run. The new splash dam which was recently completed is valuable in aiding the Yellow Poplar, as well as other companies, in getting their timber through the breaks of the Big Sandy.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, was a business visitor in our city this week in consultation with a number of our manufac-

turers who are members of the association, and had a meeting with R. G. Page and R. H. Vansant, who are members of the Construction Oak Committee. Manufacturers here are looking forward to the coming meeting at Cincinnati February 1, 2 and 3.

## ST. LOUIS

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, reports conditions as satisfactory, although bad roads are somewhat handicapping prompt shipments from the mills. A great many inquiries for all items in the hardwood list are coming in. Orders are also numerous and some of them are of large volume. Good prices are being obtained, owing to the superior quality of the lumber shipped from the Bennett mills.

T. W. Fry, secretary of the Charles F. Luehrmann Hardwood Lumber Company, with his wife, left a few days ago for Florida. They will remain there during the balance of the winter, owing to the ill health of Mrs. Fry. Mr. Fry will make frequent visits to St. Louis, but his stays will be short.

W. R. Chivvis, who makes a specialty in walnut lumber, says the domestic demand is of fairly good proportions, but the export trade is quite good.

Thomas E. Powe, president of the Powe Lumber Company, is feeling pretty good over hardwood prospects. He reports a great many inquiries being received and from indications a great many of the inquiries will develop into orders. As soon as the present disagreeable weather is over and spring opens, he believes there will be quite a rush for lumber.

E. W. Blumer, sales manager of the Lothman Cypress Company, is out on the road again, after remaining in the city only long enough to make an inventory of stock. The company is in excellent position to fill cypress orders and can take care of all that may come in, as they have some twenty-five million feet of high-grade cypress in pile in the St. Louis yards. Mr. Blumer is looking for a big cypress demand this spring, and he also anticipates prices will advance.

L. M. Borgess, sales manager of the Steele & Hibbard Lumber Company, has gone out on a selling trip. He only remained in the city during the holiday season, and then left to cover his territory. From the inquiries that have been received from the territory Mr. Borgess has gone out to cover he will have a good trade.

A nice mill work season is looked for by Albert Behrens, general manager of the St. Louis Sash & Door Works. He says inquiries are coming in nicely and from the amount of building in sight in this section, that will begin to start just as soon as the weather becomes settled, he looks for enough orders to keep their people busy.

Inquiries are coming in well Roland F. Krebs of Krebs Scheve Lumber Company reports. A good many orders are in sight. Several big ones have already been entered on the books.

C. M. Jennings of the Berthold & Jennings Lumber Company has returned home from a two weeks' stay in the East. His trip was a business call.

The stockholders of the North St. Louis Planing Mill Company, at their annual meeting held a few days ago, elected as directors: William Lothman, Henry Luedinghaus, Jr., W. D. Hemenway, John Fix, W. J. Wilderman, W. R. Irvin, Henry Niehaus, F. W. Kuhlman and Henry Speck.

Harry R. Seartz, president of the Colonial Timber & Lumber Company is visiting the mills of the company this week.

E. H. Luehrmann of the Charles F. Luehrmann Hardwood Lumber Company reports a fine business thus far this year. Last year business was heavy and from the way it is beginning this year, there is every likelihood that there

will be another big year. Inquiries are coming in well and are more than satisfactory. The demand for gum, one of the specialties of the company, is heavy and good prices are being obtained and there is indication that they will go higher.

The Garetson-Greaseon Lumber Company is having a good trade and this state of affairs is quite pleasing to W. L. Jones, sales manager of the company. Car material, one of the specialties of the company, is in good demand and some nice orders are being booked. W. W. Dings, who is in charge of the Chicago office of the company, is sending down his usual big orders of this class of material.

George E. Cottrill, secretary of the American Hardwood Lumber Company, reports a good number of orders coming in. Prices, he says, are stiffening up.

The F. C. Moore Lumber Company will vacate the office it has been occupying in the Wright building, about the first of February, and move to its new yard in the north end. The yard is in the lumber district and has good shipping facilities.

A. R. Stevens has severed his connection as the representative in this city and the northern territory for the Bluff City Lumber Company of Pine Bluff, Ark., and gone to his home at Decatur, Ill. His plans for the future have not yet been announced.

Nicholas Steber, secretary of the Grand Valley Lumber Company of this city, died suddenly at his home a few days ago.

### LITTLE ROCK

The Arkansas Retail Lumbermen's Association were guests of the Board of Trade at a smoker on the evening of January 22.

The Grant Lumber Company of Indianapolis, Ind., has paid its charter fees and entered the state, naming Martin Brasccherer of Leola as state agent. The company will operate in the vicinity of Leola. It has about \$40,000 of its capital invested in Arkansas.

The Lucas E. Moore Stave Company has entered the state and will locate a plant at Junction City, with Thomas Robertson as state agent. The company is a New Orleans concern, but has important hardwood holdings in this state.

Another mammoth hardwood concern to enter the state is the Chess-Wymond Cooperage Company of Louisville, Ky. The company is now erecting a plant at Mountain View, where it recently purchased 10,000 acres of hardwood. Savage Mabray of Mountain View is to manage the plant, it is said.

An interesting fact in lumber circles was the marriage of E. W. Frost, the millionaire Texarkana lumberman, to Miss Beatrice Walters of Atlanta, Ga., the wedding taking place last Wednesday at the home of the bride's sister in Atlanta. Colonel Frost is one of the best known lumbermen in the Southwest, having extensive interests not only in Louisiana and Arkansas, but recently connected with St. Louis lumber enterprises.

According to A. V. Alexander of Fort Smith, the lumber conditions are now better than they have been in Arkansas at any time since the panic. Prices are stiffer and the demand, for the first time, has exceeded the supply. He is very sanguine as to the prospect for the lumber interests, both in hardwood products and in pine.

### NEW ORLEANS

Several hardwood men will attend the meeting of the Hardwood Manufacturers' Association at Cincinnati February 1, 2 and 3. Exporters of this section are much concerned in the deliberations of the meeting and a number of the leading local exporters will be on hand.

Announcement is made that the new hardwood

and stave mill of the Dalton-Clarke Stave Company at Colfax, La., is rapidly nearing completion and will soon be ready for operation. The plant is one of the largest of its kind in this state. Verne J. Blow of Tennessee, E. L. Morgan of Alexandria, La., and the Dalton-Clarke people are behind the project. They control large tracts of hardwood timber in the vicinity of the mill.

The Erath Carriage Company has been incorporated at Erath, La., to manufacture carriages, wagons, spokes and other products of hardwood. J. E. Kibbe, A. C. DeRouen, Leonce R. Landry and others are the incorporators.

It is announced that W. E. Leeds of Camden, Ark., will establish a heading mill at Delhi, La.

The Southern Crosstie Company and the Bryan Black Lumber Company are among the newest institutions incorporated here to do a general lumber business. Each has \$50,000 capital. One will devote most of its attention to crossties while the Black company will export lumber and timber. Louis R. Hoover, E. H. Wharton-Davies and Douglas W. Davies are the incorporators of the Southern Crosstie Company, while Bryan Black, Charles Hamlin Black and Graham Sinclair Black are behind the other project.

### MILWAUKEE

The reports that Charles H. Van Hise, president of the University of Wisconsin, criticized the present administration at Washington in his recent St. Louis speech on conservation have been denied by the well known authority. He believes that President Taft is adhering to his declarations made on conservation.

The Wisconsin Furniture Company of Milwaukee has increased its capital stock from \$75,000 to \$150,000.

The Boutin Timber Company of Superior has increased its capital stock from \$100,000 to \$200,000.

The Maxson Lumber Company, recently incorporated at Milwaukee with a capital stock of \$50,000, has elected the following officers: President, George M. Maxson, Milwaukee; vice-president, Leverett C. Wheeler, Milwaukee; secretary, E. H. Maxson, Stratford, Wis.; treasurer, C. L. Stephens, Milwaukee. George M. Maxson, president, is secretary of the Cooper & Maxson Lumber Company, now being dissolved. A general wholesale lumber business will be carried on by the new company.

The Hackner Altar Company of La Crosse has been incorporated with a capital stock of \$50,000 by Egid Hackner, J. W. Hackner and J. M. Hackner.

The railroads running through the Wisconsin lumber country are making record breaking log shipments at the present time and have been forced to operate special logging trains. Mills in general are receiving a heavy log supply this winter.

The Fond du Lac Church Furnishing Company of Fond du Lac has increased its capital stock from \$30,000 to \$50,000. The following officers were elected at the recent annual meeting: President, M. O. Pillsbury; vice-president, C. B. Miller; secretary and treasurer, N. W. Sallade.

The Barker & Stewart Lumber Company's sawmill at Wausau has been placed in operation and the management expects to cut at least 30,000,000 feet this season. The company has secured its logs from Glandon and the cut will consist largely of hardwood and hemlock.

The former Thompson sawmill at Washburn, now owned by the Stearns Lumber Company, is being repaired and remodeled preparatory to a busy sawing season next spring.

The Brooks & Ross Lumber Company's sawmill at Schofield has been placed in operation. The company expects to cut at least 30,000,000 feet.

The annual meeting of the Stevens Point Company, a well known local concern at Stevens

Point, resulted in the election of the following officers: President, W. J. Clifford; vice-president, N. A. Week; secretary and treasurer, A. R. Week; boom master, D. C. Whitney.

The large sawmill of the Northwestern Lumber Company at Stanley is again in operation after a short closedown to permit necessary repairs to be made.

The Racine Manufacturing Company, manufacturers of automobile bodies, whose plant at Racine was destroyed by fire some weeks ago, is installing new equipment in a temporary plant. Work on the new plant will begin next spring. Announcement has been made that the company may take up the manufacture of the finished automobile.

Charles H. Law of Menominee, Mich., has disposed of his drug business and will accept an executive position with the J. W. Wells Company at its proposed hardwood flooring plant at Menominee, Wis. Mr. Law is a son-in-law of J. W. Wells.

Alexander Stewart, well-known lumber manufacturer of Wausau, accompanied by his two daughters and his son-in-law, is making a three months' tour of Egypt, France and England.

Negotiations were in progress in Milwaukee recently in regard to another large timber deal by which Walter Alexander and several business associates of Wausau, Wis., will acquire a large tract of southern timber lands now owned by Minneapolis parties.

The Badger Box & Lumber Company of Grand Rapids is securing logs taken from land in the vicinity that only forty years ago was a wet hay marsh. Lumbermen say that this shows what is possible in practical reforestation.

The plants of the Fond du Lac Church Goods Furnishing Company and the Pope Boat Company are operating at full capacity.

J. T. Phillips, general manager of the Diamond Lumber Company's sawmill at Green Bay, Wis., has returned from the annual meeting of the company held at Saginaw, Mich., and from the annual meeting of the United Lumber Company at Ruston, La., of which he is the president.

Frank Young, connected with the Barker-Stewart Lumber Company for the past four years, has resigned to accept the general management of the Loewenthal & New Company, formerly the Wausau Excelsior Company, of Wausau.

The Racine-Sattly Company, well-known implement manufacturers of Racine, has taken up the manufacture of automobile bodies and within a short time will be ready to turn out a complete automobile. A. L. Folk of Reading, Pa., has been placed in charge of the new department.

The Walter Alexander Timber Company of Wausau has purchased from the E. J. Anderson & Son Timber Company, also of Wausau, a large tract of hardwood and hemlock timber, located in northern Wisconsin and Michigan.

The plant of the Webster Chair Company at Superior is again in operation after a closedown pending the completion of the annual inventory and the installation of repairs.

The Wisconsin Handle Company, recently organized for the purpose of manufacturing handles of all kinds, is remodeling the Pankratz mill at Sturgeon Bay and installing new machinery.

The Turpentine Syndicate, recently incorporated at Grand Rapids, Mich., for the purpose of manufacturing turpentine from stumps from cutover lands, is endeavoring to secure 50,000 acres of land near Wausau, Wis., in order to erect a plant at the latter place.

The Layton Park Woodwork Company of Milwaukee has been incorporated with a capital stock of \$25,000 by George O. Franke, August F. Knoll, Fred A. Knoll, Fred Dews and William Jens.

## WAUSAU

The Fullerton-Krueger Lumber Company, a Minnesota corporation, with a capital stock of \$25,000 and Wisconsin interests of \$12,500, has filed a statement to transact business in Wisconsin. John D. Kenneby of Larson is the Wisconsin agent of the company.

For a day recently there was exhibited in the office of a hotel at Marshfield a picture that attracted unusual attention. It was the work of an artist, but was not done with brush and paint. It was an Egyptian scene, and showed the pyramids in the distance and a life-sized lion in the foreground. The whole scene was worked out in thin veneer glued to a backing. The coloring, which was very true, was produced by using different varieties of veneer. The picture was 6x3½ feet in size. The designer is a Chicago man, but the greater part of the work was done in the Roddis Veneer Company's factory in Marshfield. From a distance, so neatly were the different shades of veneer blended, that it looked very like an oil painting.

The F. MacKinnon Manufacturing Company of Grand Rapids has put its hub mill in operation again after several months' idleness. The company has contracted for about 600 carloads of logs, which it is thought will be insufficient to fill its present orders.

The Quaw Lumber Company has put its mill at Edgar in operation again, after being idle since last spring. The company's main office is located at Wausau.

The Roddis Lumber & Veneer Company's mill at Park Falls has started sawing on a stock of 8,000,000 feet of logs. Besides owning fifteen miles of logging railway, the company has 23,000 acres of land, containing some of the finest virgin timber to be found in northern Wisconsin.

Sumner Prescott, secretary and treasurer of the Prescott Company of Menominee, manufacturers of sawmill machinery and builders of sawmills, has disappeared. An investigation has shown that a reorganization of the company is necessary. It is planned to reorganize with a capital of \$450,000. Overbuilding and extension of business on a limited capital are said to be the causes of the present condition of the company's affairs.

The fifty-second annual winter run of Senator Isaac Stephenson's sawmill in Marinette began a few days ago when the Ludington mills were started. Senator Stephenson has been engaged in the lumber business for sixty-two years, beginning his operations on the Escanaba river.

It has been announced that the A. H. Stange Lumber Company of Merrill has purchased 250,000,000 feet of timber, which will be shipped to and sawed at Merrill.

D. E. Riordan of Ashland has just closed a deal for the G. F. Sanborn Land Company of that city, which is selling its land and timber holdings in Wisconsin and Michigan as rapidly as possible. The deal just completed is for a tract of hardwood located near Lake Gogebic and involves a consideration of more than \$100,000. Senator Isaac Stephenson was the purchaser. About 7,400 acres are included in the tract. All of it is situated in Ontonagon county.

Three of the five mills in Marinette will be operated this winter, Nos. 1 and 2 of the N. Ludington Company and No. 1 of the Sawyer-Goodman Company.

Although \$100,000 was the amount set by the La Crosse Industrial Association, and the amount has been subscribed, subscriptions are still coming in unsolicited. The association will be capitalized at \$125,000 and articles of incorporation have been filed, with the following named as incorporators: E. M. Wing, William Doerflinger, F. W. Sisson, G. S. Vanbucken and A. R. Schmitt. The association will spend

\$25,000 per year to secure new industries for the city.

There is not an idle manufacturing plant in Fond du Lac this winter, and every factory is taxed to its capacity. The F. W. Grondt Broom Company, which consumes a considerable amount of hardwood for broom handles, has moved into larger quarters. At Oshkosh manufacturers look forward to a prosperous year. The Paine Lumber Company is building a brick factory building and dry kilns. The R. McMillan Lumber Company has completed a new brick factory which will be occupied soon. The trunk manufacturers of the city predict a big year's business, with advanced prices. The furniture manufacturers say that the market is overstocked, but that good prices are looked for, and that there will be some advances along certain lines. In Wausau every woodworking plant is in operation except the mill of the Alexander Stewart Lumber Company, which is closed because of a shortage of cars with which to ship logs.

With a capital of \$10,000,000 the Mitchell-Lewis Company of Racine has been incorporated, an amalgamation of the Mitchell Motor Company and the Mitchell & Lewis Company. The reorganized company will manufacture automobile bodies. With the combination the control of extensive plants in Minneapolis, Chicago, Portland and Paris will come under the single company. New buildings costing over \$500,000 will be constructed at once. Architects are drawing plans for a four-story building 150x400 feet and a one-story building 162x250 feet.

## SAGINAW VALLEY

The snow is very deep in the lumbering districts in this section, ranging from twenty inches to three and a half feet, and in some localities it interferes seriously with active logging operations. North of the Straits some camps have quit trying to operate until the snow settles. Generally, however, good progress has been made and an unusually large stock of logs will be secured. The large firms are getting in all the stock available and there are more small operators than usual in the woods, owing to the good prices lumber is bringing and the excellent outlook.

Thomas Denton of Saginaw has a crew in the woods getting out 70,000 cubic feet of rock elm timber for the Quebec market. Mr. Denton purchased a large body of timber in Wexford county, and is operating there.

W. B. Tubbs of Gladwin has bought a body of hardwood timber near that place, and will put up a portable mill, where it will be manufactured.

The plant of W. D. Young & Co. at Bay City is being operated day and night, the larger percentage of the stock cut going into flooring, the market for which has greatly improved. This plant manufactured last year 22,659,549 feet of hardwood lumber, considerably more than the average for some years past.

The annual feed and meeting of the Saginaw Valley Lumber Dealers' Association, held at the Wenonah Hotel, Bay City, January 7, was thoroughly enjoyable. At the business meeting, S. L. Eastman was elected president to succeed John M. Miller, and Walter D. Young was elected vice-president. B. C. Bingham was re-elected treasurer and G. P. Waller, secretary, was also re-elected. The menu cards were of curly maple veneer and artistic as well as pleasing from the epicurean viewpoint. Covers were laid for sixty. The organization is largely of a social character, although there is unanimity of action in many matters in the handling of business accomplished by the association.

The Richardson Lumber Company of Alpena operates two saw mills, one at Alpena, which manufactured 2,500,000 feet of hardwood last year, and the other is located at Bay City and runs the year through. It manufactured last year 5,000,000 feet of hardwood lumber.

Charles A. Bigelow resident manager of the Kneeland-Bigelow Company and Kneeland, Buell & Bigelow Company, has been in Detroit the present week attending the quarterly meeting of the Michigan Hardwood Lumber Manufacturers' Association. The two local plants of these concerns manufactured 18,439,953 feet of hardwood lumber last year. Both plants run the year through, the Kneeland-Bigelow plant day and night. The Kneeland, Buell & Bigelow plant will install a new battery of boilers early in April and some other repairs will be made.

At Cheboygan the Cheboygan Manufacturing Company, which has operated a planing mill and factory is building a saw mill which will be in operation early in February. The company is now getting into its yard a stock of logs.

The maple flooring plant of the Hanson-Ward Company at Bay City is rapidly approaching completion. It will be up-to-date and will handle a crew of seventy-five or one hundred hands. It will begin operations within a month.

The lumber firm of McTiver & Hughes at Onaway has dissolved. S. M. McTiver succeeds to the business and will remove his office from Onaway to Perue Spur, where the firm has built a band saw mill of 50,000 feet daily capacity.

Last year R. Hanson & Sons of Grayling erected a fine hardwood mill at Grayling, where they manufactured 3,305,969 feet of hardwood lumber.

## MINNEAPOLIS

Not as many retailers as usual attended the annual meeting of the Northwestern Lumbermen's Association in this city January 18 to 20. The association declared that retailers would not consent to odd lengths being forced and shipped without order. Frank J. Lang, who comes each year to the convention in the interests of the I. Stephenson Company, Wells, Mich., was prevented from attending this year by illness.

E. Payson Smith of the Payson Smith Lumber Company is in Missouri looking after the manufacturing end of the business, accompanied by L. P. Arthur, manager of the Chicago office. Mr. Smith sends word that the prospect is for an advance of \$2 to \$3 on oak this spring. Some additions have been made to the staff of the company. Frank H. Long, formerly National inspector, is now looking after the concern's stocks in Wisconsin. F. S. Barnard of Minneapolis has gone down to Hough, Mo., as assistant manager at the mill of the Missouri Hardwood Manufacturing Company, under T. E. Youngblood. The force in the Twin Cities has been increased by the addition of P. M. Youngblood, a brother of the manager at Hough.

George S. Agnew, the local wholesaler, has returned from a business trip to southern Texas.

The Fullerton-Krueger Lumber Company, recently incorporated, has taken over the business of the Chicago Lumber & Coal Company in Minnesota and Wisconsin, including a hemlock and hardwood stock at Saxon, Wis. The new concern also acts as selling agent for the southern stocks of the Chicago Lumber & Coal Company. J. H. Krueger is president of the company, J. E. Dougherty vice president, and C. M. Smalley secretary and treasurer. E. H. Broughton, who, for some years, has been sales manager here for the Forbes-Everts Lumber Company, a concern with hardwood mills at Van Buren, Mo., has joined the Fullerton-Krueger Lumber Company and has charge of its hardwood department.

## DETROIT

About \$10,000 worth of hardwood lumber, trimmings and mouldings were destroyed by fire in the yards of the H. W. Harding Company

in this city last week. The fire is believed to have originated from a spark from a passing locomotive and owing to the excellent work of the fire department the blaze was confined to one big shed. This shed, unfortunately, contained the most expensive materials in the yards. C. E. Huyette, secretary of the company, says that the electric wiring in the shed was perfect, so that it is believed that a spark caused the blaze. The loss is well covered by insurance.

Congestion of freight cars is still seriously handicapping Detroit hardwood dealers. During the past few days, however, there have been evidences of improvement in the situation and some shipments long overdue came to hand. Some of the dealers have been waiting four and five weeks for shipments, which the railroads now expect to deliver during the next few days.

John Dudley of the Dudley Lumber Company, Grand Rapids, visited with Detroit lumbermen last week.

The Lumbermen's League gave a banquet at the Log Cabin Inn last week, with twenty-two members in attendance. John Stewart of the Kotcher Lumber Company acted as toast-master and was on the job every minute. Most of those present are members of the lumber bowling league and the bowling abilities of the guests were the subject of many of the toasts. Every one voted the little spread a big success and many similar gatherings are planned for the future.

The Lake Lumber Carriers' Association, at its annual meeting in Detroit last week, discussed the advisability of a raise in freight rates for next season. The general sentiment of the members seemed to be that rates should be boosted, but no definite action along this line was taken. It is believed, however, that before the opening of navigation a new schedule of rates will be announced. The association elected the following officers: President, E. L. Fischer of Cleveland; O. W. Blodgett, Bay City, first vice-president; E. M. Carelton, Cleveland, second vice-president; W. E. Holmes, Chicago, third vice-president, and W. D. Hamilton, secretary and treasurer.

C. W. Kotcher and daughter have sailed for a month's cruise through the West Indies. Before returning to Detroit they will visit the Panama canal.

### GRAND RAPIDS

Three companies held annual meetings January 19 in the offices of Winchester & Daniels, Michigan Trust building, the election of officers resulting as follows: Turtle Lake Lumber Company—President, Walter C. Winchester; vice-president, W. S. Winegar; secretary, George B. Daniels; treasurer, Henry Idema. In addition to the officers the board of directors includes J. J. Foster and F. C. Miller. Vilas County Lumber Company—President, John J. Foster; vice-president, L. H. Withey; secretary, Walter C. Winchester; treasurer, Henry Idema. In addition to the officers C. W. Johnson, of Greenville, is a member of the board of directors. McKenzie River Timber Company—President, Walter C. Winchester; vice-president, J. H. Bonnell; secretary, Claude Hamilton; treasurer, Henry Idema. Besides the officers the directorate includes L. H. Withey, C. C. Follmer, J. J. Foster, B. S. Hanchett and B. P. Merrick of this city, E. G. Filer and R. R. Blacker of Manistee, Frank S. Gibson of Greenville and Charles H. Chick of Portland, Ore. The McKenzie Company is a large holding corporation owning stumpage in Washington.

The Hackley-Phelps-Bonnell Company held its annual meeting January 17 and re-elected the following: President, W. A. Phelps; vice-presidents, John H. Bonnell and Henry Idema; secretary, Otis A. Felger; treasurer, Charles A. Phelps. In addition to the officers the board of directors in-

cludes Dudley E. Waters and Roy S. Barnhart. Reports read showed a successful year's business and a dividend of 6 per cent was declared.

New corporations of the state include the Sands-Heydon Lumber Company of this city, capital \$100,000, of which \$50,000 has been subscribed. The incorporators include Charles A. Sands, \$32,400; William Heydon, \$17,500; McGeorge Bundy, \$100. The company has timber holdings in the upper peninsula and elsewhere.

The January furniture sales are nearly over in this market. It has not been a big season so far as business goes, but still ahead of a year ago, and the manufacturers are feeling well over results. Case goods, especially in the cheaper ends, have had a slow sale, the advance in prices probably having something to do with it. Manufacturers of upholstered furniture, chairs, office desks and summer goods have made excellent sales. Nearly forty lines of furniture were destroyed by the burning of the Furniture Exchange building January 12, and these exhibitors were hit hard, inasmuch as the fire occurred at the opening of the season. Only four of the lines were insured.

Oak and mahogany are still the principal woods used. Never before has the market witnessed any such display of English period stuff, which of course requires oak. Less Circassian walnut is being used. The use of gum is slowly creeping in and high grade concerns, as the Grand

Rapids Chair Company, are using considerable of this wood. The Carrollton Furniture Company of Covington, Ky., is using large quantities of quarter-sawn gum in its bedroom furniture, calling it Kyonyx. The Davis-Birely Table Company of Shelbyville, Ind., is also a large user of southern gum.

George F. Williams, president of the Williams Brothers Company, manufacturers of last blocks at Manton, and Mrs. Flora A. Compton, also of Manton, were married in the parlors of the Livingston Hotel in this city January 18. News of the marriage will be a pleasant surprise to their friends in Manton. Mr. and Mrs. Williams left next day for San Antonio, Tex., where they will spend the winter.

Ewing & Son are putting in a sawmill at Dowagiac and will cut Michigan hardwoods.

The Walloon Lake Lumber Company, of which John Grund of Boyne City is manager, has bought the timber holdings of the Henry Starkey Lumber Company in the vicinity of Arcadia, in Manistee county, and will put in a band mill in the spring.

G. A. Swanson has bought of Henry W. Carey 440 acres of timber, eight miles west of Tustin. A sawmill will be put in; it is estimated there is a three years' cut.

Marcus Schaff of Munising has been offered the position of state forester at a salary of \$1,200.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

The consensus of opinion among Chicago lumbermen seems to be that there is a good market for most woods, the trouble now being in delivery of orders, as it is next to impossible to do any considerable hauling under the prevailing weather conditions. Sixteen hundred feet is considered a pretty fair load, and there is no telling when even that much will reach its destination. As a consequence local men are not soliciting trade, as they can't produce the goods when they do get orders.

As a rule there is not much tie-up in stock coming in, although some concerns report shortage in certain lines. There seems to be a scarcity all along the line in red and white plain oak, in one's and two's, especially in 5/4 stock, the lower grades being plentiful. Prices seem to be holding their own fairly well, plain red oak uppers being quoted as high as \$52.

Birch has a good market and is on a steady rise, especially the better grades. Some people report difficulty in filling orders in those grades.

Poplar, of course, shows the usual scarcity in wide stock. It won't be long before owners of virgin poplar will be able to command their own prices on this kind of stock. The other grades are not producing prices commensurate with the cost. A rise in poplar values will tend to boost gum, which can be substituted for it in boxes, etc.

Ash and hickory are holding a pretty steady price, as the wagon works are not influenced by the inclement weather.

Cherry, especially in the higher grades, is moving briskly and commands good prices. One firm quotes \$90, \$60 and \$26 on cherry.

Basswood and the lower grades of walnut are very slow in moving.

The flooring people report slack trade, owing to the general tie-up in building operations of all kinds. However, the market exists and all that is necessary to start things going is a breaking up of the weather. Quartered oak flooring is bringing as much as \$85. Clear plain oak brings \$54 and maple is worth from \$40 to

\$42 for clear, \$34 to \$36 for No. 1 select and \$22 to \$24 for No. 1 common.

On the whole, while things are not brisk at present, owing to the difficulty of delivery more than anything else, there is a general feeling that March and April will see conditions back at normal or perhaps better. There is no reason why the trade should not be back where it was before the panic.

### NEW YORK

The hardwood market at New York is firm, with prices strong and good lumber scarce. Any special orders, particularly in good-grade lumber, are hard to place and mill connections hard to arrange. The outlook for 1910 points to a strong hardwood market, especially in good-grade lumber, with every indication that the low-grade market will move up sympathetically. It is certainly no time to sacrifice stock in good-grade lumber.

The local market seems to be taking its proportion of good grades of hardwoods for this season of the year, with oak, poplar, ash and chestnut perhaps most in demand. Prices are ruling exceedingly firm and the year opens full of promise.

### BUFFALO

All lumbermen predict that the coming year will be a very active one in lumber, as well as in other general branches of business. Nothing is lacking but the full stocks of lumber that used to be available. There is enough to get along with, but even that will not be said very long, at least of hardwood lumber. So it behooves everyone in that trade to make the most of his stock, by getting hold of as much as he can and selling it almost as if he did not expect to get any more.

All prices are firm and there is every expectation of better prices as soon as the season is fairly open. Buyers anticipate it, for they are trying to make purchases for delivery all through the summer.

Prices have not changed much yet, but quartered oak is scarce enough to command almost any price. The rule is getting to be, though, that the buyer has about given up looking for quartered oak and is using plain oak, chestnut and birch instead. There is all of the former firmness and activity in poplar and the other southern woods, cypress and yellow pine, cypress being firmest but yellow pine getting over the unsteady state of that market last fall. The lesser hardwoods, maple, elm and basswood are doing well, though only maple is at all plenty. Black ash is strong.

### BOSTON

There has not been much activity in the market for hardwood lumber since the middle of last month. Consuming manufacturers have been small buyers for several weeks and the retail yard trade has ruled quiet. Large buyers have been busy taking account of stock. However, beginning with February, an improvement in demand is anticipated. A very firm tone has been maintained in the market even in the absence of active trading. It is expected that the spring demand for hardwoods will be large. Furniture manufacturers are doing a fair business but at present are not in the market for very large lots of lumber. Manufacturers of interior house finish have a fair amount of business on hand and look forward to a good trade when the season opens.

The market for mahogany has developed a little more strength, but demand has not improved much. The local market for veneers is not active and prices have been cut in some cases. It is reported that more trouble over the cutting of prices has been encountered in the West than in the East. The market for African mahogany is firmer. The call for quartered oak has developed more strength. It is reported that one-inch, one's and two's, has been sold at \$92, but the general price for business ranges from about \$88 to \$90. The call for plain oak is moderate, but prices are well held. Ash and maple are in good demand with firm prices. North Carolina pine has not been in active call, but it is predicted that an advance will be seen in the market before long.

### PITTSBURG

Hardwood men are feeling good. The trade is opening up for 1910 in a way which gives them great hopes of a busy season. The total sales so far this month exceed those of the entire month of January, 1909. The attitude of purchasing agents and contracting firms, as well as retailers, indicates a very pronounced improvement in the general hardwood situation. Inquiries are sharp and spicy. There is no hesitancy about what buyers want. They realize that stocks must be replenished and increased if they are to profit largely by 1910 prosperity. Manufacturing concerns especially are beginning to worry about the situation and are keeping their buyers busy getting stocks in line which can be turned into finished material between now and spring. The furniture, carriage, handle and implement trades are well aware that there will be an enormous demand for their product and they are getting ready to turn out by far the largest year's stock that they have ever produced. Especially favorable is the situation with automobile manufacturers. Hardwoods are going to these plants in larger quantities than ever before and woods which have never been used to any large extent are now being substituted for old time stand bys. Mills in Tri-State territory have been hampered by the heavy snows recently, which have prevented logging to a considerable extent. Their stocks are only fair and all these plants have orders on their books to take practically all the logs they

will have cut by March 1. Price relations are being more firmly established every day and there is no doubt in the minds of Pittsburgh wholesalers but that a substantial increase in the level of hardwood quotations will be made very soon.

### PHILADELPHIA

Notwithstanding the usual lull in the eastern field at this time, which permits of the necessary stocktaking and the striking off of balance sheets, reports coming in from all sides show considerable animation in trading. The year 1909 has closed with a satisfactory showing and every indication points to a bulging prosperity for 1910. Building work is being planned for the near future to the extent that, if allowed to materialize, will make the coming year a record breaker. Furniture factories, carriage and automobile body makers and flooring men are active and everywhere there prevails a strong optimism as to the promise of a prolific and enduring business period. In spite of these encouraging features, however, reports from the mill centers show a scarcity of stock in the standard hardwoods with very little prospect of accumulation for some time to come.

Very little is heard in this section concerning the possible outcome of the controversy between the allied engineers, trainmen and switchmen, and the railroad operators, which has been going on for some time, but those who are keeping in close touch with the affair are apprehensive that a strike is not only a possibility but likely to become a dismal verity if an amicable agreement is not effected in the near future. A disaster of this kind would tie up nearly all industries, especially the shipping of hardwoods, consequently it is deemed advisable to urge upon the buyers the extreme necessity of securing their stock before it is too late.

### BALTIMORE

The year has now been well started on its way and the hardwood men have had an opportunity to get an idea what the future is likely to bring forth. The quiet during the holidays has been succeeded by a measure of activity which is encouraging, and while the trade can hardly be said to have entered upon a stage of exceptional demand, the results are regarded as eminently satisfactory. Prices have held firm, various instances of advances being noted, and the tendency seems to be toward still higher figures. Manufacturers are beginning to push operations in the expectation of an inquiry which shall exceed the ability to supply lumber.

The virtual removal of the car shortage has aided the distribution of lumber, with the result that the stocks at the mills are perhaps even smaller than they were at the beginning of the winter. Low-grade oak and other woods, though still plentiful enough to take care of such needs as are likely to develop, have ceased to be a troublesome problem, and where one dealer reports that January so far has been rather quiet with him, two or three others say they are doing much better than they had anticipated. The inquiry has become decidedly brisk, from domestic points as well as from abroad, and an interest in supplies is shown such as has not been exhibited for a long time. The holdings abroad have been stripped to a large extent of their good stocks, and buyers who would get more of them are compelled to meet the prices of the exporters. The furniture factories and other plants here are very busy, and are buying in liberal quantities, though some hesitancy prevails about paying the current quotations. The bidding for lumber in the milling sections is said to be quite spirited, and the prices paid indicate unmistakably that the exporters entertain high hopes of good returns. Such of the local yards as

laid in extensive stocks state that they are having many calls and doing a very acceptable business.

### CLEVELAND

The Cleveland market is not quite as active as it was a short time before the holidays, but the dealers say they are well satisfied with the volume of business and the outlook generally. Many local and suburban yards are getting their bearings preparatory to stocking up for a heavy spring business.

Quartered oak and poplar are leaders in the hardwood market. Poplar is in great demand by the auto body makers, while choice oak and mahogany for interior finish is also moving well. Other hardwoods have not changed much in the past month. There is a tendency, however, to strengthen prices as the spring season advances.

### COLUMBUS

The market in hardwoods in central Ohio has recovered from the dullness incidental to the holiday period for inventories and orders, and inquiries are actively coming in from every direction. Prices in all grades rule stronger and advances have taken place in certain grades of oak and poplar. The entire list has been on the advance and lumbermen in every department of the trade believe that prices will grow higher as the season advances.

The car situation has improved. Jobbers are getting caught up with their orders and dealers and manufacturers are not caused any inconvenience waiting for deliveries.

Traveling salesmen who penetrate every part of the country report a healthy condition among dealers. Stocks generally are short for the season of the year and they believe that a much better demand will develop in a few weeks at the most. Manufacturing establishments are running on full time and their supply of material is also short. Agricultural implement factories are in the market for a larger supply of hardwoods and the same is true of automobile concerns and car works. In fact, every branch of the trade, including the furniture industry, show decided gains. The demand for both quartered and plain oak is strong and the supply limited. Red oak, firsts and seconds, advanced \$1 per thousand in the past week. Chestnut is also stronger and the same is true of the various grades of poplar. Hickory is wanted in many places.

### CINCINNATI

During the past fortnight the hardwood market has shown only a fair volume of business. Still, there is a confidence in the future that adds good spirit to the general trade conditions. The weather has interfered seriously with outdoor operations the past two weeks and in many cases mills have been forced to close. A few days of fair weather, however, have worked wonders in the outside operations, and the delayed shipments have caused an apparent activity about the yards.

White oak, both quarter-sawed and plain, is still playing the star role in the hardwood market. Select quarter-sawed white oak of good figure and ten inches in width or over is being quoted at the century mark; some transactions at \$90 and close to that figure are noted, while the average run of quarter-sawed in the market is bringing about \$80. Red oak is in good supply for both quarter-sawed and plain, and a good volume of trade is being transacted. Chestnut is not showing much animation at present, but there is a steady inquiry for good lengths of one's and two's, with a wide difference between buyers' and sellers' views. Sound wormy chest-

nut is not as active as during the early winter weeks and at present quite an abundance is being offered. Much of this, however, is of inferior grade, and prices realized are very low. A fair volume of business is done in ash, with no changes of note in quotations. Stocks are equal to the demands of the market. Hickory is in fair request for wagon-makers and carriage-makers' stock. Quotations remain the same.

The transactions in poplar for the past fortnight have been far in excess of any other class of lumber, and the activity has been more marked. There has been a fair call for good, clear wide panel stock, while the supply has not been equal to the demand at any time; selected lots of clear wide poplar bringing very fancy prices. The automobile trade has been the heaviest line in the buying, and will probably continue to be the strong feature of the market for the coming spring and summer. Medium grades of poplar have continued in active demand from furniture and carriage manufacturers, and the very large stocks that have accumulated bid fair to be heavily reduced as the season advances. There is much encouragement in the present prospects for the very rapid reduction in the large volume of low-grade stuff, which

threatened for a time to load up the market. The improvement in manufacturing conditions generally, has opened up an activity in the box manufacturing industry, and with the box factories working overtime it will not be long before the steady consumption will cause an advance in the low grades.

There is not much stirring in the export business. A large stock of walnut is accumulating, owing to the weak foreign market. The demand from American manufacturers is small, and some of the holders are not entirely satisfied with prevailing conditions. Cherry is also accumulating to quite an extent. Two large concerns, which specialize in walnut and cherry for the export trade, claim to have heavy stocks and complain of the poor chance of moving them at an early date.

The veneer cutters are all working full time, with the demand good; more especially is this true of quartered oak, mahogany and Circassian walnut veneers. There is a good sale of fancy wood stock. Thin lumber for light box manufacturers is in fairly active demand.

### TOLEDO

Annual inventories of hardwood stocks show the local supply to be somewhat above normal. Dealers, however, are disposed to buy everything that comes along in the shape of hardwoods and apparently have unbounded faith in the future of the business. A slight lull followed the holidays, but this in turn was followed by unusual activity and a general rush of orders. Wide poplar has been the feature recently, having advanced in price considerably within the past sixty days. The call for this material is coming from automobile concerns, whose wants it seems impossible to supply. Holders of poplar 24-inch and up are asking and receiving fancy prices for this stock. All grades of poplar are looking up. Inch maple has been very strong and prices have made a material advance. Maple flooring is also hard to get and is selling at higher prices. Birch has also been coming to the front with but limited supplies and strong demand, prices going up from \$2 to \$4 per thousand within the past few weeks. Ash, elm and basswood are all holding their own and oak is excellent property. While box materials are a trifle stronger, the supply appears to be plentiful. Factory consumption of all kinds of hardwood is on the increase. Receipts have been held down somewhat recently by heavy storms and transportation difficulties.

### INDIANAPOLIS

Considering weather conditions, the hardwood market is fairly satisfactory at this time. Prices are steady and the demand is increasing as the year advances. There is an especially heavy demand for quartered red and other grades of oak.

Manufacturing plants using hardwoods are all working to full capacity and predict a good year for business. Shipments are moving promptly, except from some localities where traffic has been snowbound. An increase in prices during the spring months is predicted for several varieties of hardwoods.

### MEMPHIS

Most members of the trade report that there is very good demand for hardwood lumber and the volume of business is of satisfactory proportions. Salesmen on the road have been sending a very good run of orders and there has also been a large amount of business on mail orders. Consuming interests are in the market on a fairly liberal scale. Yarding and other distributing interests are also good buyers. The tone of the market is good.

Prices are hardening somewhat. There is an excellent demand for high-grade oak of every kind and low-grade oak is also selling at good prices. Ash is moving well in the higher grades, and No. 1 and No. 2 common is also in request. Cypress is selling well in all grades with the exception of Nos. 1 and 2 common. More demand is reported for high-grade gum and cottonwood and some large sales are reported in No. 1 and No. 2 common cottonwood and gum. Cottonwood and gum boxboards are very stiff. Export demand is fairly active and some improvement is noted in prices on the other side of the water, though domestic business is relatively better than in Europe.

### NASHVILLE

The rough weather of the past few weeks has had quite a demoralizing effect upon lumber operations. The weather has been too cold to admit of much logging on the river. In fact, part of the time there was ice on the Cumberland. The cold weather had almost stopped building in this section. Lumbermen have not been idle, however, and the work of taking inventories of stock has gone merrily along. It is a general feeling among dealers that inventories will show quite a shortage of stock.

With a little break in the weather a few days this week the logging has begun and the rafts are coming down the river. The local market has a healthy tone and the lumbermen feel that they are on the threshold of the best business they have enjoyed since 1907. Inquiries are plentiful and in some instances good orders are being booked. There is quite a scarcity in the better grades of oak and poplar, particularly the latter. In fact, it is said to be very difficult to get wide poplar. Automobile factories all over the country are buying this wood with eagerness, all seeming anxious to get it wide and of high grade, and paying most any price to get it. Plain and quartered high-grade oak is also scarce. Chestnut and maple are in good demand. Dealers in cypress are expecting good business.

With the tide now on in the river enough lumber is expected down to start the mills all to sawing.

### CHATTANOOGA

The hardwood season opens with prospects for a very profitable year's trade. With stocks up to the usual assortment, a large amount on hand, a more than the usual prospect of prices advancing and a good demand, the millman is at ease. The high-grade stock is still most in demand, although the lower grades are being talked about and are moving some. The call for red oak is strengthening some, the demand exceeding the supply. Wide poplar and quartered oak are staple articles in this market.

### BRISTOL

Bristol lumbermen seem satisfied with the lumber market and all declare that they are firm in the belief that prices will move off rapidly during the coming spring. Shipments are heavy for this season of the year and an appreciable increase in the number of orders received is reported since January 1. There is a much better feeling among the lumbermen than has existed for several months and all seem to be most hopeful of the market. Several Bristol concerns have received some very large orders of late, and doing business upon an economical plan, believe they can realize a nice margin under prevailing conditions, though others report that they are handling low-grade stock at an actual loss.

## OAK FLOORING

An artistic volume by Henry H. Gibson, editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors. Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick: Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

## LOUISVILLE

In every direction the feeling among hardwood lumbermen is decidedly optimistic, the recent bad weather being the only detriment to a good business: Orders are coming in steadily, and prices on high-grade stuff are firm. While prices for low grades are low, the volume of business done is encouraging. Everything indicates small stocks in the hands of the dealers and collections are fair.

## ASHLAND

The market is very active, and a firmness in prices is noted with considerable satisfaction at this time. Inquiries are numerous and manufacturers are receiving large orders for shipment during 1910.

The past few weeks have been very unfavorable for sawmill men, but they are looking forward to receiving a large supply of timber on account of the high water. A number of them are reporting heavy work in their timber operations, and expect to be in a good position to do a large business this year.

Oak and chestnut are in very good demand; not only in the high grades, but the lower grades are also in greater demand and bringing better prices. Hickory and oak wagon stock is in greater demand than for some time, with prices more satisfactory.

Poplar is called for more than any other lumber on this market at the present time. Panel stock is very scarce, and our manufacturers are receiving very high prices for what dry stock they have. The demand for low-grade poplar has improved and prices are more favorable than they have been for more than two years. No. 1 and No. 2 common grades are being used up very closely by the bevel siding and moulding factories, while No. 3 common is extensively used by the box manufacturers.

## ST. LOUIS

The long cold spell has interfered somewhat with the cut and movement of lumber, but in spite of these drawbacks, trade has been fairly good. Conditions are better and prices are stronger with every indication of going higher. Orders for future delivery are not looked on favorably by dealers and very few of them are being accepted. They know that prices will advance as soon as the building season opens up and they think this will be early this year, owing to the long cold spell that is now on. Conditions in the producing territory are not good. The heavy snow storms have stopped mill operations and little or no cutting is going on. It is this shutting down of the production that is keeping the prices so stiff and it will continue to do so for some time to come. While there is some business being done the volume is not as great as it would be, had better weather prevailed. As soon as the cold weather is over, there is every prospect of a big demand and the dealers are waiting for this time to come. They have their stocks in readiness for a big demand.

## NEW ORLEANS

While the activity in building and the fact that a large number of handsome residences are being constructed is helping the demand for hardwoods, and especially interior woodwork of hardwoods, the general situation in this section has not changed materially in the last fortnight and the local handlers of hardwood report that the market here is inactive. European buyers, though they are showing some little interest in the conditions here, are not going actively after any materials and the demand from that section is comparatively light. Exports have picked up a trifle and the volume of export business handled

has been somewhat larger the last two weeks than during the latter part of December. Mills in this section are turning out fair quantities of stuff but their orders are not sufficiently voluminous to warrant any extra runs. A fair demand from the interior is reported.

## MILWAUKEE

While the heavy snows have tended to demoralize the general wholesale and retail lumber business, the lively demand from manufacturing plants of Milwaukee for hardwoods has placed trade on a fairly satisfactory plane. Milwaukee's heavy machinery manufacturing plants are operating at practically full blast and the natural result is that fairly good orders are being placed in various hardwood lines. The sash and door factories, interior finishing plants and the furniture concerns are in the market in preparation for a heavy building season. The hardwood flooring business is good.

The high price of oak is tending to restrict trade in this line to a certain extent. Basswood and birch are in good demand.

## MINNEAPOLIS

Dealers here say that they have not noticed any revival in country trade. Many retailers have been in the city attending their convention, but they did not do heavy buying, and the bulk of the crowd consisted of line yard managers. There is plenty doing, however, in factory and flooring business. The building activity of the Twin Cities continues without abatement and has been favored by some open weather. The sash and door factories have been very busy getting out orders as they are required, and have been steady buyers of birch, oak and basswood, chiefly the first named. The furniture men have also been in the market, having a prosperous season ahead, if the preliminary signs are correct.

Birch is the king of the market still, and first and second birch is scarcer than hen's teeth. The price has advanced till none is to be had for less than \$37 or \$38, and very little is to be had at that price. As high as \$42 is quoted by some holders, and they expect to get it. Basswood uppers are firm and oak, though not moving much, is also strong at former quotations. The demand for low-grade stock remains light and prices are weak.

## SAGINAW VALLEY

Local trade conditions are satisfactory. There is a fair movement in lumber and the demand is good. Dealers are getting orders from all directions and every hardwood plant is actively employed. There is a shortage in dry stocks of maple, basswood and birch. Prices are very firm and a shade higher in some grades. Some grades are so short of dry stock that manufacturers are shipping lumber not entirely cured. Maple flooring trade is active with every plant in the valley running full time and some day and night. Many saw mills are also in operation, yet the demands for lumber are such that stock is not accumulating. The moment it is fit to ship there is a call for it.

## DETROIT

There has been no material change in the hardwood market in Detroit and vicinity in the past two weeks. The trade showed a slight lull, but is picking up again in a satisfactory manner. Prices are firm and very fair. There is still a steady and consistent demand for maple, oak and poplar. Basswood has picked up strength, several orders for this wood having been placed in this market in the past few days. The factories report a good volume of business.

## ADDITIONAL WANTED AND FOR SALE

Matter See Page 64

## EMPLOYES WANTED

## WANTED AT ONCE—FOREMAN

for our dimension mill. Must be thoroughly familiar with building and glueing up hard and softwoods, and competent to take full charge of factory, and willing to start at a moderate salary. We would not want any but a first-class man. Address, stating experience, "BOX 19," care HARDWOOD RECORD.

## WANTED—COMMISSION MEN

to sell Northern Hardwoods to consuming trade in Chicago, Michigan, Indiana, Ohio and Pennsylvania. We are manufacturers. Address "Box A," care HARDWOOD RECORD.

## WANTED—HARDWOOD SALESMAN.

An experienced hardwood lumber salesman for the road. Give references. Address, "BOX 12," care HARDWOOD RECORD.

## SALESMAN WANTED.

H. D. Wiggin, Boston, Mass., who has mills in West Virginia, manufacturing Oak, Poplar, Chestnut, Basswood and Buckeye, and has on hand some five million feet dry stock, wants to hire a salesman who has a thorough knowledge of the consuming factories of N. Y., N. J., Pa., Md., Ohio, Ind. and Mich. Will pay high salary to sober, industrious man.

## WANTED

By a hardwood lumber jobber, a first-class office assistant, having practical all-round knowledge of hardwoods and familiar with West Virginia and southern mills; also Ohio, Illinois and Indiana consuming markets. State age, salary and experience. All replies will be held in strict confidence. Address "BOX 16," care HARDWOOD RECORD.

## TIMBER LANDS WANTED

## WANTED.

Tract of white oak timber, two to five million feet.

Bearing Metals Department Sta. J-55

## DO YOU HAVE TROUBLE WITH YOUR GLUED UP STOCK OPENING UP AT THE ENDS?

If so, let us tell you in our illustrated booklet how you can overcome this difficulty by the use of our **New Continuous Feed Glue Jointer**. With this machine, you can make what is known as a "**Spring Joint**"—joint slightly concave, so that, when your stock is glued and pressed together it cannot open up afterwards.

The illustration will give you an idea of the feeding mechanism of our No. 217 which consists of a traveling chain, composed of detachable links. The chain runs over

two octagon wheels, one at each end of machine with finished faces and flanged at the lower edge to support the chain—a gib is provided, running full length of the chain—not part way only—insuring perfect alignment. The feed is driven by a 3-step clutch cone operated by a lever close at hand. The feeding power is transmitted by a large bronze worm wheel and steel worm running in oil, absolutely noiseless. **Ball Bearings** are provided for end thrust of worm.

WRITE FOR GLUE JOINTER BOOKLET.

**J. A. FAY & EGAN CO.**

414-434 W. FRONT ST., - - CINCINNATI, OHIO

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

# CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

*Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

# Linderman Automatic Dovetail Glue Jointer

To the woodworker who weighs the cost of Jointing Lumber and the value of his finished product the LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER offers a method that is superior to all others. It eliminates the operations necessary to complete a glue joint as jointing, glueing, clamping, unclamping and edging the jointed panel to width, combining the five hand operations into One Automatic Operation with a

## WEDGE DOVETAIL JOINT

which has proven by practical tests stronger than a flat joint and as strong as the natural wood because it allows the glue to stay in the joint until the tapering wedge Dovetails draw the lumber together which forces the glue into the pores of the wood welding it with a permanent clamp.

**Baltimore, Maryland**

## Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock **THAT IS IN SHAPE TO GLUE.**

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. **THE GLUE WE USE IS GUARANTEED HIDE STOCK.**

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed **THE BEST.**

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

# GIBSON TALLY BOOK

Special, patented, triplicate tally tickets supplied, printed on waterproofed paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability, convenience, accuracy, and for systematizing the inspection and measurement of lumber.

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets— $4\frac{1}{8} \times 8\frac{5}{8}$  inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket.

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

## PRICE LIST

Aluminum Tally Covers, each.....	\$ 1.00
Aluminum Tally Covers, per dozen.....	10.00

# A Moulder With "Get-At-Able" Adjustments

Neither an inside nor an outside machine but  
a combination of the good features of both

Not many years ago, moulding run at 40 feet per minute was considered the limit at which good work could be produced.

It's a fact that there are a good many moulders in use today that do well to turn out even 20 feet a minute.

One of our salesmen found this very condition existing in the factory of a large concern manufacturing refrigerators. Walking through the factory with the manager, they came across a moulder running about 40 feet a minute. The manager said he wanted to double the output to meet his requirements. Our man looked over a piece as it came from the machine and said, "Mr. Manager, that's pretty rough work for \*\*\*\*\* refrigerators. We're making a moulder that I will guarantee to do **better** work at 75 feet than you're now getting at forty."

The manager quickly figured he would be getting double the output of better work with the same machine crew — no increase in wage expense. That man has had a No. 108 running in his factory for several months.

Perhaps conditions in **your** plant are similar—you may not realize just what our No. 108 Open Side Moulder will accomplish.

As the illustration shows, it is open on the side, making readily accessible all working parts and adjustments. The base is cast in one solid piece—no bolts or girts to loosen or give.

The feed rolls are 8 inches in diameter — more powerful than those used on the average inside moulder.

We've cut down the number of gears to nine. They all run on shafts with babbitted boxes—no studs to give you trouble. You can't run stock face down successfully on an outside moulder — the lower cylinders and side heads vibrate too much. But it's easy on the 108, because both the bottom cylinder and the side heads have the direct support of the one-piece base.

We've a large folder showing front, rear and sectional views and which contains a complete description. Better send in your request today—this may be just the machine you're looking for.

# General Electric Motors Will Increase Your Profits

GENERAL ELECTRIC MOTOR DRIVING TIMBER SIZER

GENERAL ELECTRIC MOTOR DRIVING BAND RESAW

## Bigger Output

Whether all the shop, or only a few machines are working, each machine is doing its best. The speed of every one is under full control of its operator.

## Lower Expenses

Every machine makes the most of its power. The motor is attached direct to the shaft of the machine instead of turning it through belts and long lines of shafting.

## Better Work

The one speed best for each kind of work can be found and kept. There are no belts to look after. The operator can give his whole attention to the work. Best results are easily obtained.

## Your Woodworking Shop Needs Electric Motor Drive

There is a kind of motor for every type of machine and a size for every capacity. Electric Motors are as useful to small shops as to larger ones. Expert machinists are not needed to care for them. With slight attention from the man at the machine these motors are always in condition.

### Coming Association Meetings

#### NATIONAL ASSOCIATION OF BOX MANUFACTURERS

The annual meeting of this association will be held on Wednesday, Thursday and Friday, February 23, 24 and 25, 1910, at French Lick Springs Hotel, French Lick, Indiana. Hardwood manufacturers are especially invited to attend.

E. H. DEFEBAGH, Secretary. C. FRED YEGGE, President.

#### NATIONAL WHOLESALE LUMBER DEALERS' ASSOCIATION

The next annual meeting of this association will be held at the Sinton Hotel, Cincinnati, Ohio, on Wednesday and Thursday, March 2 and 3, 1910.

E. F. PERRY, Secretary. GEORGE F. CRAIG, President.

#### NATIONAL LUMBER MANUFACTURERS' ASS'N.

The Board of Governors of the above association have fixed the dates for the 1910 annual meeting for April 19 and 20 at New Orleans, La.

GEORGE K. SMITH, Secretary. EDWARD HINES, President.

### General Market Conditions

It is to be regretted that the RECORD can not announce today that hardwood sales conditions the country over are in good shape and running smoothly. However, there is no use of manufacturers, jobbers or consumers fooling themselves or each other.

The hardwood business is spotted in character, and while of late there has been a good many large orders placed, the vast majority of buyers are still purchasing only for their immediate requirements.

The higher grades in practically every variety of hardwoods, in shipping condition, are remarkably short. Sales are not being strongly urged on the part of manufacturers. Jobbers who have laid in large purchases are the only ones that are insistent upon forcing sales.

The trend of the market is upward all along the line.

The recent furniture sales period, on the whole, is a disappointment. Orders did not materialize to the extent that was anticipated, with the result that the furniture manufacturers are not buying lumber with any freedom. It is apparently a waiting game all along.

The foregoing is the situation and there is nothing in it to warrant the assumption that there is any prospect of a break in prices, but still it is a waiting game.

The comparatively small amount of No. 2 and better quality in first hands, as a foregone conclusion, is already sold, and even cull grades are in fair demand, and they apparently will be reduced to a normal stock within the next few months.

The only danger in the whole situation is the fact that current prices may induce manufacturers to produce an increased quantity of lumber during the next few months and overstock what is still rather a sensitive market. This is a warning and should be heeded. There is more money in hardwood producers keeping their cut down to normal than in increasing it unduly at the present time.

There is a call for panel poplar and cottonwood clear above the manufacturers' producing ability, and prices range very high.

The call for all varieties of oak is also in excess of stocks.

Most all varieties of northern woods are in the same shape.

In the face of all this, as before noted, business is not uniformly good.

The interior finish and flooring trades are still working practically up to capacity.

The veneer people are busy, as they are all working on a scale of prices not commensurate with their log value and lumber cost.

The entire situation will probably straighten out into good lines within a short time, but this condition is not yet here.

### Eucalyptus from Government Viewpoint

It will be recalled that in a recent issue of the RECORD the miscellaneous exploitation of eucalyptus-growing in California as an investment and as a fast money-making proposition was deprecated. In these articles evidence was presented of the exact status of eucalyptus values and prospects and an analysis made of the possibilities of making money in eucalyptus growing.

From the documents under discussion the RECORD attempted to disprove a good many statements that were being promulgated. Now it is gratifying to be able to state that Secretary of Agriculture Wilson has inspired the Forest Service to issue the following circular:

The Department of Agriculture has recently been informed that certain of its publications dealing with eucalyptus have been misquoted by several companies interested in selling lands. For instance, circular 97 of the Forest Service has been misrepresented as saying that California will in a few years be the only source of hardwood supply in the United States. Such a statement has never been made in any of the Forest Service publications and is not considered a fact.

The department experts believe that there is promise of considerable success in the cultivation of eucalyptus trees in many parts of California, but estimates of profit and of growth have been attributed to the department which are unauthorized. There are many uncertainties connected with eucalyptus culture, the government experts say, which the investor should take into account.

In some cases statements falsely attributed to the Forest Service in advertising matter have been corrected when attention was called to the facts, but not before the misstatements had been widely circulated. Secretary Wilson says he does not intend to allow the name of his department to be used as a means of victimizing the public,

and that in future any concern which attributes to the Forest Service unauthorized statements may expect the statements to be publicly disavowed.

The RECORD is pleased to note that Secretary Wilson has taken cognizance of the misuse of Forest Service literature on the subject of eucalyptus and has scored the eucalyptus promotion crowd in the way he has.

## The Big Hardwood Meeting

The most notable happening in hardwood affairs of late was the great and enthusiastic meeting of the Hardwood Manufacturers' Association of the United States which commenced January 31 and continued through February 1, 2 and 3, at Cincinnati, O. The attendance was approximately seven hundred, making this not only the largest gathering of hardwood people ever assembled in the history of the trade, but also the largest assemblage of lumbermen of any sort that has ever gathered together at any one conference.

At the preliminary day's session a conference was held between the Executive Grading Commission of the association and leaders of all lines of hardwood utilization; i. e., the wholesale hardwood consumers. This conference was entirely harmonious and resulted, by means of mutual concessions, very slight in character, in an agreement upon a standard basis of grading rules for all varieties of hardwoods.

President Carrier in his address, which was concurred in by a subsequent meeting, laid down certain basic principles without equivocation. Among other things he said:

No honest man can successfully defend the existence of more than one standard of grading, nor can any reasonable man deny the fact that the producer and consumer are the only parties concerned in the making of grades. Why should this not be brought about? The time for action is now, as too much has already been lost. Further delay will work great harm to the industry.

The Hardwood Manufacturers' Association has always recognized the value of the co-operation and support of the legitimate hardwood merchant, and it is my wish that amiable relations shall be continued and encouraged with that branch of the industry, but I am equally opposed to supporting any continued existence of the part of the trade whose functions lead to irregular practices and demoralization of grades, prices and good trade ethics.

Further on in his address the president said:

We do not advocate combinations or agreements in restraint of trade, nor action of any kind which is opposed to the public welfare. We do not expect the survival in business of any one who by reason of incompetence, dishonesty, or fault, is unable to cope with his competitors in an open market and a fair field. What we do advocate, is fairness and friendship in business, cordial intercourse, confidence in each other and frankness in disclosure when information is properly requested.

There was certainly no dodging of issues on these propositions.

Secretary Doster also made a very elaborate and comprehensive report of the "doings" of the association during the past year.

The president's address and secretary's report and other important matters that occupied the attention of the sundry meetings will be found printed in full in this issue of the RECORD.

Among other important things handled at this meeting was a logical Code of Ethics that was adopted.

It certainly was a great meeting, the like of which was never before known in lumber history.

In the face of the excellent work done by the officers of the association during the last year, their reelection and that of the Executive Board *en masse* was the part of wisdom. They are to be congratulated on the confidence they have inspired both in brother members and in the trade at large.

## The Impending Railroad Strike

To be consistent, the RECORD had to prophesy as long as two months ago that there probably would be trouble between the railroads and their employees over wage scales, which might result in strikes and a tie-up of freight transportation.

The crisis is due today in the wage negotiations of the Chicago switchmen affiliated with the Brotherhood of Railroad Trainmen. An ultimatum from the switchmen to the effect that unless the railroads grant an increase in wages there will be a strike will be delivered this morning to the railroad general managers.

By a referendum vote in eighteen switching yards the men overwhelmingly decided for a strike and against submitting the question of

wages to arbitration. The result of the complete returns was announced yesterday at the meeting of the chairmen and secretaries of the general grievance committee and the members of the Chicago Yardmen's Association held at the Great Northern Hotel.

The vote showed 3,007 in favor of a strike and only ninety-one in favor of arbitration. Nearly 4,000 men are engaged in yard service in Chicago. The entire force, including members of the Switchmen's Union, will go out should a strike order be issued.

This local situation is duplicated in nearly all railroad centers the country over. Railroad employees are simply demanding more wages and railroads are not in a situation to consistently abide by this demand. What the outcome will be remains to be seen.

## Cincinnati Hardwood Record Daily

Agreeable to promise, HARDWOOD RECORD issued at Cincinnati three fifty-two-page dailies during the big convention of the Hardwood Manufacturers' Association, February 1, 2 and 3. Three thousand copies were printed each day; through distribution by mail and those taken up by members at the meeting, which number was larger than expected, the three issues were exhausted up to less than one hundred copies of each day. These extras are held at this office and will be forwarded to anyone who desires copies, on receipt of five two-cent stamps to cover the postage.

The papers contained a complete report of each day's proceedings and a daily roster of attendance, besides a large quantity of miscellaneous matter, caricatures of individuals present at the meeting, etc.

The association manifested its appreciation of the RECORD's enterprise by tendering it an enthusiastic resolution of approval, and this office is deluged with letters of encomium over this innovation at functions of this sort.

## Annual National Wholesalers

Active and enthusiastic preparations are being made for the eighteenth annual of the National Wholesale Lumber Dealers' Association, to take place March 2 and 3 at the Hotel Sinton, Cincinnati, O. Questions of importance and interest to the trade will come up for consideration at this time, and a large attendance is expected.

At a recent meeting of the executive and arrangement committees definite plans were formulated for business procedure and for the banquet to take place on the evening of March 2. During the regular sessions reports will be submitted by committees on Trade Relations, Trade Ethics, Transportation, Fire and Marine Insurance, Credits, and Forestry. These committees are composed of men who are considered authorities on the subjects with which they treat, and their reports should be of profound importance to the trade in general.

A large attendance of members and guests is anticipated at the banquet. Men of national reputation will speak on this occasion.

The second evening will be taken care of by the Lumbermen's Club of Cincinnati, which at a recent meeting appointed the following committee to make suitable arrangements: Joseph Bolser, chairman; Fred Mowbray, W. E. Delaney, Chester F. Korn, B. F. Dulweber. It is needless to say that they will provide an affair which will make it well worth while for those who are planning to attend the convention to make arrangements to stay over the second evening.

## Restricted Building Operations

In the news columns of this issue of the RECORD will be found a report of the January building operations the country over. From this it will be seen that there is a slight falling off of structural work for January of this year as compared with the same month of last year. The only surprising feature of the falling off in this line of work is that it is not greater. The building of flats, houses, warehouses, factories, etc., always reaches its highest notch in times of business depression. This is the time when owners of real estate take advantage of low values of material and labor cost and make permanent improvements. Just as soon as business again becomes active the factory owner has no time for overhauling or building new structures, and the loose money that previously has gone into the erection of flats and kindred structures is put into active business pursuits.

Undeniably the year 1910 will show a falling off of fifteen to twenty five per cent. in general construction as compared with 1909.

## Quantity, Not Quality

You say you think my figure fine.  
 You say, in fact, it's quite divine.  
 And beg me please not to decline  
 To be your bride.  
 But, ah, for you—I thought you knew—  
 One figure, sir, is quite taboo.  
 How many, tell me, pray, have you—  
 Then I'll decide.  
 Eleanor Roosevelt in *The Smart Set*

People who live high are not always above suspicion.

A man is lucky not to have any worse luck than he has.

He who fights and runs away may draw a pension some fine day.

Change your opinions once in a while if you would improve them.

The bravery of some men is like that of bulldogs: they haven't sense enough to be afraid of anything.

Laziness travels slowly and poverty soon overtakes it.

Many a so-called orator is merely a human phonograph.

If a man's credit is good it is because he seldom uses it.

Procrastination is the thief of many a good time.

Insomnia is something that seldom troubles a person in the early morning hours.

A man is rich in power if he is able to do without the things wealth will buy.

A pet extravagance is no more a weakness than is a pet economy; and often it is not half so expensive in the end.

Nothing lowers a man so much in the estimation of his friends as being always on his uppers.

"Trust men, and they'll be true to you," says Emerson; but you can't make the grocer believe it.

Some people never pay anything but visits to their relatives.

It's easier to originate an idea than it is to get a capitalist interested in it.

The weather eventually gets back at the people who talk about it.

Opinions and visits are more appreciated when not forced upon people.

A wise workman lets the boss have his own way.

He is a wise fool who knows enough to keep it to himself.

## The Spirit of the Times

The Boys—"Let's make him a friend of ours."

All men are foolish, but some manage to conceal the fact.

A man would rather be embarrassed any other way than financially.

To love a good woman is a liberal education. To love a lady of fashion is a commercial education.

LESLIE'S WEEKLY.

Some men are driven to drink, some walk up to it and some have drink driven to them.

Modesty is the result of a man's fear that others won't think him as great as he thinks himself.—SMART SET.

Most of the fish in small puddles imagine they are big.

The people who are paid to be good never earn their salary.

The man who is afraid of work deserves to be scared to death.

Women remind us of angels because they are always flying around.

Why is it that little girls always smile and little boys always snarl?

Marriage is the process by which a woman tries to get a job as boss.

Don't waste valuable time explaining why you failed. Get busy and make good.

Anyway the woman who marries a man with a dimple in his chin had fair warning.

A toper doesn't believe in sober second thoughts.

# AMERICAN FOREST TREES

## EIGHTY-FIRST PAPER

### Basket or Cow Oak

*Quercus Michauxii*. Nutt.

*Quercus Michauxii* is distinctly of the South and is the best southern representative of the white oaks. Some authorities contend that it is really a variety of the swamp white oak, *Quercus platanoides*, basing their belief on the resemblance of the two and on the fact that their ranges meet but do not overlap. This oak thrives best in wet, swampy localities where it is found in company with water hickory, swamp bay, water elm, water oak, the gums and red maple. In such places it is not difficult to cultivate.

From the northern limits of its growth in Delaware, where it is not of any considerable size, it grows south through the Atlantic states and into Florida, west in the Gulf states to the Trinity river in Texas, and up the Mississippi valley, including in its range Arkansas, eastern Missouri, southern Indiana and Illinois and western Kentucky and Tennessee.

*Quercus Michauxii* has various sectional names as follows: basket oak in Alabama, Mississippi, Louisiana, Texas and Arkansas; cow oak in Alabama, Mississippi, Texas, Arkansas and Missouri; swamp white oak in Delaware and Alabama and swamp chestnut oak in Florida.

In general appearance the tree gives the impression of massiveness and strength, offset by the delicate, silvery effect of the bark and the lining of the foliage. The usual height is sixty to eighty feet, but it often exceeds a hundred feet, the bole attaining a diameter of as high as seven feet and showing three log lengths clear. The characteristic light grey, scaly, white oak bark covers trunk and heavy limbs, which rise at narrow angles, forming a rounded head and dividing into stout branches and twigs. The winter buds are not characteristic of white oak, being long and pointed rather than rounded. They are about  $\frac{1}{2}$  inch in length, scaly, with red hairs and usually in threes on the ends of the twigs. The general texture of the leaves is thick and heavy, their upper surfaces being dark, lustrous green and the lower white and tomentose. They are five to seven inches long with heavy petioles an inch in length and of the general outline of the chestnut leaf. Their rich crimson color is conspicuous in the fall after turning.

The staminate flowers are in hairy aments three to four inches long, and the pistillate ones in short, peduncled spikes. Large edible acorns are borne every year. They are one to one and one-half inches in length, and buried for half their length in the scaly gray

cups that are often flat on the bottom. They grow either in pairs or solitary, and the stalks if any are short.

As a timber tree basket oak is of great value, producing wood suitable in every way to the uses to which true white oak is put. The wood is heavy, hard, strong and durable, the heart being light brown and the sap being

for which use it is unsurpassed. From this use comes the common name, basket oak. The durability, strength and hardness of this wood render it suitable also for ties, poles, construction timber, cooperage, wheel-stock and fencing. It is used extensively for interior work, furniture and agricultural implements and for fuel.

Structurally the wood is ring-porous, the large spring pores being arranged as a rule in a single row. A radial (quarter-sawn) cut shows a rather lustrous surface. The specific gravity of the wood is .8039; one cubic foot weighs fifty pounds. Using kilograms and square centimeters as units, the coefficient of elasticity is 96373; modulus of rupture, 1118; longitudinal resistance, 482.

The sweet acorn is valuable in grazing, hence the name cow oak. This is conceded to be the best and most prolific mast tree we have. The accompanying photograph of a specimen of virgin growth of basket oak was taken by the editor of *HARDWOOD RECORD*, in Raleigh county, West Virginia.

This representation of the large oak family is one of the group of chestnut oaks, of which there are three others. These trees are so called because of the similarity of their leaves to those of the chestnut, the chief point of difference being in the lobes. All four are under the broader heading, white oak, and produce lumber of excellent qualities.

### Frecks of Tree Growth

The sofar, or whistling tree of Nubia, is a curious example of nature's freaks. On hearing for the first time the weird chords that emanate from its branches during a wind storm, one is not surprised at the native superstition that the spirit of a dead singer makes his home among them. But more practical white men attribute the sounds to the labyrinth of minute tunnels bored by a certain insect in the spines of this tree.

Another more practical freak is found in the weeping tree of the Canary Islands, which keeps the natives supplied with pure water even in the driest weather. The leaves have numerous pores at their base, which seem incapable of closing and emit a continuous shower of minute drops.

The Roys Hardwood & Implement Company of Russellville, Mo., was recently chartered with a capital stock of \$15,000. The incorporators are Charles W. Monroe and J. W. Burke of St. Louis, Mo., and R. F. Roys of Russellville.

FOREST GROWTH BASKET OAK, RALEIGH COUNTY, W. VA.

thin and darker. In quarter sawing the grain is not as beautiful as some of the other oaks, the medullary rays being few and large and giving a blotchy appearance to the wood. Probably owing to the moist conditions of its growth, the tree shows wide annual rings and large spring ducts which render it tough and easily split, the annual layers separating readily, making it adaptable to basket making,

# A Forestry Student's Letters to His Father

## FOURTH SERIES

DARMSTADT, GERMANY, Jan. 12.

My dear Father: Yesterday I received your letters from Sandosky and it sure did seem good to read them. I almost died when I thought of you people eating one of Aunt Carrie's good New Year's dinners, for it made me so homesick.

Things have been going along nicely. A week ago Monday I took my examination in tree identification from Dr. Schenck. Every man upon being graduated from the B. F. S. must take this exam and pass 100 per cent in it in order to be eligible for a degree. I was successful. I now have nothing to fear about getting a degree, for I have not failed in an examination taken since I entered the school. I note the letters which were published in the Record. Really I did not want them printed, but if they went well I am not sorry that they were published. However, I hope after this you will not send any letters in, unless I acquiesce.

The weather here has been fierce ever since we arrived. The sun has shown for but two days and we have not seen a bit of snow. The climate in this part of the country is always bad, being misty and damp at all hours of the day. For that reason I would suggest to Mother a change in the plans of the trip she outlined to me. Instead of going from Munich over to Frankfort, Heidelberg, etc., and then back to Carlsbad, I would go to Vienna, which is just as near Carlsbad as Frankfort, and the best city in Europe. People over here say Vienna is even better than Paris, and by all means to take that trip through Austria-Hungary. I think the trip will be great. Wish you would let me know on what date you expect to return home. I'll be on the job March third at Genoa, and the first person you will sight. You land there on "fighters," not coming into the mainland. I must now close and go out to eat. Am invited to dine with Dr. and Mrs. Schenck tomorrow evening.

DARMSTADT, GERMANY, Tuesday, Jan. 19.

My dear Father: What on earth is the matter that I do not hear from you or Mother? Have looked for a letter the last three days now.

Things are going great, and I am having the time of my life. Went to Doc's to dinner last week and he had several of the best people there. Had a peach of a dinner, and I succeeded in getting through with it without putting my feet through any trains, etc., showing the Dutch frauleins that I have been "elegant raised." After dinner the ladies all smoked with the men, even to the youngest, who is seventeen years old.

The next day Dr. Schenck told us we were invited to a big ball given by the Mercks here. He invited four of us, Jones, Buchanan, Tong, the Chinaman, and myself. By the way, I have never mentioned Tong to you, I believe. He is a prince of a fellow. Went to America six years ago, and since then has developed into a typical college man. Wears good clothes, talks well, smokes cigarettes, drinks beer, and is the best student in the class. His father is a big man in China, and he went to the United States with the Prime Minister. He intends to practice forestry in China. He dances well, and last night at the ball was the hit of the evening. In the cotillion he had the Dutch girls fighting to pin a flower on him for a dance. He and I are great friends. He has all kinds of nerve, and no matter how hard the field work is (and it is awfully hard over here), he always sticks. He is not accustomed to such strenuous work, and before the afternoons

are over he generally is about fagged out, but he sticks to the end and as a result is a great favorite with the Doctor and the fellows.

We all made a big hit last night, from what Doc says. It was one of the biggest affairs I ever attended. All the nobility, except the Grand Duke, were there—Prime Ministers, Barons, Counts, etc. We had a peach of a dinner, at which champagne flowed like water. Afterwards they danced four regular dances and a flower cotillion where the ladies collected a great bunch of flowers and the men got colors and carnations for favors. All the foresters were in on every dance, and I came home with my dress suit covered with flags. The ladies all looked good, but Mrs. Schenck was without a doubt the prettiest on the floor. She is "right" over here, and last night she and the Doctor were the whole cheese. I met piles of men wearing "Victoria crosses," or something like them, which signifies honor. All Doc did was to rush us around introducing us, and when the finish came he said to us, "Boys, I'm proud of the Biltmore School. We can show 'em that we've 'got the goods.' In overalls in the morning and dress suits at night, we're always there."

It was a great experience for me, and one which few Americans have had. I sure have been the lucky one in getting my share of social experiences over here. First, I attended a student kneipe of the best corps here; then a "slugger bout," then a dinner party, and now a grand ball. I'll be shooting craps with the Kaiser next.

I took the exam. in sylviculture Friday. It was not hard, and I think I drew a high mark. My work is nearing the end. Have two more diaries to write and only an exam. from Dr. House.

DARMSTADT, GERMANY, Friday noon, Jan. 21.

My dear Father: I have just an hour before our train leaves for the Black Forest, so I'll drop you a line. Cannot understand why you do not receive more letters from me, as I write twice a week regularly.

Things are just whooping along now, and I never felt better or enjoyed myself more in my life. Don't believe I ever got so much exercise. Yesterday Dr. Schenck read his pedometer, which he always carries on field trips, and he told me that the B. F. S. have averaged twelve miles walking every day. Not bad, is it? Wednesday we had a great field trip. We went to Heidelberg by train and visited the communal forests in that vicinity. Climbed mountains all day long, and it was great. These forests are perfect examples of good forestry practice. Here we saw government experiments being carried on with the various species. Saw pure and big stands of the difficult American species, such as Douglas fir, *Chamaecyparis Lawsoniana* (Port Orford cedar), sequoia, diameter three and four feet, chestnut, white pine, and, in fact, everything that grows over home, and doing better than they do at home. A gentleman from Pittsburg, who lives in Darmstadt, accompanied us and was very much enthused. Dr. Schenck is as enthusiastic as I have ever seen him. He says the school has never been in as good condition as now, and these new fellows work better than the old ones used to. I never have been kept so busy as since we have been here.

Today we ride by train until 11:30 at night, barely arriving at the Black Forests. Will sleep in a little town over night and beat it up in the woods in the morning. Will come back Sunday night.

We sure were bit hard when we heard the

news of Pinchot's dismissal. Dr. Schenck would not believe it. He has always said since this controversy came up that the country would not dare dismiss so valuable a man, and when he heard the news he said, "What will they do? Foresters they have in plenty in the United States, but no more Pinchots. He is not only a forester but he is a diplomat, and just what the country needs for the job." When he heard Graves got Pinchot's job he threw up his hands. That is an awful joke to us all, for we know Graves to be a forester who fools with dendrology, botany and the like more than the practical side, and I believe he will not be broad-minded enough to cope with the lumbermen of our country as Pinchot has done so well, giving the Forest Service its present position. We have not read the American papers, as they have not arrived. We found the news in a foreign paper, and immediately wired Pinchot, "Biltmore Forest School stands by you."

Doc disagrees with Pinchot in many things, but he always has impressed upon our minds that big men disagree. For instance, one day he introduced us to a professor in this way: "Boys, I want you to know Prof. ———. Now, boys, you must listen to him because I love him, but I don't believe a ——— word he says." The Doctor thinks Pinchot is a wonderful man in forestry and everything else. I think Taft has made a rash move, don't you? I must close now and get ready to leave.

Tell Mother I will leave my trunk and will not buy another. I can travel in my suit cases. Trunks are a bother and cost like the deuce, and you generally have to wait for them a day or so.

Please bring over for me a large one-pound can of Tuxedo smoking tobacco. Open the top and take out some just before you get into Italy, and I don't think you'll get soaked. Smoking tobacco over here is awful. I have not smoked a cigarette since the first of January. Am awfully anxious to see you both, and know we will have a great time.

For Heaven's sake flag Mother in sending my picture to HARDWOOD RECORD. I don't like the idea at all, and don't publish any more letters.

DARMSTADT, GERMANY, Sunday, Jan. 23.

Dear Father: Here goes for a letter before dinner. Have been in the Botanical Laboratory at the university for the last three hours. Things are going fine. I feel good and am counting the days until we meet in Genoa, on March third. We sure will have the time of our lives over here. There is so much to enjoy.

Last Saturday I wrote you a postal from the Black Forest. We were up there for two days, and I never enjoyed anything so much in my life. Wish you and Mother could have been there to have seen the wonderful stand of timber. I truly never saw such trees in my life. I ran a couple of estimates through some of the big spruce stands and found them to exceed anything in the States. We climbed mountains all day, and when we got back to Darmstadt late Saturday night we were a pretty tired bunch. I can tell you. Snow there was two feet deep, and everybody used skis up in the mountains. We walked up to the top and had dinner at the Hotel Sand there, and then took bob sleds and coasted down to the railroad in the afternoon. It sure was great, and Doc has promised to take us up for a week next month, when we will estimate the timber from heights and survey various tracts. It will be the best kind of practice, and I hope he does it before I leave.

# THE STORY OF YELLOW POPLAR

Illustrations from Photographs by Editor Hardwood Record

## CHAPTER III

THE BEST MULES PURCHASABLE ARE EMPLOYED

The accompanying pictures do not need very much text to explain this detail of the timber operations of the Yellow Poplar Lumber Company of Coal Grove, Ohio, to which great institution this series of articles pertains. The logging operations of an institution like this one differ materially from those of the majority of hardwood propositions. Primarily, it must be known that poplar timber does not exist in a solid stand, but grows interspersed with oak, chestnut, hemlock, beech, birch, maple and minor varieties of hardwoods. As the Yellow Poplar Lumber Company operates exclusively in poplar and as this wood never exists in an average stand above twenty-five hundred feet to the acre, and often runs less than one thousand feet to the acre, it will be seen that this company has to go over a large area of land year by year in order to secure its thirty to forty million feet annual log crop.

This way of logging a timber property is very expensive as compared with the cost entailed where the entire forest is denuded at one time. In the case of the particular timber operation now being conducted by this company in Dickinson county, Va., it meant about a year ago the entering upon an unbroken forest remote from railroad or other transportation facilities, with only a sat-

"SCALPING" THE LOG

ONE OF THE NUMEROUS TEMPORARY CAMPS

tering landful of mandantants and farmers along the creek valleys.

In taking therein the necessary woodsmen, live stock, locomotives, commissary, supplies, etc., the equipment had to be moved over two mountain ridges on roads that would seem impassable to the average person; swamping had to be done; portable mills erected for the making of wooden rails; camps had to be built, and all the paraphernalia put into action for the felling, skidding, railroad building and the transportation to the Russell fork of the Big Sandy River of the forty million feet of logs that this company took out in the following ten months. The undertaking was monumental in character, but this same work has to be done over from a new base of operation year by year.

The poplar has been taken off fifteen thousand acres during the past season, and next year it means the stripping of fifteen thousand additional acres to stock the company's mills.

The first picture of this quartette of woods scenes shows a bunch of the company's big mules just leaving one of the stables for the day's work. These are the largest and best mules obtainable in the market at St. Louis and cost an average of \$275 each. The animals are made up in four mule teams.

The large halftone presented on this page shows one of the quickly constructed and semi-temporary camps the company builds as near to the scene of active operations as possible. The entire work requires a perfect army of expert employees, cooks and common laborers.

The picture inscribed "Scalping the Logs" represents taking the outer bark off

the big poplar logs, which is done so that they may be "snaked" more easily and to avoid the depredation of borers, or of sap-rot in the event that the stick of timber should lie out in the woods over a season.

The final picture shows hauling logs to

the railroad.

In connection with the present operations of poplar operations, it may be noted that all items of expense connected with logging have practically doubled in the past ten years.

SNAKING BIG POPLARS TO THE SKIDWAYS

# Eighth Annual Convention Hardwood Manufacturers' Association of the United States

(See illustrative supplement.)

The eighth annual convention of the Hardwood Manufacturers' Association of the United States was held at the Hotel Sinton, Cincinnati, O., February 1, 2 and 3. The meeting was the most notable in hardwood annals, in many respects, in all lumber history.

In point of attendance, there being nearly seven hundred present, it was the largest gathering of lumbermen ever known. This attendance is indicative of the great interest aroused in advance over the important matters which it was announced would be considered at this convention.

On January 31 there was held a conference between the Executive Grading Commission and representatives of all important as-

more than four hundred being present, and every succeeding meeting was participated in by an unusually large number of members.

## MORNING SESSION, FEB. 1

The opening session of the meeting was convened in the large banquet room of the Hotel Sinton at 10:30 a. m. on February 1, President Robert M. Carrier, of Sardis, Miss., presiding and Lewis Doster, of Cincinnati, secretary, recording.

President Carrier opened the meeting by introducing Vice-Mayor Galvin, of Cincinnati, who welcomed the visitors on behalf of Mayor Schwab, who was unavoidably absent.

On invitation of the president, James J. Heekin, president of

ROBERT M. CARRIER, SARDIS, MISS.,  
PRESIDENT.

FRANK F. FEE, LITTLE ROCK, ARK., FIRST  
VICE-PRESIDENT

W. B. TOWNSEND, TOWNSEND, TENN., SEC-  
OND VICE-PRESIDENT

sociations composed of wholesale consumers of hardwood lumber. This meeting was presided over by R. H. Vansant, chairman of the Executive Grading Commission, on behalf of the association, and was participated in by the various members of this commission and by either association or individual representatives of organizations of wagon, carriage, railroad car, railroad construction, coffin and casket, dining table, parlor table, case-goods and other similar manufacturers.

The specific grades of various woods in which each faction was interested were carefully discussed, and by means of slight mutual concessions, an agreement was reached whereby all parties at interest were entirely satisfied. The Grading Commission of the association was perhaps obliged to make more concessions than the representatives of the different trades, but the basic principle of the Hardwood Manufacturers' Association that both sides of every board be taken into consideration when making grades was adhered to. The changes, which were authorized at the association meeting later, constitute no drastic nor very considerable deviation from the old grading rules of the organization.

The attendance was unusually large at the opening session,

the Chamber of Commerce, Cincinnati, added the welcome of his organization to that of the previous speaker.

Following him A. J. Conroy, president of the Business Men's League of Cincinnati, delivered an enthusiastic address of welcome.

The quartette was rounded out by an address of welcome by Cliff S. Walker, president of the Lumbermen's Club of Cincinnati.

President Carrier then introduced Frank F. Fee as the "official orator" of the organization, who made a very happy response.

The president then delivered his annual address as follows:

## PRESIDENT'S ADDRESS

Gentlemen—In greeting you upon this occasion, the eighth annual convention of this association, it is a source of great pleasure to present to you the customary address, and to congratulate you upon the return of better conditions in the hardwood industry and brighter hopes for the future. One year ago we were just emerging from a financial depression which affected our line of business greater perhaps than any other prominent American industry. Notwithstanding the conditions which prevailed from the latter part of 1907 until well along into 1909, our organization has not only remained intact, but has gone steadily forward until to-day

our association stands out a recognized force and a recognized necessity.

#### The Association.

Our membership has increased in all three classes, namely, productive, wholesale and consuming. Our various departments have been maintained and conducted with the same degree of energy and efficiency which has characterized the work of the association since its organization. The progress we have made during the past year has been particularly gratifying and has shown splendid results, making necessary a number of changes.

#### Membership.

Our Main Office has been permanently established in Cincinnati, a great hardwood lumber gateway, decided upon by the executive board as the logical center for both the producer and the buyer.

#### Main Office.

The establishment of a New York Office became necessary to handle Eastern conditions, which action has tended to broaden the market for our various hardwoods in this large consuming territory. It has given confidence to shippers from distant producing sections for with an office in that territory, they feel that their interests will be properly protected.

#### Eastern Office.

The educational work instituted by this office has in a large measure removed prejudice and opposition to our grading rules in that section among purchasers, who were either but slightly familiar with our association and its methods, or had based their conclusions upon misrepresentations.

An innovation developed during the year, which has proven most satisfactory, has been the inauguration of a Bulletin Service.

The Corps of Inspectors has been maintained as in the past, with the same unbiased and efficient service; and the educational work at the mills is being continued. The Inspection Bureau is the most important department in our organization, and the cost of maintaining it consumes the larger part of our income. I desire that particular attention be given to the matter of devising ways and

#### Bureau of Grades.

means whereby the expense of maintaining this department may be more equitably adjusted, without in any way impairing the efficiency of the service.

The secretary's report will fully cover the work carried on by our association during the past year.

It is my purpose to present to you several matters of importance which should come before this association. Chief among them is the question of uniform inspection. The time and attention which the association has given to this subject demands that it have preference over all others. It is our earnest and sincere desire to establish a universal standard of grading for hardwoods, and it is to be

#### Uniform Inspection.

hoped that much will be accomplished at this meeting, and more in the near future. It might be well to dwell briefly upon the association's past history along these lines. In 1902 the Hardwood Manufacturers' Association of the United States was formed chiefly for the purpose of standardizing the grading of hardwood lumber. At that time the entire industry was in a more or less chaotic state. The grading rules effective in most prominent hardwood centers were usually of a character for local use only. The producer was forced to grade differently for each market, thereby preventing an intelligent marketing of his product. After many months

of investigation and consultation with consumers as to their requirements, this association adopted standard rules which we now have in effect. Since then after due deliberation and careful study these

#### Manipulation.

rules have been re-worded, changing only the language, so that we come before you to-day with a book of rules which we believe to be the fairest for the entire trade; they cannot be misinterpreted, thereby preventing as far as possible the manipulation of grades—a practice quite common in the hardwood trade, and one which this association discourages, and which would be discontinued to a large extent, if not altogether eliminated, by the adoption of a single standard. The question of uniform inspection in the grading of hardwood lumber has come in for its share of attention during the past few months, and the lumber press has given its space freely and impartially to exponents of both sides to the controversy. This association has repeatedly placed itself upon record to the effect that it is thoroughly in accord with the movement to bring about one standard of grading, and has indeed made strenuous efforts in this direction. With this object in view numerous conferences

#### Conferences.

have been held, our association acting always in good faith and under the impression that if all parties interested could be gotten together in the proper spirit, all desiring the same end, the situation could be cleared up and a single standard agreed upon. But in every instance these conferences have accomplished nothing, and I deem it no more than proper to state here that such failures are in no wise chargeable to this association. I may say, however, that as a result of these conferences—or more correctly speaking, the lack of results—it has been very clearly demonstrated to us that we have been expending our energies in the wrong direction. The producers who compose the largest element of this association are very busy, devoting practically all of their time to the arduous duties of producing a commodity satisfactory to the purchasers, and they have found that practical results can be obtained by conferring with those who use the material. Why should not the producer and consumer engage in conference? The consumer knows his requirements and the producer desires to fulfill them. By such co-operation mutually beneficial results must follow. It would be impractical to even contemplate a standard grading rule to meet the specific requirements of every customer of hardwood lumber, but I see no reason why co-operation with the consumer should not result in a standard of grading rules, to enable the lumber manufacturer to more intelligently produce the article which the consumer desires to purchase. The consumer wants nothing which the producer cannot give him, and through co-operative methods the differences, if any, can be easily overcome. No honest man can successfully defend the existence of more than one standard of grading, nor can any reasonable man deny the fact that the producer and consumer are the only parties concerned in the making of grades. Why should this not be brought about? The time for action is now, as too much has already been lost. Further delay will work great harm to the industry. Practically every line of consuming trade is organized, and

#### Future

#### Co-operation.

and let us join our forces with them to this end. If there are individual interests outside of the organizations, we shall be glad to meet with them also. It is to

#### One Standard.

W. E. DELANEY, CINCINNATI, O., MEMBER  
EXECUTIVE BOARD

W. A. GILCHRIST, MEMPHIS, TENN., MEM-  
BER EXECUTIVE BOARD

J. H. HIMMELBERGER, MOREHOUSE, MO.,  
MEMBER EXECUTIVE BOARD

be hoped that definite action will be taken at this meeting to bring about these much desired and necessary results.

*The Hardwood Manufacturers' Association has always recognized the value of the co-operation and support of the legitimate hardwood merchant, and it is my wish that amiable relations shall be continued and encouraged with that branch of the industry, but I am equally opposed to supporting any continued existence of the part of the trade whose functions lead to irregular practices and demoralization of grades, prices and good trade ethics.*

Conservation of the forests has been given a great deal of attention in recent years, not only among lumbermen and lumber organizations, but by the country generally. The life of our present forests can be prolonged by the application of practical methods at producing points to prevent waste of the product now so prevalent among sawmill operators. To remove from the forest

#### **Forest Conservation.**

all of the timber that will pay a profit and reduce this to lumber with thin saws into as thin lumber as can be used in a practical way; to find ways and means of working up more closely, into different commodities the material, which is to-day wasted and burned—this form of conservation seems to me to be the one that should appeal to the present generation, whereas the re-planting of trees is one for the future.

A matter of importance to members of this association is the recently enacted law which provides for the levying of a tax of one per cent. on the net income in excess of \$5,000.00 of all corporations,

#### **Corporation Tax.**

with a few minor exceptions. The law appears to be fundamentally bad because it reduces to public property the private records of corporations, and it is discriminatory in its application, because it exacts no tribute from the co-partnership whose income may be greater than that of the corporation's. Some of the foremost authorities on constitutional law have declared the law unconstitutional, and have even gone so far as to advise corporations to ignore it. Conservative authorities, however, while not less certain of its unconstitutional nature, advise compliance with the law, but to pay the tax under protest. Test cases will, without doubt, be forthcoming, but in the meantime, it may be well to remember that the law is a reality, and that a heavy penalty is attached to failure to comply with its provisions, which require that forms supplied by the Government must be filed with collectors of internal revenue not later than March 1st.

#### **National Lumber Manufacturers' Association**

The National Lumber Manufacturers' Association has been doing excellent work. This association is made up of practically all of the producing organizations, including our own. The character of the work is of general nature, dealing only with questions

**Its Scope.** of national importance affecting the welfare of the entire industry. Its influence is far-reaching and is felt from coast to coast. As an illustration of the broad and general nature of its work in the interest of the lumber fraternity, I may mention that the National Association was largely instrumental in preventing adverse legislation when the tariff question was before the country for readjustment, and it is due to its efforts in a great measure that the duty on lumber was not placed at a still lower figure.

A feature of its work is the publication of a credit rating book, known as the "Blue Book," published by the National Lumbermen's

Credit Corporation of St. Louis. This book has made great progress, and is a recognized authority on credit ratings among lumbermen. It is compiled by lumbermen, and its existence was forced upon them for their protection, and is not dominated by any outside influences.

#### **Credit Rating Book.**

Its chief sources of information are the lumbermen themselves, and the information contained therein can be thoroughly relied upon. The "Blue Book" is always fresh, up-to-date and contains no old or obsolete matter. Moreover, I do not know of a single instance wherein this book has discriminated against any individual or firm, whether a subscriber or not. By actual use for a number of years, and from knowledge gained from a large number of other subscribers, I am prepared to state that it contains the most accurate information of any publication of like nature. Its special report department is extremely satisfactory and prompt, and the volume of data supplied with respect to the standing of any concern of whom inquiry is made, attests its activity in gathering information. This book is worthy of your careful consideration, and I heartily recommend its use by the members.

Of late it has been the fashion among the daily, weekly and monthly press to print frenzied articles, from time to time, condemning lumbermen and their methods, with little or no foundation in fact. It has been openly charged that lumbermen are in a trust, but neither the United Government nor any other investigating body has ever been able to find the slightest evidence of the existence of a

#### **Undue Publicity.**

trust among lumber producers. Whether right or wrong, the reading public forms its opinions and reaches its conclusions from articles appearing in the general press, and unless a vigorous campaign is waged against such misguided articles, it may result in adverse and unjust legislation. It is, therefore, your duty to refute and counteract these charges at every opportunity, and to call the association's attention to such matters.

You will no doubt recall that in 1908 the Lumber Trades Congress met at Minneapolis and formulated a code of trade ethics which, during the past year, was revised at a meeting held in Chicago.

Numerous objections have arisen to portions of this **Sales Code.** code, which have been considered undesirable by some of the members, and a special committee was appointed to take up this question, and, if possible, to formulate a code satisfactory to members of this organization. The necessity for a better and more definite understanding between buyer and seller is apparent. It has been brought out quite forcibly during the past two years that many misunderstandings and difficulties, and, in some cases, expensive litigation have arisen because of insufficient contracts, or the lack of any contract. It is to be hoped a comprehensive selling code will overcome this in the future. It seems necessary that a code of some sort should be adopted and referred to as a part of the selling contract, in the same manner that we refer to our grading rules. The committee will report upon this later.

The lumber press have proven themselves our friends and impartial ones. It is their constant endeavor to promote our best interests, and they deserve our support in return. They are the principal medium whereby the lumberman is kept in touch with current and important events affecting the welfare of his business. Within the past three months a man of more than national prominence has

JOHN W. LOVE, NASHVILLE, TENN., MEMBER EXECUTIVE BOARD

G. E. W. LUEHRMANN, ST. LOUIS, MO., MEMBER EXECUTIVE BOARD

W. M. RITTER, COLUMBUS, O., MEMBER EXECUTIVE BOARD

been called from the scene of his tireless activities. When James Elliott Defebaugh, of the *American Lumberman*, passed away, the lumber industry lost one of its best friends and strongest supporters. Mr. Defebaugh was a friend of mine, and when I speak of him I reflect my feelings from the viewpoint of one who can appreciate his worth from personal contact.

On January 5th the association lost one of its most prominent members. The death of John B. Ransom is a great loss to this organization, as he was not only its president for two years, but

**John B. Ransom.** at all times has been one of our most active and loyal members. Mr. Ransom was one of Nashville's foremost citizens, a business man of splendid ability and of the highest character—one whose methods of living any man would do well to follow.

A brief analysis of last year's business discloses a most satisfactory condition. Agricultural products, while showing no material increase in volume over the previous year, show an increase in value of nearly a billion dollars, or about 12 per cent. Iron, steel, copper, and other manufactured products have increased both in volume and prices, in some cases exceeding all previous records.

#### Trade Conditions.

Bank clearings, showing an increase of more than 25 per cent. over last year, testify clearly to the expansion in all lines of trade.

Lumber has not advanced in price in the same proportion as any other factory or farm product; but with the general revival of commercial activity, it is only reasonable to predict that more satisfactory values will be realized during the present year. Wages have increased in every line of industry, the purchasing power of the farmer has increased wonderfully during the past few years of bounteous crops and constantly advancing prices. If lumber values do increase, it will be through natural causes only, the basis of which is the law of supply and demand. Hardwood values, especially those of the better grades, have increased. The lower grades, while moving off more satisfactorily during the latter part of the year, have shown no apparent increase in price.

It gives me great pleasure to greet such a large and representative attendance at this convention, and I take this opportunity to thank you for your hearty co-operation during the past year, which has made it a pleasure to be your president. From

**Peroration.** the smallest operator to the largest producer there has been a more decided interest shown this year than at any time since the association was organized, and this, I feel sure can only be accounted for on the ground that the association is a necessity to the industry. The continuous growth of the organization, the closer relations established among the members, and the strength and standing of the association in the community, are sources of much gratification, and so long as it continues upon the same high plane which has characterized its work in the past, its success is assured. *We do not advocate combinations or agreements in restraint of trade, nor action of any kind which is opposed to the public welfare. We do not expect the survival in business of any one who by reason of incompetence, dishonesty, or fault, is unable to cope with his competitors in an open market and a fair field. What we do advocate, is fairness and friendship in business, cordial intercourse, confidence in each other and frankness in disclosure when information is properly requested.* I desire to thank the

various committees who have been with us during the year, and especially do I appreciate the hearty co-operation of the members of the Executive Board who have stood by me, and have given the office of president the support necessary to the welfare of the organization. Finally, the splendid services of our able secretary should not be overlooked. On the alert at all times to further the best interests of the association, he has done commendable work in every direction and especially among the purchasing element in an educational way.

My duties the past year have brought me in closer touch with the organization than the several years on its Executive Board, and as long as it continues on the same business-like lines, this association will always have my most earnest support.

Secretary Doster then read the report of C. M. Crawford, treasurer, as follows:

#### REPORT OF TREASURER

Cash on hand January 15, 1909.....	\$ 5,455.77
Cash received from Secretary's Office January 15, 1909 to January 31, 1910.....	30,919.28
	<hr/>
Vouchers paid out, from D-852 old series to J-294 present series.....	\$36,375.05
	<hr/>
Cash on hand January 31, 1910.....	35,652.02
	<hr/>
	\$723.03

Respectfully submitted,  
C. M. Crawford, Treasurer.

The report of the auditor, which was next presented, guaranteed the correctness of the association's accounting.

Secretary Doster then read his report as follows:

#### SECRETARY'S REPORT

Mr. President and Gentlemen of the Convention—In submitting my annual report to you, covering 1909, I desire to take up various subjects in the order in which they are arranged, as follows:

1. Production.
2. Executive Board Meetings in 1909.
3. Eastern Office.
4. Membership.
5. Association Meetings Attended in 1909.
6. Organizations Invited to Our Annual.
7. Bureau of Grades—Inspection Department.
8. Bureau of Grades—Grading Rules Department.
9. Mahogany Interests Joining Our Association.
10. Weights of Hardwood Lumber.
11. Bulletin Service.
12. Freight Traffic Matters.
13. Market Condition Statement.
14. Bureau of Commercial Reports.
15. Publicity—Berlin Exposition.
16. Exporting Red Gum.
17. American Lumber Trades Congress.
18. Stock Sheets—For Sale and Wanted.
19. Corporation Tax.
20. Telegraph Code.

WILLIAM WILMS, CHICAGO, ILL., MEMBER  
EXECUTIVE BOARD

R. H. VANSANT, ASHLAND, KY., MEMBER  
EXECUTIVE BOARD

FLOYD DAY, SWANN-DAY LUMBER COM-  
PANY, CLAY CITY, KY.

21. Government Price List.
22. Government Investigation.
23. National Lumber Manufacturers' Association.

#### Production

In our last annual report we set out the probable output of the membership of this association for 1909, as reported to us and which was the compilation of seventy-five reports. It has been impossible to obtain the exact amount of production for 1909, up to the present time, but comparing the reports of shipments by our members for 1908 with those for 1909, we find an increase of 125,000,000 feet.

The FOREST SERVICE published under date of November 15, 1909, the production of lumber for 1908, and requiring, as it seems to have done, that length of time to obtain complete reports, it is evident that any attempt on our part to give authentic statistics for 1909 production at this time, will be practically impossible. We are glad to reproduce for you their report covering the woods in which this association has been interested in the past, from which it will be seen that, with the exception of walnut and cherry, both of which are high-priced woods and of which the production is relatively small, there was a large decrease in 1908 over 1907:

KIND OF WOOD	QUANTITY IN M FEET	
	1908.	1907.
Oak .....	2,771,511	3,718,760
Poplar .....	654,122	862,849
Red Gum .....	589,347	689,200
Chestnut .....	539,341	653,239
Beech .....	410,072	430,005
Birch .....	386,367	387,614
Basswood .....	319,505	381,088
Elm .....	273,845	260,579
Cottonwood .....	232,475	293,161
Ash .....	225,367	252,040
Hickory .....	197,372	203,211
Walnut .....	43,681	41,490
Sycamore .....	43,332	46,014
Cherry .....	18,054	9,087
Total .....	4,704,400	5,228,367

It is not believed that the production for 1909, in the final complete report will equal that of 1907. The comparative report of shipments heretofore made referring to 1908-9, must not be taken as an accurate index of the production for 1909, as business in the latter part of 1908 was extremely depressed, and there was a great quantity of stocks in the hands of the producers which was carried over into 1909, and included in the shipments hereinbefore referred to for 1909.

For 1910, there is every reason to believe that the production for 1909 will be surpassed, if the strengthening of the demand which is now apparent on every side, increases in the same ratio as it has for the past three or four months.

Conditions now in evidence indicate that 1910 will be the banner year for hardwood lumbermen in production, in volume of business received and in the values of the different classes of your product.

#### Executive Board Meetings in 1909

The Executive Board of this association has held the following meetings during the year for the purpose of taking action on important matters that have arisen.

The first meeting was held immediately after the Annual Meeting in Louisville, the results of which have already been duly published in our proceedings.

The second meeting was held on June 19, at Cincinnati, at which time the detailed report regarding the opening of the Eastern office was made to the board and approved by them. Detailed reports were also made at that time covering the general work of the main office, and directions given for the guidance of the Secretary in the conduct of both the main office and all departments of Association work.

The third meeting was held in Cincinnati, on October 30, at which time the various matters that had transpired in Association work since the meeting of June 19, were fully gone into, and the work of the Secretary's office approved. Also at this meeting the matter of holding our Eighth Annual Meeting was thoroughly discussed, when it was decided, if possible, to hold the same in Cincinnati. Other current matters of interest and importance to the association were brought before the board for approval or for further action.

#### The Eastern Office

In May, 1909, after the project had been thoroughly discussed in all of its phases by the Executive Board, and as a result of their decision, we opened Eastern offices on the tenth floor of the Metropolitan Building, in New York City, and have already succeeded in creating an interest in the association affairs which had theretofore not been evidenced by the Eastern purchasing element. The lines of work pursued at this office have already in a most encouraging fashion demonstrated the wisdom of this move, and the prospects of rapidly broadening the scope of our association's influence in the East, particularly in so far as it relates to the adoption of our Official Inspection Rules, by large and influential buyers, seem now well assured.

Incident to the opening of the Eastern branch by this association, the Eastern consuming trade was thoroughly canvassed, being thus made familiar with the important step taken by the association toward actively studying trade conditions and trade difficulties connected with the consuming end of the line and the progressiveness of the manufacturers in determining upon an aggressive campaign against the lack of uniformity among hardwood purchasers in specifying grades. Over 3,000 personal letters being sent out in this campaign to consumers and large purchasing interests, and a very gratifying interest has been exhibited by a large portion of such trade, and many strong indorsements have been received.

We have an inspector, as heretofore suggested, located at the Eastern office, and this inspector, together with the duties of making inspections on disputed shipments, calls upon the trade at all opportunities for the purpose of enlightening them not only as to the interpretation of our inspection rules, where such may seem not to be thoroughly clear, but to outline as far as possible the simplicity of the methods of association work, and to show how the motto of the association, "A Square Deal for All," is being worked out through our systems.

Not only have we received indorsements from the Eastern trade, but our members are realizing the value of our maintaining an office in that territory, as it enables them to be protected in their shipments to that section of the country in better shape on shorter notice, and with greater celerity than ever before. Maintaining an

official inspector thus at our Eastern office, we have been able to demonstrate clearly and effectively the justice and impartiality of our grading rules. This being the fact, every member of our association should invariably specify the official inspection rules of the Hardwood Manufacturers' Association to govern when making a sale. The result of the work accomplished through that office warrants the feeling that a study and an impartial test of our inspection rules almost invariably produces a user of the same and frequently a hearty exponent thereof.

### Membership

In our last annual report we subdivided the membership into the different States, showing a total membership at that time of 352. Up to then we were not aware that more than two of our members went out of business on account of the hard times which began late in 1907, and continued practically through 1908, but during the past year there has been brought about the retirement of a number of the smaller mill men who have been heretofore, and still are, loyal to the association in their support. Such failures have had the result of decreasing the number of our members, but the membership has been increasing with the larger operators coming into the association, as the result of which our timber area is increased, and together with the interests of the wholesale and yardmen and the consumer coming into our association, as they have been the latter part of 1909, our income is increasing in better proportion.

We feel that the membership from now on will increase always in numbers, in view of the era of prosperity which is again in evidence, and it is hoped our timber area will also continue to increase from an organization standpoint.

### Association Meetings Attended, 1909

It has been my pleasure to attend a number of meetings of different associations during the past year, at practically all of which I have been honored by being placed upon the program to represent our interests. These different associations and their meeting dates are as follows:

- June 26th.—Meeting of Gum Manufacturers at Memphis, Tenn., Non-Association.
- July 7th and 8th.—American Lumber Trades Congress, Chicago, Ill.
- August 12th.—Semi-annual Meeting of the National Association of Box Manufacturers, at New York City.
- August 25th.—Annual Meeting of the American Manufacturers of Coil Elm Hooks, Toledo, Ohio.
- October 26th.—Central Bureau of Extension Table Manufacturers, Chicago, Ill.
- October 28th.—Meeting of the Michigan Hardwood Manufacturers' Association, Detroit, Mich.
- November 2d.—Chicago Furniture Manufacturers' Association, at Chicago, Ill.
- November 10th.—Annual Meeting of the Wheel Club, at Cincinnati.
- January 13.—Annual Meeting of the Indiana Hardwood Lumbermen's Association, Indianapolis, Ind.

I should also state that shortly after the last annual meeting, I made a trip to Washington, in connection with the National Lumber Manufacturers' Association, during the tariff hearings, and at that time appeared before Mr. Pinchot and explained the conditions as existing in the hardwood sections as represented in our association.

### Organizations Invited to Our Annual

It was decided that the association would this year especially invite organizations of consumers to have representatives present to discuss with the Executive Grading Commission, who met yesterday, the matter of uniform inspection. The organizations, which have been so invited to send representatives for the purpose of thus discussing the important question of inspection with our Grading Commission, full detailed report of which conference will be submitted to the association at a later time during this convention, are as follows:

- National Association of Furniture Manufacturers, Grand Rapids, Mich.
- Central Bureau of Extension Table Manufacturers, Chicago, Ill.
- Manufacturers' Association of Jamestown, N. Y.
- St. Louis Furniture Board of Trade, St. Louis, Mo.
- Queen City Furniture Club, Cincinnati.
- Cincinnati Furniture Exchange, Cincinnati.
- Furniture Manufacturers' Association of Evansville, Ind.
- Western Chair Association, Chicago, Ill.
- Chicago Furniture Manufacturers' Association.
- National Association of Box Manufacturers, Chicago, Ill.
- National Wagon Manufacturers' Association, Chicago, Ill.
- North Carolina Case Works Association, High Point, N. C.
- Oak Flooring Manufacturers' Association, Detroit, Mich.
- National Association of Agricultural Implement & Vehicle Manufacturers, Chicago.
- National Hickory Association, Detroit, Mich.
- The Wheel Club, Muncie, Ind.
- Vehicle Wood Stock Co., Chicago, Ill.

In addition to these, the unorganized trade has been invited, having the desire to have everyone connected with the hardwood

industry, who might be in any way interested in the deliberations of this body; we sent out about 15,000 invitations, and these were sent to a long list of each department of the industry:

- To Automobile Manufacturers.
- To Wholesale Hardwood Lumber Dealers.
- To Manufacturers of Washing Machines.
- To Manufacturers of Mantels.
- To Car Builders.

To every manufacturer of hardwood lumber anywhere whose name and address we could obtain, and we hope that everyone who has honored us by the acceptance of such invitation will participate as far as possible in the deliberations of this body and be benefited thereby.

### Bureau of Grades

#### INSPECTION DEPARTMENT

The Inspection Department of our Bureau of Grades is one branch of our association work which receives most careful attention. We have a corps of inspectors who are traveling through the different sections of the country, and which is composed of men of the highest calibre, both as to knowledge of our Grading Rules, ability to interpret the same, absolute integrity and men of good judgment.

We have divided their work up into territories—one man or a set of men, as the occasion may require, taking care of the different territories as follows:

The Central or Main Office District, traveling out of Cincinnati as headquarters to the surrounding territory, going as far east as Pittsburg and Buffalo, and to Ohio in the west.

The Eastern District, traveling out of New York City as headquarters, and covering the territory contiguous to Boston, New York City, Philadelphia and Baltimore, and west, if necessary, through Pennsylvania and New York.

The Chicago District, traveling out of that hardwood center through Wisconsin, Michigan, parts of Indiana, Illinois, Iowa, etc.

The St. Louis District, mainly occupied with local St. Louis work, but at the same time, as occasion may require, traveling over the territory immediately contiguous to that hardwood center.

In comparing the amount of work taken care of by this department in 1908 with that of 1909, we find a total of 697 cars, 8,364,000 feet in all districts for 1908, as against 792 cars, 9,404,000 feet in all districts for 1909. It should of course be remembered that these amounts represent only disputed shipments at destination on which no basis of settlement could be arrived at without such reinspection. But the fact that our membership handled so much more lumber during 1909 in comparison with 1908 shows that the ratio of complaints did not appear in the same proportion with the amount of lumber shipped. This is a natural condition in the lumber business; the movement of lumber became freer in 1909, which always has the effect of reducing complaints; also, the membership are studying the methods of the consumer more, grading their lumber more carefully in accordance with our rules and thus avoiding the opportunity of having such complaints.

It has been our custom in the past year, as in former years, to send our inspectors to the mills of our members for the purpose of checking up the work of their inspectors to see that they are in line with the proper interpretation of our Inspection Rules, to show them where they are weak, and to avoid their going from one extreme to another. It often happens when an inspector finds that his work has been of too high a grade, that he will endeavor to correct the same, be inclined to go to the other extreme, and put in too large a percentage of the lower end boards. We endeavor to correct this by such visits.

These inspectors who visit the mills are the same men who travel through the consuming territories, who reinspect any disputed shipments of our members, and who are able to demonstrate to the management the causes which have resulted in the reduction of grade where such has occurred, which helps to remove the cause for future disputes, carrying out our idea of uniform grading. We have sometimes been requested to have our inspectors load cars for shipment, but unless the destination of such stock is to some foreign, or to a west coast point, we have not been able to accede to their requests under our rules and regulations, finding it more satisfactory from practically every point of view to have our inspectors only go through the stock at destination when complaint has been made, or to act as arbitrators between the buyer and seller when any differences occur.

We publish in our Grading Rule Books the regulations covering reinspection charges for reinspection work, in all cases when it was the intention to ship the stock in accordance with the Official Grading Rules of this association. The information that we desire in such cases is the name of the original shipper, a copy of the original invoice from them, and the present holder of the stock; the invoice, of course, showing the car initial and number and complete contents—we acting as arbitrators between the parties interested. If the original shipper has not received settlement in full for the car, it is evidently his right to receive information from this office as to the results of inspection of our Official Inspector, if he has not received such through other sources. It

is our desire at all times to assist in the settlement of disputes wherever possible, believing that the quicker any disputed shipments are settled, the better it is for all, and having men of the highest class of intelligence who can represent the interests of both sides and stand absolutely impartial in all of their decisions.

#### GRADING RULES DEPARTMENT

There was practically no change made in the grading rules of this association at our last annual meeting, except in one or two instances which was done for the purpose of further elucidating and harmonizing the rules as a whole, but which necessitated a new printing of the book, and which was done under date of April 10, 1909. Ten thousand copies of these new grading rules have been printed and practically all of them have been distributed, the requests coming in from all sections of the country, and a great number have been distributed from our eastern office.

The Executive Grading Commission in their report will no doubt advise you as to any changes or additions that may have been suggested to them during the year.

#### Mahogany Interests Joining Our Association

A number of concerns in part or entirely interested in the manufacturer and sale of mahogany have been desirous of joining this association, but have been held back, owing to the fact that we, as an organization, do not include this wood in our various publications. Of late, however, we have received the applications of a number of firms who are largely interested in mahogany, who have suggested that grading rules be adopted covering this wood and that mahogany be inserted on our statement of market conditions.

Realizing that, although mahogany is not a domestic wood, the adoption of a set of grading rules covering this wood and the publishing of current prices would be of benefit to our members, we suggest that the committees be duly appointed to carry out the same.

#### Weights of Hardwood Lumber

The Committee on Weights of this association reported to this body at the last annual meeting, which report was duly adopted at that time and published in our official proceedings. However, realizing that this was not in such form as to be readily referable by the parties desiring to use the same; therefore, we have reproduced the weights officially adopted by this association on heavy cardboard folder which can be opened out and placed at a convenient location for quick reference. Over 1,000 of these pink folders have been sent out to our members, to the Railroad Freight Claim Agents and Classification Bureaus. The matter which was thus published in the convenient form is as follows:

#### OFFICIAL STANDARD WEIGHTS OF HARDWOOD LUMBER

Kinds of Wood	Thickness	Condition	Pounds Per 1,000 ft. dry
Ash	1" and thicker	rough	3,500
Basswood	1" and thicker	rough	2,600
Beech	1" and thicker	rough	4,000
Birch	1" and thicker	rough	4,000
Buckeye	1" and thicker	rough	2,600
Butternut	1" and thicker	rough	2,800
Cherry	1" and thicker	rough	4,000
Chestnut	1" and thicker	rough	2,800
Cottonwood	1" and thicker	rough	2,800
Elm (soft)	1" and thicker	rough	3,200
Elm (rock)	1" and thicker	rough	3,800
Gum	1" and thicker	rough, red	3,300
Gum	1" and thicker	rough, sap	3,100
Gum	1/2" Bevel Siding	S1S	900
Gum	—" Drop Siding	S2S	2,200
Gum	—" Flooring	S2S	2,200
Gum	3/8" Ceiling	S2S	850
Gum	1/2" Ceiling	S2S	1,300
Gum	3/4" Ceiling	S2S	2,000
Gum	5/8" Ceiling	S2S	1,600
Gum	1" —" —" —"	S2S —" red	2,500
Gum	1" —" —" —"	S2S —" sap	2,350
Hickory	1" —" —" —"	rough	5,000
Hickory	Axles and Reaches	rough, dry	4,500
Hickory	—" —" —" —"	green	6,000
Hickory	Rim Strips	rough	5,000
Maple (soft)	1" and thicker	rough	3,000
Maple (hard)	1" and thicker	rough	4,000
Oak	1" and thicker	rough	3,900
Oak	3/8" thick	rough	2,000
Oak	1/2" thick	rough	2,200
Oak	5/8" thick	rough	2,700
Oak	3/4" thick	rough	3,200
Oak Chair and Furniture Stock	1" and thicker		4,200
Oak Squares	1" x 1" and larger		4,200
Oak Wagon Stock and Felloes	—" —" —" —"	dry	4,500
Oak Wagon Stock and Felloes	—" —" —" —"	green	6,000
Oak Plow Handle Strips	—" —" —" —"	dry	4,250

Poplar	1" and thicker	rough	2,800
Poplar	3/8" —" —" —"	rough	1,600
Poplar	3/4" —" —" —"	rough	2,100
Poplar	1/2" Bevel Siding	S2S	850
Poplar	Drop Siding	S2S	2,000
Poplar	3/8" Ceiling	S2S	800
Poplar	1/2" Ceiling and Partition	S2S	1,200
Poplar	3/4" Ceiling and Partition	S2S	1,500
Poplar	1/2" Ceiling and Partition	S2S	1,750
Poplar	13-16" Ceiling and Partition	S2S	2,000
Poplar	1" —" —" —"	S2S, to 13-16	2,200
Sycamore	1" and thicker	rough	3,200
Walnut	1" and thicker	rough	4,000

These weights have been established from actual tests. It has been the accumulation of information received from different sections of the country, showing the average weights of the different varieties of wood and the different character of manufacture. Attests have been submitted showing the tests to be absolutely accurate.

Cincinnati, O., September 30, 1909.

The Committee on Weights will no doubt also have a report to make in regard to the same.

#### Bulletin Service

In the past year, as already referred to by the president, the association made an innovation in the form of a publication to all members and others interested, called the "Bulletin Service," and in this publication we have sent out items of importance to our members regarding association work and conditions in the hardwood industry, as well as items of importance in connection with the general business world which are not, as a rule, published in the daily press, but which are of vital importance to business men.

Under this service we published to all our members and to manufacturers of gum, regardless of membership, statistics which were obtained at a meeting of the gum manufacturers held in Memphis, Tenn., June 26th, 1909, showing surplus stocks for sale, in detail, as well as gross amounts of stocks on hand July 1st, which publication assisted the manufacturers to a great extent in their marketing their surplus stocks, coming as it did into the hands of people who desired to purchase the same.

We also later canvassed the situation with the same purpose in mind, covering the stock of poplar on hand, and the results of such canvass were also published in the "Bulletin Service," and being sent as it was to the purchasing as well as to producing members, the large number of requests received from them for detail information as to who held certain items of stock, which were in each case furnished to them, evidenced the good results that such publication had for our members.

The great number of letters received by us heartily commending this service assures us that the benefit of such publication is realized by our members and appreciated. It is our intention to further increase the value of such service the coming year, and we ask you to watch the same for future developments.

#### Freight Traffic Matters

The committee have been working on various matters during the year, although the association does not maintain a traffic bureau, at the same time, matters of vital interest to the members, are drafted through this committee. It is hoped that they will be retained for the future year, so that the different subjects can be placed before the members through the "Bulletin Service."

Delegates attended a meeting of the Western Classification Committee, which was held at San Antonio, Texas, on January 18 and 19.

#### Market Conditions Statement

We have issued our regular statement of market conditions of the past year as conditions justified.

Statement No. 1 was published immediately after the annual meeting in February; this was current until October 11, when statement No. 2 was published. This showed a number of changes over the first statement. The demand had become more nearly normal and it was felt that the prices shown on such statement were an accurate index of trade at that time.

Statement No. 3, making a number of changes, especially in better grades of poplar, oak and other woods, was published under date of November 20, and which statement is current at the present time.

There are numerous suggestions to which changes should be made and it is hoped that the committees will meet at this convention to rearrange any divisions of widths, insert new woods, or readjust the list to suit the ever-changing conditions appearing as we advance in our work.

Last year we were confronted with a knowledge of a great deal of low grade material being held by the producers, as well as the opportunity of a great deal of competition from other woods. The great devastation in the North on account of forest fires which occurred during the year and the tornadoes of the South which caused a great deal of fallen timber and which was necessary to be manufactured at once, all became competitive with our low

grades and caused them to move very slowly at the beginning of this past year. The last part of 1909 the lower grades have been moving more freely and although the prices have not been advancing in proportion to the increased demand there has been a marked strength in the market and the stocks in hand now are more in normal condition with respect to the proportion of the different grades.

There is nothing in sight confronting the lumbermen that indicates anything but flattering trade conditions. The panic being over, every class of consumption resuming their buying to practically their old condition, together with the fact that the production is only fair, brings every lumberman who has stock for sale into a condition that is not only satisfactory at the present time, but with a future before him that is more than satisfactory. The lumbermen with hardwood interests can be congratulated on the conditions which are appearing for the year 1910; it is predicted by one of the most conservative that by the month of April the values of all commodities, lumber especially, will be in line with a plane that will produce satisfactory returns. This is a condition that has been long looked for by the lumbermen in the past as a great many losses have been sustained during the last few years when the prices obtained were not in line with the costs of production.

#### Bureau of Commercial Reports

This department of our general Information Bureau is perhaps second only to our Bureau of Grades, and it has been handled in the past along the same general lines as we have endeavored to carry out in the inception of this system, and find the large number of members who constantly use this system of inquiring to all members, and return reports covering their actual business dealings with parties inquired for. We believe that it is of great benefit to all our members, perhaps more especially to those who are in less active and close touch with their customers. In the long period of time that we have been issuing these confidential reports, our members should have very complete records regarding the same.

#### Publicity, Berlin Exposition

We have received communication from the Executive Secretary of the American Exposition to be held in Berlin, 1910, enclosing a prospectus of the same, from which we are advised that this will be an All-American Exposition held in a foreign country, and the first of its kind. The exposition opens in June and continues for three months.

The Executive Secretary, Mr. Vieweber, also calls our attention to the fact that the Board of Governors of the National Lumber Manufacturers' Association adopted resolution at their last meeting to bring this matter to the attention of the various association of lumbermen, outlining the desirability of their placing an exhibit at that exposition. Mr. Edward Hines, the president of the National Lumber Manufacturers' Association, is a member of the Advisory Committee for this exposition, and we have, therefore, been requested to bring this matter up for your consideration, as to whether or not we, as an organization, or individual lumbermen, would desire to make an exhibit at such time.

We have also been approached during the past year by the forest service by Mr. McGarvey Cline, in behalf of their laboratory at Madison, Wis., to furnish them with a certain number of logs of given specifications for testing purposes, which communication we have submitted to our members through the "Bulletin Service."

We have just in the past few days received a communication from the Iowa Agricultural Experiment Station, advising that they are anxious to put in a good display of finished woods that would show the commercial uses of the different species, and that they would like very much to have the sample pieces of such woods in oak, beech, birch and maple, showing the varied uses of the woods, as well as views of hardwood logging and milling operations for the same purpose. Any of our members wishing to place exhibits with the above should communicate with Mr. C. A. Scott, forester, Ames, Iowa, for full details of what is desired.

#### Exporting Red Gum

It has been brought to our attention that the Italian government is discriminating against the manufacturers of red gum. The Italian customs tariff provides, as we understand, for two classes of wood, namely, common and cabinet makers. The former class is admitted to that country free of duty, while against the latter there is assessed a duty of from three to four lire per quintal, or from 20 cents to 25 cents for about 225 pounds. Heretofore gum has been classed as common lumber in connection with such woods as maple, oak, chestnut, cherry and cedar, but recently has been placed in the class with ebony, mahogany and similar woods of great weight and value as cabinet woods, and the classification covers all varieties of gum, red gum, sap gum, tupelo, etc. This duty on gum is approximately \$10.00 per 1000 feet.

The National Lumber Exporters' Association have taken up this matter with the association, and in view of the fact that a large number of the members of our association are vitally interested in the manufacture of gum, and a considerable number are engaged in exporting the same to Italy and other countries, we place this

matter before you, as it has been placed in our hands, for consideration.

#### American Lumber Trades Congress

This association, at its last annual meeting, adopted a Code of Ethics that had been put into shape by the American Lumber Trades Congress at their meeting in July, 1908. This congress, which is composed of delegates from a large number of lumber trade organizations, representing practically all lines of the industry, at the meeting in Chicago, June 7 and 8, 1909, revised its Code of Ethics, and you will find distributed throughout the hall a copy of this new code, which the president has already referred to and which has had the careful consideration of our committee on a selling code for the past year, and as the result of such consideration they will no doubt have something to propose for your adoption in lieu thereof.

The members of this association who attended this last meeting of the American Lumber Trades Congress, were as follows: R. M. Carrier, president, Sardis, Miss., Thos. W. Fry, C. F. Luehrmann Hardwood Lumber Co., St. Louis, Mo., and Lewis Doster, secretary, Cincinnati, Ohio.

#### Stock Sheets

This department of our general information bureau we have endeavored to carry along the lines that would be of greatest benefit to our producing, our wholesale, and our consuming members, and have had a great number of requests all through the year for copies of the same from parties who desire to get in quick touch with stocks for rush shipments.

The wholesale as well as the consuming members have been using this system very freely the past year with good results to them and to the producing members. We shall take advantage of every opportunity in the future to improve this feature along any lines where such can be discovered.

#### Corporation Tax

As you are doubtless aware, and as suggested by President Carrier in his annual address, the tariff law passed by Congress in 1909 under Section 38, provided for an income tax on corporations.

We have received correspondence from different organizations during the year in regard to the constitutionality of this law, such as the St. Paul Manufacturers' Association, and the Illinois Manufacturers' Association.

Through the courtesy of the former we are able to present to you in printed form the report of the committee appointed by that association, including opinions of prominent members of the New York Bar. These pamphlets have been distributed for your information, in view of the fact that this matter may no doubt be taken up and some action decided upon at this meeting, or a committee arranged for to instruct the work for the future.

#### Telegraph Code

The Western Union and Postal Telegraph Companies the past year amended the tariff on land line telegrams covering code messages, reducing the group of letters theretofore considered as one word from ten letters to five, thereby in some cases practically doubling the cost of such code messages.

We took the matter up with both telegraph companies, and neither of them would consent to any change in their rules, except as to what they designate as their rule 4, and under which rule 4, they will allow all dictionary words from the eight most prominent languages, regardless of the length of the word, to be counted as one word, and that the arbitrary counting of five letters as one word only refers to such code words as are not found in any dictionary of any of the eight languages specified, or are arbitrary combinations of letters which the telegraph companies consider unpronounceable. We feel that we have done all we could in our endeavors to have them amend the same, but if not, will be guided by any action that is taken at this convention regarding the same.

#### Government Price List

At our last annual meeting we were honored by having with us Mr. McGarvey Cline, representing the forest service, who at that time outlined to us the purpose of the department in publishing a price list, and since that time they have changed their plan of issuing the list each month, so that now the United States government through the Forest Service of the Department of Agriculture, publish quarterly what is called "Wholesale Prices of Lumber."

There are also publications being made by private organizations, and although there is considerable variation in prices shown by the different publications from the actual conditions, in view of the fact that none are binding, nor recognized authority nor widely circulated, they are not considered a detriment to the business, but as a matter of record.

The value of any of these publications depends practically upon the class of people from whom the information is derived. The secretary's office has not participated in the making of any of these lists.

#### Government Investigation

We have been called upon in the past by the Department of Commerce and Labor to go into the affairs of our association

work. We have gladly opened up for their investigation all of our methods for the last two years, whereby they could obtain the information they so desire, and which opportunity was taken by them. However, since the change of administration there has been nothing heard of the matter; at the same time we are ready at all times to still have our office open for investigation.

The legality of our methods in the various departments of our work has been carefully studied, and it is not the intention of this association to deviate from good business methods, or to offer any opportunities for censure under the charge of "restraint of trade," either in the way of iron-clad price agreements, or any other matters that would tend to render the association liable in damage suits or other actions at law, either by a local, state or national government.

#### National Lumber Manufacturers' Association

This organization held its annual meeting for 1909 in Seattle, Wash., and none of the delegates appointed by President Carrier to attend the same, representing our organization, were able to be present at that time, owing to its being held in the far West. However, we desire to report that the important matters affecting our interests which were acted upon at that time were as follows:

"Resolutions adopting odd lengths as standard as well as even lengths in dressed lumber."

This action confirms the action taken by our organization which, as you know, admits in all lumber a certain per cent. of odd lengths, as specified in each grade. Mr. Victor H. Beckman, of Seattle, is in attendance at our convention and he will no doubt discuss this matter more fully at a later time during our sessions.

The Board of Governors at that time also passed a resolution providing for a new office of the organization to be created under the style of manager, and Mr. Leonard Bronson, of Chicago, has been elected to fill such position. He is with us to-day and will discuss matters pertaining to the organization during these sessions.

We also have with us Mr. W. F. Biederman, superintendent of the National Lumber Manufacturers' Credit Corporation, which publishes the Blue Book, and he will also talk to us at a later time regarding the same, as well as the Collection Department thereof.

On motion, the president appointed a committee to report on recommendations contained in the officers' reports, made up of W. B. Townsend, A. B. Ransom and A. G. Fritchey.

President Carrier then introduced George F. Craig, of Philadelphia, president of the National Wholesale Lumber Dealers' Association, who made a happy little address to the visitors and stated that it had given him great pleasure to be present. He complimented the organization on its evidence of vigor and stated that his association would be extremely glad to become allied with it.

### AFTERNOON SESSION, FEB. 1

On reconvening at 3 p. m. President Carrier opened the meeting by introducing John W. Love, of Nashville, Tenn., who read a heartfelt tribute to his departed friend, John B. Ransom, ex-president of the Hardwood Manufacturers' Association. Mr. Love's tribute was a splendid one to this great and honored member of the association. He concluded his appreciation by offering a resolution of respect to the memory of Mr. Ransom, which was signed by every lumberman of Nashville, which he presented for adoption.

R. H. Vansant in seconding Mr. Love's motion added a splendid tribute to the character of the deceased.

The resolution was adopted.

Mr. Love then made a motion that a suitable resolution be drawn up in memory of F. S. Hendrickson, an honored member recently deceased.

This motion prevailed.

The president then introduced O. B. Bannister, the well-known wheel man of Muncie, Ind., who made an address on "Organization," of which the principal portion is reproduced below:

#### ORGANIZATION

In this modern day when we speak of organizations, we are apt to think that they are the product of some recent years, but this is not so. The principle has been followed from the beginning of the world. It is true that this principle has been much abused, both in early and late history.

It is quite well established, I think, that the only reason why the Jewish people are forbidden by their laws to eat hog-meat, is that when Moses was on Mount Sinai receiving the law of God, that Aaron, his brother, brought up all the hogs and when he refused to share the profits with Moses, Moses the lawmaker,

promulgated a law forbidding his people to eat hog, and *busted the trust*; and strange as it may seem from that time on, many of the business and commercial interests of the world, have been busy forming trusts, and the lawmakers just as busy trying to bust them, and the end is not yet.

My subject, however, is not trusts, but "organization." I am quite well aware that many are unable to see any distinction, and it is difficult sometimes to tell wherein the difference exists, as many honestly conceived organizations have abused their power and become obnoxious, selfish, overbearing trusts; but I am sure that we will all be able to see the difference in principle at least, between the inborn nature of man that was God given and that makes him want to associate with his fellow man for the good of each other, and in obedience to the command for him to subdue and have dominion over the earth for the benefit of the whole—Yes! I say we ought to be able to distinguish between this principle and the abuse of it—in the "hog meat scrap" that is credited to Moses and Aaron. It might be a good thing right now for us to have a Moses who could forbid the eating of meat for thirty days. (I believe that this is the extent of the time of the present proposed abstinence.) It certainly would be a cheaper boycott than the one that is now being attempted.

This great difference between trust and organization is certainly clear to us, and it must also be quite as clear that the principle of organization rightly applied is good; wrongfully applied is bad. If this is true, then why all of this disturbance?

Is it not because we are trying to correct the abuse of the principle in the wrong way?

There is an old saw, "Competition is the life of trade." Let us see what is this thing "Competition" that is the life of trade. If it is the trade's life, we ought to be able to compare it with the blood of a healthy man—that which flows through his veins, brings color to his cheek; that which makes him step quick; that which makes him stand erect, his eye to sparkle, and his tongue to say: "I am glad I am alive." This is life, and life worth living; and of course if competition is the life of trade, it must be *that something* that will develop the body "trade," and make it strong, give it life, build it up, and make it a means of profit to everyone engaged in it, and when I use the term "everyone," I do not mean the employer only, I mean *everyone*, employer and employee. This thing that is the life of trade must give life to everyone dependent upon it. The child of a section hand on the railroad is entitled to comfortable clothing and good schooling quite as much as the child of the president of the road, and if competition will give trade this *kind* of life, then by all means let us have competition. But is this the case?

My dictionary tells me that competition means "common strife for the same object;" and it also tells me that strife means, "Altercation, violent contentions, fight, battle."

Now suppose we were to change this old saw to read: "Competition, that is common strife for the same object, alterations, violent contentions, fights, battles, is the life of trade. This is really what it means, except that I think we could change one more word, which would show the result. Let us do it, and make it read as it really is: "Competition, that is common strife for the same object, altercation, violent contentions, fight, battle, is the *death* of trade."

Do you say, "How the death?"

Jones is in the manufacture of stockings. He has a nice plant, pays his help well, makes money.

Smith who lives in the same town says, "That man Jones has a snap. I guess I will go into the stocking business myself," and he does so. He goes to the same people that Jones has been selling and reduces the price that Jones has been making 10 per cent. The buyer rubs his hands in glee, and says "Ah! that is good." *Competition is the life of trade.*

Jones has a good plant, has been buying his wool direct from the farmer, and paying his help good wages. The buyer, who is never satisfied, tells him he is buying from Smith at 10 per cent. less. Then Jones gets busy, he puts down on a piece of paper the cost of the wool; he looks at it and studies it, and wonders if the farmer can't afford to furnish it for less. He knows that the farmer did not pay the Lord anything for growing the wool on the sheep's back, and that there was, therefore, no cost of raw material, and that the only thing that made it cost was the labor of the farmer in caring for the sheep and raising food with which to feed them.

He consults the farmer, who by facts and figures proves to him that he cannot sell the wool for a lower price and make a living.

He now puts on this piece of paper the names of all the people in his employ; the amount paid them; the cost of his taxes and his insurance and his fuel, and when he adds them all together, he finds it is impossible for him to meet the price that has been made by Smith, and leave him a profit.

Jones has been employing *men*, in his factory, but upon investigation he finds that Smith has employed women and girls; so he concludes to displace his men with *girls only*, and go Smith one better.

The "common strife for the same object begins," and continues. First Jones is on top and then Smith. Each reduction must bring additional reduction in the cost, and as the Lord has made no charge for the raw material, there is nothing in the cost except the labor that is necessary to make the goods. Consequently there is nothing to reduce but the labor; and the reducing process goes on down, down; the hours of work are increased—the age of the labor reduced to the minimum until mere children are at work, and the burdens are made as heavy as it is possible for them to bear, and the result is that there are contentions, altercations, fights, battles, death. This is competition.

Jones and Smith met one day when conditions were at the very worst, and one said to the other, "Why not get together and agree upon a price for selling our stockings that will enable us to employ men and pay them living wages; get rid of these long hours, and child labor and make ourselves some profit? And be of some service to ourselves and our employees."

The result is that they agree to do so. *This is organization, and the kind of organization that it was intended for mankind to pursue, and although it is forbidden by law, their pressing necessity and distressed condition of their business makes them take the chance.*

They find after forming this organization that they have a *new power*. They control the sale, and can compel the buyer to pay whatever they may ask. With this new power they seem to forget the conditions of anyone except themselves, and they say to themselves: "This is our business and we can do with it as we please. It is true we are not paying our help enough—they barely have enough to eat and but little to clothe them, but we control the stocking business and they can't get any more from anyone else and we will just keep every dollar we can make." *This is a trust.* It is also forbidden by law, as it should be.

Organization as I have defined it in this brief way *should be permitted by law; but trusts should be put out of business.*

Now I feel quite sure that you will all agree with me up to this point. The question then is how to permit one and prohibit the other.

Before trying to answer this question, let us take a little deeper look into our system of commerce. It is a matter of statistics that there is a greater percentage of failures in all branches of trade than there is of success. Some have placed in the successful column 5 per cent. of the whole; others 25 per cent. I am not prepared to say which is right, but apply the thought to your own knowledge. Write on one page the names of all the men you know who have been successful in any line of trade with which you are acquainted; those who have retired with a competency with which to support themselves and their families in old age; and on the other the names of those who have started and failed. I am sure you will find the failures to be many more than the successes.

*Should not a system of commerce that brings about this result be changed? What is the cause of the failures? It is the system. What is the system? "Competition is the life of trade and trusts."*

What is the remedy? Legalized organization that requires everyone engaged in any line of trade to associate themselves with all others engaged in the same line, and that requires them to become bureaus of information, through which they can show their right to exist; and their right to exist should be based upon their being able to show that they are conducting their business at a profit, and this should be made so clear that it could be understood by the producer, by the consumer, and by the public. It must be known by the producer because he must know what his goods are costing him in order to be able to sell them at a profit, and it must be known by the consumer because the consumer must be willing to pay the producer his wages, and it must be known to the public because the public are the people that invest their money in these institutions, and they must know that their investment is safe.

I hear an objection to the profit being known to the consumer. Why should this be the case? If you employ a man you know the wages that you are going to pay him. Do you not? And if you are employed as a hatter to make a hat, you would be quite as willing that the man that is to pay the bill should know what he is paying. And there is something else that must be shown also. Listen! They must show that they are conducting their business at a profit based upon the cost of their goods; and as the consumer must be willing to pay the producer a profit upon this cost—this profit being his wages—if you please, for his labor and for the use of his capital, so must the producer pay his laborers a price at which they can live and support their families.

Has it ever occurred to you that there is nothing in the cost of any article of merchandise but labor? There is fundamentally no such thing as cost of raw material. When the Creator started this organization of the human race, He did not say, "I will furnish you raw material at such and such prices," but he said: "Behold! I place you upon the earth to replenish it, to subdue it, to have dominion over it, and I have given you everything upon the earth, the trees, the ore, the coal."

There is not a single item of raw material that is costing mankind one cent. *The only cost is labor.*

Legalized organizations that are required to show their right to live, and in doing so, to show that they are paying cost for their goods, and that this cost permits the producer of it to support their families as families should be supported, will become bureaus of information, that will prevent over-production and the temptation to sell goods for less than cost. It will prevent under-production, and the temptation to ask more money for them than they are worth.

They will settle the question of the tariff as they will be made to show positively what effect the labor they can buy in the shape of partially produced goods coming from foreign countries, has upon the product of their own labor in their own country; and will settle the question of capital and labor, avoid strikes, lock-outs, and bring harmony where there is contention, fights, battles, death. The economic changes that have occurred during the last half of a century or during the present generation of living man have unquestionably been more important and varied than during any former corresponding period of the world's history.

It would seem, indeed, as if the world during all the years since the inception of civilization, has been working upon the line of equipment and industrial efforts in perfecting tools and machinery, building work-shops and devising instrumentalities for the easy inter-communication of persons and thoughts and the cheap exchange of products and services; that this equipment having at last been made ready, the work of using it for the first time in our day and generation is fairly begun. The real facts are that we are just now ready to do business in this great country.

A recent publication has undertaken to show what the great volume of business will be in the United States in 1918. These figures have been based upon the average increase that there has been in the last 18 years. Taking the amount of business done in 1890, and taking the period from 1890 to 1908, a period of 18 years, and taking the average increase per year and apply this for the next 10 years, and the increase shown is so marvelous that one must hesitate almost to think it possible. I will mention only one item. It is plainly shown according to figures that if the business increases in the United States for the next 10 years as it has in the last 18, that the railroad facilities of this country must be doubled in order to handle the business in 1918.

Now does anyone believe that this great business can be conducted with profit to the capital invested and to the labor that produces it without organization? And are we to continue our attempts to prevent organizations and give the men engaged in it the opportunity to form trusts? Must we continue in the dark? Would it not be better to come out boldly in the light?

It is manifestly impossible for the government to make laws to both control and prevent organizations. The fact that they try to make laws, to control the abuse of them is an acknowledgment that they cannot prevent them.

This being the case, *why should they not be required by law?* Is it not clear to you that if they were required, and if they were required to show their right to live as organizations, that they could be more effectively controlled than with our present system.

I firmly believe that there is an evolution going on that will result very soon in changing the trend of thought to this view.

I have no suggestions to make nor resolutions to offer for your adoption. I simply want to leave this one thought with you. Namely, that the time is coming, if it is not already here, when organization will be required by law, and when they do come, we will have made one of the greatest steps forward that has ever been known to civilization.

Now what has all of this to do with the Hardwood Manufacturers' Association. Just this: You as manufacturers, have been holding your meetings from year to year drawing ways and means for the economic handling of your business. Many of you, no doubt, can look back to a time when you regarded your business as your own. When you thought, if you did not say it, that Smith had no right to be in it, but now you recognize that Smith is a part of it and must be considered.

This is your part of the evolution that is going on. I believe that this is the first meeting to which you have invited the consumer. You are now asking him: How can we supply you with your needs to better advantage? How can we work with you in a way that will help you and us to conserve this great gift of nature so that it may be put to the best use, so that it may not be ignorantly wasted or destroyed? And I answer you with all the emphasis of which I am capable, by *organization*.

Not by a trust that arbitrarily controls, and dictates prices, but by organization that shows so plainly that there is a duty to your fellow man which must be obeyed; that the mere price question will become a secondary matter. The press of the country has from time to time referred to a gigantic lumber trust. If there is such a thing I do not know it, but if there is and they are abusing their power they should be punished. Let us suppose for

the sale of argument that there was now in force a national law that would say in effect:

*Lumbermen, form yourselves into an organization, establish a central office, to which you must furnish the entire details of your business; the knowledge you have of the timber standing, the cost of producing it; the purposes to which it is put; the annual amount consumed, the amount paid for stumpage, the amount paid for labor, the amount paid for freight, yes and the profit you make. Don't you suppose that we would then be able to tell whether there was a trust or not? Don't you think we would then know something more about the supply and demand? Would the lumber be so high in price one year that it would make building prohibitive and so low the next year that everyone engaged in the business would see failure staring them in the face? Do you say that it is a vision—a dream—a theory—impracticable—impossible?*

President Carrier then introduced J. H. Baird, of the Southern Lumberman, Nashville, Tenn., who spoke on the "Functions of the Trade Press." Mr. Baird's address follows:

#### THE FUNCTIONS OF THE TRADE PRESS

The lumber newspaper is only a specialized newspaper, and its function is not different in any particular from that of the legitimate newspapers in any other line. The lumber newspaper is the development of modern business conditions. It came into existence as the result of the specialization that has occurred in every other direction. Just as the Interstate Commerce Commission has become a special tribunal for giving a certain character of litigation a degree of careful attention and technical knowledge not possible to be had at the hands of the older courts, so the lumber newspaper has come in response to the need for a fuller and more accurate news service in the lumber trade than could possibly be furnished by other publications.

The primary function, then, of the lumber newspaper, is to publish the news of the lumber trade—fully, promptly, frankly and with absolute fairness and impartiality. Its main editorial function is to supplement this news with such timely comment and discussion as will make clearer its full meaning and significance.

The lumber newspaper should not only publish the news of the trade for the benefit of the men in the trade, but should endeavor so far as possible to enlighten the general public on the true facts of the trade. How much it may be able to accomplish along this line is impossible to say. A strictly trade publication, no matter how readable it be made, can not hope for a large circulation outside those engaged in the business to which it is devoted, but so far as such a paper does reach the general public its utterances should be such as to command respect and absolute confidence. If it goes to the general public recognized as a special pleader, all its utterances will be discounted and its motive distrusted. Mention is made of this feature of the function of the lumber newspaper for the reason that right now the lumber business is the subject of widespread misrepresentation in the removal of which its several excellent trade newspapers ought to be able to render some effective assistance.

The lumber newspaper to accomplish its maximum usefulness along any line should be absolutely free from suggestion of partisan influence and control. In this respect it is exactly on an equality with all other newspapers. Freedom from special influence, and an absolute honesty and fearlessness of expression are just as essential to the success of a lumber newspaper as any other. Let it lose character for honesty and truth telling, and its influence is destroyed. With a recognition of its truthfulness the lumber newspaper is in position to bring all the force of a wholesome publicity to bear on the building up of all the good things in the trade, and to powerfully assist in the elimination of all the bad things; and this, with the rendering of an adequate, attractive and truthful news service, constitutes the true mission and function of the lumber newspaper.

Development of the tendency toward specialism in journalism, while not bearing directly on the subject assigned me, is not without interest and tends to make clear the true function discharged by class publications. In this development the weekly newspaper, devoted to a certain line of business and giving up its columns almost if not wholly, to recording the news happenings of that business, is the latest step. The tendency toward specialization in newspaper set in almost as soon as the first periodical publication was established.

The first periodical publication was established in England about two hundred years ago. It was in the form of "News Letters." At first these were circulated as written manuscript, but soon came to be printed, and issued at irregular intervals as occasion demanded. These early "News Letters" were given up almost wholly to news of the church and state—that is politics and religion, the leading issues of those days. They were vital issues too; one had to do with the man while he stayed here and the other after he left, and both came in for more real concern than they do now.

Crude as they were, the success of these early "News Letters" show that they supplied a distinct want. They increased rapidly in

number and slowly enlarged in scope. It required a long time for them to get away from politics and church news. Little by little, however, some came to take on a distinctively literary character, and the development thus begun has led in a period of two hundred years to the literary magazines of to-day. Somewhat earlier than the beginning of those literary publications, however, occurred a great advance along another line—the development of a news service. The earlier forms of the "Letters" were soon supplanted by what might be fairly called newspapers, to the old topics of church and state doings being added sporting announcements and social gossip. Along this line the development led, somewhat more rapidly than that leading up to the magazine, to the daily and weekly newspapers of modern times.

It was long before any of these early newspapers paid any attention to business, for the reason, no doubt, that business in those days cut but a relatively small figure. Business was not in it with war and politics. As it is now carried on business is a comparatively modern institution, and the real business newspaper is one of its very latest developments. It is impossible to say when the first strictly business publication was established. Whenever that event occurred, however, it was the result of the need felt for a more adequate and accurate treatment of matters affecting some particular trade or business than could be had in existing publications. Probably no strictly business publication of any sort dates back further than fifty years, and nearly all of those now in existence or that have existed were established within the past twenty-five years. As soon as the first one had been established, the same causes that led to its establishment began at once to operate to bring about further specialization. The first trade publications were rightly called journals. They were issued at regular but somewhat long intervals. None of the earliest were issued oftener than monthly, and many were content with bi-monthly or even quarterly issues. There was no need for frequency of publication, as their contents were made up almost wholly of statistical or technical matter, or a combination of the two. When these earlier trade journals began to depart from statistics and technic, it was to introduce special articles dealing with features of the business or trade with which they were allied, and a more or less academic discussion carried on in essays on topics of collateral interest. The introduction of trade news matter into these earlier trade journals came slowly. It was only when several lines of trade had come to be so developed that thousands of persons were engaged therein, and in which happenings of real news value were of frequent occurrence, that there was felt a need for the real trade newspaper as distinguished from class journals. Not many lines of business have yet developed to the point of requiring a weekly news service, and to say that the lumber business supports more real newspapers than any other line of business is but one way of saying that the lumber business is the most advanced and up-to-date of any business on earth.

Mr. Doster, as secretary of the Insignia Committee, stated that the committee recommended the adoption of the seal used on the badge as the official one of the association.

On motion, the recommendation of the committee was accepted and adopted.

The secretary then announced the make-up of sundry committees on statistics, grades, rules, transportation, waste, resolutions, etc.

President Carrier announced for the evening for the entertainment of the visitors an address on Rough Country Lumber Operations, supplemented by stereopticon and moving pictures, by H. H. Gibson, editor HARDWOOD RECORD.

#### TUESDAY EVENING, FEB. 1

Mr. Gibson's feature of the entertainment was produced in the main assembly hall of the Hotel Sinton, at eight o'clock on Tuesday evening, and consisted of an address involving a description of more than a hundred colored stereopticon views of scenery, timber landscape, tree growth, mountaineers, moonshiners, feudists and of individuals involved in the range of the mountain country known as the Appalachian, and concluded with a moving picture exhibition showing the woods and splash dam operations of the Yellow Poplar Lumber Company, Coal Grove, O., in Dickinson county, Va. Excerpts from Mr. Gibson's address follow:

#### ROUGH COUNTRY LOGGING OPERATIONS

Primarily, I want to disabuse the minds of the suspicious. Lectures are serious things—usually to be avoided—and this is not to be a lecture. It has been suggested that I might exhibit some pictures, reproduced from photographs which I have made during years' cruising in the woods which would interest and entertain the members of the Hardwood Manufacturers' Association and their guests.

These pictures do not need much explanation, and about all that I shall attempt is a running and rather discursive talk concerning them. It will be impossible to make any continuity of discourse beyond a recitation of facts germane to the pictured subjects; and I know that you will not expect any oratorical efforts from me.

Since boyhood my business and my pleasure have taken me to the woods. Next to my wife, the forest tree is my most adored object. I know the forest as the average man knows his friends. I love every tree that grows.

I might talk to you about tree growth of any section of the United States, but it has appealed to me that pictures and stories about the timber and lumber operations in the Appalachian range, involving as they do almost all the types of commercial hardwoods of the country, would prove more interesting than any other, therefore I have selected this section to discuss.

The elevations of the eastern half of the United States—the Alleghenies, the Blue Ridge and the Great Smokies—involved in the Appalachian range, are of paramount interest for forest, geographic and hydrographic reasons, and, as a consequence, for economic reasons as well. These mountains are old in the history of the continent which has grown up about them. Hardwood forests were born on their slopes, and ever since vegetation began have spread themselves over the eastern half of the continent. More than once in the remote geological past, these forests have disappeared before the sea on the east, south and west, and before the ice on the north, but here in this mountain region they have existed from the remote ages even up to the present day.

Under varying conditions of soil, elevation and climate, many of the Appalachian tree species have developed, and in this region occur a marvelous variety and richness of growth that marks the concentration of many of the most valuable tree species that exist, as well as many others of secondary importance. These trees thrive under such variable conditions that they have attained this perfection of forest and commercial greatness. It must be recalled that the southern Appalachians embrace the highest peaks and largest mountain masses east of the Rockies. Throughout their rich valleys and coves, and along their wooded sides are many tree species that grow nowhere else in the world and which furnish important lumber supplies which cannot be obtained elsewhere.

This is a rough country. Many sections of it have been but recently opened to the march of lumbering operations, and others are still inaccessible for lack of transportation facilities. It must be recognized that a tree is like an Indian. It will not stand civilization. Our beautiful park trees, from a monetary viewpoint, are a mockery. They have no commercial value. Where timber is at its best is in regions that have never witnessed the inroads of man. To be sure, in the large portion of this mountain country the rich river valleys have been settled by farmers for years, but they have done comparatively little damage to the virgin timber in the far-back coves and distant mountain fastness save in some of their older settled regions where live stock has been allowed to roam and leaf fires have been started to forward early grazing.

It must be recalled that this is a very sparsely settled region and that often whole counties involving a larger area than some states of the Union, have a population of but three or four thousand. The damage caused by the squatter, therefore, is infinitesimal as compared with the great mass of timber land involved.

In these remote sections of the United States, originally settled largely from old Virginia, exist a peculiar and isolated people. They are as foreign to the great mass of population as the inhabitants of the continent of Europe or Central America, or almost, I might say, of the oriental countries. They have peculiar morals and strong religious beliefs. They live in isolation, in poverty, and in contentment. They are hospitable to a marked degree. Their law is Mosaic: "An eye for an eye and a tooth for a tooth." They recognize no law that prohibits them from making and selling "moonshine" whisky. They do not recognize any justice that prohibits them from killing a human being who has wronged them.

One will find great valleys in Kentucky, the Virginias, eastern Tennessee and western North Carolina encompassed by mountain ranges in which nearly every man, woman and child are related to each other. In the local vernacular, they are "kin folks," and any one living even across the ridge is a "furriner." This "furriner," should he visit in that section, is welcome to the best that the rough cabin affords, and many a time have I been invited to "light and rest my hat" at a mountaineer's "shack" as night overtook me and have partaken of the best, and usually of the little, there was in the larder; the mountaineer and his wife have insisted on my occupying their bed in the corner of the one-room log shack, and themselves sleep on a pallet beside the open fireplace. For such services it is impossible to get them to accept any recompense. I was the stranger within their gates, their honored guest, and they my friends.

This picturesque country, to my mind, for sheer beauty of landscape, surpasses anything on this continent. I have seen Yellowstone Park, the Grand Canyon of Arizona and the battlements of the Rockies, but for pure air, for sparkling springs, for the musical

tones of running water, for nature's glories unadulterated, at every opportunity I hie back to the Great Smokies.

In some places in the mountains, notably in the Blue Ridge and Cumberland sections, there are sink holes in the plateaus, often a hundred feet or more below the surface. The sides of these sinks are practically perpendicular, and in their bottoms are found magnificent growths of poplar, oak and hemlock. Successful lumbering of a proposition like this involves a good many engineering difficulties and is expensive. The incline plane railroad was built by William E. Uptegrove & Bro., of New York, to enable them to lumber some timber near White Rock station on the East Tennessee & Western North Carolina Railroad. This narrow gauge line is popularly known as the "stemwinder," and at its terminus connects with one of the W. M. Ritter Lumber Company's old logging lines, which is locally known as the "Arbuckle" route. The legend behind the name "Arbuckle" is that Mr. Ritter's predecessors, who built the road, paid for its construction almost entirely out of commissary supplies consisting to a considerable extent of Arbuckle's coffee. The "stemwinder" derives its name from its multiplicity of reverse curves, as it follows the gorges of the Toe and Doe rivers. As these streams in crookedness have no rivals in the known world, it is not an inappropriate name.

This incline plane was built almost from the railroad platform at White Rock up the side of the mountain for a distance of three quarters of a mile. Then a transfer table was put in and a second incline, nearly half a mile long built at right angles to reach the plateau. Interposed between the top of this incline and the sink hole were two and one-half miles of tram-road, involving two switch-backs. Then another half mile incline plane was built up from the sink. This was one of the most expensive lumber operations for its size in the history of the mountain country, but it is said to have paid a handsome profit on the investment.

Incidental to these pictures, I will tell an anecdote.

Major Thomas, manager of this operation, one day invited me to go and look it over. Not in the least realizing what I was going up against, I cheerfully assented. I clutched one of those cable-hauled tram-cars convulsively on the trip to the top of the mountain, hung on to the bucking locomotive over the switch-backs in fear and trembling, and was eventually landed at the bottom of the sink where the logging operations and sawmill were located. On the outward trip I had the company and assurances of safety of Mr. Thomas. Returning, I came alone, and was back to the turntable at the top of the final three-quarters of a mile of the incline, and was instructed to hang on to the top and ends of a tram-load of lumber about to be dispatched into the abyss below. Just after the car started down this 45 degrees toboggan, one of the big husky "devils" that handled the levers of the hoisting apparatus said to his companion:

"Bill, we've had pretty good luck lately, hain't we?"

His companion vouchsafed assent.

"Yep," continued the first speaker, "we hain't killed no 'furriner' this week, have we?"

The front porch of a Kentucky mountaineer farmer's home. No matter how good or how poor the house is, very few of them are without a front porch. Here is where the mountaineer lives. I must tell you just one story that was told me by a prominent Episcopalian bishop of Chattanooga. This distinguished divine was much interested in the welfare of the mountaineers, and rode horseback over thousands of miles of rough country to visit them. One spring day, noontime found him at the doorway of a cabin, where he accosted the group of men and boys on the porch with a request that he might stop for dinner. The men were gassing with each other, and the particular amusement of the moment was the spitting of snuff saliva at a mark, a knot on one of the firewood logs hauled up in front of the cabin. Mixed up with the men and boys were half a dozen dogs. The men were cordial to the stranger and invited him to alight. The spokesman, who afterwards proved to be the man of the house, said he didn't know how much there was to eat, still he was welcome to what there was, but there would be no dinner until the "old woman" got back to the house. He indicated the woman in question by pointing up the mountain side, where she was engaged in plowing with the aid of a small steer and a primitive plow. The bishop dismounted, and one of the boys, at the suggestion of his father, provided a little bundle of "roughness" for the horse to eat. Presently the weazened, sorrow-faced old lady came trudging down from the mountain leading the steer, which she carefully fed, and, on her appearance at the shack, was "made acquainted" with the bishop. She was cordial, but careworn, and said that dinner would be ready soon. The woman first picked up the ax and split wood for the fire in the old mud-chinked fireplace. Then she prepared the meal, after fetching a pail of water from the spring some quarter of a mile away. The dinner was set on the table, and the men and boys were told that it was ready. In the mountain country the women and girls of the house always wait until the men have finished before they eat. This instance was no exception. The man of the cloth, although no newcomer in the mountains, was discomfited to sit at table while his hostess served, and attempted to make

himself as pleasant as possible, and especially addressed the wife. He disclaimed on the beauties of the scenery, the gorgeous flowers, the splendid timber, the purity of the air and water, and asked her if it were not an ideal place to live. The old lady up to this time had uttered scarcely a word, but she now answered with a weary sigh: "Yes, mister preacher man, this is a fine country for men and hound dogs, but it's hell for women and bulls."

You often hear about the feudist of Kentucky and the Virginians. Here is perhaps the best known of them all. This is a picture of the famous Devil Anse Hatfield, the feudist of McCoy-Hatfield fame, who lives up at the "head of the creek" about fifteen miles from Devon station on the Norfolk & Western Railroad in West Virginia. He is a particular friend of mine, and I think a lot of the old chap. He is as harmless as a kitten, and is loved by his friends and respected by his enemies. I coaxed him six hours before he would let me take this picture, because, as he said, "I reckon there are about twelve indictments out ag'in me yet, and I don't want to get too well known by all these trifling deputy sheriffs."

I once asked him to tell me the story of his life, but the same indictments stood in the way of personal reminiscences. On my insisting that he tell me how the McCoy-Hatfield feud started, he vouchsafed that it all came about over a little argument over a "passel" of hogs. He says that the feud spirit has died out within him and that he is a feudist no longer. He has taken a vow never to step on Kentucky soil again and when he visits his friends on the further side of the Tug, he does so from his skiff. Hatfield's title of Devil Anse did not accrue to him through his feudist record, but was the name he achieved in the confederate service for his intrepidity and general foolhardiness during the War of the Rebellion. Perhaps it is more of a habit than anything else which makes him carry his Winchester in the crook of his left arm, but you rarely see him without it. Now-a-days, he is a famous bear hunter and has repeatedly invited me to share his hospitality and go cruising for Bruin with him.

Here is a picture of another famous mountain character, Quill Rose, who lives far above the navigable waters of Eagle Creek in Swain County, North Carolina. Quill does not make any "moonshine" now-a-days, but has had the reputation of having produced more and better whisky than any man in the mountains. He and the "old lady," and his "yaller" mule now are engaged in peaceful agricultural pursuits. One day he did show me the remnants of his old still and former greatness and told me a good deal of the details of how corn whisky should be, to be made right. He also told me that he "met up" with a stranger once who insisted that the quality of "moonshine" could be much improved by aging it. What this fellow meant by "agin," the old man explained, was leaving it stand for a while before you drank it.

"There is nothing in it," he continued, "but that there trifling stranger talked so much about it that I finally tried it. I hid out a two-gallon jug of 'moonshine' in the laurel for more than a week, and when I got it back to the cabin, I found it wasn't a bit better than it was warm from the still. I tell you, there is nothing in this 'agin' whisky business."

I can't tell you this man's name because I don't want to, but he is a typical North Carolina "moonshiner." I asked him if he was making any "shine" just now, and he said to me: "No, I am not, but I am fixing up my mash tubs and don't know what I 'mought' do."

This innocent looking yoke of oxen and vehicle would scarcely convey to the mind of any one that within this apparent household moving wagon is concealed a half barrel of "moonshine" in kegs, jugs and bottles, but such is the fact. This is one of the sundry ways it is peddled from house to house through the mountain country to such denizens as do not know how to make it or are afraid to enter into the manufacture of "mountain dew."

Another moonshiner and his son. He is a clever chap and has about as much fear of a revenue officer as he has of a striped snake. These government officers, I might mention, are usually "kin folks" of most of the residents, and one of them had broken up this man's still and taken away the worm. At the time of my visit, in some way his wife had secured a wreck of an old-fashioned cook stove with which she was going to supplement her fire-place. Unfortunately, the stove had no pipe. She asked me as a special favor when I got back to Knoxville to send her a half dozen lengths of stove pipe. This I agreed to do.

This man came around to me the next morning as I was departing and said: "The old woman has got you to fix her up with some stovepipe. Now, while you're buyin' pipe over in Knoxville, I reckon perhaps you mought as well buy a little pipe for me. Suppose you send me down four lengths of copper pipe about an inch and a half through, three feet long, and say, these railroad fellows are so keerles in handling stuff, perhaps you better have it nailed up in a box."

I promised to do this stunt for him also, but named as a condition that he tell me how he could manufacture a still and a worm out of four chunks of copper pipe, and especially, how with his primitive tools, he could coil the pipe.

"Why," he replied, "that's sure easy. If you give me some

sheets of copper and a pocketful of rivets and this pipe, I can fix up a still and have it running in twenty-four hours. Making the worm is the easiest part of it. All I do is to pack the pipe with sand, bend it around a sapling, and then jar the sand out of it." It was dead easy after you knew how.

I am showing this picture to get even with the man it depicts. This is Leon Isaacson, of the Yellow Poplar Lumber Company, vice-president, president *pro tem*, woods engineer, general woods boss, splash dam builder and tireless man of the mountains who last fall piloted me over a million miles of Dickinson County, Virginia, and had little respect for my stomach, my age, or my inability to follow in the woods a veritable human cyclone. This snapshot was made as he was steering me down the "Grand Canyon of Virginia," sometimes known as the brakes of the Big Sandy. Just at this moment, he was harking back to the big dump poplar logs we had left at Russel Fork above this gash in the earth, at the bottom of which runs the river. He answered my query as to the value of the logs, "Guess." I told him I hadn't mental vitality enough left to even make a guess. He said: "When these logs are in the form of lumber and piled up at Coal Grove, it will mean a million dollars."

Now I am going to give you the good part of the show.

Early in November, when I visited the logging operations of the Yellow Poplar Lumber Company in Virginia, I said to Mr. Isaacson and Mr. Crawford, "It is a shame we cannot have a moving picture show of this entire operation."

They echoed the sentiment.

Then it occurred to me it was possible. By dint of considerable telegraphing to a friend, a theatrical magnate of Chicago, I ascertained that the leading makers of moving pictures were the Essanay Film Manufacturing Company, of that city, and after further telegraphing, I succeeded in getting this concern to send a group of photographers down into the wilds and make the films we will now show you.

A crew of "hicks" starting with their saws and axes to cut the kerf which directs the falling of the tree in the desired direction.

The men are sowing down the tree from the opposite side.

This giant of the forest falls.

The great stump that remains.

The "woods boss" measuring the tree for cutting to log lengths.

This process is known as "scalping" the log; *i. e.*, removing the bark. This enables the logs to be skidded easier and militate against sap-rot or wood borers getting into the timber if the logs are left over a season.

The big logs being hauled to the skid with four-mule teams. These teams are the best live stock I ever saw in the woods. They tell me that they cost \$275 a head in the St. Louis market.

The logs being hauled to the skidways, to which they are rolled to be within easy reach of the railroad and of the steam log loader.

The great white triangle noted on the end of each log is the log mark or the trade mark of the Yellow Poplar Lumber Company.

Loosening the steel dogs from the ends of the chains by which the logs are snaked.

Cars being switched along the railroad.

A scaler is seen measuring the logs. The average diameter of these logs is nearly three feet.

A section of the logging tram-road on which wooden rails are employed. The cost of manufacturing the wooden rails and building the tram, which lasts long enough to clean out the timber area, is less expensive than the freight and team hauling alone would be on moving steel rails to the operation.

These logging cars are hauled by geared locomotives. This form of locomotive is able to pull a train of logs and negotiate a fourteen per cent. grade.

The steam log loader, of Decker type, one of the famous loaders manufactured by the Clyde Iron Works, of Duluth, Minnesota.

The big dump of poplar sticks in the Russel Fork of the Big Sandy river, about one mile above the brakes of the Big Sandy. With the aid of Lidgerwood skidding apparatus, these logs are closely piled in the gorge to a height of fifty feet. This dump when I saw it was more than two-thirds of a mile in length and contained more than thirty-six thousand large virgin forest yellow poplar sticks of timber, ranging in length from twelve to thirty-eight feet, with an average of 750 feet to the piece, amounting to 81,000 logs of sawmill length, with a total log scale of 30,000,000 feet.

This is the largest assemblage of poplar logs ever made in the history of hardwood manufacture and is a part of the 40,000,000 feet log crop that will be manufactured by the Yellow Poplar Lumber Company during the year 1910.

Below this dump is located an immense concrete splash dam 360 feet in length and 25 feet in height above the toe sill. The dam contains five flues, forty feet in width, the openings of which are closed with false work of timber and planking and all are released simultaneously by a dynamite explosion when a head of water is secured. Then the entire mass of water and logs are hurled through the flues and the logs are driven down the gorge to floating water

at the forks of the river below Elkhorn City. This gorge is strewn with rocks as big as an ordinary house, and the cliffs on either side of it are in places 1,500 feet high.

There they go—a million dollars' worth of poplar logs!

## MORNING SESSION, FEB. 2

This session of the convention was not called to order until 11:30 owing to the vast amount of committee work that had to be accomplished in advance.

President Carrier introduced W. B. Townsend, of the Little River Lumber Company, Townsend, Tenn., who delivered the following most interesting and instructive address on Forestry.

### FORESTRY

For some reason best known to our good president, I have been named on the Forestry Committee and not long since I received a letter from him advising me that a report to this association at this meeting would be expected. I have written each member of the committee and have had an expression from practically all of them, as also we have had a rather informal meeting since coming here, and are happy indeed to be honored with the privilege of submitting a report on a question that is beyond doubt of very great importance, not only to this association or this generation, but of even greater importance to future generations. And that, too, in the city where the FIRST AMERICAN FORESTRY CONGRESS was held in 1882.

The theory of forestry as taught in the schools and as practiced by a good many foresters may be said to consist largely of the general principles of silviculture, or planting, regeneration, and conservation constituting re-forestry. All of these, pleasant to teach, nice to talk about and theorize on, but none of them practical to a practical lumberman, except perhaps conservation.

And no man of common sense would be willing nor would it be expected of him to practice these things in America unless they would be remunerative, or at least promise to be.

So I take it that you as practical lumbermen do not want to waste much time on theories, but rather want something that will be of real benefit, and will help you as mill men with a view of increasing your profits and prolonging the life of your operation.

The public press and sensational magazine writers, with their grossly exaggerated articles about the willful wastefulness of sawmill men generally, are trying to so inflame the public mind as to regard the lumber operator or sawmill man as the arch conspirator of his race, and more destructive to human welfare than any other known agency.

But listen—and stick a pin here—have any of you ever read an article treating this subject written by these muck-rakers that contained a word of recommendation for improvement that was practical? And of course, criticism, destructive or otherwise, without any suggestion or recommendation for improvement is nothing more than fault finding, and is doubtless published by the great magazine trust from a mercenary point of view only. And I am sure that few, if any, of these demagogues or common scolds would be competent to superintend the falling of a tree with a view of saving it from breaking, or manipulate it on the mill so as to get the largest possible percentage of high grade and wide stock out of the logs, or could distinguish the difference of the various grades when made. And these are the questions that appeal to the intelligent manufacturer and rightly so.

However, while it is admittedly true that the sensational articles on forestry that appear in the public press and magazines are published with a view of selling the paper, yet it is also true that lumbermen are not as economical in preventing waste or wasteful methods as they might be, but my experience is that they are as a rule honest and sincere in their endeavor to improve their methods, and wonderful improvement along these lines has been accomplished within the last decade.

Our worthy president, in the splendid message you have heard read, refers to the absurdity of a possible lumber trust, so I pass that.

I will not burden you with statistics as I am satisfied you do not want anything that dry. Many of you living in dry towns when at home will naturally want something else when in a town as damp as this is supposed to be. Besides that you can get all the statistics you can digest in a lifetime by subscribing for these splendid trade journals represented here (if you are not already a subscriber), or by request of your congressman for copies of governmental reports.

The same is true of the proposition for governmental control and regulation of standing timber left in the United States, and not included in the National Forest Reserves. This you are all more or less familiar with from the governmental reports which I have no doubt you all get, as also much is published in the press on the question.

Therefore, it seems to me that the only practical side of forestry to lumbermen is that of conservation. Conservation has been aptly described as the application of common sense to common problems for the common good, and for the time being,

low prices, high taxes, hot fires, cold logic, and many other things do not allow of much of this.

Reforestry or regeneration, as these terms are understood by us, are not only not practical, but unnecessary. The argument that the standing merchantable timber is necessary for the protection of the water sheds is ridiculous. Nature will take care of all this herself if we but give her half a chance. She will take care of our water sheds not only better than we, but far more rapidly than any known system of reforestry now being taught. It is our duty, however, as lumbermen to assist nature in every possible way, not only from a pecuniary point of view, but from patriotic motives as well.

And in all the hardwood belts of our country especially, there is perhaps no more effective way than the fighting of fire. Many of the larger concerns to-day are spending a good deal of money along these lines with satisfactory success. And after all is said this is real conservation and reforestry and can be successfully applied. If the states and counties were not so shortsighted along these lines and would eliminate politics from it, you can scarcely estimate the value of what could be accomplished at a minimum cost. But the everlasting publican, the tax gatherer, the selfish politician, is in the way, and it looks now as though help from these sources need not be expected until the millennium.

Practically all the large timber landowners of the country to-day are eager to assist in preserving our natural resources as well as our timber supply and the protection of our water sheds, and the philosophy of forestry in its last analysis can mean no more than this.

### Waste

The eliminating of waste was referred to by our president in his message by the various improved methods in manufacture. There is undoubtedly much room for improvement not only as suggested by him, but by more closely watching and improving our present methods at the edger, trimmer, and slasher. Yet this is not real conservation, but it should and will increase the output of lumber from a given quantity of logs and thereby correspondingly increase profits.

And now, referring to the waste products of the mill and woods, as this is becoming more so the chemist becomes more active, and he is successful to-day in producing by-products from the slabs, sawdust, and other waste material that were never even dreamed of a few years ago. But he too is being handicapped in his efforts by adverse legislation because by dumping his fully spent and harmless acids in the streams he changes somewhat the color of the water. This cry comes, as a rule, from the same people, at least the same class of people that cry out against the lumberman, accusing him of destroying the natural resources of their great states and nation, and in the same breath insist that he be punished if he attempt to work up closely all offal and waste with a view of perpetuating an important national industry, and the supply of a very much needed product at a price very much less than it could otherwise be produced.

These, gentlemen, are conditions well worthy of our most serious attention in which we should heartily co-operate with a view of awakening the people to the conditions as they really exist, and thereby endeavor not only to stop adverse legislation, but strive to obtain legislation favorable to the real conservation of our national and timbered resources.

The conditions generally are much aggravated by the calamity howler, as to what will become of us in a short time when the timber is all gone, etc. This need concern us but little, for the reason that if we keep everlastingly at it favorable legislation is sure to be obtained, and through this, more than any other agency, rapid and consequent wasteful methods of manufacture and lack of care of lumber and timber will be largely abolished. It pains me much every time I learn of a really large capacity sawmill being built, or present capacity increased. This is really suicide. Better far restrict production than increase it, even at the risk of the muckraker, who, with assumed sincerity, will cry out trust, trust, etc. And in almost the same breath the calamity howl of ruthless destruction of our resources.

### Supply

The fact is, gentlemen, there is much more lumber being manufactured these days than is really needed, for the reason (now this is among ourselves) that lumber is not necessarily the best suited article for every purpose for which it is used. But its use is and has been so general because of the extremely low prices at which it can be bought. And the reverse is also true, viz.: when lumber commands the price it should, commensurate with the cost of production, then and not until then will its use be restricted, production reduced, and we will then be approaching the eve of the real millennium of conservation.

I think all of you will agree that a good, lively rig, well handled and carefully looked after in every small detail, cutting, say 25,000 feet hardwood daily, will make as much money daily

for its owner as the same rig pushed hard for count and cutting a half more feet in the same length of time.

The one looking carefully after his balance sheet while conserving his resources, the other striving to make a good report to his company in footage pushed through the saw.

This is not an exaggeration, or overdrawn statement, but there are plenty of the latter class of mills in every producing territory.

Further as to hardwoods, in the not far-distant future, much sooner than we now think, edgers and trimmers will not occupy the important position on the sawmill floor of the hardwood mills as they do to-day, and slashers will be in oblivion. But, rather most logs, except for special uses, will be flitched only, and sent to the work shop likely not far distant, where all taper and wane edge will be utilized to its full width, and defects cut out without waste.

This is not dreaming, but is being successfully applied to-day in all European countries where logs are being manufactured, and even in this country to-day, to some extent, in our more valuable hardwoods.

Now if you will bear with me just a minute, let us look at the other side of the picture.

As stated, the question of forestry is of but very recent origin in the United States. First Congress in the city of Cincinnati in 1882 as referred to, and nothing done, not even brought to public notice until the administration of President Cleveland, so with commendable pride and true American spirit we have accomplished as much in these few years as any other nation would attempt in a century.

At first we needed the land cleared for farming, now conditions have changed as stated, so that while we need and badly need more farming we do not necessarily need more farming land, and while we are teaching, preaching, and practicing conservation along our individual industrial lines, let us also be as much interested in and teach what is known to-day as intensive farming. Whereby as much can be produced from one acre as is now gathered from ten. This with a view of being able to feed our stock in the woods, while logging grain at a fair price, and thus also eliminate the necessity of a meat boycott.

This committee beg leave then to recommend that this association resolve to teach and preach intensive farming, also conservation, to treat fire as a crime (crime of ignorance, crime of carelessness, crime of arson), and above all and beyond all, resolve, to never increase capacity.

The president next introduced B. F. Masters, of the National Association of Box Manufacturers, who delivered the following excellent address on "Wooden Packages":

#### WOODEN PACKAGES

One day last week Mr. Doster, your secretary, notified me through the kindness of Mr. Defebaugh, our secretary, that I had been obligated to present a paper to this meeting. This is the first intimation that I have had. You will therefore appreciate that I am somewhat surprised to find my name on this program along with others. I can not help but feel that the committee might have given me a little intimation of what was expected. \* \* \* In response to Mr. Doster's request I dictated a letter to him. I will read that letter to you as a basis for my remarks, something like reading an obituary perhaps, as I have never sent the letter to him.

The history of the lumber business begins with the history of the world. From the dawn of creation through all the advancing years of civilization, from the experience of our ancestor with the fruit of the apple tree, and from the building of the ark down to the present day, the progression of the human race has marked the progression and development of the lumber industry.

Linked with this industry through the influence of civilization and its attendant necessity for the transportation of goods and products from one place to another, we find the business of the box manufacturers. Both have gone on and on, hand in hand, through the evolution of the ages, and today we find them just as indispensable to the development of our civilization and indeed to each other as ever before.

Therefore, the relations between them should be most cordial and there should be cultivated a spirit of cooperation. We can not liken them to that of the buyer and seller nor the producer and consumer, for the box manufacturer is not the ultimate consumer, but really an assistant to the lumber manufacturer, and carries the manufacturing process to a little higher degree of perfection. Their interests are in the main identical and their operations should be along cooperative lines, having in view mutual advantages for both classes. Box manufacturers are, beyond doubt, the best customers lumber manufacturers have. It is estimated that the box manufacturing interests of the country consume annually six thousand million feet of stock, which is from 15 to 20 per cent of the annual output of lumber of all kinds. With the growing industries of our great country and the natural and continued increase in the use of packages for various purposes, this amount would naturally increase under favorable or even ordi-

nary conditions. Instead of an increase, however, the box manufacturer has suffered severe loss in the volume of his business brought about by the substitution of packages of various sorts other than those made of lumber. We wish to impress upon him that they are primarily the cause of this great loss of trade through the invasion which has so visibly affected the interests of the box manufacturers and which in turn produces a sluggish market for low grades of all kinds.

It has been remarked that the price of lumber, like that of any other commodity, is regulated by the law of supply and demand, but I am forced to say that the propriety of all such laws has been overstepped to some extent by the lumber manufacturers and that in many instances they have been prompted by a feeling which must be termed akin to avarice.

#### Low Grade Stock

About ten years ago low grades of lumber began to advance and continued to do so at an enormous rate up to the last two or three years. During that period the box manufacturer was scarcely able to keep pace with the continued advance in lumber, but was forced to advance the price of his product to his customer to cover an ever increasing cost of lumber, to say nothing of the additional cost of manufacturing incident to the poorer grades of lumber that the manufacturers began turning out for the box trade. This continued advance in the price of the product of the box manufacturer made it possible for substitute packages to get a footing; shippers are always anxious to economize in anything pertaining to their packing departments, which under any and all circumstances is purely an expense item. Boxes are never bought and sold because of their intrinsic value. They are always an expense item and one of the first things to be considered in the interests of economy by those who are obliged to use them; therefore the substitute package, so far as it can be adopted, has been welcomed by shippers everywhere.

The prices of lumber have not been the only thing with which the box manufacturer has been obliged to contend. The grades have been made harder and harder, year after year, until the box manufacturer is obliged to buy higher grades of stock than formerly. A few years ago a box common grade was very much better than the No. 2 common of today, and contained sufficient clear cuttings for practically all the diversified sizes and styles of boxes that we are called upon to furnish. This is not true of grades today and we are obliged to purchase a certain quantity of No. 1 common in order to secure lumber of sufficient quality to use in certain classes of packages. There are some boxes that must be made with one-piece ends, others that must have one-piece sides, and in boxes requiring widths of stock from 10 to 13 inches it is impossible to get sufficient stock out of No. 2 of a quality suitable to make one-piece ends and sides. This deterioration in grades and the continued inclination to make the stock poorer have added an increased cost to the manufacture of boxes. A very great part of the expense of manufacturing low grade stock is put in on the board before we begin the process of eliminating defects. The lumber must be surfaced, resawed and in many cases ripped, but the real process of cutting out the defects takes place after it has gone through all these processes, and upon the basis of 25 per cent waste, only on an assumed basis, the box manufacturer is obliged to practically manufacture one thousand feet of lumber with a net result of 750 feet. In other words, the expense of manufacturing is practically as great as applied to the waste as it is to the finished product. It may easily be seen that if this rule be carried sufficiently far we might arrive at a grade of lumber which we could not afford to use in our box factories if it were given to us for nothing.

There seem to have been efforts made to standardize the grades of all kinds of hardwood lumber with the apparent intention of simplifying matters or making the rules less liable to misinterpretations, but it does not seem that these changes in grades have been made with proper consideration for the sizes of good cuttings required by box manufacturers. Indeed, the interests of the box manufacturer have not been considered and, if you will pardon frankness, the entire matter seems to have been prompted by the same desire referred to in the beginning as the power impelling all lumbermen in the matter of grades and prices. The lumber manufacturers must get away from the idea that anything is good enough for boxes, and must work to the end that their grades of lumber for the box manufacturer be based upon his requirements and not entirely upon a principle that will dispose of a lot of stock that is practically worthless.

#### Substitute Packages

It may be seen from what has been said regarding the advance in the price of lumber and decline in value of the grades that the last two or three years have been most favorable for the introduction of substitute packages. Shippers have been greatly favored and assisted in their introduction by the railroad companies, through whose generosity they have been permitted to ship practically all classes of merchandise without consideration for the

additional danger in transportation. In many instances they have been misled and in others disappointed, until they are beginning to realize that something must be done to protect their interests from overwhelming claims for damage in transit.

The National Association of Box Manufacturers has been urging upon the transportation companies the importance of basing all their rates upon goods packed in standard packages and to make wooden boxes standard. It is not my purpose at this time to discuss the merit of wooden boxes. But they have always been standard and I predict they always will be so. They are the product of the forest, made from that which would otherwise be waste.

Railroad companies will do well to look into the future when considering problems of this character and act cautiously and carefully before discriminating against an industry that represents to the lumber carrying railroads of the country their greatest amount of tonnage.

The members of our association and box manufacturers everywhere are not unmindful of the cooperation of lumber manufacturers in this movement. Great and valuable assistance has been given by lumbermen everywhere and it has served to emphasize the bonds of friendship and the feeling of reciprocity between them and to establish a mutuality of interests.

#### Prices and Grades

The box manufacturers are not actuated by selfish motives alone in this matter of price and grades to which I have referred. This was made very plain to the lumber manufacturers through the years past when the prices were constantly advanced. We have no wish to dictate prices and are anxious to see the lumber business of our country maintained on a profitable basis, but it does seem that a revision might be made in prices that would work no hardship upon the lumber manufacturer and at the same time prove an advantage to the box manufacturer by enabling him better to compete with substitutes.

Personally, I am not convinced that the prices of the different grades of lumber are based entirely upon the law of supply and demand. It is conceded that certain low grades of stock are sold below cost. If so, the better grades must carry sufficient profit to cover the loss on the lower grades. Prevailing market prices for low grades of lumber of all kinds are to some extent a matter of custom and precedent and I believe that lumbermen would be wise if they reduced the prices of their low grade stock for box purposes and increased the prices of higher grades for which there is a better demand and the use of which can not be replaced by substitutes. Generally speaking, where the better grades are used in manufacture the cost of the material alone is not so great a proportion of the entire cost of the output as it is in the box business, where low grades are used. A matter of a few dollars a thousand feet for low grade stock might be of the greatest importance to the perpetuation of the box industry, whereas an equal amount added to the price of higher grades would not represent more than the ordinary fluctuations of the market. I understand that a variation of \$5 or even \$10 does not represent more than the market changes in higher grades of the better class of hardwood lumber, which demonstrates the possibility of maintaining the higher standard of prices. If the prices on box grades were reduced this amount it would not only be a great relief to box manufacturers but it would be very helpful in perpetuating a business that always has provided the greatest market for low grade lumber in the country. Your association can not do this alone, because the product of your mills is sold in competition with low grade stock from other sections, but with the cooperation of all other lumber associations, representing all classes of lumber that are used in the manufacture of boxes, I am persuaded that this plan could be worked out to a successful conclusion. It would not only be helpful to the box manufacturing industry of our country and to the lumber industry, but would also be in direct accord with the most advanced ideas for the conservation of forest products. With our combined efforts and cooperation we can meet competition for substitutes in boxes, you can retain your market for low grade stock and give a greater freedom to the work of selling your higher grades of stock upon a profitable basis.

What I have said about grade and quality has reference more especially to the classes of hardwood lumber manufactured by the members of this association. I do not claim that you should be held accountable for the sins of the entire lumber world. The basis of supply is so diversified that each section depends upon the source that can supply its demands most economically and most advantageously. Therefore the matters of location and of transportation facilities usually determine the source and basis of our supplies. New England depends mostly upon its native second growth pine. As we come west to New York our horizon broadens, we get not only New England pine but the product of our pine forests of Michigan, Wisconsin and Minnesota, together with the importations from Canadian forests. Besides this they begin to draw from the products of the South and Southeast, particularly

from points accessible for water shipments. Moving farther along west we come to what is termed the middle West, where our supply comes mostly from either the North or South, depending upon our latitude and location. The Northwest depends entirely upon its own output, drawing little or none of its supply from other sections. This is also true of the South, whose interests are much more diversified on account of her greater area, and here our supply is determined by our proximity to waterways or other transportation facilities. That great area of our country referred to by us as the West has within its confines the greatest amount of timber to be found in our country, perhaps has local supply for practically all its industries and gives less thought to the basis of supply than we do where we are more restricted.

Perhaps the greatest freedom in choosing our supplies is enjoyed by those of us who are located in the great centers of the Middle West. Speaking for our city, Chicago, we draw from all districts and with our facilities for transportation, both lake and rail, are not dependent upon any particular section. We can handle the pine, hemlock and spruce of the North as well as of Canada—or the birch, beech, maple and other hardwoods of the same section. We can draw from the western pine and spruce of Oregon and the far West. And are available to the product of the entire southland from Texas to the Atlantic. This gives us gum, cottonwood, yellow pine, cypress and all other kinds indigenous to these sections. Failing in all these, we can go to the forests of Wisconsin and Minnesota and find that there is still "balm of Gilead" which some of us substitute for cottonwood.

It may readily be seen that with these conditions existing and with the diverse interests which are found in various sections, with the possibilities of drawing from varied sources of supply, it becomes not a matter for any organization to dispose of alone, but a question of national importance.

It is a fact which, though deplored, must be admitted, that the business of the box manufacturer suffers today from overproduction or, rather, overcapacity. Notwithstanding this fact some lumber manufacturers seek to relieve the situation by creating a still greater capacity and placing in their mills machinery for the manufacture of boxes and shooks. This only aggravates a situation already acute and disturbed. No action can be taken by either your industry or ours to stimulate the use of boxes. They are bought only when their use is required—not before—and the biggest business you and I can engage in today is to see that when they are demanded they are made out of that product which nature intended and which under all laws of economics must otherwise be wasted.

With all these things to be considered, what course should we pursue? We can accomplish nothing except through cooperation and the cultivation and development of mutual interests—at best we will have enough opposition from extraneous sources—and my closing admonition is to recommend a thorough consideration of the subject from every point of view that we may work in unison and harmony in perpetuating these industries in the interests of all concerned.

Frank F. Fee, of the Fee-Crayton Hardwood Lumber Company, of Little Rock, Ark., was then introduced and delivered the following exhaustive analysis on the "Cost of Manufacture":

#### MANUFACTURING COST OF LUMBER

While the assertion may seem, on first thought, to be too severe self-condemnation, nevertheless I believe it to be a positive fact that the manufacture of lumber has been, and is to-day, conducted with less actual knowledge of costs than any other business. The maker of lumber as a rule is a life member of that large association—"Guessers." We guess what we pay per thousand feet; guess how many feet we get out of a given amount of logs; guess what per cent. of Fas and common we produce; guess what it is worth; guess what is should sell for; guess how much we make or lose per thousand feet; and guess whether we will fail or succeed. Possibly there has been a reason for all this in days gone by.

No two trees are alike in quality. You may buy clear logs gotten together from a great quantity, say half a dozen logs of the same size, and clear exterior, each has a heart that runs the entire length; there the similarity ends. Who knows how far shakes or knots radiate from the heart of any log? The gentleman of sporting proclivities should get into the sawmill game, not even Monte Carlo affords such an opportunity for a game of chance. Occasionally there is a winner in our game. His name and fame reaches across the continent, but the many erroneous guessers are not heard of.

The flour mills, the steel maker, and the cloth maker buy on certain measures of value. Cost of your life insurance is based on lengthy mortality tables. Fire risks, on elaborate compilations of statistics, but tables of percentages and amounts sawn from logs are woefully lacking. As timber begins to vanish the commercial cemeteries of sawmillers expand.

We have awakened to the necessity of looking into costs. Values have increased so greatly that knowledge must take place of guessing. Years back if one guessed wrong but little capital was

necessary to start again, opportunity knocked frequently, but now, like Diogenes with his lantern hunting for an honest man, we hunt opportunities in timber investments with little success.

We are compelled to watch this constantly growing goblin—"Costs." In no other way can we meet competition. In a line of a recent play, a character said, "Mr. Colt with his gun makes all men equal;" in commercial life, "Costs" is the gun that creates equality; the little with the big.

Unfortunately no great mathematician has arisen among us to compile thousands of cases, codify and tabulate in condensed form, a tremendous data. Not only garlands of laurel leaves will decorate his brow that can do this, but oak leaves, pine leaves, cypress leaves, and leaves of every wood cut by the sawmill.

Much interest has been aroused on this subject of late by members of our association. Many of us have delved into the facts that have been so constantly before us but unfortunately few have been able to arrive at satisfactory conclusions. Conditions of specified localities vary as greatly as do results from various logs. Even in an area of a few miles, quality of timber may run from very good, to the reverse; nay more, the banks of a small creek may show opposite quality, hence to get down to concrete facts, I can only recite data of logs sawn on my mill and you on yours, relative to per cents. of quality.

I believe the subject of costs could be well divided into several heads:

- First—Stumpage.
- Second—Logging.
- Third—Sawing.
- Fourth—Yard cost.
- Fifth—Selling.
- Sixth—Office.
- Seventh—Overhead charges.

These represent the financial side of the lumber business, and I believe that were our worthy president to appoint a committee of seven members of this association, each one to introduce a paper under one of these specific heads, and the matter presented at the annual meeting, where it could be thrashed out in a committee room, and then the compilation introduced at our next annual gathering, it would be time well spent.

I will not attempt to take up the financial side of "Costs," as there is another phase of this great subject that has an all-important bearing—namely, the physical side of costs. This does not relate to theories, and it is not a question of guessing, but is the boiled-down result of good, bad and indifferent logs as they appear to the man with the lumber rule. He is a recorder that has watched each board as it came from the log. He has no sentiment in his heart; his eye is cold. He is there to see things as they are, and the report from this man, be it either cheerful or sad for you, is simply the result of facts as he finds them, but how varying must be his reports from time to time and from place to place!

We have said that no two logs have like defects. We might add that no hour's run is like any other hour; no week nor month agrees with the preceding or following, hence the statistics of value are only those covering a long period of time. Again, these will vary tremendously in different mills. We will say that A's mill is sawing their own timber brought in on their own railroad. The cost of logging to mill is slight, hence the low cost of logs permit much lower value in quality to be sawn. Six months later that tract may have been cut off, and they are paying freight to a standard railroad, which materially increases the cost of logs, in which case they can ill afford to introduce the low quality of timber brought in from their own woods.

Thus you see the difficulty of arriving at any definite basis by which you may calculate per cents. of grades that can be found in logs.

Again, you may pick out, if you choose, certain logs and saw them up immediately fresh from the woods, carefully tabulate percentage of lumber made therefrom, but this showing would be entirely unavailable were these logs to lay even sixty days in certain portions of a year in Southern country. Sap-stain would so deteriorate that losses would result in your upper grades. Hearts would crack open, and even worms start within sixty days' time. Therefore, in whatever direction we turn for statistics, we find some difficulty that prevents a standard condition of grades being tabulated. However, taking logs as we found them during the month of December, we have prepared the following statement:

Segregating Quartered White Oak Logs They Ran—	
Fas .....	45%
No. 1 common .....	37%
No. 2 common .....	9%
No. 3 common .....	2%
Dimensions .....	7%

Segregating Quartered Red Oak Logs They Ran—	
Fas .....	39%
No. 1 common .....	42%
No. 2 common .....	11%
No. 3 common .....	5%
Dimensions .....	3%

#### Segregating Plain Red Oak Logs They Ran—

Fas .....	29%
No. 1 common .....	21%
No. 2 common .....	7%
No. 3 common .....	2%
Ties .....	29%
Dimensions .....	12%

#### Sggregating Plain Red Oak Logs They Ran—

Fas .....	31%
No. 1 common .....	30%
No. 2 common .....	10%
No. 3 common .....	2%
Ties .....	11%
Dimensions .....	16%

#### General Run of Averages—

Quartered Oak.	
Fas .....	14%
No. 1 common .....	15%
No. 2 common .....	3%
No. 3 common .....	1%

Plain Oak.	
Fas .....	19%
No. 1 common .....	17%
No. 2 common .....	4%
No. 3 common .....	1%
Ties and Scantling .....	22%
Dimensions .....	4%

The foregoing statement tabulates quartered oak strips in Fas grade. Also  $\frac{3}{8}$ -inch,  $\frac{1}{2}$ -inch,  $\frac{5}{8}$ -inch and  $\frac{3}{4}$ -inch plain oak is counted face in 1-inch stock. Whatever heavier stock than 1-inch was produced is counted under 1-inch, in its respective grades.

W. E. Delaney made a brief address on the subject of costs of manufacture. He said he believed it was an important subject, and wanted the members of the association to go into the matter to the fullest extent. He intimated the most of the intelligent price competition encountered by lumbermen was owing to defective cost systems or no cost systems at all. He made a motion that the chair appoint a committee of three to make a recommendation covering such a system to report at the next meeting.

W. A. Gilchrist supported the motion, and explained somewhat the difficulties encountered in lumber accounting. He stated that railroad accounting was a simple matter, but in his operations had often found himself at fault in accurately ascertaining costs. He recited one case in which cost had been figured at less than \$7 a thousand, and in the wind-up of the operation it showed it to be approximately \$12.50 a thousand.

W. O. Worland, of Evansville, explained the cost accounting system that he employs. The motion of Mr. Delaney was adopted.

C. Fred Yegge, president of the National Box Manufacturers' Association, was then introduced and said that all the officers of his organization had accepted the invitation to be present and that they were enjoying the meeting to the fullest extent. He said that the annual meeting of the National Box Manufacturers' Association would be held at French Lick Springs, Ind., on February 23rd, 24th and 25th, and that he hoped that all the members of the Hardwood Manufacturers' Association that are producers of box materials, would be present. He stated that they could achieve commercial results in the way of sales at that meeting that would be profitable to them.

R. H. Vansant then delivered a beautiful tribute to the memory of the late J. E. Defebaugh, which on motion was made a part of the records of the meeting, and it was referred to the resolution committee.

The committee on reports of officers then made the following report:

#### Report of Committee on Officers' Reports

Mr. President and gentlemen of the convention:

Your Committee to whom the subject of considering officers' reports submitted at this opening session, desires to report as follows:

The association is to be congratulated in having its reports presented to them this morning in the manner in which they have been delivered to us. The splendid results that have been accomplished during the last year in all lines of work connected with this association, and what we believe to be its best interests, has been most carefully looked after by its efficient president, and the untiring energy and zeal of its secretary to such an extent that this committee, in rendering or attempting to render, a report on this work, and being familiar only with the English language, find themselves unable to express in behalf of this association their appreciation of results accomplished.

Also, we would not fail to call your attention to the splendid manner in which the treasurer has apparently taken care of the funds of your association, as also the fact that we have today a very considerable balance in the treasury.

Also, we are pleased to report that the auditor, in going over these various accounts, has been unable to find anything wrong in

anyway, or misplaced even to the extent of a farthing; hence we recommend that this association is not only to be congratulated by reason of the efficiency of its officers in charge, but that this same zeal and energy is likely, and certainly will, perpetuate to this association that success which we all have been striving after for these years of our organization, namely:

That this association must and soon will be the association of lumbermen of the United States of America. This becomes so much apparent to us from the fact that the interest which we are emerging in our association work of developing the further intercourse between the manufacturer, the merchant and the consumer and user of our product. This is one of the strongest features that this association has ever attempted, and although it is only in its beginning, the good redounding from this meeting will be of such character that it can be accomplished in the future, will tend to develop an organization of unbiased strength, that will be impossible to ever overcome by any other influence that is not friendly to this association work.

We congratulate the association on having such remarkable program in its detail, outlining the various business and entertaining features to come before us in this three-days' session; its papers to present the reports of the past year's standing committees, as well as the splendid entertaining features, are of the finest we have ever had the opportunity to enjoy. However, we believe that at the same time, without interfering with any of this program, it must be known that we have a great deal of business to attend to. With this in mind we have, after deliberation, to recommend to this association matters touching on the future of this organization, and from the president's report the treasurer and secretary submit you the following, which should be carried into effect as much as possible—

The appointment of the following committees:

A committee of three on the subject of resolutions.

That the committee on transportation and increase in freight rates be continued as now existing.

A committee on grading and statistics on the following woods.

Gum, to consist of nine; Cottonwood, to consist of seven; Hickory, Pecan and Sycamore, to consist of three; Cherry, to consist of three; Walnut and Butternut, to consist of three; Beech, Birch, Elm and Maple, to consist of seven; Vehicle Dimension Stock, to consist of seven; Chair and Furniture Dimension, to consist of nine; Oak Dimension Timbers, or Car and Construction Oak, to consist of five; Oak Flooring, to consist of three.

Also a committee on Statistics in Poplar, Basswood and Buckeye, to consist of nine.

Also a committee on Oak, Ash and Chestnut statistics, to consist of nine.

A committee on grading for Oak, Ash and Chestnut, to consist of nine.

A committee on Grading and Statistics for Mahogany, to consist of three.

A committee on the Corporation Tax, to consist of three.

A committee on the subject of a Selling Code, to consist of three.

We take pleasure also to recommend the appointment of all of these committees today to meet this afternoon, or tonight, immediately after all other program events have been carried out. These committees to submit their report to the association before adjournment.

The work of all these committees is of much importance to the association, and the chairman of each committee is requested to designate to his committee the time and place of such meeting, so that all work that is to come before them can be taken promptly in hand, and with due notice of where such meeting rooms will be held, the various other visitors can have the opportunity to present themselves before such committee for consultation for having the opportunity to represent the interest as shown from their section.

There are matters of importance referred to in the reports submitted that can not, owing to the short space of time, be acted upon intelligently by this committee; nor it may not be allotted to the time allowed in holding this organization meeting. All such matters and conditions are recommended to be referred to the incoming executive board, who meet during the intervals of the fiscal year, so that they can take action as to their judgment to the best interest of the association.

W. B. TOWNSEND, Chairman.

A. G. FRITCHE,

A. B. RANSOM.

## AFTERNOON SESSION, FEBRUARY 2

The session was opened at 3:30 p. m. and W. L. Hall of the Forest Service was introduced.

Mr. Hall: You know how startling it is sometimes to suddenly meet a friend in a strange place; I assure you it is even more startling to meet yourself in a strange place. That was my situation this morning on seeing on the wall a card announcing that I was to address the meeting.

The past ten years forms an interesting period of hardwood

history. Before 1900 the hardwood industry centered in the states of Ohio and Indiana, and up to that year those states produced probably their just output. Since then they have gradually declined while other states have come into prominence in hardwood production. At the present time practically every state east of the Mississippi and several west of it are producing heavily.

As of locality, so of kinds of wood; in 1900 oak and poplar furnished a large percentage of the output. They still continue to do so though their production has been greatly reduced. Other woods to a considerable extent are filling their places. The cut of such woods as birch, chestnut and red gum has greatly increased. Woods which we did not cut until ten years ago have become prominent, as for instance, beech, tupelo and black gum. The present condition is one where every wood locality and every kind of wood is yielding its greatest output, while the production is less than it was ten years ago.

If we turn from production to use, we note corresponding changes since the wood output has diminished and business generally has grown. Other materials have necessarily taken the place of wood in a number of uses. We have seen metal go far towards replacing hardwood in car building; we have seen metal, brick, tile and cement take the place of wood in house building. Metal is also replacing hardwood in furniture manufacture, and other materials are replacing hardwood in box making.

We are making our good hardwoods go much farther than they used to, through the great development of veneer manufacture, and we are doing much in many ways to reduce the waste in the manufacture and use of lumber. Such in part have been the changes of the past ten years. We now face the future. What must be our aim and how must we work to make the hardwood industry a permanent one? The problem divides itself into two aspects; First, we must do everything we can to make the timber we have go as far as it will.

Second, we must by some means or other provide for the renewal of the present timber supply.

The problems of economy in use are problems which primarily concern the lumber manufacturer and to a large extent the manufacturer must solve it, but the Forest Service is, I believe, in a position to aid the manufacturer greatly in this respect. The Forest Service has established in co-operation with the University of Wisconsin at Madison, a Forest Products Laboratory, the purpose of which is to solve problems involved in the economic use of lumber. We expect to work on many problems that will be of vital interest to this and other lumber associations; for example, we mean to take up the question of kiln drying, and in my opinion it will be possible to find methods of kiln drying hardwood lumber with but little loss from warping and checking, and in a few days where it now takes months.

Even when we effect all possible economies in utilization, the great problem of the hardwood industry will remain unsolved. Unless means are put into effect to renew the forest as it is cut away, the hardwood industry is founded upon sand.

I do not refer especially to the planting of trees; you might plant trees with your entire force of men during the whole planting season, but that would not solve the problem. Nature is the great tree planter. She plants millions to our one. What we need to do is to remove the obstacles to the natural reproduction of the hardwood forests—one of the greatest of these is fire. We must abate the fires by state laws where necessary and by combined action among ourselves. Another important obstacle to be removed is high taxes, which make it impossible for lumbermen to hold their lands for a second crop. The great problem must be solved by the federal government, by the states and by individuals, and much of the preliminary work must be done by the states; therefore the first work of the lumberman should be to see that the states make conditions possible for the furtherance of forest conservation.

The problem of trade conditions is a most important one; it is important that prices be high enough so that lumbermen can bring out of the woods all his sound timber, but the great difficulty is that of supply, and the old adage is true of the hardwood industry that, "None is so far from market as he who has nothing to sell."

The president then introduced Victor H. Beckman, secretary of the Pacific Coast Manufacturers' Association. Mr. Beckman discussed the question of odd lengths.

The president then said:

"We have with us this afternoon the manager of the National Lumber Manufacturers' Association, Mr. Leonard Bronson. This association is composed of different manufacturing organizations of the United States, from coast to coast. Its work is national in character, and we would like Mr. Bronson to explain to us the work that is to be carried on by that organization."

MR. BRONSON:—Mr. Chairman and Gentlemen of the Convention: I do not think it necessary to go over very extensively the work and purposes of the National Lumber Manufacturers' Association, because they are your own purposes—its work is yours.

What it seeks to do is to uniformly bring together the work of the lumber manufacturing industry of the United States. The organization is, say, six or seven years old. It was effected soon after the reciprocity negotiations with Canada, when the lumbermen of the United States were called upon, without exception, to give Canada out of their own pockets all she wanted in return for whatever Canada might be willing, under the circumstances, to give to us.

The National meeting this year will be held April 19th or 20th in New Orleans, and we hope that your delegation will not only be posted, but that they will be there. What have we done? Not a great deal, perhaps very little, in fact, in proportion to the work to be done. We adopted the short lengths matter; we adopted the resolution to support the wooden package as against the fibre or paper package. We have taken up the subject of car stakes, because the car is one of the means or instrumentalities of transportation, and we did do something on the tariff matter. We sent a delegation to Washington a year ago. We lost in part, but we saved something. Right there arises the question which is of vital interest to all of you. I presume that a great many of you would say that you were not interested in the matter of trust discussion; you know you are not a trust, individually or collectively; you know there is not a lumber trust which governs the lumber industry in the United States, and you say you are not interested in it—it does not concern you. The people of the United States believe that there is a trust; you stand not only charged with a crime, but you are convicted of a crime.

Mr. Bronson then discussed solution of the trust question and the adoption of uniform prices.

Dr. Von Schrenk then spoke as follows:

#### Some Problems in the Manufacture of Hardwood Lumber

The subject, which I have chosen to speak about to-day, I have entitled "Some Problems in the Manufacture of Hardwood Lumber." I believe this to be a particularly opportune time for the hardwood lumber manufacturers to investigate in a more thorough way than has ever been done before what they can do towards improving the quality of the product being turned out by the mills. These are days in which all are very much interested in the conservation of the timber supply. The phase of conservation, which is of most immediate importance to the hardwood lumber manufacturer, deals with the question as to how he, individually, can conserve his supply and at the same time keep his plant running and manufacture lumber sufficient in quality and quantity to produce a fair return on his investment at the end of the year. As I have stated to this organization before, I am of the opinion that, with the quality of the logs becoming poorer in many parts, and with the quantity available decreasing materially, the only way to increase the returns from any particular operation will depend upon increasing the quality of the lumber turned out.

The points to which I wish to call your attention to-day deal with some of the smaller economies in the manufacture of lumber. I regret to state that for many of the problems to which I shall refer I can give no definite solution at the present time. My main object in presenting them to you is to point out some possible lines of investigation. All of them, I am sure, will be recognized by you as of immediate importance. Such suggestions as may be made should be considered tentative, and their application subject to local conditions, that is—none of them should be taken as universally applicable. The term "hardwood lumber" includes a great many different kinds of wood, and what is true of one will not necessarily apply to another.

The first point which should be considered is that we are now manufacturing a class of timber into lumber, whose physical and chemical qualities are too little appreciated by most of us, because, in the first place, the timbers are new, and in the second place, the relation of the physical and chemical qualities of the wood when in the tree to the manufacturing processes to which the wood is subjected, is but very little understood as yet. The manufacture of boards involves the getting of as perfect a log as possible to the sawmill and careful and proper preparation of the lumber from the time it leaves the saw until it is ready to market. I dare say that few appreciate even the amount of lumber that is lost or degraded because of defects which get into the boards after the tree is cut. Such losses may have been negligible heretofore. It has been my contention all along of late years that these losses were appreciable enough to warrant considerable attention being given to the causes, and that the money expended in preventing such losses would be many times repaid by the superior quality of the material turned out.

Let me now refer to several specific questions:

1. **SAP-ROT OF LOGS:** One of the difficulties with timbers like red gum and cottonwood is the sap-rot which occurs after the trees are cut and before they can be gotten into the mill. Every year I see thousands and thousands of logs in the woods more or less affected with this peculiar defect. Sap-rot, briefly stated, is caused by a low form of plant life which we call a fungus, the seeds or spores of which spread over the ends of the freshly cut

logs or in the cracks or breaks which form as the logs start to dry. The freshly cut log is full of starch and sugar and the fungus finds abundant material for rapid development. The effects manifest themselves in discoloration or black lines, which appear in the sap-wood to a greater or less degree. This discoloration is followed by a change in the wood fibre which ultimately becomes more or less punky or decayed. Enough is known of the life history of the fungi which causes sap-rot to enable me to state that their process and growth in the log can usually be prevented to a very large extent. One must be fully conscious of the fact that these spores are in the woods, where the logs are cut, in countless millions, and they are certain to attack every log of the particular kind of wood upon which they are fitted to grow, with perfectly certain results. Affected logs, when they reach the mill, will make a poorer grade of lumber than freshly cut logs. During a recent visit to several southern hardwood mills I was appalled at the quantity of lumber which was cut off at the trimming table entirely because of the sap-rot defect. The main point of interest is—What can be done about it? Some years ago I recommended painting with creosote the ends of freshly cut logs which might be liable to sap-rot. Another possible method for preventing sap-rot (which at the same time is very effective against the attacks of timber-boring insects) is to bark the logs immediately or shortly after they are cut. Another effective method consists in arranging the logs, where they are to be floated, in some way so that the air will have plenty of opportunity to circulate around them. The close piling of logs will be the surest way to keep the water in them and bring about an ideal condition for the development of the sap-rot fungus. Not only is care necessary in the handling of logs in the woods, but the same is true at the sawmill. I know of numerous instances where the manufacturer brings gum logs, or timber of a similar character, to the mill and dumps them in promiscuous piles. One of the finest exhibitions of sap-rot I ever saw was in one of these piles. While the logs are being conveyed to the mill just as much care should be given them as after they are sawed.

In this connection, I was particularly interested in a scheme for handling logs, a brief account of which was recently published in *HARDWOOD RECORD*. At one of the Michigan mills, the manufacturer has set aside a part of his yard for piling logs with skids between each layer, decking these logs in such a way that an adequate air passage is obtained between each and every log. A cableway suspended between two tall towers, is constructed in such a way that it lies parallel to the railroad track over which the logs are delivered to the mill. The logs are piled on the ground and are left in this manner until ready for sawing. I am indebted to Mr. Wells, manager of the mill, for information showing the cost of handling such logs, which he advises is about 35 cents per thousand. The main erection cost them about \$4,000. He says that it has been very satisfactory, very easy to keep in repair and very easy to operate. I am indebted to *HARDWOOD RECORD* for the pictures of this hardwood operation, which are shown you herewith. The piling of logs has the additional effect of drying them to a very considerable extent which means much less difficulty in the subsequent manufacturing operations.

II. The next point, which I believe to be of considerable importance, is the question of sap-stain. During the last year or so, we have heard a great deal about this subject. A good many manufacturers have put up an apparatus for the chemical treatment of their sap grades to prevent stain. Some have succeeded fairly well, while others have failed. The results are not surprising, because most of the operators followed some general recommendation without any very definite knowledge as to what they were trying to do. I want to point out that the process for preventing sap-stain is strictly a timber preserving process, and requires definite technical knowledge of every step in the proceedings. When we actually come down to it, we know very little as yet about what it is that causes the prevention of sap-stain. It will require much additional painstaking, technical investigation before the best method for sap-stain prevention can be recommended.

In view of the general importance of this subject, I may be pardoned for briefly describing this stain, and presenting some of the questions which require further investigation. Sap-stain is caused by one of the lower fungi, which differs from one of the sap-rot producing fungi in that it does not affect the wood structure. In other words, sap-stained lumber is as strong and as good for all practical purposes as unstained lumber. All that the sap-stain fungus does is to get into the cells of the wood, particularly the pith rays where it lives on the starches and sugars contained in the pith rays. We all know that the fungus starts with lightning rapidity in freshly sawed lumber and that the damage is done in a very short time. Please to note my emphasis on "freshly" sawed lumber. I, together with many others, have believed for many years that the first condition necessary for the development of the blue stain fungus was a very large quantity of water on the surface of the board. We also believed that a certain percentage of acid on the surface of the board was necessary. Our investigations during the last year have shown some curious relations between the stain fungus and the water and air content of the board. As

the result of still more exhaustive investigations by a German mycologist in Munich, it has been found that the appearance and development of a blue stain fungus on a board is determined wholly by the relative amount of air (and consequently of water) contained in a given volume of freshly cut wood. Stated in exact terms, it has been found that if the air space occupies only 15 per cent. of the volume of freshly sawed wood, the blue stain fungus cannot possibly grow on it. If a freshly cut board dries out so that it loses 10 to 15 per cent. of its weight, the conditions are then of such character that the blue stain fungus grows with great rapidity. On the slide before you, you will see some photographs of blocks of wood inoculated with the blue stain fungus. The table below shows the percentage of air and water in each particular stick. You will note that stick No. 1, having only 15 per cent. of air in it, has no stain on it at all, and that as the percentage of air increases in the stick, the amount of stain increases. This with the exception of the last piece in which the percentage of water becomes so small that the growth of the fungus was considerably retarded. The most favorable condition for its development is when the wood contains about 40 to 42 per cent. air. In freshly sawed lumber the percentage of air in the outer layer undoubtedly rises above 15 per cent. very soon after the boards are cut. I regard this recent discovery of the relation of the air content to the blue fungus as extremely important and a decided step in advance. It now remains to go still farther and determine the relation between this fungus and the acid production on the outer surface of the board, and what relation these two factors bear to the compounds which we are trying to use to prevent the stain. I do know that, without appreciating the causes, we can stop the stain with certain chemical salts, but I would advise caution in applying these salts except under the most rigid conditions.

We are preparing at the present time to inaugurate a series of accurate observations at the sawmills with whom we are working, not only to reduce the cost of operations but also to increase their efficiency.

III. This brings me to another item of saving, namely, the question of handling crossing strips. Hundreds of thousands of feet of lumber are manufactured into crossing strips at the mills every year, and in the majority of cases these crossing strips rot, break and are thrown away. This represents the loss not only of the lumber manufactured into the crossing strips, but also a very considerable loss due to the contaminating influence of the crossing strips to the boards on both sides of them.

During last year we built a small plant for the treatment of crossing strips at one of the southern mills, and it is the plan to hereafter treat all crossing strips so as to make them last a sufficiently long time to pay for the strips themselves, and at the same time to save lumber.

I want to make it very clear that the treatment of crossing strips is a very different proposition from the treatment of lumber to prevent sap-stain. Not only must different chemicals be used, but the process must be conducted in an entirely different manner so as to avoid not only loss of treatment, but also probable loss of the lumber from piles in which improperly treated sticks are used.

I want to caution all manufacturers against the use of salts or compounds which might in any way influence the grade. I, personally, for instance, would discourage the use of mercury chloride in any way in the treatment of boards to prevent stain. The use of small quantities may be justified, but I would by no means make it a matter of general application.

IV. A problem, which is giving a good deal of trouble to cottonwood manufacturers, is the so-called "brittleness" of a considerable quantity of this timber after it has been sawed into boards. Complaints of this kind are coming from all parts of the cottonwood manufacturing district, and have also been received from one of the large mahogany dealers.

Examination shows that this cottonwood is perfectly sound, that is, there is no decay in the fibre and to all intents and purposes it should not break. We had an idea that it might be due to long exposure of the wood in water. Some tests were made during the last two years by immersing certain pieces in water, and keeping other pieces from the same log in a dry room. The pieces were soaked about two years. They were recently tested under a testing machine, and to our surprise it was found that the difference between the soaked and unsoaked pieces was only such as might occur in two different sticks of wood. In other words, soaking the wood had apparently not harmed it. It will therefore be necessary to make further investigations to determine what causes this brittleness. It is certainly becoming an important problem to the cottonwood manufacturer.

V. One of the chief difficulties in the manufacture of many hardwoods to-day is connected with the drying operation. As a rule carefully air-dried lumber is far to be preferred to lumber dried in any other way. It is, however, not practicable in many cases to air-dry the lumber—in the first place, because the time necessary for holding lumber in order to air-dry it means a considerable investment tied up, and in the second place, it may oftentimes be

more profitable to kiln-dry lumber in order to prevent sap-stain. Kiln-drying is something that will be resorted to and which will probably be used on an increased scale in the future. A whole evening, or for that matter, several evenings might be devoted to the discussion of this subject. All I can do now is to call attention to the necessity for careful study of the kiln-drying operations.

There are a large number of kilns on the market, whose claims go all the way from rapidity to efficiency. I have recently tested some lumber for the Cypress Association dried in different kinds of kilns, which may serve as a striking example of what a kiln can do and cannot do. Without mentioning any names, you will be interested in seeing the results of exceedingly rapid kiln-drying when compared with slower kiln-drying under entirely different conditions. I hold that perfectly dried lumber is the best product which any mill can possibly turn out, and in order to do this, more attention must be given to the subject of the dry kiln.

Practically everything we know about kiln-drying lumber has been learned by very great effort, and what we now need is careful comparative examination of the various kinds of kilns and the results which can be obtained with the different kilns with different species of hardwood lumber, for what may be true of cottonwood drying will not hold for gum. I believe that you will readily appreciate this when you think of the very complex structure of the different woods. Note, for instance, the different arrangement of the wood cells in pine and oak.

Drying means the slow disappearance of water, carried from cell to cell to the outside. Any drying process which dries the wood in such manner that it does not split, check, warp or twist, must dry it at the rate of speed with which the water travels from the interior of the stick to the outside. This cannot be determined theoretically, nor can it be determined by argument, nor can it be determined by the test of one or two small pieces, but it must be determined on a large scale and under every possibly varying condition as to locality and kind of lumber. If there is any one thing which will do more than any other to increase the quality of the lumber turned out, it is successful kiln-drying. I get more inquiries from manufacturers asking how they can successfully dry gum, cottonwood, etc., etc., and I am sorry to say that I am unable to answer these questions as I would like to, because the information is not as yet at hand.

VI. Intimately connected with the manufacture of lumber, as an item of possible future economy, is the question of possible chemical treatment of all the lumber and timbers used by the manufacturer himself. All of the larger railway companies, telegraph and telephone companies, etc., are now using chemically preserved ties, poles, posts, bridge material, etc. The rapidly decreasing supply of such timbers and the consequent increase in prices have brought most of us to the realization of the necessity for such action. The lumber manufacturer, who uses timber from his own lands for making ties for his logging road, particularly if these timbers are capable of being manufactured into lumber, is depleting his own stock to that extent.

One of them recently said to me: "My supply of tie timber is getting low, and I am getting about two to three years' life out of the ties in my logging road. Is there not something that I can do to increase the length of life of these ties, not only for the purpose of saving the cost of the new ties, but also the very expensive cost of renewal charges?" He is now building a small treating plant where all of his logging track ties will be treated from now on.

What is true of logging roads will apply also with equal force to telephone and telegraph lines, building foundation timbers, sills for trucking platforms, etc. A little expense at the right time means a big economy in the long run. My particular treating plant at the Missouri Botanical Garden, where I can treat pieces of logs, shingles, etc., has cost to date the magnificent sum of \$1.75.

If the time permitted, I would like to dwell on other phases of the manufacture of lumber, for instance, the possibility of engaging, either directly or indirectly, in the production of stained wood or the so-called artificial wood. Numerous concerns are now advocating processes of various kinds to unsuspecting manufacturers. I was particularly impressed recently by one man, who sent out circulars on a process for staining wood upon which he claimed to have a patent. The manufacturer, fortunately for him, brought the scheme to us, and was very much surprised when I showed him a list containing some one hundred or more patents on the same subject, many of which were issued sixty or seventy years ago.

VII. Before closing I must refer briefly to the question of bi-product plants.

Under the present market conditions, with prices down on wood alcohol and charcoal, etc., even when successfully operated, the bi-product plant in the Mississippi Valley is not a very satisfactory proposition. One of the chief reasons why none of the bi-product plants have succeeded is undoubtedly due to the fact that they have been operated by men entirely unfamiliar with the industry. What the average manufacturer does not know about retorts, distills, etc., would fill a book. Many of the bi-product plants which I have examined in recent years ought to have failed. While condemning

them, I want to point out as strongly as I can that the bi-product plant of the future will be almost a necessity. All realize that the quantity of tops and other material put into the burner at the mills, or left in the woods every year is tremendous, and that something can be done to utilize this material no one doubts.

These, briefly stated, are some of the important problems which I see concerning the hardwood manufacturer; all of them are immediately practicable, and all of them promise immediate returns. All that is lacking is certain additional information which can be easily obtained by some further investigation. The conservation of his own material need not be urged upon the hardwood manufacturer as I know him.

#### Trading on the Floor

The president then announced that the next part of the program would be trading on the floor. This new feature was brisk and interesting. It is said that over four hundred ears of lumber changed hands during the proceeding. It was certainly a lively meet-up of lumbermen, and was not only highly enjoyed by all participating, but the success was so great that it was resolved that it should form a part of all future annual meetings.

### ENTERTAINMENT, FEB. 2

The local entertainment committee, headed by the Lumbermen's Club of Cincinnati, gave an elaborate banquet and vaudeville for the visitors in the big banquet hall of the Hotel Sinton on this evening. Previous to the banquet, a buffet luncheon and refreshment parlor were opened in the assembly hall, after which the guests marched to the big dining-room at the opposite end of the hall. This hall was artistically decorated for the occasion and between the courses appropriate music was provided.

The banquet, which was excellent in every respect, was prepared by the Hotel Sinton. The menu follows:

#### MENU

Martini Cocktail	D'Artois of Anchovies
Chablis	Bouchees Mignonne of Caviar
	Blue Points
	In naked beauty more adorned
	more lovely than Pandora.—Milton.
	Cream of Chicken, Doria
	A delicate odor as
Amontillado	ever hit my nostril.—Pericles.
	Salted Almonds Olives Celery
Chablis	Bass, a la Havraise
	This dish of meat is too good for
	any but anglers or very honest men.—Walton.
Moet & Chandon White Seal,	
Very Dry	Filet of Beef, Printaniere
	When I have tasted of this sacred dish,
	Then shall my bones rest in my father's tomb in peace.
	—Beaumont and Fletcher.
	Sherbet Creme de Menthe
	Not to know me argues your self unknown.—Milton.
	Royal Squab, a la Clermont
	Hominy Fritters
	Here's a pigeon so finely roasted, it cries.
	Come, eat me.—Swift.
	Head Lettuce, Hongroise
	The tender lettuce brings on softer sleep.—W. King.
	Nesselrode Frozen Pudding
	Mignardises
	Then farewell heat and welcome frost.—Merchant of Venice.
	Camembert
Cognac	Bachelor's fare;
Apollinaris	bread and cheese and kisses.—Swift.
Cigars	Coffee
Cigarettes	One sip of this will bathe the drooping spirits
	in delight beyond the bliss of dreams.—Milton.

Following the banquet an elaborate vaudeville performance of high-class talent was presented.

The only speech at the banquet was by Cliff S. Walker, president of the Lumbermen's Club of Cincinnati, in which he announced that there would be no speech-making.

### THE SESSION OF FEBRUARY 3

This day's session did not commence until 12:15 owing to the immense amount of committee work that had to be accomplished. It resolved itself into a single and concluding session.

President Carrier introduced W. F. Biederman of the National Lumber Manufacturers' Credit Corporation of St. Louis, who made a brief talk setting forth the details of this company's credit rating

book, collection department, reports, etc., and inviting everyone present to become a subscriber to his Blue Book.

W. A. Gilchrist, chairman of the Sales Code and Inspection Rules Committee, explained what this proposed Sales Code consists of, and after some discussion the following Sales Code and Inspection Rules were adopted:

#### SALES CODE AND INSPECTION RULES

These Terms, Rules and Regulations were adopted by the Hardwood Manufacturers' Association of the United States, February 3, 1910, at its eighth annual meeting, held at Cincinnati, Ohio, and are known as the Sales Code and Inspection Rules of the Hardwood Manufacturers' Association of the United States.

When quotations, orders and contracts covering the sale of forest products in which the members of this association deal, contain the clause "subject to the Sales Code and Inspection Rules of the Hardwood Manufacturers' Association of the United States, adopted February 3, 1910," they shall be governed and controlled (with such exceptions as are specifically made in writing) by the following:

#### Sales Code

1. Quotations are based upon and orders and contracts accepted under a general contingency clause, which recognizes that the seller shall not be held liable for delays or non-deliveries of material, when occasioned by strikes, floods, fires, epidemics, war supplies, delays of carriers or any other causes, whatsoever, beyond the control of the seller. In any of these events, the seller may suspend further performance under the same until such causes and their effects shall have been removed.

2. All quotations are made subject to prior sale, change without notice, and purchaser's credit rating proving satisfactory.

3. All orders and contracts shall be in writing.

4. All orders and contracts are subject to approval and acceptance at the main or home office of seller, and are not binding unless confirmed in writing. Such acknowledgment shall contain all data appertaining to order, and shipment to be made in accordance therewith. Omissions and errors to be corrected by the purchaser by return mail. All forms used shall show the address of main or home office of seller.

5. The delivered price (f. o. b. destination) includes only the usual freight charges to point of delivery mentioned, and is based upon the freight rates in effect at time of quotation, with no allowance for switching or other terminal charges at destination. The seller does not guarantee the continuance of those rates. In the event that freight rates change after acceptance of order and before date of shipment, either party may cancel the contract, if the other party refuses to make the price accord with the changed rate. The seller does not guarantee safe delivery, nor insure against breakage, loss or damage to material while in transit.

6. (a) When order, or contract, specifies definite time for shipment, failure to ship within said time, gives the purchaser the privilege of cancelling the order or contract by wire.

(b) When no definite time for shipment is specified, the purchaser shall not be entitled to cancel such order inside of thirty days from the date of order, without the consent of the seller.

(c) Whenever shipments are not made within thirty days the seller shall forthwith notify the buyer, giving reasons for failure to ship. Purchaser shall then have the privilege of forthwith cancelling by wire. Should he fail to so cancel, the seller shall have an additional thirty days in which to ship; provided, however, that in case of special or worked material being on hand at the time of cancellation, all material so worked must be accepted by the purchaser.

(d) All material en route, or loaded preparatory to shipping on such orders, at date of receipt of cancellation, at home or main office of seller (with three days' grace if home or main office of seller is not at point of shipment) shall be likewise accepted. Otherwise the order or contract shall remain in effect, uncancelled, by mutual consent.

7. Seller must promptly send to purchaser an invoice for each carload, or other shipment. Each invoice is due and payable as follows: Freight is due upon arrival of shipment, and must be paid by purchaser; original "expense bill" (or certified copy thereof) must be sent to seller; Balance of invoice (remainder after deducting freight) is due sixty days from date of shipment and bears interest after maturity; Provided, however, that purchaser may pay the same ten days after date of invoice with a discount of two per cent; or thirty days after date of invoice, with a discount of one per cent.

All payments must be made in funds at par New York or Chicago. Omissions and errors in invoice are subject to correction.

8. If, during the life of any order, or contract, the financial responsibility of the purchaser becomes impaired, or unsatisfactory to the seller, cash payments, with above discounts, or satisfactory security may be demanded, in default of which the order or contract may be cancelled by the seller.

9. In the event of complaint by purchaser on either the quality or quantity of stock shipped, the purchaser shall pay freight, unload, hold intact and properly protect the entire shipment, and shall file complaint with seller within five days after receipt of the shipment. Payment of freight or invoice shall not be considered as an acceptance of the order, nor shall such payment work a forfeiture of the right to enter complaints and make corrections.

Upon receipt of complaint by seller, shipper shall at once request the secretary of the Hardwood Manufacturers' Association to have the shipment reinspected in accordance with the rules of the Hardwood Manufacturers' Association of the United States in effect at the time of the execution of the contract, and the purchaser shall lend reasonable assistance in the reinspection thereof.

Certificates will be issued by the association showing the original shipper, the purchaser and the result of such reinspection, the original being mailed to the shipper and the duplicate to the purchaser.

10. Both seller and purchaser shall be bound by such reinspection.

The purchaser shall accept all material of the grade purchased, and all of the lower grades not in excess of 5 per cent. of the total quantity invoiced, and shall pay for said grades at current proportionate prices as shown by the latest publication of market conditions issued by the Hardwood Manufacturers' Association. All de-grades in excess of 5 per cent. shall be the property of the seller.

R. H. Vansant, chairman of the Executive Grading Commission, then presented the following report:

#### Report of Executive Grading Commission

Mr. President—I desire to submit the following report of the Executive Grading Commission. Gentlemen, this meeting has been a very important one so far as the manufacturers are concerned on agreeing on the rules with consumers of our product. We have had in consultation with the various committees on these different points a large part of the manufacturing consumers, as well as other people who are interested. Among these I want to especially mention Mr. M. Wulpi, commissioner for the extension table manufacturers and also for the casket manufacturers. Also Mr. O. B. Bannister, representing the vehicle people, and quite a number of others whose names I can't recall just now, but who will receive mention in the record showing who has been here.

We have had also with us the chairman of the Board of General Purchasing Agents of the railroad, and have practically come to a conclusion with them as to the inspection rules in which they are interested.

This has been a very harmonious meeting with all of these consumers, and the rules we have adopted have been practically with their agreement. I will now take up the different woods in their order.

Rough poplar, no change in the rules, except 18-inch and over, sap will be no defect.

Basswood, no change.

Beech, no change, except that there is an error in the printing, which will be corrected.

Birch, no change.

Buckeye, no change.

Butternut, no change.

Cherry, new rules prepared by Mr. Kirby's committee. They are to be the only ones. I move that they be adopted.

Motion seconded and carried.

R. H. Vansant: Chestnut. There has been a large amount of consideration given this wood. There has been no definite change on this. I move that it be referred to the Executive Grading Commission, with power to the Executive Board to act.

Motion seconded and carried.

R. H. Vansant: Cottonwood, no change.

Cypress. I move that we adopt the Southern Cypress Association rules as they are revised; that they may be used as revised by the Southern Cypress Association each time as published by them.

Motion seconded and carried.

R. H. Vansant: Dimension material. We adopted a rule on that as made by the users of dimension material, and they adopted our lumber rules. The rule is to be ours, and the application is ours. I move that that be adopted.

Motion seconded, carried, and so ordered.

R. H. Vansant: Elm, no change.

Gum, no change.

Hickory, pecan, and sycamore, no change.

Maple, no change.

Oak, but one slight change. Some of the manufacturers appeared before us and there was some complaint on the question of quarter-sawed oak, striking out the 10 per cent for scant lumber. The committee agreed to strike out that word "10 per cent" at the request of the manufacturing consumers who were present, and we have done so. I move that that change be adopted and made.

The motion was seconded and carried.

R. H. Vansant: A rule on Cuban mahogany was prepared by Mr. Moffett, as chairman of that committee, and handed in. I move that that rule be adopted as prepared by Mr. Moffett's committee.

Motion seconded and carried.

R. H. Vansant: I move that the rule on mahogany, after consulting, be referred to the Executive Grading Commission, with power for the Executive Board to act.

Motion seconded and carried.

R. H. Vansant: Gentlemen, before leaving this question, I want to thank the various committees for the arduous duties they have performed. It has been an immense amount of work. I want to thank you for not requiring me to read this; you will find that these agreements, these instructions that have been made, have been the most important things that have ever occurred in the history of this organization. I feel that you will be fully satisfied.

The railroad timber has been gone into by our ablest men most thoroughly, as well as all other questions.

I also desire to express the thanks of this association and of this committee to those railroad men who attended our meetings and conferred with us.

The chairman of the Inspection Committee made a detailed report on sundry goods involved in the inspection system of the association. There were little or no changes made in the rules, save on cherry, for which substantially a new set of rules was adopted, and on quarter-sawed oak, the provision allowing ten per cent. of thin lumber on one edge being eliminated.

The Committee on Weights made a report adding weights on cottonwood bevel siding at 850 pounds;  $\frac{3}{8}$  cottonwood S2S 1,000 pounds;  $\frac{1}{2}$ -inch cottonwood, S2S 1,200 pounds;  $\frac{5}{8}$  cottonwood 1,500 pounds.

The Committee on Constitution made a report recommending change in date of annual meeting to January or February of each year, and of a semi-annual meeting for July or August of each year.

The Committee on Resolutions reported a resolution of condolence concerning the death of J. E. Defebaugh.

On motion of W. H. Shippen of Ellijay, Ga., the chair was instructed to appoint a committee to gather funds to erect a suitable tablet in memory of Mr. Defebaugh.

The chair appointed on this committee William H. Shippen, R. H. Vansant, F. W. Gilchrist, G. E. W. Lachmann and C. M. Crawford.

The chair also appointed the Committee on Manufacturing Costs, provided for earlier in the session, to consist of F. F. Fee, W. A. Gilchrist, W. E. DeLaney, T. B. McCormick, T. W. Fry, W. A. Townsend and G. O. Worland.

The Committee on Resolutions submitted numerous matters, including a suitable tribute to F. S. Hendrickson, deceased; offered a resolution of thanks to the editor of HARDWOOD RECORD for his address and picture entertainment, and for the publication of the DAILY RECORD during the convention; extended the thanks of the convention to the writers of the sundry papers read before the convention; offered a vote of thanks to the lumber trade press, a very enthusiastic one to the Cincinnati hosts, one to the officers, and one to the proprietors of the Sinton Hotel.

On motion, the report of the committee was adopted.

Thomas L. Cannon of St. Louis was then introduced. He extended a cordial invitation to the association to hold its next annual meeting at St. Louis. On motion, this matter was referred to the Executive Board for action.

### Election of Officers

The Committee on Nominations reported, recommending the reelection of the officers and the Executive Board as follows:

President—R. M. Carrier, Sardis, Miss.  
First Vice-President—Frank F. Fee, Little Rock, Ark.  
Second Vice-President—W. B. Townsend, Townsend, Tenn.  
Treasurer—C. M. Crawford, Coal Grove, O.

### Executive Board

Clyton Crane, Cincinnati, O.  
W. A. Gilchrist, Memphis, Tenn.  
J. H. Himmelberger, Morehouse, Mo.  
C. R. Lamb, Minneapolis, Minn.  
John W. Love, Nashville, Tenn.  
G. E. W. Luckmann, St. Louis, Mo.  
J. W. Oakford, Scranton, Pa.  
A. B. Ransom, Nashville, Tenn.

W. M. Ritter, Columbus, O.  
R. H. Vansant, Ashland, Ky.  
William Wilms, Chicago, Ill.  
W. E. DeLaney, Cincinnati, O.

The report was accepted and the secretary was instructed to cast the vote for the Officers and members of the Executive Board, as named, which was done.

Mr. Carrier made a brief speech of acceptance and this most successful meeting in hardwood history adjourned.

### Executive Board Meeting

Immediately following the meeting, the Executive Board held a brief session. About the only business of importance transacted was the reelection of Lewis Doster as secretary for the ensuing year.

The total registration at the meeting was 702. As the list of names was printed in the DAILY HARDWOOD RECORD, it is omitted here.

## Hardwood Record Mail Bag

In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.

### The Views of a Small Arkansas Operator

The following semi-humorous, semi-pathetic communication, which appeared in the Cincinnati daily issue of the Record on February 3, was recently received by President Carrier of the Hardwood Manufacturers' Association from a firm of small sawmill operators in Arkansas. The letter is absolutely authentic, though for obvious reasons the names of the parties in interest cannot be given:

MIDDLE, ARK., January 16, 1910.

R. M. CARRIER, Hardwood Manufacturers' Association, Sardis, Miss.

Dear Brother Carrier: We are in receipt of your very kind invitation to attend the annual convention of the Hardwood Manufacturers' Association of the United States, to be held in the city of Cincinnati on the three first days of February.

It is with feelings of most sincere and heartfelt regret that we are compelled to forego this pleasure, for we feel that it would indeed be a pleasure to meet with so many of our fellow sufferers as will be gathered together on that occasion.

The fact is that circumstances over which we have no control, i. e., the prosperity of the lumber dealers, have so affected our financial affairs that that that well, maybe you will spare us the pain of further explanations.

You see, we, like a host of other small sawmill concerns in the South, have for the last four or five years been trying to overcome the "law of gravitation" by selling lumber for less money than it has cost us to produce it. Of course, the inevitable is overtaking us, one by one, as fast as the resources we put into our enterprises to begin with are exhausted; the better worker and hustler a fellow is, the longer he can keep ahead of the sheriff, but sooner or later.

True, some of the luckier ones have managed to live because the property they bought for the lumber turned out to be good agricultural lands, and they realized a profit that way over the price the lands cost them, but none of that profit belongs to the manufacturer of lumber.

We doubt if there is a lumber firm in the South today which would not rather have the lands they own in the state they were in when they first bought them than to have all the profit they have made in the working up of all their fine timber.

We have wasted our "patrimony." Were we to outline the history of our experiences during the past few years it would probably sound so familiar to most of the small sawmill men in the southern hardwood territory that they would think we were telling about them under an assumed name. And yet the cost of our products to the consumer has probably been as high as he could have afforded to pay, compared with prices of other commodities, and at these prices every sawmill man in the South should have, during the last five years, gotten independently rich.

The trouble has been, it seems to us, that the mill man has adopted the rule of "say nothing and saw wood," and hasn't realized till too late that it takes something more than a tract of good timber and a good sawmill to make money in the manufacture of lumber.

The fact is, there are four things necessary to a successful lumber manufacturing plant. The first two are brains and money; the mill and the timber are accessories.

We, of course, found this out later and have never been able to supply the deficiency. But our idea in writing you this letter is not to tell a tale of woe, or offer ourselves as candidates to the kickers' club, but to make a suggestion that occurs to us might be useful, from one who has been over the ground and seen some of the rough places.

Perhaps the best way to illustrate the thought we have in mind will be to tell about your own experiences during the years just past. We feel confident that the story will sound so familiar to a great many of your friends that they will not accuse us of drawing on our imagination for any part of the narrative.

It was this way: We owned several million feet of standing timber in a fairly good location, and thought we could see a good profit in putting in a small mill and making it up into lumber. We also found a man who owned a pretty good mill, and was considered a good mill man, so the two of us agreed to go in together and start business. We had plenty of money to put the mill up and get it ready to start, and to buy teams and wagons enough to do our logging. Bill, that's my partner's name, said that he knew a lumber firm in Memphis that would furnish us all the money we needed to operate on, once we got the mill to going, and could show them that we had everything paid for and could make good lumber. So, as soon as we had everything going and had sawed out enough lumber to build a few shanties for the mill hands to live in and had everything lined up right, Bill and I went over to town to make our financial arrangements.

We found the office of the Skinner Lumber Company on the sixth floor of a very large building. It was a nice, cozy, little office, with a green carpet, a roll-top desk, a rented type-

writer, some four or five easy chairs and some letter files and calendars.

The manager, a bright, genial man, sat within easy reach of the telephone, and a pretty, neat little stenographer girl was busily chewing gum, and trying to keep time on her machine. As we entered and stood, hat in hand, on the green carpet, she glanced nervously at our big, muddy, gum boots and involuntarily tucked her skirts a little closer.

Bill had already had some dealings with Mr. Skinner, so that the introductions were easy, and in a very few minutes the little stenographer was busy jotting down the terms of our contract. That settled, Mr. Skinner, who by this time had grown exceedingly sociable with us, said that now while the girl was getting it up on the machine, we would all go out and have lunch—it was dinner time for Bill and me. On the way we stopped at a convenient corner and Skinner told the barkeeper to fix us up one like he always took (whatever other faults Skinner may have, he is a man of good taste).

After "lunch" we had another on our way back to the office—and all on Skinner, mind you. There we found the little girl with the two copies of our contract all ready for us to sign, just putting on her hat to go after her own little lunch.

The writings were pretty long, and after glancing hastily over them, Skinner assuring us they were all right, we signed up. It didn't make much difference about the terms of the contract. We had agreed on prices and payments, and what we had to have was money.

At the end of the first month Skinner made us an advance of seventy-five per cent of the price, according to contract. He explained to us that he had an arrangement at a bank to discount his paper, so he gave us ninety-day notes, discounting our statement of two per cent for cash, but he paid the discount on the notes. It took us a year to find out that we were securing these notes for Skinner, and paying all the interest and four per cent besides.

So far as we have ever been able to learn, the only money of his own that Skinner ever put into our deal was the price of the lunch and the drinks on the first day of our acquaintance. Once or twice during the year when Skinner failed to renew his notes and meet the interest, the bank would notify us that they held unpaid paper with our endorsement for "so much," requesting us to "call at once and protect same."

Take it all in all, though, we got along smoothly enough with Skinner & Co. during that year. The seventy-five per cent advance he gave us paid all bills for grub, labor and supplies, repairs, etc., so that we found ourselves with a first-class credit by the end of the year. Such promptness was quite unusual in sawmill firms, and we figured out that we would have all of the twenty-five per cent held back as a profit.

Things looked rosy.

But when we came to make our final settlement with Skinner & Co. we found that grades and measurements hadn't anything like held up to our estimates, so that instead of having a profit awaiting us, we found a slight deficit. This was disappointing indeed, but as we didn't owe anything, and had our outfit all paid for, we felt that we could stand it better than if we had had some payments to meet.

All we had lost was our time and the value of our tinder. This same experience with slight modifications has been repeated year after year.

Often we have found our lumber passing through as many as five hands between us and the consumer. Each one had to have a profit, and handling freight, and office expenses had to be paid out of the difference between the price we got and the price the consumer had to pay.

We doubt whether the quality of the lumber was improved any by reason of these various handlings, but we do know that in most cases the grade was raised.

As we look back over the situation it occurs to us that maybe in calling a convention like this one which is, we presume, to be devoted to the interests and betterment of the conditions of the men who make hardwood lumber, it might not be a bad plan to extend the scope of the organization a little, and invite the attendance of some of the only class of men in whose power and to whose interests it would be to remedy to some extent the condition of such men as Bill and I.

Let in a few consumers, and make it an organization of mutual interests, for then we would be in a position to assist and protect each other.

We have no particular animosity against the dealers, and fully realize that the trade will never exist without their aid and support. They are live, bright, brainy, energetic men, and no doubt most of them earn their money well and truly; but let us get along with fewer of them and simplify the work they are doing. It need be no hardship on them, for they are capable of making a living in most any other line of work, and will soon find some other class to subsist on.

If we can manage to get the profits, of say half of them, to divide between the producer and consumer, it will make dividends for both parties, where many times under the existing conditions there are none for either.

Again expressing our regret that Bill and I cannot be with you, we remain

Your humble and benighted servants,

JOHN GREENWOOD.

BILL BLOCKWOOD.

#### Wants White Oak Truck Poles

GAINESVILLE, FLA., Jan. 31.—Editor HARDWOOD RECORD: We are in the market for six carloads of white oak truck poles:

2¼x5½ butt x 2¼ square point.

2½x6 butt x 2½ square point.

2¾ x 6½ butt x 2¾ square point.

3 x 7 butt x 7x3 point

all 13 feet long. All must be absolutely free of defects and sawed from good, sound, live timber.

COMPANY.

Any HARDWOOD reader who would like to communicate with the writers of the above letter can have the address by writing this office.—EDITOR.

#### Yellow Poplar Lumber Company Commences Sawing

COAL GROVE, O., Jan. 27. Editor HARDWOOD RECORD: It is with considerable pleasure that I am able to advise that we started our 1910 sawing season here yesterday. We have had a fine log delivery during the past week, which includes part of the excellent

lot of virgin-forest poplar logs you saw at the head of Sandy River last fall. The first day's sawing would indicate the fine quality of lumber this timber will produce.

We are gratified with the work of the splash dam, which has made these early deliveries possible. We expect to keep our mills in steady operation throughout the year, beginning night run about March 1.

YELLOW POPLAR LUMBER COMPANY.

C. M. Crawford, Sec'y.

#### Acknowledgment from Gifford Pinchot

WASHINGTON, D. C., Feb. 4.—Editor HARDWOOD RECORD: The great pressure of work must be my excuse for the long delay in acknowledging your letter of January 18, enclosing a copy of resolutions passed at the annual meeting of the Indiana Hardwood Lumber Association on January 13. Such support and encouragement do a man good.

Please give my best thanks to the members of the association, and especially to Mr. Burkholder, for their good wishes.

With renewed thanks for your letter.

GIFFORD PINCHOT.

#### Likes the Record

The following letter has been received from an Axim (West Africa) reader of the RECORD, whose subscription was supplied by the C. C. Mengel & Bro. Company, Louisville, Ky. It shows that the paper is appreciated even in that far-off land.—EDITOR.

AXIM, W. C. AFRICA, Jan. 14.—Editor HARDWOOD RECORD: We take pleasure in acknowledging the receipt of your valued favor of 13th ult., advising us that Messrs. C. C. Mengel & Bro. Company had remembered us in so very acceptable a manner. We anticipate from its perusal even more pleasure than the satisfaction experienced by you in adding our name to the subscription list of "the best lumber paper printed," and the best is good enough for us.

VLEDER B. PALME.

General Manager.

#### Wants No. 2 Two-Inch Quartered White Oak

PHILADELPHIA, PA., Feb. 4.—Editor HARDWOOD RECORD: We are very anxious to secure some No. 2 common 8-4 quartered white oak. If you can advise us where we can locate any we will appreciate it very much.

Anyone desiring to communicate with this leading eastern wholesaler can have the address by advising this office. Editor.

#### Wants Veneer Factory

The following letter is self-explanatory.

AUGUSTA, GA., Feb. 5.—Editor HARDWOOD RECORD: We are looking for a connection to start a veneer plant at this point. We do not know of any location in the United States that is better adapted, on account of price of logs and quality of same, than here. In the first place, we have a log rate coming in Augusta that is, at a radius of one hundred and fifty miles, which has the same rate as lumber, with a 40,000-pound minimum instead of twenty-four. In other words, within a radius of twenty miles the rate on logs averaging 15 inches would be about \$2 per thousand feet.

The woods that are handy to get are poplar, gum, pine, oak, ash, cedar and cypress. Our ash has no superior; our gum is of the best quality; poplar and oak, however, are not the

equal of the Tennessee, Kentucky and Indiana stocks, but are being shipped out of this section daily to a number of veneer men.

We have suitable land and buildings, and would gladly answer fully all further questions to a prospective buyer.

AUGUSTA BOX & MFG. CO.,

T. G. Philpot, Sec'y and Gen. Mgr.

#### Stand Well With Him

The RECORD is in receipt of the following amusing letter from J. C. Strauss, the well-known photographer of St. Louis, with whom negotiations were recently made for making pictures for this publication. Lumbermen certainly stand well with the "picture-man" of St. Louis.—EDITOR.

ST. LOUIS, Jan. 28. My dear Mr. Gibson: Responding to yours of the twenty-sixth in my experience of more than a quarter of a century, I have found lumbermen about the best ever with whom to do business, and millionaires have a peculiar charm. So I am willing to take my chances with any man who is a combination of both whom you may route my way.

J. C. STRAUSS.

#### Wants Basswood Piano Key Boards

LONDON, E. C., Jan. 26.—Editor HARDWOOD RECORD: Can you put me in touch with the manufacturer of white basswood piano keyboards? —

Will some reader of the RECORD who is interested in the production of this line kindly supply his address, which will be communicated to this leading London hardwood house. It may lead to some desirable trade on the other side of the Atlantic.—EDITOR.

#### Wants to Market Red Cedar

BIG CLETTY, KY., Feb. 2.—Editor HARDWOOD RECORD: Please furnish me the names of some firms using cedar for the manufacture of pencils; also cedar telegraph poles and fence posts.

J. W. LEWIS.

Anyone interested in the purchase of cedar would do well to communicate with Mr. Lewis.—EDITOR.

#### Ravages of the Mistletoe

It is reported that the common American mistletoe, *Phoradendron flavescens*, has attained such abundant growth in the Southwest, especially along the southern border of the great arid region, as to be an actual pest to tree growth. It is a fortunate fact that this parasite thrives best in intense sunlight, for in that way its harmful growth is limited to trees leading isolated lives. As a consequence, the damage to forest growth is negligible, as there the moist, shady conditions force its successful germination to the topmost branches of tall specimens; its ravages are confined almost wholly to shade trees.

This parasite is unique in that it has green foliage, and as a consequence merely steals undigested food of its host and not the elaborated product as is usually the case with parasites. The mistletoe seed is encased in a pesty substance which causes it to stick to any body on which it is deposited. Its germination seems to be general on all species of tree growth. To germinate the seed must fall in some wound in the bark of its host and with this start the dissolvent enzyme contained in the root tips soon forces a channel to the vitals of the tree. Once well established it is only a question of time when the growth will sap the life, first of the limb on which it lives and then, if the growth is abundant, of the whole tree.

# The Status of Forestry in the United States

This article, which was taken from a circular by Broadwell Cox land, issued by the Forest Service, is reprinted from the Record of Jan. 1914.

## State Forestry

In comparison with the great need disclosed by a study of present forest conditions, the states have done exceedingly little toward the solution of the forest problem.

### Lines of State Action

The past lines of state action fall naturally under the following heads: (a) Protection of the forest against trespass; (b) protection of the forest against fire; (c) the promotion of forestry by various means; (d) the establishment of state forests and forest organizations charged with their care.

### Trespass Laws

In general, the state laws against forest trespass are sufficient, but they are not enforced, and never have been, in any state. The non-resident forest owner is frequently so great a loser from trespass that he finds it cheaper to cut the timber before it has reached financial maturity—that is, before it is the best business to cut it.

### Fire Protective Systems

Eighteen states have organized fire protective systems. These are: Alabama, California, Connecticut, Louisiana, Maine, Massachusetts, Maryland, Michigan, Minnesota, New Hampshire, New Jersey, New York, Oregon, Pennsylvania, Tennessee, Vermont, Washington and Wisconsin.

It is interesting to note that the fire laws and amendments considered by experts the most satisfactory have been enacted within the past five years (California, Oregon, Maryland, Washington, New Jersey, Idaho, Minnesota, New York).

Nearly all of the states have long had legal provisions against setting fire to forests and waste land. In recent years, however, such provisions have been made more specific and effective.

The following improvements in existing fire protective systems are urgently required:

(1) Greater independence of the head officer and his direct responsibility to the governor. It is a distinct advantage to have a state firewarden who devotes his entire time to fire protection. He should be appointed from a nonpolitical state civil-service list and hold office during efficient service. His duties should include the personal superintendence and instruction of the local over-wardens, who would be his own deputies; the appointment and removal of local officers when this is consistent with state and local policy; the auditing of firewardens' accounts; and the enforcement of fire laws against offenders. This arrangement is in the direction of state rather than local enforcement of the laws. The New Jersey provisions more nearly meet these requirements than do perhaps any of the other state forest-fire protective laws.

(2) Greater independence of local firewardens. There is at present a sound tendency away from adding the duties of a firewarden to the duties of existing offices. Firewardens should give all of their time to their work and receive pay for it.

(3) The extension of the plan, followed in part in California, Idaho, Oregon, and Washington, of appointing employees of private forest owners as state firewardens or rangers, the state delegating the powers of peace officers to such appointees and the forest owners bearing the added expenses, if any.

(4) A very great extension of patrol. Efficient patrol is the first essential of effective protection. The great object of all protective systems is to prevent fires, and patrol alone will prevent them. It is, therefore, good business for the state to pay for patrol on its own holdings; for the same reason patrol is the best kind of business for private owners, who should be, and usually are, entirely willing to bear their share of the burden, as they are required to do in Nova Scotia, may do in California, and will do in Wisconsin if a bill that has been presented is enacted into law. State rangers under the state forester or firewarden should be permanently maintained by the state, assisted by the voluntary or compulsory co-operation of private owners. Legal provision should be made for the appointment of employees of private owners as state firewardens, with the powers of such officials. Patrol may be limited to the dangerous season, except that district firewardens should patrol at all seasons. Where no merchantable timber remains on cut-over lands, and the owners of such lands are consequently indifferent to fire, there will not be effective local support or sufficient funds to maintain patrol. In such cases the state should acquire the land for state forest purposes and protect it by state patrol. The results would encourage the practice of forestry by private owners.

(5) Better provision for inspection.

(6) Further provision for coöperation between state and federal governments in the states having National Forests. At present the National Forest officers may be appointed state firewardens in California and Oregon. In order fully to protect the National Forests it is frequently of great importance to extinguish threatening fires outside of but adjacent to the forests, and it is always desirable to prevent such fires. In the states above mentioned federal forest officers receive the needed state authority on state lands adjacent to the forests, but no provision is made for reimbursing the government for expenses incurred in the protection of such state lands. Should such provision be made by the states, so as to permit National Forest officers acting as state fire-

wardens to incur such expenses as may now be incurred by other state firewardens, the coöperative arrangement would be yet more advantageous than it now is for both state and National forests.

(7) Provision for the taxation of forest owners on an acreage basis, the fund so raised to be devoted to forest patrol. This plan is successfully followed in Nova Scotia, and a law containing similar provisions was introduced last winter in the legislature of Wisconsin.

### The Promotion of Forestry

State laws to encourage forestry have thus far been chiefly of two kinds: Those creating forest commissions and, of late, state foresters, and those offering inducements, in the form of bounties or exemption from taxes, to plant forest trees or to maintain forests. The latter have had some slight educational value, but they have in most cases been poorly framed and they have usually been declared unconstitutional. They have led neither to the planting nor to the preservation of forests. The state forest commissions and state foresters, on the other hand, have very greatly advanced the cause of forestry by gathering and distributing information, advising the government or legislature of the state, and coöperating with private forest owners in the care of forest tracts and woodlots and in the establishment and care of forest plantations.

Coöperation with private owners in forest management and forest planting is of paramount importance. The private owners must be met on their own ground. Until the resources of real coöperation are exhausted it is not time to consider measures for bringing forestry to pass by drastic legislation.

Forest taxation is one of the insistent problems involved in the encouragement of forestry by the state. At present private forests are in many cases practically taxed out of existence. Our forests are doubly discriminated against in the tax laws: First, because they belong to the class of real property, which is already overburdened, and, second, because they are assessed on the basis of sale value instead of on the basis of income. Such a state of affairs encourages reckless cutting, after which the devastated forest is too commonly allowed to revert to the state.

Public sentiment has been awakened to the need of a substitute for the general property tax as applied to forest lands. Economists have for years recognized the fact that the burden to which such lands are subject under present tax systems is very unjust, and desultory attempts have been made to effect a remedy. As was said, these attempts, which have usually taken the form of partial or entire exemption of forests from taxation, of rebates of taxes, or of bounties to the owners, have not been very successful.

In the autumn of 1907 the whole subject was brought into the field of general public thought by the International Tax Association at its first conference held at Columbus, Ohio, when forest taxation was given a separate place among the topics for consideration. At the second meeting of the association, held at Toronto, Canada, one year later, a scientific and just method of forest taxation was first well presented, and the principles then laid down have, with some variation, been since embodied in laws proposed in several of the state legislatures.

The principles recommended by the Forest Service can not be generally adopted without amendment to the constitution of a great many of the states, but it seems as if the growing public interest in this whole subject will compel such amendments and thus open the way for a system of forest taxation which will be just and which will encourage the holding of cut-over lands for reforestation and another crop. Indeed, in two of the states, Minnesota and Oregon, steps have already been taken to this end, for in each of these states a constitutional amendment has been submitted to the legislature which will permit the taxation of timberlands according to approved principles.

These state forests represent a line of state action which has been preëminently successful. A total of 3,279,771 acres of forest reserves is owned by the states including Hawaii. New York leads the states in state forest area, followed by Pennsylvania and Wisconsin. The smaller attempts of Minnesota, Michigan, Connecticut, Massachusetts, New Jersey, Indiana, etc., are all important. The state forests speak for themselves. First, they furnish object lessons of great value; second, they form the nucleus of what some day must be the principal center of state forest work. It is a fundamentally sound policy for the state to own land, especially land which does not offer the conditions necessary for prosperous settlement.

#### Private Forestry

##### THE INDUCEMENT TO PRACTICE FORESTRY

Three-fourths of all our forests are in private hands. These private forests are, moreover, the best stocked; they contain four-fifths of all the timber in the country. Clearly the bulk of the timber cut must come, for some time at least, from this area. Upon the use of the forest growing upon it will depend whether future demands for timber will be met or not. Very largely, therefore, the forest problem is to be solved by private forestry—unless, indeed, private owners fail to practice it on any considerable scale, in which case public ownership may be invoked in the public interest. It is of the greatest importance, then, to know the extent to which forestry is now, and is likely to be, practiced on private lands.

The area of private forest on which forestry is practiced at present is not known and can only be roughly estimated. Probably

it is less than 1 per cent of the total area of private forests. As was said in describing the cooperative work of the Forest Service, about 10,000,000 acres have been involved in the applications made to the Service for advice in proper forest management. Actual work in accordance with Service advice has been done on a substantial part of the area. In but few cases, however, have complete working plans been persistently carried out. The chief value of this work has been its educational effect, which extends far beyond the forests directly concerned. A valuable result thus secured is the better general knowledge of the meaning and aims of forestry. Forestry is now correctly understood to mean no mere sentimental plea for regarding the forest as an ornament to the landscape, but a practical plan for getting the best economic service out of the forest in the long run. This is a great advance. With forestry rightly understood, it is a comparatively simple matter to work out the results which the practice of forestry may be expected to secure.

It is, of course, both useless and unfair to invite forest owners to practice forestry simply for pleasure. In dealing with public forests the first consideration is the public welfare; in dealing with private forests the first consideration is the business inducement. Forests in private hands are really investments made for the interest they will produce. Their owners are chiefly concerned with knowing what will happen to the investment, how its interest-yielding power will be affected under the conservative management which the forester recommends. If forestry is not good business, then good business men, such as most forest owners unquestionably are, are precisely the sort of men not to touch it.

In the past almost the exclusive inducement to invest in forest property has been the chances it offered for clearing up and closing out at a satisfactory profit—a quick and remunerative turnover of capital. This sort of investment has been, and to a greatly limited extent still is, highly profitable. It is distinctive of the lumber industry. It will continue to characterize transactions in timber land as long as it pays better to skin the land and move on than it does to develop the land and hold on. It has become a business habit, which fact makes it all the harder to change. In order, however, for forestry to come into general practice, a change will have to come.

Speculative deals in forest property, buying in cheap in order to sell out at an advance, can go on only as long as it remains comparatively easy to get in and out of the market quickly; that is, only as long as first-class stumpage can be readily picked up. Cheap virgin forest is getting scarce, and stumpage prices, which so long have lagged behind lumber prices, are rising sharply. The opportunities for forest speculation in the old style are fewer every day.

Realizing this situation better than anybody else, lumbermen and others owning and dealing in forest lands are beginning to ask whether it is not time to handle forest properties in a different way—to hold them and put them on a permanent paying basis by utilizing the productive power of the forest, together with the advance in stumpage values; in short, whether forestry will not pay better than exploitation.

A satisfactory answer to the question "Will forestry pay?" can not be made off-hand. The problem is not one of theory, but one of conditions; the considerations involved are not absolute, but relative. The point to decide is not whether forests in general and anywhere can, by intensive forestry, be made to yield net profits indefinitely, but whether private forests in the United States, at present and prospective market prices for stumpage and forest products, in the present state of the lumber industry, under existing laws, and with the prevailing public sentiment toward the forest, can, under more conservative management, be made to yield an interest rate satisfactory to investors as compared with the profits of forest devastation. The lumberman and the forest owner are facing a real situation of concrete facts, and the forester's answer to their question must be no less concrete.

#### OBSTACLES TO PRIVATE FORESTRY

Getting right down to the situation as it comes home to the forest owner and the lumberman, it is easy to see that there are certain obstacles in the way which must be overcome before it is reasonable to expect that private forestry will be widely practiced. The chief of these are the following:

##### THE GREAT FIRE RISK

While the private owner should unquestionably be required to contribute toward the protection of his own holdings from fire, he can hardly be expected to assume the whole expense in a country where the general sentiment toward fires is indifferent. The most effective fire protection anywhere outside of the State and National forests is secured now in the states of Oregon, Washington, and Idaho by cooperative fire associations which assess their members on an acreage basis and maintain a patrol. During the past year such associations cooperated successfully with the protective force maintained by the National Government and the states. Investigations show that patrol can accomplish full protection to forest land at an annual cost of from 2 to 4 cents per acre throughout the United States, according to the regional fire risk. The total annual cost of protecting all private forests is estimated at \$10,000,000. The annual fire losses in standing timber alone are placed at \$50,000,000.

##### ILL-DEvised TAXATION

In a real sense, forests are in many cases simply taxed out of existence. As long as forests continue to be taxed on the basis of

an annual crop, holding young forests until they reach maturity, and, still more, the establishment of new forests, means financial loss to anyone who attempts it. Such methods of taxation are in the end ruinous to the community also, for they encourage devastation and the abandonment to the state of lands which thereafter yield no revenue in the form either of products or of taxes.

By suitable legislation the State can remove both of these obstacles now in the way of private forestry. They are artificial obstacles.

CHEAP STUMPAGE PRICES

Cheap stumpage is the chief natural obstacle to the wide extension of private forestry. Forestry involves an investment in growing timber. If the investment is to show a satisfactory profit, the product must not sell too cheap. As long as the product sells cheap, expenditures will not be made to produce it, and the timberman will continue to be the nomad and the speculator which past conditions have inevitably made him. In order to hold out inducements to private enterprise, forestry must offer a reasonable margin of profit above the cost of growing the timber.

This obstacle to forestry is being steadily removed by the depletion of the virgin forests and the consequent rise in stumpage prices. Already, as the following examples show, the scarcity of supplies has resulted in a number of cases in the holding of tracts for more than a single crop.

EXAMPLES OF PRIVATE FORESTRY

The heavy loss from fire has led to the greatest progress thus far made toward the practice of forestry on private lands. In Oregon, Washington, and Idaho large tracts have been placed under organized protection by associations of timber-land owners, each member of which pays pro rata toward the cost. For example, the four fire protective associations of northern Idaho expended for fire protection in 1908 \$52,284.11, protecting directly 1,257,787 acres of forest owned by members, and incidentally large areas of adjoining forest. The average cost of this protection, including fire fighting, was a little over 4 cents per acre. One of the associations, however, lost far more heavily than the rest, owing principally to incomplete patrol. Three of the associations protected their holdings at a cost, respectively, of 3 cents, 2½ cents, and 2⅓ cents per acre. The reports of the associations show that the main emphasis was laid upon patrol. Thus one association apportioned its expenditures as follows:

	Per cent.
Patrol .....	49.23
New trails .....	16.98
Cleaning old trails .....	12.98
Fire fighting .....	10.57
All other items .....	10.24

Next to patrol the chief expense was trail building, which in the above case was 29.96 per cent of the total protection cost. Provision was made for tool boxes at convenient

places, for tools, and for horses, as well as for lookout stations.

Equally successful results have not yet been achieved over large areas of private forest lands by either individual or associated efforts in other parts of the country. But numerous small tracts in the East and South are now fairly well protected at moderate cost, and the owners report satisfactory recuperation and reproductions on the protected areas. A case worth special mention is that of an owner in the south-central region, a coöperator with the Forest Service, who is applying a working plan in the management of large holdings. Difficulty was found in keeping fires out of the cut-over land, owing to the carelessness of neighboring settlers. An experiment was therefore made by the owner. A tract of 1,000 acres was set aside and given special protection. Fires have been kept out of this tract for five years, and the owner finds that full reproduction is now the reward of his efforts. Where the business wisdom of protecting a large tract is in doubt, such a test may well be tried. It is not costly, and the results speak for themselves. In most cases an object lesson of this sort, driving home the truth about fire protection, will convince the forest owner that he can not afford fires.

At Corbin Park, in central New Hampshire, some 17,000 acres of forest have been carefully lumbered on the selection plan for five years, in accordance with a working plan made by the Forest Service. The park is intended mainly for a game preserve, and all forest work is arranged with respect to its effect upon the game. Nevertheless, the revenue derived from the sale of live game and of forest products more than covers the expense of management and yields a satisfactory profit on the investment, while the future forest crop is steadily coming on.

On one of the larger private estates on the Hudson forestry is well practiced. The property, which embraces 1,000 acres, has about 300 acres under forest, from which cordwood from improvement cuttings sells well in the local market. Good roads and the easy accessibility of the tract make it possible to handle the forest in this way as profitably as if large clear fellings were made, so that the maximum financial yield is secured with the minimum of disturbance to forest conditions. Where the stand is sparse planting is done, and the stock is raised in a forest nursery upon the estate. This is another example of what can be done by forestry. The methods employed and the results secured are of great educational value to the whole community, where many opportunities of similar management offer.

That good management pays is strikingly shown by the experience of the University of the South, at Sewanee, Tenn. In 1900 the university undertook to manage its 7,000 acres of forest in accordance with recommendations made by the Forest Service. Immediate financial returns were desired, while

expenditures for improvement were not permitted. In 1899 the university had considered an offer of \$3,000 for the merchantable timber, and regarded it favorably. At the time the working plan was made fires were injuring the forest by burning away the humus and damaging the timber. The plan recommended took into consideration the probable rise in local stumpage values, and embraced a series of fellings instead of an immediate sale of the whole merchantable stand. Since the plan went into effect the sum of \$18,101.76 above all expenses has been received from the sale of timber. Meantime, fire has been controlled, and excellent reproduction is the result, so that the perpetuation of the forest is assured.

A Connecticut water company furnished another example of forestry. In this case forestry was undertaken mainly because of its value as a means of increasing the purity of the water. But though forest growth was needed on the reservoir catchment basin primarily as a protective cover, it was seen that this protection forest might safely be made to produce also a yield of wood. Accordingly the existing forest was placed under a conservative plan of management. The stand is perpetuated and improved, and also produces an annual yield of cordwood, posts, and cross-ties. Open ground is being planted to a commercial forest, while around the reservoirs protective belts of conifers are being set out to protect the water from pollution and improve the scenic beauty of the property. Several other water companies are practicing forestry along substantially the same lines.

In point of variety and scope the work done on the Biltmore estate, in North Carolina, is remarkable. The forests, which cover 130,000 acres, are made self-sustaining by the production of various forms of material. Four million feet of lumber, 5,000 cords of tannic-acid wood and fuel, a thousand cords of tan bark, and several hundred cords of pulp wood are cut every year. At the same time the forest itself is steadily increasing in value. Workmen employed along the boundaries of the forest do duty as fire guards. Thus fire protection is secured at least throughout all the accessible parts of the tract. In connection with all lumbering operations permanent logging roads are built. These minimize the present cost of transportation, and will greatly reduce the cost of marketing future crops. Thus the extension of the roads is steadily adding to the investment value of the forest. Moreover, they serve also as a network of fire lines. Forest planting is practiced where fire will not threaten its success. The experimental work in silviculture which is done at Biltmore is certain to make important additions to the science and practice of forestry.

Since extensive forest planting is to be expected only when the conditions surrounding forestry are far more stable and advantageous than they are at present in most

parts of the country, it is not surprising that it has as yet scarcely been attempted by private owners. What forest planting has been done on private lands is mainly the result of artificial encouragement, by the Federal timber-culture laws, now repealed, or by bounties or tax exemptions offered by the states. The bounty and exemption laws are, as a rule, unsatisfactory in their results, and the forest area of the country has not been much extended by this means. The total area of planted forest land does not exceed 965,000 acres. Yet the total area of land which would yield its greatest returns from planted forest is more than 56,000,000 acres.

In New England forest planting has been particularly successful, and is now being done on an increasing scale. Not including old plantations that have been cut, approximately 25,000 acres have been planted, and it is estimated that 5,000,000 board feet of white pine and 34,000 feet of hardwoods could be harvested to-day from plantations in New England. From the trees that were planted in 1908 about 60,000,000 feet can be obtained when the plantations become merchantable.

Realizing the advantage of an assured future timber supply, several railroads are adding to their forest holdings and managing their forest properties for the production of a sustained yield of cross-ties for their own roads. The success and economy of preservative treatment now make it possible to use for cross-ties woods that are cheaper and more abundant than the woods of longer life. By their recent purchases of tracts of loblolly pine the railroads are showing their appreciation of this fact. The practice of forestry by the railroads is therefore especially significant, in that it includes, in addition to conservative management, the commercial utilization of timbers of lower grade. In a number of cases planting is done, also with a view to tie production, though such planting is usually a subordinate part of the forest policy.

As widely scattered illustrations of what private forestry may do and is beginning to do, these concrete examples are noteworthy. But as progress toward the general practice of forestry by private owners, their total amount is altogether insignificant.

icles are now made with plain, flat surfaces, which is found to be true also in pretty nearly all kinds of furniture manufacture. The finish, too, is all paint, there being less trend toward using woods in their natural colors.

weeks, or until the moisture in the wood is all out.

The woods used for the bodies of light vehicles are poplar and cottonwood. For

## Utilization of Hardwoods

ARTICLE XXXV

### LIGHT VEHICLES

In considering the range of utility of hardwoods in the manufacture of light vehicles it is well to understand the development of light vehicles in the carriage trade. What are commonly spoken of as carriages are today of small moment to the manufacturer. The automobile has supplanted this heavier type of vehicle almost wholly, and that within the past five years. This reduces the manufacture practically to the making of light vehicles, such as buggies, light phaetons, road wagons, light delivery wagons, both open and closed, stan-  
hopes and surries. Light vehicles have in-

creased in recent years in production and quality. The elimination to a large extent of heavy carriages has made, to the class unable to buy any grade of automobile, the light vehicle more of a necessity; hence its greater production. And because of this fact the manufacturer has effected greater economies.

There have been no changes in the past twenty-five years in the hardwoods used in the manufacture of light vehicles. The styles have, however, undergone a decided change, quite turned around, as it were. From scrollwork of many types light ve-

TYPE OF BODY USED ON LIGHT VEHICLES.

the axes factory, though maple and ash are used in small quantities. In the hubs elm has exclusive use. The poles are always made of hickory, either shellbark or the black variety. This is also true of the reaches, rims, shafts, single trees, double-trees, spring lars, cross bars and neck yokes. Felloes, being the other remaining part, are confined entirely to wagons.

Wagon manufacturers generally buy their wheels already built, but they are constructed according to specifications. The hubs are furnished by the mill men in blocks cut to specified length and dried in blocks. They are turned at the factory as they are used, before going through the kilns. Rim strips reach the factory in the rough, cut to certain desired sizes. They are shipped green and bent and finished before being used. The spokes are always finished by the spoke manufacturer, being turned and finished, except the tenon, after they are thoroughly seasoned.

The purchase of parts from separate factories has been rather a big problem with the carriage manufacturer. In many cases

manufacturers have been known to buy parts and leave them lying about in exposed places until they were ready for use, before attempting the necessary finishing and seasoning. This has had a bad effect, for the wood, particularly if green, will undergo slight changes. But the manufacturer has learned that it is necessary on receipt of the parts immediately to put them through whatever finishing or seasoning is required and then to assemble them ready for immediate use. As soon as this is done the parts are sent to their respective departments without delay. And this is one of the prime factors entering the "turning" of the stock carried, since the manufacturer figures on having his stock turned once in one, two or three years.

For the bottoms of light delivery wagons and buggies yellow pine strips, white ash for sides on open delivery wagons and white ash and maple in building up seats on both are used.

Gum is now being experimented with in

the seats of light vehicles with remarkable results. Lumber buyers are free in their expressions that gum soon will be used for wagon and buggy sides.

Builders of light vehicles are large users of dimension stock, and the best that can be had in the market is always required by them. Carriage manufacturers buy ahead in order to avoid financial depressions rather than to gain by fluctuation of prices. It is often the case that stock ordered is not delivered for several months, and it becomes necessary to anticipate this, as much as any other fact, in keeping sufficient stock on hand.

The illustrations shown here were secured from the Studebaker Carriage Company of South Bend, Ind., as well as much of the data. This concern carries approximately 57,000,000 feet of hardwood on hand all the time, turning it once in three years. Its plant covers seventy five acres of ground, with eighty sheds 250 by 400 feet each for housing the timber.

# Machinery for Broom Handle Manufacture

By H. B. ALEXANDER

Success in the broom handle business, like every other phase of the woodworking industry, depends to a large extent upon the type of machinery used. Years ago manufacturers were forced to carry on this line of work in a rather primitive way. Gauge lathes were used, and these were not equipped with self-centering devices or provided with any means of carrying the cutter-head back without its touching the pattern, as with the modern gauge lathe. The stock was ripped up to proper sizes and lengths, and then the operator would take the square and center the front end on the point of the head stock, and then center the other end on the tail block. Then with a hand wheel he would tighten up the tail blocks so as to drive the blank, and by tripping the screw box on the traveling cutter-head would turn a handle. As the cutter-head passed over the end of the handle, the operator had to release it and get it out of the way in order to allow the cutter-head to go back. This was a very slow way to turn out handles, but doubtless some of the best broom handles ever made were produced in this manner. The best feature about handles made in this way was that they were turned straight, and a good operator could get a straight handle and a good one out of a crooked square. The most unsatisfactory feature about modern lathes is that if the blank is crooked the handle also is crooked. Nor can it be said that this old method of producing handles was such a slow process, for good men on piece work, in a day of ten hours, could turn out as high as eighteen hundred handles, which is really quite as much as some operators can show as a result of a day's work with an up-to-date lathe.

One of the most important machines used in the handle factory is the cut-off saw. There are a number of different styles of this saw, but the one that is in most common use is the overhead swing. Doubtless this saw has any number of good features, but it also has some unsatisfactory ones, as it is simply impossible to cut a true line with it when the stock is of any considerable width. The trouble seems to lie in the fact that the saw is on one end of the arbor and the handle holds on the other. In cutting off a wide board the saw resists and holds back, and as it is pulled to make the cut it dodges and the frame twists enough to permit a variation of sometimes half an inch on a twenty-inch cut.

In a certain factory there are two swing saws and both of them have as a counter-shaft a shaft that is fastened to the supports and all three of the pulleys are loose ones. Now there is an objection to this arrangement right here. Instead of making the pulley that drives to the arbor and the one that drives this one separate, to save expense an extension has been made on the small drive on one side and a rim added and used to

drive the saw arbor. The result is that there is an uneven pull on the stationary counter-shaft and it has been necessary to replace this shaft three times in the last year, as it wears rapidly and almost breaks in two.

The so-called railroad saw is perhaps the most satisfactory one for handle men, for the reason that it works from below and there is a more even pull on it. It cuts stock almost perfectly square. Now, I am well aware that a good many of the would-be handle men do not think that it is necessary to be so particular, but after a season's try out they will probably have quit the business.

Another important tool in handle production is the rip-saw. This may be selected from any number of styles, according to what suits the fancy, purse and business ability of the operator. Here to quite an extent lies the success or failure of a handle factory, as it is a very easy matter for operators to spoil enough lumber in an hour or so to offset an entire day's profit. Good rip-saw men are scarce, and when one is obtained he should be kept, as it will often be found next to impossible to replace him in a short period of time.

I have used the plain single saw, hand rips, the same with power feed, and also gang saws with power feed and out feed, and I believe that the best machine that can be bought is none too good. There is much to be learned about these high-class gang self-feed saws, but a handle man must learn all if he expects any degree of success. As a rule handle men start out by putting on five or six saws and try to rip dry hard maple at high feed. It does not take long to find out that this will not do at all, and when they have gained some experience along this line they will run two saws slightly speedier than the lowest feed. They will also find that their saws have to be fitted somewhat different from the way they were accustomed to fit them on their old hand feed saw or they will soon burr up and get full of cracks. When they have learned all this and have found a good man for each end of the work and have them broken in to the proper way of doing things they will be highly satisfied with their saw and wonder how in the world they ever made handles without it.

The off-bearer on this kind of a saw must be a very efficient man and have a good eye. To him comes the important duty of seeing that there is no stock ripped up that will not make handles, and yet he must not throw out any piece that will produce a single good blank. He must notify his partner at once if the guide slips so that the squares are off-size, and he must pile the blocks on his truck in orderly fashion. Such a man is a valuable employe in a handle factory, one hard to find and when obtained and trained into the right way of doing things should be encouraged to become a permanent fixture at the plant.

When the cat's away the mice will play—this is as true of men as it is of mice, at least of a great many men. To their disgrace it may usually be found in a shop that there are a number of workmen who make it a point to put in as much time dawdling over their work as possible whenever the foreman is away. The keen, watchful foreman can usually tell not only that work has been neglected but also who the idlers are. The day's work usually shows a sufficient falling off from the average to make watchfulness in this respect necessary and the idlers will undoubtedly find themselves without jobs and without recommendations when they are least expecting it.

\* \* \*

Stockholders as employees—this is a question of them? I have heard any number of factory operators say that this plan is a good one, but is it? The prevalent idea is, of course, that if an employe is a stockholder he will work to the interest of the firm more assiduously, but what I have seen of this does not entirely bear out this statement. If the employe happens to be a foreman this may be the case, but I have found that in a number of instances the foreman has bought stock merely, as it were, to cinch his job, and then thinks he can't lose it, and so works just when and how he pleases. In other cases the men work well enough but seem to think that as stockholders the foremen have no control over them, and they also try to boss the rest of the men, and any factory owner will realize what that means. The average employe expects to be directed by a foreman, but he will not stand for anybody else assuming this right, and it is said that several strikes have been caused by this thing alone. Stockholding employes also seem to have an idea that they should receive more pay than the other men doing the same kind of work. A shop where all the men are stockholders might work well, but the success of the one in which only a few own stock would be doubtful and it would seem wisest that none of the workmen be stockholders with the exception possibly of the foreman.

The handle business just now is prosperous. The usual crop of greenhorns quit business last fall and gave the regulars a chance. However, from reports from various directions there are quite a few factories starting up in this line, so that undoubtedly the failures next year will be quite as heavy as this. Some of these new factories are sending out reports that they are going to make from five to six thousand handles a day on one lathe! They might as well say that they don't know a thing about the handle business and be done with it. There is not a lathe made that will turn out anything like this number of handles in a day. These concerns may make sticks of some kind but not handles.

A very valuable machine in the broom bundle business is the tumbler for drying and polishing the bundles after they are turned to shape. This machine is made of steel and accomplishes the drying and polishing of bundles in much less time than by the old method, combining the two processes of drying and polishing. The Cadillac Machine Company, manufacturer of a complete line of broom bundle machinery, makes a particularly valuable type of steel tumbler.

### Meeting Philadelphia Exchange

The regular monthly meeting of the Lumbermen's Exchange was held February 3. President Herbert Robinson occupied the chair, but as he was obliged to leave before the close of the session to attend the annual meeting of the New York Lumber Trade Association, Vice-President Franklin A. Smith presided over the remainder of the meeting. R. B. Rainor & Co. were elected to membership in the exchange.

S. B. Vrooman, chairman of the Forestry Committee, who with Frederick S. Underhill attended the twenty-ninth annual meeting of the American Forestry Association, held at Washington, January 18-19, presented the following report:

At a meeting of the advisory board it was decided to employ speakers to deliver illustrated lectures in different localities on forestry and arouse some enthusiasm on the subject, at least plan a campaign of education. At the banquet speeches were made by the president, by Mr. Guild, former chief forester, and Mr. Pinchot, who received a splendid ovation and who assured the members that the new chief would carry out the policy that he himself had outlined. Maxwell also made a whirlwind speech, pointing out the evils of deforestation and the pressing need of immediate action in acquiring the Appalachian and White Mountain reserves and any other desirable tracts of timber lands that might be secured. At the meeting on Wednesday there was considerable discussion and an address was made by the chairman of the Women's Clubs of the United States, who assured the convention that something was bound to happen now, as from now on the association would have the help of 800,000 women, who were all deeply interested in the preservation of our forests, and who would bring the needs of the cause before "the man behind the roast," and either induce him to do something or roast him. A list of the representatives who voted for or against the Weeks bill on March 1, 1909, was circulated and a motion was passed unanimously that each Lumbermen's Exchange take the matter up in the different states and find out, if possible, why those who voted against the bill did so and if possible get them to vote for the bill when it comes up in the present Congress.

Your committee would recommend that the representatives of our own state be requested to vote for the bill. It feels encouraged and hopeful of something being eventually accomplished.

S. B. VROOMAN, Chairman

The report from the Car Demurrage Bureau of Philadelphia stated that during the month of January there were received in the vicinity of Philadelphia 1,730 cars of lumber, amounting to 25,800,000 feet.

### New Red Book Out

The Red Book, published by the Lumbermen's Credit Association, has just made its semi-annual appearance. It is a careful revision of previous editions and shows the usual increase in size commensurate with the growth of the trade it has faithfully served for more than a quarter of a century. William Clancy, president of the institution, is uncompromising in his devotion to the business he founded and therefore it receives the benefit of his mature judgment in all matters appertaining to the agency business. The agency is free from entanglements with outside influences or affiliations with business men in the lumber trade, so that every element of favoritism is eliminated and reports and ratings are bound to be unbiased, which ac-

counts for the Red Book service being generally recognized as the authority for lumber credit information. The Red Book has a larger circulation than other publications designed for the same trade and more care is exercised and more money is spent judiciously in securing accurate information; therefore, those who place quality above the idea of saving a few dollars on the initial cost of a credit service should subscribe for the Red Book.

### Meeting Memphis Lumbermen's Club

The semi-monthly meeting of the Lumbermen's Club of Memphis was held at the Hotel Gayoso, February 5, at 1 o'clock, and the usual luncheon was served. One of the features of the gathering was the discussion of the co-operation of the club with the committee of forty appointed by the Business Men's Club from among the business organizations of Memphis in bringing new industries to this city and in otherwise increasing the prestige of Memphis in the matter of population and commercial and industrial importance. There were several members of this committee present who addressed the club, including C. P. J. Mooney, managing editor of the Memphis Commercial Appeal; President Tutwiler of the Memphis Street Railway Company; President F. W. Faxon of the Business Men's Club, and F. N. Fisher, superintendent of the Louisville & Nashville Railroad, with headquarters at Memphis.

At the last meeting of the club, C. D. Hendrickson introduced resolutions providing for the appointment of a committee of five to solicit funds to be used in bringing new woodworking enterprises to Memphis. His resolutions were referred to the publicity committee, who, after a conference with the committee of forty from the Business Men's Club, recommended that the Lumbermen's Club join with the committee of forty in efforts to secure new woodworking enterprises instead of launching an individual movement of its own to the same end. This recommendation was accepted by the Lumbermen's Club and the latter will have representation on the executive committee of ten as well as on the larger committee of forty. The club does not, as an organization, agree to pay any specified amount, but the lumber firms in Memphis will be asked to make such contributions as they may be able in connection with this matter.

W. R. Barksdale, chairman of the entertainment committee, recommended February 21 as the date for the annual banquet of the club.

J. W. Thompson, one of the trustees of the National Wholesale Lumber Dealers' Association, appealed to the lumbermen present to attend the annual convention of that body which will be held at Hotel Sinton, Cincinnati, March 2 and 3. He furthermore moved that a committee of three be appointed to represent the Lumbermen's Club at that gathering. This committee will be appointed by President S. C. Major. Messrs. Thompson and Starke will spend some time during the coming week in soliciting new members for the association.

Three new associate members were elected: W. E. Hoshall of Hoshall & McDonald, New Orleans; John McDonald of McDonald Brothers, Helena, Ark.; and W. T. Updegraff of the Helena Hoop Company, Helena, Ark. Mr. Hoshall was the first secretary of the Lumbermen's Club of Memphis and it was in his office that the club was launched.

Resolutions were offered by the resolutions committee in connection with the recent death of I. M. Darnell, president of the Darnell-Taenzler Lumber Company. These were formally adopted by the club, copies were ordered spread on the minutes and also sent to the family of the deceased.

### New Wholesale Concern for New York

The DeWitt Lumber Company, a recent corporation under New York laws, has opened offices at 1 Madison avenue. The officers are George DeWitt, president and general manager; John H. Hillman, secretary and treasurer. The company will wholesale a general line of lumber, making hardwoods a specialty.

George DeWitt is a popular young lumberman and one born to the trade; his affable smile and pleasant personality renders him always a pleasing party to deal with.

He started in the lumber business about twenty years ago with the Laurel Hill Lumber Company at Somerset, Pa., commencing as lumber handler in its yards. After a short period he was promoted to the carrying of slabs, and later filled every position connected with a portable sawmill. After remaining some time with this company he spent a year in the woods for the Otter Creek Lumber Company, after which he accepted a position with the Mackie Lumber Company of Piedmont, W. Va., with which he remained about seven years as lumber inspector, afterwards going with J. H. Becker & Co. of Marietta, which firm was finally incorporated under the name of Barr & Mills, Zanesville, O. He went East about five years ago, when Barr & Mills opened an office in New York City, making his headquarters in Philadelphia. A little more than two years ago he took charge of the hardwood department for Horace G. Hazard & Co. of Philadelphia, which concern he succeeds in the hardwood end of the business.

### Destructive Baltimore Fire

A most destructive fire on February 1 swept away the yard and stock of the Eisenhauer-MacLea Company, on Central avenue, between Eastern and Canton avenues, Baltimore, Md., and destroyed other property in the neighborhood to a value of more than \$300,000. The stock of the Eisenhauer-MacLea Company, the largest and best assorted in the city, was composed of fine grades of mahogany, walnut, oak, ash, chestnut, poplar and other woods, and was especially heavy at this time, as the company was preparing for a brisk demand. Daniel MacLea, a member of the company, estimates that there was not less than 3,000,000 feet of all kinds of woods in the sheds and adjoining yard. Most of this stock was in fine condition, being under cover, and was perfectly dry, so that when it began to burn there was no checking the flames.

For hours the fire raged and the piles of charred lumber smoldered for several days. The cause of the blaze is unknown. The Eisenhauer-MacLea Company was well insured. It has secured a temporary office at Eastern and Central avenues, in what was formerly a saloon. It will be difficult, however, to assemble such a fine stock of hardwoods as that destroyed, which included mahogany and other choice woods that had been seasoning for years and required much time and patience to assemble.

### Coe Manufacturing Company Reorganized

The Coe Manufacturing Company, Painesville, O., has emerged from its receivership with a complete reorganization, all creditors of the concern having been satisfied.

The new directorate consists of the following men:

R. C. Moody, president Cleveland Machine & Manufacturing Company, Cleveland, O.; A. W. Ellenberger, president Worden Tool Company, Cleveland, O.; Ira B. Bassett, president Bassett-Presley Company, Cleveland, O.; L. J. Cameron, cashier Central National Bank, Cleveland, O.; F. M. Murray, president Painesville National Bank, Painesville, O.; H. A. Hammer, attorney, Painesville, O.

The officers are R. C. Moody, president; F. H. Murray, vice-president; Geo. P. Steele, treas-

urer: L. F. Cameron, secretary; H. P. Coe, for many years connected with this business, will be general sales agent. With these gentlemen at the helm, the future success of the reorganized company is guaranteed.

In August of last year the concern was forced into a receivership, R. C. Moody and L. J. Cameron being appointed receivers. Mr. Moody and Painesville residents, who were interested as stockholders, have labored continuously since that time for a successful readjustment of the company's affairs.

As the result of an appraisal of the property and assets made by the American Appraisal Company, Milwaukee, Wis., the company has been re-financed in a satisfactory manner and future success is assured.

Successful operation of the business since the failure of the old company has convinced receivers and creditors that with a perfected reorganization the company could and would meet all its obligations and prove a paying investment to those who financed it.

The books now show a large amount of present business, while the prospect for the future is promising. Large orders from the Philippine Islands, Russia and Japan are in sight, while the domestic market has never looked brighter.

### Hamilton Lumber Company

Col. F. M. Hamilton has sold out his interest in the Indiana Lumber Company of Nashville, Tenn., after having served that company as president since its incorporation more than twenty-five years ago. He will organize with his son, J. A. Hamilton, the Hamilton Lumber Company, of which the two will be sole proprietors.

Colonel Hamilton is a native of Indiana and started in the lumber business in 1869. He went South in 1877 and a year later took a responsible position with the Indiana Lumber Company, which had just been established at Nashville. This concern was run as a partnership until 1883, and was then incorporated with a paid-up capital stock of \$100,000, Colonel Hamilton being elected president.

Colonel Hamilton is an experienced lumberman, with a wide acquaintance in the hardwood trade. He has several times held office in the local association and has been closely identified with various other hardwood organizations. His thirty years' residence in Nashville has placed him in a high position socially as well as in the business world.

His son, J. A. Hamilton, upon graduating from high school, engaged with the Indiana Lumber Company and has long since made a place for himself in the ranks of competent lumbermen. Most of the active work of the new concern will fall to him.

The offices of the Indiana Lumber Company will serve as headquarters for the new concern.

### Wisconsin Lumber Company to Have Large New Mill

The Wisconsin Lumber Company of Chicago announces having awarded contracts for the erection of a large double bandmill at Huttig, Ark. It is expected to have the plant in operation some time in August. Besides the regular equipment, auxiliary machinery for the manufacture of hubs, belt rims and wagon stock will be installed.

The plant will be located conveniently near the 200,000,000 feet of white oak owned by the Wisconsin Lumber Company, which expects to be able to operate on that site for twenty years.

The Filer & Stowell Company, Milwaukee, Wis., will furnish the sawmill machinery; Casey-Hedges Company, Chattanooga, Tenn., the boilers, and the engines will come from the Porter-Allen people. T. R. Helms has the contract for erection.

### A Handsome Badge

The badges furnished at the recent convention of the Hardwood Manufacturers' Association at Cincinnati were donated by Joshua Oldham & Sons, Brooklyn, N. Y., the well-known band, circular and gang saw manufacturers. These badges are of an attractive appearance that would warrant their being used permanently as watch-fobs. The pin is attached to the back of an eagle with outstretched wings, holding in its talons a shield on which is the registration number and to which are attached two streamers bearing the inscriptions "Cincinnati" and "Feb. 1-2-3, 1910." A black leather strap with a brass buckle is suspended from the back of the shield and holds the insignia. The body of the

ATTRACTIVE BADGE PRESENTED TO H. M. A. CONVENTION VISITORS BY JOSHUA OLDHAM & SONS.

medal is gilt and has in the center a raised outline map of the United States in white with a red border and bearing the inscription "Hardwood Manufacturers' Association of the United States." Behind the map is an embossed, conventional design of green trees. The back of the medal is plain and engraved with words of presentation from Joshua Oldham & Sons to the Hardwood Manufacturers' Association.

This design has been adopted as the official insignia of the Hardwood Manufacturers' Association.

### Doings in the Forest Service

Gifford Pinchot spoke before the National Arts Club of New York on February 9 and in his talk made a strong plea for the forest rangers of the service. He denounced in forceful terms the action of Solicitor McCabe, who, in the few days in which he served as acting forester, following Mr. Pinchot's resignation, did his best to make it appear unlawful for the government to provide

collegiate training for those rangers who, in the estimation of the chief forester, merit such advancement.

These actions of Mr. McCabe resulted in an order from the Comptroller of the Treasury to discontinue what has always been of direct public benefit.

Mr. Pinchot made his appeal in the following speech:

"Upon my dismissal, the solicitor of the Department of Agriculture, George P. McCabe, was made acting forester for three or four days. It appears that he learned of the rangers' schools at the four state universities of Montana, Washington, Utah and Colorado, and sent telegrams to the dispersing officers in the field to pay no expense connected with them. These telegrams were kept secret.

With equal concealment a letter was prepared and sent to the Comptroller asking for a speedy advanced decision as to the legality of the rangers' schools. This letter was clearly intended, and was so framed, to secure a decision against the school, and it was successful in doing so.

This letter is a misrepresentation, because it omits to state the central, essential, incontrovertible facts: First, that the Forest Service must have trained rangers; second, that it can get them only by training them after they enter the service. It follows that the training of the rangers by the service is necessary, clearly and undeniably, for the "administration, protection and improvement of the national forests." Being necessary for that purpose, it falls well within the terms of the agricultural appropriation bill, and is therefore lawful.

Consider now the situation under which this decision of the comptroller was obtained. The solicitor of the Department of Agriculture is the officer charged with promoting the welfare of the department on the legal side, yet he made no attempt to assist the service in this matter. On the contrary, he led the secret attack upon it.

The whole proceeding is not seen in its true light until we realize its effect on nearly two hundred of the best young men in the Forest Service, who were officially ordered to those schools for instruction. These rangers are poor men, working for from \$900 to \$1,300 a year, and they need their pay. Yet they will lose their pay for the time they attended these schools and the money already advanced out of their pockets for expenses.

It is a cruel and needless loss, but the fine loyalty of these rangers to their work is shown by the fact that half of them have stayed on at the rangers' schools at their own expense in order to better learn their public duties. I do not believe the people can afford to let that devotion stand unrewarded.

Of course Solicitor McCabe states that this accusation is "absolutely untrue" and that he did not initiate this action without consulting any one in the Forest Service.

Secretary Wilson has issued an order which places the law force for the Forest Service under the supervision of the Agricultural Department, represented by Solicitor McCabe. It is believed that this action is traceable to the difficulty in which former law officer Shaw of the Forest Service became involved in connection with the Glavis charges. From now on the law officers of the service, instead of being practically independent as heretofore, will be under the orders of the solicitor of the Secretary of Agriculture.

L. F. Kneipp has been appointed assistant forester in charge of the department of grazing, succeeding Albert F. Potter, who has gone to Washington to take the place of Overton W. Price, recent assistant to Gifford Pinchot. The successor to Law Officer Shaw will be P. P. Wells.

The plans formulated by Gifford Pinchot, reclassifying the forest land, stand approved by President Taft, and more than 4,000,000 acres of public land formerly included in the forest domain have been made available for homestead settlement.

### A New Plant for the Consolidated Fuel & Lumber Company

The Consolidated Fuel & Lumber Company of Negaunee, Mich., will erect a new hardwood flooring mill in that city on the old Pioneer furnace site. The mill will be up-to-date in every detail and will have a daily capacity of 50,000 feet.

Work is already begun on the new structure, and the management expects to start manufacturing April 15. The bulk of the machinery has

been ordered, but none of it will be delivered inside of thirty days.

The company has secured the privilege from the Cleveland Cliffs Iron Company of utilizing the old furnace engine house. This is a brick structure 101 feet in length by 24 feet in width, with a wing on the north side 18 by 24 feet. The Consolidated people will construct a dry kiln with dimensions of 135 by 24 feet, connecting with the wing on the east side and extending some feet beyond the east end of the main building. A boiler house will be erected on the west side.

Tracks will be extended to the east end of the dry kiln building and all the lumber will be received at that entrance. The kiln will have a capacity of 50,000 feet. Edger, matcher, band resaw, end matcher, cut off and twin saws will all be in one room, from which the flooring will pass directly to the warehouse.

The management has not yet decided whether to operate with steam or electric power, but all of the drying will be done by steam coils. It is claimed that green lumber will be thoroughly dried in four days.

Major Winter, who is a prominent stockholder in the company, can take most of the credit for securing the enterprise for Negaunee. It will be of considerable commercial importance to that municipality, providing steady employment for from twenty to forty men in addition to the Consolidated company's present force.

Several large tracts of maple stumpage have been purchased by the company in the vicinity of its mill and a supply of excellent stock is insured for several years to come. Logging will all be done by contract. The principal product of the new concern will be maple flooring.

The new plant will cost in the neighborhood of \$40,000, the bulk of which will be raised by the sale of 30,000 additional shares of stock voted at the recent annual meeting held in Ishpeming. There has been no difficulty in disposing of this issue as practically all the stockholders have already asked for their allotment, and many have expressed the desire to purchase any shares that are uncalled for. The Consolidated company is regular in its payments and Manager R. P. Bronson with his assistants handle its affairs in a capable and efficient manner.

FREDERICK JAMES JEFFRIS

#### Marriage of Chicago Lumberman

Frederick J. Jeffris, the genial secretary and treasurer of the Chicago Car Lumber Company, with offices in the Pullman Building, Chicago, was married on January 26 to Miss Gladys Osborne, daughter of Mr. and Mrs. J. Harrison Os-

borne, of the Patterington apartments, Graceland avenue, Chicago. The ceremony was performed at 4:30 in Francis I room of the Congress hotel. The couple sailed on February 2 for an extended European tour and carried with them the hearty good wishes of their many friends.

#### Obituary

JOHN W. POTTER.

John W. Potter of the lumber firm of Potter & Gardiner, Providence, R. I., died of typhoid fever after an illness of two weeks on Tuesday, January 25, at St. Petersburg, Fla., where he had been spending the winter with his wife. Mrs. Potter was with her husband at his death and accompanied the body to the Potter home, 451 Broadway, Providence, where the funeral services were held.

Mr. Potter was one of eight children of the seventh generation of his family in this country. Among his ancestors are numbered many names directly connected with events of importance in the colonial history of New England, and his father, Col. Isaac Potter, who died in 1902, was famous in Civil War times.

The late John W. Potter after finishing his course at Worcester Academy returned to the home farm at Scituate, but soon went to Providence, where he engaged successfully in the real estate business for several years. In 1880 the original partnership of Potter & Gardiner was formed, James S. Gardiner being the first partner. At his death Mr. Gardiner's son, Charles C. Gardiner, became the junior member of the firm, this arrangement continuing up to the present time.

Besides his connection with the Potter & Gardiner concern, Mr. Potter was chief executive of the L. H. Gage Lumber Company of Providence and Memphis and was connected with the Crittenden Lumber Company, operating in Arkansas.

Mr. Potter was born December 31, 1828, at Scituate, and since young manhood had occupied a prominent position in the business and municipal affairs of that city. His standing as a business man had always been of the highest and his reputation one of strict honesty and integrity. He was twice married, and is survived by his second wife, Adelaide Stockbridge Potter, and several nieces.

I. M. DARNELL.

I. M. Darnell, president of the Darnell-Taenzer Lumber Company, Memphis, Tenn., succumbed to what was probably a stroke of paralysis at St. Petersburg, Fla., Monday evening, January 24. Mr. Darnell had had several such attacks and while this is not definitely acknowledged to have caused his death, such was probably the case.

Mr. Darnell began his active participation in the lumber business in 1856, when he erected what is said to have been the first circular saw-mill in Owen county, Indiana. This mill was successfully operated up to the time of the Civil War, when its owner enlisted in the Union forces, serving until he was wounded, in 1864. The old mill was removed in 1866 to Worthington, in the same state, and here the deceased remained for several years.

The first Tennessee operations were begun in 1882, when a more up-to-date mill was constructed in Dyer County, R. J. Darnell joining his father in the business. They continued on that site for a year and removed to Lauderdale County. H. Y. and W. S. Darnell, two other sons, were made members of the firm two years later, and in 1887 the first Memphis hardwood yards of the concern were opened, although the Memphis mill was not constructed until eight years after. Following the withdrawal of the first son, R. J. Darnell, the firm united with the E. E. Taenzer corporation, forming the Darnell-

Taenzer Lumber Company, under which style it has continued to the present. The elder member of the Darnell family headed the new business up to the time of his death, but of late has not been actively associated in its affairs.

Mr. Darnell's demise will be the cause of sin-

THE LATE ISAAC M. DARNELL

cere sorrow on the part of his many business and social friends.

He is survived by his widow, Mrs. Emma Darnell; a sister, Mrs. Jeanette A. Branham, of Spencer, Ind., and the following children: H. Y. Darnell, Dyersburg; R. J. Darnell, W. S. Darnell, Memphis; Jennie Darnell, St. Petersburg, Fla., and Mrs. Edward Hazeltine, Terre Haute, Ind.

The remains were taken to Terre Haute for interment, all the members of the family being present at the services.

#### February Meeting Cincinnati Lumbermen's Club

The February meeting of the Lumbermen's Club of Cincinnati was held at the Gibson House Feb. 8, with the usual dinner. In line with the announcements, the meeting was a lively and interesting affair. During the dinner the guests were entertained by the famous Smoketown Sereaders, the Pork Chops Band.

The menu disposed of, and while coffee and cigars were being passed, J. H. Baird of the Southern Lumberman, guest of the evening, arose and apologized to President Cliff Walker for usurping his prerogative in calling the meeting to order, but said that in so doing he was carrying out the wishes of Mr. Walker's hosts of friends. He said that it had often been observed that, in calling the meeting to order, Mr. Walker had had to fish around in his pockets and bring up a bone handle, with a collection of blades of various sizes and shapes on both sides, and a pruning hook attachment on the end, with which he proceeded to rap the chinaware, occasionally breaking it. Then, on behalf of his many friends among the delegates to the late convention, and in appreciation of his work in getting up the greatest entertainment ever given a lumber convention, Mr. Baird presented him with a handsome ebony and ivory gavel as a slight token of the appreciation in which President Walker is held by those who visited the city and the members of the club.

President Walker thanked Mr. Baird and the members in a few graceful words and immediately put the gavel into use by rapping for order and announcing that if there were no objections the minutes would be dispensed with.

The secretary read a telegram from H. H. Gibson, advising the members that a package of 100 copies of the last edition of the DAILY HARDWOOD RECORD had been sent to the Business Men's Club for distribution.

The chair announced that a speedy adjustment had been made of the first case presented to the new arbitration committee, to the satisfaction of the contending parties.

The secretary presented the resignations of the United Building Material Company and the Cincinnati Hardwood Lumber Company, both of which were accepted.

The application of the New River Lumber Company for membership was reported upon favorably by the membership committee and the executive board. The chair ordered the ballot spread and the New River Lumber Company was unanimously elected to membership.

The club then took up a discussion of advertising Cincinnati as a hardwood market. This matter was gone into at length, and it was finally decided to make the question of advertising the special order of business at the next meeting.

W. A. Bennett then spoke in regard to entertaining the convention of the National Wholesale Lumber Dealers' Association, which will be held in Cincinnati March 2 and 3. He stated that the association will have a banquet for the attendants the first evening, and that he thought the Cincinnati lumbermen should furnish some sort of entertainment for the second evening. He moved that a committee of five be appointed to look after the matter, and stated that he wished Joseph Bolser might be one member, as he had already been selected by the executive board to arrange the details of the banquet at the Sinton. Mr. Bennett suggested that the entire affair be placed in the hands of the committee, with full power, and that Mr. Bolser be made chairman.

The president then appointed the following committee to look after the entertainment for the National Wholesale Lumber Dealers' Association: Fred Mowbray, W. E. Delaney, Joseph Bolser, Chester F. Korn and B. F. Dulweber.

Thomas C. Powell, vice-president of the Cincinnati, New Orleans & Texas Pacific Railway then addressed the club on railroad rates and other interesting matters. After some discussion on this subject the meeting adjourned.

There were present: A. Schmidt, W. T. Johnson, R. L. Gilbert, G. M. Morgan, E. Stemmelin, C. Groves, J. H. Baird, J. H. Whaley, J. L. Strickland, F. H. Duling, W. A. Bennett, S. E. Giffen, R. C. Hook, G. W. Hand, H. R. Welling, J. Van Orsdel, J. E. Dulweber, Ferd Brenner, C. J. Allen, C. F. Shields, D. Hinckley, K. J. Williams, C. S. Walker, W. S. Sterrett, W. I. Rees.

FINE POPLAR LOGS BELONGING TO J. V. STIMSON

D. C. Gritman, J. Watt Graham, A. R. DeLeon, H. R. Browne, J. N. Powers, W. H. Flinn, F. E. Radina, E. J. Thoman, G. C. Ault, T. B. Stone, S. G. Boyd, S. W. Richey, A. E. Hart, Geo. Fredericks, T. C. Powell, M. R. Williams, N. L. Heatton, R. McCracken, J. A. Bolser, L. S. Murdock, C. F. Korn, F. E. Linz, J. D. Serena, M. R. Short, J. H. Wehry, W. E. DeLaney.

### Some Poplar in Kentucky

The RECORD is indebted to J. V. Stimson of Huntingburg, Ind., and Owensboro, Ky., for photographs from which the poplar pictures on this page were reproduced. Big poplars in the Owensboro, Ky., section are scarcer than they were in the days of old, but they have not all been cut out by any means.

The logs pictured were ten-foot logs measuring from forty-seven to fifty-two inches in diameter. They were all loaded on one car. The tree cut ninety-two lineal feet out of the trunk and a ten-foot log above the fork, making one hundred and two lineal feet of logs cut from the tree, which is one of the largest poplars that has been cut in the state of Kentucky for a long time.

Mr. Stimson advises that this is only a specimen of a good deal of high class poplar that he is getting out of the Kentucky country at the present time.

### Annual Meeting Pennsylvania Lumbermen's Mutual Fire Insurance Company

At the annual meeting of the stockholders of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, January 25, a forty per cent cash dividend was declared on all policies that expire or terminate from and including February 15, 1910, to February 15, 1911, so long as the condition of the company in its judgment warrants such payment. This is an increase of five per cent over the dividend that was declared last year. Insurance in force as at December 31, 1909, amounted to \$12,408,056, as against \$10,533,860 December 31, 1908, an increase of \$1,874,195. Net cash assets as of December 31, 1909, were \$431,275, an increase of \$72,657, and surplus (fifty per cent basis) amounted to \$290,880, an increase of \$52,536.

Officers of company were elected as follows:

Edward F. Henson, president.

Richard Torpin, first vice-president.

W. Z. Sener, second vice-president.

Edwin H. Coane, treasurer.

Harry Humphreys, secretary.

Justin Peters, manager.

The directors include:

Edwin H. Coane, of Henry C. Patterson Company, Philadelphia; William O. Curtis, of Wm. Curtis' Sons Co., Boston, Mass.; R. R. Griswold, of A. Roberson & Son, Binghamton, N. Y.; Edward F. Henson, of Edward F. Henson & Co., Philadelphia; Harry Humphreys, of H. Humphreys & Co., Camden, N. J.; Louis A. Mansfield, New Haven, Conn.; T. Atkins Murphey, of Murphey Hardy Lumber Company, Newark, N. J.; Hugh McLean, of Hugh McLean Lumber Company, Buffalo, N. Y.; Albro J. Newton, of Albro J. Newton Company, Brooklyn, N. Y.; T. F. Ryman, of A. Ryman & Sons, Wilkes-Barre, Pa.; W. T. Sener, of G. Sener & Sons, Lancaster, Pa.; William Henry Smedley, of Smedley Bros. Company, Frankford, Pa.; Richard Torpin, of Richard Torpin & Co., Philadelphia.

The finance committee is composed of Edward F. Henson, chairman; Richard Torpin, Edwin H. Coane, W. Z. Sener, William Henry Smedley.

The auditors are: Emil Guenther, Philadelphia; Myron J. Kimball, Kimball & Prince Lum-

STIMSON'S BIG KENTUCKY POPLAR LOGS

at Greensboro, N. C.; Clayton W. Nichols, Philadelphia.

It is in fact, manager of the company, is at present on a business trip to Canada.

### Just Beginning to Wake Up

The smaller sawmill operators are just beginning to wake up to the fact that they are passing a good thing when they can install a gang edger.

There was when a gang edger was in vogue in a portable or small stationary mill; but thanks to the Gordon Hollow Blast Grate Company of Greenville, Mich., it is now possible to get a machine of this description proportionate in space occupied, power consumed and price asked to the mill in which it is to be used, be that mill large or small.

While the "Tower" line (as the company calls its edgers and trimmers) includes seventy-two sizes and styles of edgers, the Gordon Hollow Blast Grate Company makes a specialty of "pony" edgers for mills cutting not to exceed 20,000 feet in ten hours.

The "Tower" trimmers are made in ten sizes.

It is perhaps superfluous to mention that the manufacturer of the "Tower" edgers and trimmers is the same concern that has made famous the Gordon Hollow Blast Grate, which is recognized as one of the greatest steam producers and sawdust burners ever devised.

### Special Combined Skidder and Loader

The development of the steam skidder and loader during the past five years proves conclusively that, like the automobile, it has come to stay, and that the operator who keeps his eye on the cost sheet cannot afford to continue the use of old methods.

Any engine of sufficient power will skid a log and load it; how many a day, however, depends on many things outside of the engine itself.

The Russel Wheel & Foundry Company of Detroit, Mich., has recently brought out a combined skidding and loading machine, built for the Ingram Day Lumber Company, Lyman, Miss., that has a number of novel features, all of which have proved distinct improvements.

The machine, excepting the loading boom, is

constructed entirely of steel. It is what is known as the straddling type, that is, it straddles the track, resting on blocking, and is raised and lowered by means of power operated

hydraulic jacks of ample capacity, to insure rapid action.

The skidding is done by means of a Russel special heavy duty logging engine, cylinders 9 inches by 11 inches, 150 pounds working pressure. There are three skidding drums 30 inches

in diameter, 30-inch face, two of which only are in constant use, the third being only used in case of a broken line to avoid delay while splicing. This engine is also equipped with two drums for tightening the guy lines, and drum for a car spotting line.

ward approximately to an angle of 45 degrees from the center line of the machine.

The guy lines lead through the sheaves on the end of the hinged jib, through sheaves on the tower to two friction driven power operated drums on the skidding engine.

RUSSEL COMBINED SKIDDER AND LOADER. OPERATIONS INGRAM-DAY LUMBER COMPANY

in diameter, 30-inch face, two of which only are in constant use, the third being only used in case of a broken line to avoid delay while splicing. This engine is also equipped with two drums for tightening the guy lines, and drum for a car spotting line.

On the front end of the machine is a skeleton steel tower from which is suspended a vertically hinged jib, or triangle, from which the skidding sheaves are hung at the outer end, on each side of the jib just over the skidding sheaves is a guy line sheave.

The connection of the hinged jib at its upper end to the tower is not rigid, being provided with a spring arrangement similar to the draft rigging on a car.

It will be noted by this arrangement:

First—That there can be no interference between the skidding lines and the guy lines.

Second—That the guy lines cannot possibly interfere with the loading boom.

Third—That all strains due to skidding are absorbed by the guy lines.

Fourth—That all shocks are softened by the spring attachment of the jib.

Fifth—That an operator standing on the deck of the machine watching the hinged jib can bring it into an exactly central position with an equal strain on each guy line.

Sixth—Should one guy line stretch they can be equalized without any delay to the skidding or loading.

Seventh—Should a guy line break the jib will swing into the line of pull of the skidding line, relieving the tension on it and allowing the leverman time to release his friction before any strain is transmitted to the tower of the machine.

The loading boom is of the swinging type, having a hinged connection at its lower end to a turntable on which the loading engine is mounted and its outer end supported from the top of the tower.

The loading engine has two 8x10 cylinders for 150 pounds working pressure, and three drums, one operating the loading line and the other two for swinging the boom, by means of two wire ropes leading through sheaves supported on a steel frame projecting from the front of the tower.

The swinging of the boom is controlled by one lever and the action is quick and certain—the boom being locked in any position by placing the operating lever in a middle position. When the machine is being moved the loading boom is locked in a central position by a foot brake.

As the capacity of a skidding and loading machine must largely depend on the proportion of working hours it can be kept at work skidding

ANOTHER VIEW OF THE RUSSEL SKIDDER AND LOADER

constructed entirely of steel. It is what is known as the straddling type, that is, it straddles the track, resting on blocking, and is raised and lowered by means of power operated

The two guy lines are made fast one on each side of the machine, to any convenient stump or tree entirely without regard to their relation to each other, the lead of the lines may be back-

and loading, the designers of this machine had in mind the production of a machine with which a maximum amount of time would be consumed in work that would count for results and a minimum consumed by time lost in moving or in delays caused by the interference of any guy lines and between skidding lines and loading boom.

The accompanying illustrations clearly show how this has been accomplished, and advices from the purchaser of the machine express the highest satisfaction with its operation, design and construction.

#### A Generous Gift.

Joshua Oldham & Sons of Brooklyn, N. Y., recently donated to the museum of the Department of Forestry of The Pennsylvania State College an exhibit of the different kinds of saws manufactured by them.

Among these are many kinds of circular saws and two large band saws, one of which, over twenty-five feet in length, is stretched across one end of the museum. It was made especially for this position and shows in the one saw the different styles of teeth used on band saws and on one end is shown the make of the double band saw.

It forms a very interesting and instructive exhibit and will be used in connection with the course in lumbering.

#### Pennsylvania State College Forestry Students Studying Lumbering in the Woods

In accordance with the plan of developing the course in Forestry at the Pennsylvania State College along practical lines, the Senior class spent the month of January in the woods, studying logging methods and lumber mills. After studying the theoretical principles of getting a log to the mill and sawing it into lumber, the students visit lumber operation where they can see those principles carried out in a practical manner. They spend a month in the woods in lumber camps, where they watch the trees being felled and cut into logs and study the methods of swamping, skidding, loading and hauling the logs to the mill. The logs are then followed through the mill and the methods of sawing them into lumber and methods of handling, seasoning and storing the lumber are studied. Each student is furnished with an outline prepared for the purpose of investigating lumber operations, and presents a report descriptive of the plant studied and the methods of logging used.

Students are at Haleb, Mo., studying the operations of the Great Northern Paper Company in that region; at the Goodyear Lumber Company's operations at Austin, Potter county, Pa.; at Wheeler & Dusenbury's operations at Endeavor, Forest county, Pa.; at the operations of the Tomb Lumber Company and the Pocahontas Lumber Company in Pocahontas county, West Virginia; in the longleaf pine region with the Long-Bell Lumber Company at Longville, La., and in cypress work at Bowie, La.

The Forestry Department of the Pennsylvania State College is one of the largest forest schools in the country, having an enrollment of over 125 students.

#### F. A. Hall Joins Cameron Engineering Co.

F. A. Hall, who for the past twelve years has been manager of the chain block and hoist department of the Yale & Towne Manufacturing Company, whose general offices are at 9-13 Murray street, New York, and whose works are at Stamford, Conn., has resigned that position to accept election as vice-president and treasurer of the Cameron Engineering Company of Brooklyn.

Mr. Hall's successor will be R. T. Hodgkins, who for several years has been his chief assistant, and who is thoroughly qualified by experience and ability successfully to perform the duties of the position.

In his new connection Mr. Hall expects to make a specialty of trolleys and appliances for overhead handling of materials, and in connection therewith to make use of the Yale & Towne blocks and hoists, with the sale of which he has so long and prominently been identified.

#### Building Operations for January

Building operations for January, 1900, got up to expectations, as shown by all reports from some fifty cities throughout the United States and compiled by The American Contractor, Chicago. The aggregate gain over January, 1909, is a trifle over 5 per cent, and this may be ascribed to the severe weather which prevailed during the month. Thirty cities show a gain over January, 1909, from 4 to 480 per cent, and twenty-two show a loss from 9 to 89 per cent. The gains over 50 per cent are: Baltimore, 163; Dallas, 84; Des Moines, 125; Duluth, 160; Indianapolis, 55; Louisville, 104; Los Angeles, 173; Minneapolis, 59; Memphis, 486; Mobile, 118; Salt Lake City, 139. The particulars are shown in the following table:

City	1900	1909	Per Cent
Atlanta	8,046,577	8,501,779	28
Baltimore	976,500	1,170,500	161
Birmingham	169,848	220,000	22
Bridgport	87,785	141,720	59
Buffalo	418,000	501,000	24
Chicago	6,954,000	8,277,500	26
Cleveland	281,659	458,945	68
Chattanooga	57,045	51,095	11
Cheltenham	309,915	267,780	4
Columbus	67,265	120,338	44
Dallas	280,565	294,095	84
Denver	419,500	694,475	35

Wicks, Pa.	70,324	64,090	6
Total	87,968,514	84,197,161	7

#### Important Meeting Philadelphia Retailers

The eighteenth annual convention of the Philadelphia Retail Lumbermen's Association was held January 27 and 28, at the Walton hotel and proved a most interesting affair. The Turkish room of the hotel was appropriately decorated with boughs of long-leaf yellow pine, cones, etc., and tiny white pine trees growing in tubs, presented by the Pennsylvania Forestry Commission, and which were affectionately borne away by the members of the association, to be planted and cared for as requested. These trees were grown in the state nursery at South Mountain.

An interesting exhibit of lumber-destroying insects was obtained from the Department of Agriculture at Harrisburg, through the kindness of H. A. Surface, State Economic Zoologist. Some very able addresses were delivered at this meeting, the most notable of which were by

Leslie M. Shaw, ex-secretary of the Treasury; W. L. Sykes, a well known lumberman in this section of the country, and George E. Bartol, president of the Bourse. Gifford Pinchot was on the list but was unable to be present. Mr. Shaw in his address earnestly advocated that the United States exert itself to procure foreign markets for what is soon to become an overproduction of manufactures, and recommends the subsidized merchant marine to save the country. Everything but the marine is subsidized, he means, and this in his opinion is a blind neglect, for which the people are bound to suffer in the not far distant future. Mr. Bartol spoke also on expansion, and Mr. Sykes followed on forest conservation. The members of the Lumbermen's Exchange of Philadelphia were invited to the banquet on the last day of the convention, and not a few aired their opinions on the trade matters under discussion. The following resolutions were passed by the organization:

*Resolved*, That our association endorse the work of collecting and demonstrating timber-destroying insects under the direction of Prof. H. A. Surface, State Zoologist, and that a copy of this resolution be forwarded by our secretary to Prof. Surface.

*Resolved*, That this association endorse the action of the National Wholesale Lumber Dealers' Association, in further prosecuting the car stake and equipment bill before Congress at the present session, known as bill No. 27528, and be it further resolved that a copy of this resolution be immediately forwarded to E. F. Perry, secretary.

*Resolved*, That this association stands pledged with the President and National Forestry Service for the conservation of our forests, and that we recommend the establishment of a national laboratory for the testing and treating of timber. That a copy of this resolution be forwarded to Hon. Wm. H. Taft, President, and the National Forestry Association at Washington.

*Resolved*, That we endorse the work done by the Forestry Reservation Commission of Pennsylvania and heartily co-operate with them in the maintenance of fire wardens, road building, nurseries, hospitals and forestry schools on the state reservations. That a copy of this resolution be sent to Hon. Robert S. Conklyn, Forester, Harrisburg, Pa.

*Resolved*, That the thanks of the Pennsylvania Lumbermen's Association are hereby rendered to the proprietors of the Hotel Walton for the excellent accommodations afforded the association for their various meetings.

*Resolved*, That the thanks of the association are offered to Addison B. Burke, of the Atlantic Deeper Water Ways Association; to John Berkinblum of the Pennsylvania Forestry Association; to George E. Craig of the National Wholesale Lumber Dealers' Association; to Ben. C. Currie, Jr., of the Hoo Hoo Association, and to Edward F. Henson, of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, for their assistance in rendering this meeting one of the most notable in the history of the association.

*Resolved*, That the association especially thank the Pennsylvania Forestry Commission for the white pine trees furnished as gifts to the members of the association; to H. A. Surface, Economic Zoologist, for his exhibit of timber-destroying insects; to the Jackson Lumber Company for the gifts of yellow pine needles, cones and branches; to the entertainment committee for its untiring services, and, last but not least, to S. C. Cressy, our efficient president.

*Resolved*, That the thanks of the association are extended to the National Forestry Association for sending us R. S. Kellogg and to R. S. Kellogg himself for his excellent address.

*Resolved*, That the press must not forget to mention for the space they allowed us in their news columns for full account of the proceedings of this association.

## Miscellaneous Notes

T. T. Adams, a prominent manufacturer of Richmond, Va., formerly of Greenville, Tenn., has purchased a large tract of timber on the Carolina, Cincinnati & Ohio railroad near Marion, N. C., which will be developed at an early date. The consideration for the tract is said to have been more than \$100,000. Installation of mills and the building of railroads will be begun at once. The operation will be one of the largest in that region.

On January 18 Miss Grace Gilchrist and Harry Fletcher were quietly married at Detroit. Miss Gilchrist is a daughter of F. W. Gilchrist of Alpena, Mich., and Mr. Fletcher is the son of F. W. Fletcher of the same city. After the wedding the couple left for a tour of the East. On their return Mr. and Mrs. Fletcher will reside at Alpena, where Mr. Fletcher is manager of the Fletcher Paper Company.

The Banaher Hardwood Lumber Company has recently sold its mill at Dollarville, Mich., to Wicks Brothers of Saginaw. The plant is being wrecked and most of the employees have moved to other fields.

Fire, believed to have been of incendiary origin, recently destroyed the plant of the Narrows Lumber & Manufacturing Company at Narrows, Giles county, Va. The loss is estimated at \$20,000, with \$14,000 insurance.

The Sagola Lumber Company of Menominee, Mich., has discontinued logging operations at its hardwood camp two miles west of the town, and will now supply the mill from the Witbeck camp.

The S. C. Major Lumber Company of Memphis, Tenn., recently increased its capital stock from \$25,000 to \$100,000.

The Crocker Chair Company of Sheboygan, Wis., is building an \$8,000 addition to its plant.

A new concern for Bryan, Miss., is the Bryan Veneer & Lumber Company, capitalized at \$25,000.

On January 23 the dry kilns and planing mill of the Emporium Lumber Company's immense plant at Galeton, Pa., were entirely destroyed. The fire started in the north end of one of the dry kilns and within an hour the building was burned to the ground. The company's loss is estimated at between \$35,000 and \$40,000. About two-thirds of this loss is covered by insurance.

The Indiana Veneer & Panel Company of New Albany, Ind., recently entered into a contract with Heimberger & Drinkard for furnishing 3,500,000 feet of sawed oak veneer. This contract, which is said to be the largest of its kind ever signed in Indiana, will keep the firm busy day and night for the next twelve months. The plant of the company is located at East Third and Main streets. This company was only recently started, but has already made great headway.

A deal has been closed whereby the Klemeyer Lumber Company, with headquarters at Vincennes, Ind., became possessor of the larger lumber yard formerly owned by J. C. Snapp of Oak-town. This company now owns and operates seven large lumber yards in various cities in Indiana and Illinois. It reports a good business at all of its yards and says the indications for an immense spring business are splendid.

The Mangle Pole & Tie Company was recently incorporated at Chicago, Ill., to do a general lumber and sawmill business. The capital stock is placed at \$100,000.

The Eureka Manufacturing Company, capitalized at \$6,000, is a new concern to enter the handle business at Jonesboro, Ark.

The Standard Hardwood Lumber Company has been organized at Townsend, Mass., with a capital stock of \$25,000.

The Williams Brothers Company, large manufacturers of lumber, shingles and last blocks at Manton, Mich., has increased its capital stock to \$150,000.

The Novelty Lumber Company has been organized at Elkins, W. Va., to specialize in dimension and furniture stock. The incorporators are Alf. A. Reddy, an Elkins lumberman, and T. G. Hos-

terman. The plant will be located on the C. & I. railroad.

A new chair concern for Chattanooga, Tenn., is the Chattanooga Manufacturing Company, capitalized at \$10,000.

The Montezuma Bobbin Company of Montezuma, N. C., has been incorporated with a capital stock of \$25,000.

G. A. Farber, London representative of Russe & Burgess, Inc., Memphis, Tenn., states that three-ply wood from Russia is being sold all over Great Britain and the continent, and is beginning to supplant thin poplar, sap gum, oak and ash. He contends that it will hurt the sale of thin lumber manufactured in the United States for the European market and is therefore inclined to look for a decrease in the number of orders for this stock from Europe.

The new aloxite wheel manufactured by the Carborundum Company, Niagara Falls, N. Y., is especially adapted to grinding saws and moulding

bits. Aloxite is a product of the electric furnace, being manufactured at a temperature of 7,000 degrees Fahrenheit. Tests have proven that this is the coolest cutting wheel in existence. Since its discovery a year ago the Carborundum Company has had more sawmill orders for gumming wheels made of this product than it can fill, and it has been obliged to add seven new ovens for their production alone.

The Consumers' Lumber Company, with offices at 669 73d street, Brooklyn, and mills at Alvon, W. Va., has been organized to conduct a hardwood business. It is capitalized at \$11,000.

Henry Disston & Sons, Inc., Philadelphia, Pa., have recently started manufacturing in their new Toronto plant at Frazer avenue and the Grand Trunk Railway. W. E. Radcliffe is their Toronto manager and S. Horace Disston is superintendent in charge of the works. Other branch houses recently opened by the Disston people are at Seattle, Wash.; Portland, Ore., and Vancouver, B. C.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

David W. Walker, sales manager for Markley & Miller before they closed their Chicago yard, has opened an office for himself at 133 LaSalle street. Mr. Walker will do a hardwood and veneer business and will specialize in mahogany.

Through an error of the engraver, the splendor supplement showing the banquet tendered by the Lumbermen's Club of Cincinnati to the Hardwood Manufacturers' Association of the United States at the Hotel Sinton, Cincinnati, February 2, shows the date February 9. It is not a serious error, but one that is humiliating to a newspaper which attempts accuracy.

The Wood-Mosaic Flooring & Lumber Company of New Albany, Ind., and Rochester, N. Y., has sent out an announcement to the effect that at the last annual meeting of the directors of the company it was decided to shorten the official name to the Wood-Mosaic Company, thus resuming the original title as used when the business was established at Rochester, N. Y., in 1883.

E. H. Klann of the F. S. Hendrickson Lumber Company, Masonic Temple, this city, for the past few weeks has been down at the company's mills at Harris, Okla., and is at present looking over the company's timber lands in Texas.

President Carrier and Secretary Doster of the Hardwood Manufacturers' Association of the United States, were welcome callers at the RECORD office this week.

G. C. Pratt of the G. C. Pratt Lumber & Tie Company has returned from a business trip in the South.

D. E. Kline of the Louisville Veneer Mills, Louisville, Ky., was a recent Chicago visitor.

President J. H. P. Smith of the Hardwood Lumber Company, Cincinnati, was a recent business visitor in the city.

O. B. Bannister of Muncie, Ind., was in the city on February 8.

F. W. Mowbray of the Cincinnati firm of Mowbray & Robinson, recently visited the local trade.

Omar Farrell of the St. James Cedar Company, Cincinnati, visited Chicago on February 7 on his way to Detroit, where he has extensive business connections.

T. M. Stack of the Escanaba Lumber Company, Masonville, Mich., visited the city recently with his two sisters. His concern has commenced the erection of a new maple flooring plant at Escanaba, which it expects to have ready for operation by July 1.

Frederick Gustorf of Frederick Gustorf & Company, states that since he entered the Chicago trade in 1865 he has not seen transportation blocked the way it is at present.

The Continental Piling & Lumber Company, large dealers in heavy timber, piling, etc., complains that the railroads seem to have exhausted their resources in booming their stock and do not want to buy material for improvements or repairs. It reports that figures quoted on piling are considerably above the present local market prices.

Allen E. Hunt, general salesman of the Lyon Cypress Lumber Company, Garyville, La., reports satisfactory prices and an excellent trade in cypress lumber. He says there is no difficulty in moving stock. Mr. Hunt has an office in the Marquette building.

A new member of the Chicago trade is the Christiansen Lumber Company, with main sales offices in the Rector building. This concern is composed of Nels Christiansen of the Hawkins Land & Lumber Company, Hawkins, Wis., president, and C. K. Ellingson of the Ellingson Lumber Company, Hawkins, Wis., vice-president. It will do a business in northern and southern hardwoods, hemlock and pine, and will specialize in crating lumber.

M. F. Rittenhouse of the Rittenhouse & Embree Company, Chicago, with his wife and son, have been visiting the plant of the Arkansas Lumber Company at Warren, Ark. They were en route to Richton Lumber Company, Richton, Miss., in which concern Mr. Rittenhouse is interested.

Tom A. Moore of T. A. Moore & Co., Monadnock block, Chicago, was married on Wednesday, February 2, to Elinor Marion Chase, charming daughter of Mr. and Mrs. Ira R. Chase, also of this city. Mr. Moore has a wide acquaintance among the local lumber fraternity and his many friends will join in heartiest congratulations.

John Dickson, president of the J. W. Dickson Lumber company, Memphis, Tenn., on a recent trip to Chicago expressed himself very optimistically relative to the future of the lumber business. Mr. Dickson is naturally of a genial disposition, but gives assurance that there is every reason this year to be pleased with the condition of business.

E. D. Galloway, president of the Galloway-Pearse Company, Cincinnati, recently made a visit to Chicago in the interests of his business. He tells of good business in Cincinnati, and prophesies a bright year.

The Miller Hardwood Company, formerly located at 6 Madison street, this city, has removed its offices to the Rector building, 122 Monroe street, where it has convenient and roomy quarters.

## NEW YORK

W. D. Mershon, 1 Madison avenue, who recently merged his business with the John D. Mershon Lumber Company, will head the eastern sales office of that company. He announces that his concern has secured exclusive eastern selling agency for the big California redwood output of the Pacific Lumber Company, Los Angeles, Cal., with a total output of 150,000,000 feet.

Among the prominent visitors during the fortnight were E. E. Goodlander, Goodlander-Robinson Lumber Company, Memphis, Tenn., and Chester F. Korn of the Farrin-Korn Lumber Company, Cincinnati, O., both of whom were here visiting their customers in the trade, and expressed themselves optimistically in regard to the general business situation; G. F. Hanley, Eastern Lumber Company, Tonawanda, N. Y.; L. M. Young, L. M. Young Lumber Company, Boston, Mass.; C. H. Bond, E. W. Rathbun & Co., Oswego, N. Y.; Lewis Dill, L. Dill & Co., Baltimore, Md.; O. H. Babcock, E. V. Babcock & Co., Pittsburg, Pa.; C. H. Prescott, Saginaw Bay Company, Cleveland, O.; C. W. Betts, C. M. Betts & Co., Buffalo, N. Y.; Guy White, North Tonawanda, N. Y., and G. H. Ellington, Ellington & Guy, Richmond, Va.

James Murdock Pidgeon, for many years prominent in the lumber commission and shipping business in South street, this city, died January 27 at his home in Grantwood, N. J., in the 76th year of his age.

Russell J. Perrine, head of Johnson Bros., Inc., Brooklyn, and president of the New York Lumber Trade Association, sails on February 10 for a month's pleasure trip to Bermuda, accompanied by his family.

The regular annual banquet of the Westchester County Lumber Dealers was held at the Hotel Manhattan, New York, on January 21, when 1,000 members and their guests enjoyed a delightful evening. Festivities were presided over by President E. M. Yorks, of Yonkers, and many prominent guests from sister associations and public life spoke at the after-dinner session.

The annual banquet of the New York Lumber Trade Association occurred at the Waldorf-Astoria, Manhattan, on the night of February 3, and was participated in by about 325 members and their guests. The menu was in the usual excellent Waldorf style and the menu cards a very handsome creation. The festivities were presided over by President Russell J. Perrine of Brooklyn, but there were no set speeches, the after dinner session being taken up by the presentation of an excellent vaudeville show. It was one of the most successful affairs in the history of the association.

Secretary E. F. Perry of the National Wholesale Lumber Dealers' Association spent several days in Washington, D. C., during the past week attending the car stake congressional hearing and numerous other Washington happenings, in which his association is interested. The local office is very busy getting ready for the annual convention at Cincinnati on March 2 and 3 and everything points to a record attendance and a most interesting program.

C. O. Shepherd, managing director of the Davison Lumber Company, 1 Madison avenue, left last week for a two weeks' visit to the Nova Scotia operations of the company and to go over matters at that end of the line.

The Barker-Bond Lumber Company has been organized by the well known interests previously identified with Barker & Co. of Boston and New York, to take over the selling business of Barker & Co. in New York and Philadelphia. The old firm will continue its New England business as formerly. Associated with the Barker-Bond Lumber Company, as principals, are George J. Barker, president; J. M. Bond, formerly head of the New York office, as treasurer, and J. P. and Robert G. Comegys of Philadelphia, who previ-

ously represented Barker & Co. in that city, and F. A. Niles and P. U. Fuller, previously identified with the New York office. Business will be carried on along the same lines as heretofore.

Gouverneur E. Smith & Co., wholesale hardwood house, of 17 Battery place, announce that they have just closed negotiations for the exclusive sale in the Metropolitan district and vicinity of all the cedar boat boards and 20-inch machine dressed shingles manufactured by the Waccamaw Lumber Company of Bolton, N. C., known as the Waccamaw Brand. This, together with their connections, greatly increases the firm's facilities to local buyers.

The DeWitt Lumber Company is the name of a new wholesale house just organized at 1 Madison avenue, composed of George P. DeWitt, president and general manager, and J. H. Hillman, secretary and treasurer. Both of these gentlemen have been identified with the Philadelphia and eastern trade for many years, more latterly with H. G. Hazard & Co., of Philadelphia, and bring to the new company a large experience which should result in success to its activities. They will handle a general line of wholesale lumber and hardwoods will be the specialty.

The lumber trade of the Metropolitan district was signally honored during the fortnight in the appointment by President Taft of E. W. Voorhies, head of E. W. Voorhies & Bro., planing mill and lumber dealers of south Brooklyn, to be postmaster of the city of Brooklyn. Mr. Voorhies is widely and favorably known both in local lumber and political circles and his appointment has been received with general satisfaction.

The Stevens-Eaton Company, 1 Madison avenue, reports busy. T. S. Miller, manager of the hardwood department, is preparing for a banner year in hardwood trading. He has established a distributing and storing yard at Gilman, W. Va., with a capacity of 4,000,000 to 5,000,000 feet of lumber. This yard, which is located about three miles from Elkins, has about one million feet of railroad track and facilities for several railroad connections, consequently the company will be in a position to guarantee prompt shipments.

The Sea Coast Lumber Company, 1 Madison avenue, anticipating a brisk lumber business for 1910, is making arrangements for an extensive landing of hardwoods. This department will be in charge of C. W. Brownson, assistant treasurer, who is emphatically optimistic as to outlook.

## BUFFALO

There is still next to no news in connection with the lumber exchanges, but the merger of the Manufacturers' Club with the Chamber of Commerce, with the lumbermen so generally interested in both bodies, promises to afford them a meeting place soon such as they never had.

A new hardwood yard is being opened by the James H. Walsh Company on outer Seneca street. It is a pretty hard matter to do foundation work, but the office is already partly built and lumber for the yard is coming up from the Ohio river. Mr. Walsh has long been connected with Buffalo lumber interests and everybody hopes that he has made a winning move. He has operated for some time without a yard.

A steady increase is noted in the handling of Pacific coast lumber. Both white pine and hardwood dealers are getting into that trade, for they need the stock.

G. Elias & Bro. report business fair, with all promises of a heavy setting in of the demand as soon as the snow is out of the way. There is still quite a large amount of fall received stock on the dock waiting for weather.

A. Miller is a pretty busy man these days. There is a saying that the local hardwood users no longer buy their stock of the city dealers, but Mr. Miller's books would tell a different story if they were consulted on the matter.

Hugh McLean recently spent some time in Burlington, Vt., where he has a family estate to look after and where he is still director of a city bank. However, most of his time is still given to selling lumber on the road.

Frank A. Vetter is still giving his time to the office of the county treasury, but he is not forgetting that he is a lumberman and he will some day come back to his own with interest and make the Pascola mills hum again.

There is no lack of lumber moving in the yard of I. N. Stewart & Bro., especially oak, poplar and chestnut. There is also demand for birch, but the rule is that few yards have a good stock of that, as they sell something else in place of it.

The kinds of lumber handled by T. Sullivan & Co. seems to be the lumber that is wanted, whether it is Michigan hardwood or Pacific coast fir and spruce. The yard has been very busy all winter and expects to continue for it has the stock.

F. W. Vetter is getting a lot of trade just now and though he is against selling for long time, he is loaded up with orders for quick delivery. He reports that the snow has handicapped the yard business to a great extent.

O. E. Yeager is not only selling lumber of all sorts at a good rate, but has just received a large stock of hardwood, which will make it busy in that yard for some time.

## PHILADELPHIA

Wistar, Underhill & Co. are complacent over business conditions. R. W. Wistar says that January was a very good month, considering the adverse weather and the usual holiday inertia. The salesmen are all laboring in their respective territories and report a decided improvement all along the line, with fine prospects for 1910 trading.

On January 24 a fleet of twenty-one barges passed through the Chesapeake into the Delaware, carrying 8,431,000 feet of lumber, five barges with 2,075 cords of pulp wood and seven barges with 4,226 tons of mine props. This was the fleet of barges that was ice bound at Canton Hollow, Baltimore, and its timely arrival saved many of the lumber yards and pulp mills from a shut-down.

The plant of the Middletown Car Company, Middletown, Pa., will be enlarged at a cost of \$300,000. Additional real estate will be purchased for extensions.

George Brill, a member of the J. G. Brill Car Company, died on January 1, aged sixty-one years. He was the son of J. G. Brill, who with Martin Brill were the founders of the extensive car works at Sixty-second street and Woodland avenue.

The United States Motor Company, with main offices in Jersey City, has increased its capital stock to \$16,000,000. The stock is divided into \$8,000,000 preferred and \$8,000,000 common. The incorporators are Henry E. Torrey, New York; James A. Daily, Ossining, N. Y., and Kenneth K. McLaren, Jersey City. The company is authorized to manufacture and deal in motors, flying machines and automobiles.

The Lewis J. Bergdoll Motor Company, Camden, N. J., was chartered on January 2 with a capital stock of \$50,000.

The Chalmers-Hipple Vehicle Company, Philadelphia, was recently incorporated under Pennsylvania laws, with a capital of \$50,000.

The Carlson Motor Vehicle Company, capitalized at \$10,000, was recently incorporated at Philadelphia, Pa.

The Bergdoll-Hall Motor Company, Philadelphia, obtained a charter under Pennsylvania laws on January 20. Its capital stock is \$25,000.

The Lamund Motor Car Company, Rutherford, obtained a charter January 28 under New Jersey laws; capital \$150,000.

The Morris Yacht Building Company, Camden, obtained a charter on January 28 under New Jersey laws; capital \$20,000.

### PITTSBURG

The Summit Lumber Company, capital \$100,000, has been formed at Youngstown, Ohio, by D. C. Stewart, F. C. Robinson, W. R. Baird, L. H. Beal and T. B. Van Alstine.

The Allegheny Lumber Company made a splendid showing on its books in January and is preparing to enlarge its operations considerably this spring. A. M. Turner of this company has been active in lining up good southern stocks and the concern has splendid connections in Pennsylvania and West Virginia.

J. J. Linehan of the Linehan Lumber Company, has been down East a good share of his time since January 1. J. C. Linehan spent a few days in Kentucky at the mills last week. Both are well pleased with the outlook for good hardwood trade this spring.

The Edinboro Timber Company of Edinboro, Pa., which owns 200,000,000 feet of standing timber in British Columbia, recently elected J. N. Tarbell, president, and Dr. F. G. Greenfield, George Taylor, F. T. Proudft, Eugene Tarbell and D. G. Curtiss, directors.

The Tarentum Coal & Stone Company has been formed by M. and John Griffith, P. H. Gough, W. H. Norris and J. H. Gough of Tarentum, Pa., and will proceed at once to cut off a small but fine tract of oak timber on the Allegheny river.

The Tree Lumber Company of Vandergrift, Pa., has been dissolved and Charles L. Reed and Harrison L. Yerte of Pittsburgh have been named to wind up the affairs of the company.

The Bortwiser & Wilson Company did a remarkably good business in January, considering that it was its first month. It reports a good demand for oak bill stuff, especially heavy pieces. Prices are steadily going up.

The Altoona Lumber Company, most of whose stockholders reside at Windber, Pa., has disposed of its entire holdings of 8,000 acres of Virginia timber, and also a sawmill and several mills on the railroad, and will go out of business in that state.

The Mead & Spier Lumber Company is making a good winter's cut at its mill at Strange Creek, W. Va. Its stocks of hardwoods which are being turned out there are among the finest that come from the Little Mountain State.

The Aene Manufacturing Company has taken up temporary headquarters at 1221 Pennsylvania avenue, North Side, and meanwhile is having plans prepared for a large curtain stretcher factory to replace the one recently burned.

The Motz Lumber Company has been formed at Monessen, Pa., by W. R. and J. C. F. Motz, Dr. W. D. Hunter, S. B. Frazier and C. A. Derby, and will do a general lumber business.

J. N. Wollett has taken a new partner in the Aberdeen Lumber Company. He is several days old now and is known among J. N.'s friends as a "king William."

Secretary J. G. Criste of the Interior Lumber Company reports encouraging trade in the eastern states, chiefly Baltimore and Philadelphia. The company's plants in northern Pennsylvania are shut down until the weather breaks.

The Ohio Pail Company of Middlefield, Ohio, a few miles over the Pennsylvania line, is buying every tract of standing hardwood which it can find. It has purchased more than 1,000 acres of timber during the past year and is adding constantly to its holdings in eastern Ohio.

The Tri-State Lumber Company of Uniontown, Pa., whose output will be handled by the Palmer & Semans Lumber Company, recently organized, elected two weeks ago B. A. Smith, president; J. H. Rush, vice-president; L. W. Fog, treasurer, and D. V. Johnston and I. G. Robey as directors.

William R. Cornelius is arranging to make a

big stride in southern hardwood business and especially in plain oak. Those have been his specialties since he started in business about eighteen months ago, and he has established a splendid reputation for delivering the kind of goods that good lumbermen want.

President W. D. Johnston of the American Lumber & Manufacturing Company has returned from a two weeks' jaunt in the South. He is very confident in speaking of the spring activities in lumber, and sees no reason why hardwoods will not make a sharp advance between low and mid-summer.

The Hickory Lumber & Handle Company of Benton, Pa., has bought a 700 acre tract of hickory near Danville, Pa., for about \$25,000 and will cut it off at once.

Secretary Carl C. Van der Voort of the Pittsburgh Lumbermen's Mutual Fire Insurance Company announces that in 1909 the company gained 68 per cent over 1908. That year, in turn, showing a gain of 60 per cent over 1907.

The Stewart Lumber Company of Sharon, Pa., has been dissolved, D. C. Stewart retaining the business. He will carry this on hereafter with headquarters at Warren, Ohio.

The Newell Brothers Lumber Company is doing a good business. Oak, chestnut and maple flooring seems to be in much better demand, it announces. This concern is rapidly cutting off its tract in West Virginia and will have another hardwood operation probably before the year is out.

The W. P. Craig Lumber Company announces large sales of spruce and also of chestnut. Its mills have been doing pretty well in West Virginia, and the prices which it is getting for good lumber are encouraging.

Robert A. McDonald, president of the McDonald Lumber Company, is doing tall stunts in the mountains of northern Pennsylvania. His office manager, J. W. Hulse, has taken to the South this week to look up some hardwood stocks.

January building in Pittsburgh showed a decrease of about 40 per cent compared with one year ago. Nearly \$5,000,000 worth of building was started here in January, 1908, but last month the total was only about \$3,000,000.

W. W. Dickey, president of the West Virginia Lumber Company, has gone to California for a two months' stay. The company's most encouraging announcement is the big demand for oak bill stuff.

I. F. Baisley, sales manager of the Palmer & Semans Lumber Company, is down South this week contracting for some good supplies of hardwood. This concern is getting its business lined up in splendid shape for spring.

G. G. A. E. and R. A. Stitzinger and W. H. Gillespie of New Castle, Pa., and E. E. and J. E. Stitzinger of Woodbine, W. Va., have purchased about 9,000 acres of hardwood timber, nearly all of which is virgin forest. The tract includes poplar, oak, basswood and other hardwoods, and most of it lies in Tucker county, W. Va. The purchasers have formed a new company called the Glade Lumber Company, which is being incorporated with a capital of \$200,000. It will build seven miles above Rowlesburg, W. Va., a big band sawmill, 40 houses and railroads, etc., to cost \$300,000. Its product will be sold from the New Castle office of G. G. Stitzinger.

The third annual convention of the Retail Lumber Dealers of Pennsylvania on January 27 and 28, proved to be all that was anticipated. A total of 160 wholesalers and 210 retailers were registered and nearly 400 sat down at the banquet the last night of the convention. The features of the discussions were demurrage and the mail order house problem. The smoker provided by the Pittsburgh Wholesale Lumber Dealers' Association the first evening of the convention at the Fort Pitt Athletic Club was well worth while, and reflected much credit on the committee. The officers elected for the ensuing year were: President, W. T. Geddes, Windber, Pa.;

first vice-president, Frank E. Miller, Ingram; second vice-president, R. S. Cornelius, Butler; secretary, A. C. Rightor, Pittsburg; treasurer, A. J. Stewart, Washington.

### BOSTON

William E. Litchfield, the well-known hardwood lumber dealer, Boston, attended the convention of the Hardwood Manufacturers' Association, after which he visited the mill of Litchfield Brothers at North Vernon, Ind. He returned from the West this week.

The Massachusetts Wholesale Lumber Dealers' Association held a meeting at Young's hotel, Boston, Wednesday evening, February 9. A reception was held from 5 to 5:30 p. m. and the banquet at 6 p. m. Several matters of interest were discussed.

Mr. Adair of the Huntsville Lumber Company, Jamestown, N. Y., and Dacatur, Ala., was a recent visitor in the Boston market.

Frank O. Orcutt of Randall & Orcutt, hardwood dealers, Boston, recently returned from a short western trip.

Fred S. Morse of Springfield, Mass., has returned from a trip south.

Harry C. Philbrick, a wholesale lumber dealer, Boston, is expected home in a few days from an extended southern trip.

Joseph Gramer, vice-president of the Emerson Piano Company and a member of that concern since 1879, died late last month at his home in Roxbury, Mass., after an illness of about two weeks. Mr. Gramer was born in Germany, and came to this country as a young man. He worked at the trade of cabinet maker and entered the employ of the Emerson Piano Company in 1874 as foreman of the upright department. In 1879 he was taken into the firm and to his last illness was active in business. He also served as chief draftsman. He is survived by a widow, two sons and three daughters. Mr. Gramer was seventy-six years of age.

As the result of a merger which was consummated about two weeks ago, James Cunningham Son & Co., of Rochester, N. Y., become the owners of the George Brownell carriage business of New Bedford, Mass., one of the oldest New England firms making hearses, ambulances and coaches. This business was established in New Bedford by the late George L. Brownell in 1843. The new owners will operate the business under the supervision and management of William C. Barker, who has been manager and superintendent of the factory since Mr. Brownell's death in January, 1903. No permanent plans are announced by the new owners, but for the present the factory will be continued, as the books are filled with orders for delivery during the spring. In addition to the hearse and ambulance work, the business includes automobile features.

John W. Potter, senior member of the firm of Potter & Gardiner, Providence, R. I., died recently of typhoid fever in St. Petersburg, Fla., where he and Mrs. Potter were spending the winter.

The large lumber and flooring mill of Follensby & Peck at St. Johnsbury, Vt., was recently destroyed by fire, causing a loss of about \$17,000.

The Lawrence & Klein Lumber Company was recently organized in Fitchburg, Mass., to conduct a wholesale lumber business. Ivers P. Lawrence of the firm has been in the wholesale lumber business in that city for the past seven years. Morton A. Klein at one time was with P. R. Eaton of Fitchburg but recently of the Butler & Klein Company at Meriden, Conn.

W. H. Lewis, who for many years has been manager of the Brockton branch of the Taunton Lumber Company, died of heart failure at his home in Taunton on January 24. He has been

succeeded by A. H. Willbur, who has been in the company's employ for about seventeen years.

The National Flooring Company has been organized at St. Johnsbury, Vt., with a capital stock of \$5,000.

The Lumber Dealers' Association of Connecticut is planning to hold its annual meeting and banquet Thursday, February 24, at Waterbury, Conn.

## BALTIMORE

The following standing committees were appointed at the annual meeting of the National Lumber Exporters' Association, a report of which appeared in the last number of the *Hardwood Record*.

### TRANSPORTATION

John L. Alcock, John L. Alcock & Co., Baltimore, chairman.

George M. Spiegle, George M. Spiegle & Co., Philadelphia.

Fred Arn, J. M. Card Lumber Company, Chattanooga, Tenn.

W. F. Best, Ferd Brenner Lumber Company, Alexandria, La.

H. D. Billmeyer, Billmeyer Lumber Company, Cumberland, Md.

W. E. Hoshall, Hoshall & McDonald Bros., New Orleans.

W. P. Young, Lucas E. Moore Stave Company, New Orleans, La.

E. E. Carrier, LeMore & Co., New Orleans, La.

Howard Coles, The Bliss-Cook Oak Company, Blissville, Ark.

James E. Stark, James E. Stark & Co., Memphis, Tenn.

A. L. Foster, The J. W. Thompson Lumber Company, Memphis, Tenn.

H. L. Bowman, R. E. Wood Lumber Company, Baltimore.

### ARBITRATION AND COMPLAINTS.

E. E. Taenzer, Darnell-Taenzer Lumber Company, Memphis, chairman.

George D. Burgess, Russe & Burgess, Inc., Memphis.

W. A. Scott, The Rees-Scott Company, Ltd., New Orleans.

F. J. Foxley, Foxley Stave & Lumber Company, Ltd., New Orleans.

F. E. Hoffman, Hoffman Brothers Company, Fort Wayne, Ind.

William B. Roper, John L. Roper Lumber Company, Norfolk, Va.

S. Menzies, James Kennedy & Co., Ltd., Cincinnati.

### MEMBERSHIP

Chester F. Korn of the Farrin-Korn Lumber Company, Cincinnati, chairman.

Claude Maley, Maley & Wertz, Evansville, Ind.

H. L. Bowman, The R. E. Wood Lumber Company, Baltimore.

Richard P. Baer, Richard P. Baer & Co., Baltimore, Md.

E. Stringer Boggess, Clarksburg, W. Va.

John L. Roper, John L. Roper Lumber Company, Norfolk, Va.

D. T. Rees, The Rees-Scott Company, Ltd., New Orleans.

J. Darnell, R. J. Darnell, Inc., Memphis.

M. J. Dukes, R. A. & J. J. Williams Company, Philadelphia.

T. B. Allen, T. B. Allen & Co., Galveston, Texas.

### CLAIMS.

President Dickinson, chairman.

Two directors, selection left to the president.

L. Methudy of St. Louis was the first honorary member of the association ever chosen, provision having been made for such membership in the revised bylaws.

Mr. Methudy has served for years on committees and is held in the highest esteem.

A resolution relative to the repeal of the publicity clause of the corporation tax law, in so far as it relates to small corporations, was adopted by the association.

An invitation from the Memphis members that the association meet there next year, was adopted, and will doubtless be approved by the board of directors, which has the matter of selecting the meeting place in charge.

George G. Barr of Beecher & Barr, Pottsville, Pa., and Ben May of Adler, May & Co., Atlanta, Ga., were recent visitors in Baltimore.

G. L. Fraser, a well-known lumberman of Glasgow, Scotland, stopped in Baltimore recently on his way to New York, after an extended trip through the hardwood manufacturing sections of the United States. He had been

in this country since Christmas, and had spent much of his time in the Bristol, Tenn., district, taking in also a number of other localities. He said that the millmen were as busy as they could be considering the weather, the snow on the mountains having been very heavy, and that they entertained a feeling of confidence in the future. Prices he found comparatively high. Mr. Fraser, speaking of conditions at home, expressed the opinion that now, when the British elections are over and it is seen that there will be no radical change in policy, business may be expected to become more active.

H. T. Burt, a wholesale lumber dealer, has moved his office from the National Marine Bank building to 11 South Gay street, where he has comfortable quarters on the second floor.

## NORFOLK

The Allapaha Lumber Company, Norfolk, Va., has been authorized, with a capital of \$10,000. H. L. Williamson, formerly with Walker & Williamson of this city, is president; H. A. Jackman, vice-president, and H. W. Williamson, secretary-treasurer. This firm has offices in the Citizens' bank building.

L. B. Walker & Co., Norfolk, Va., has been organized, with offices in the National Bank of Commerce building. This company will make a specialty of handling oak for ship-building purposes. Mr. Walker just returned from Baltimore, and states that business is getting better all the time.

George Silk has severed his connection with the George Silk Lumber Company, Norfolk, Va., and together with Mr. Simmons has organized another company, under the firm name of S. & S. Co.

Robert McNeal, of the Norva Land & Lumber Company, with head offices in Baltimore and factory at Wallaceton, A. A. Wendell and J. T. Durnell have organized the Brobda Lumber Company, Inc. The new concern's headquarters are located in Norfolk.

W. M. Tilley & Co., conducting a large lumber business in this city, has just filed a petition in voluntary bankruptcy, with liabilities placed at \$55,969.09 and assets at \$34,984.42.

Harvey M. Dickson, of the Dickson Lumber Company, this city, has returned from Baltimore, where he attended the tenth annual meeting of the National Hardwood Lumber Exporters' Association. He reports business good, with bright prospects for good trade throughout the year.

## CLEVELAND

Fearing that the new federal building was to be furnished in mere mahogany, Senator Burton, from Cleveland, caused an additional \$60,000 to be tacked on to the appropriation for the furnishing of the new postoffice, making the total appropriation \$160,000. The plan now is to have all furniture of Circassian walnut.

Putnam & Savidge of Cleveland, dealers in hardwoods, have dissolved. Hunter Savidge retiring to go into business with a brother at Klamath, Ore. The Putnam Lumber Company has been formed and incorporated for \$25,000. S. E. Putnam, Ward Sager, H. C. Boyd, H. H. Andersen and B. Fretter are the incorporators. Mr. Putnam will be active manager of the new company. Putnam & Savidge operated in Cleveland for about five years.

A. C. Klumph, manager of the Cuyahoga Lumber Company, has been named as chairman of the entertainment committee of the Builders' Exchange. Despite adverse climatic conditions, the Cuyahoga company is doing a fine business.

Robert H. Jenks is slowly recovering from a broken arm, received several days ago from slipping on the ice at his home. Mr. Jenks is head of the Robert H. Jenks Lumber Company,

one of the largest concerns of its kind in Cleveland.

The F. T. Peitch Company reports a growing demand for mahogany and other hardwoods. Mr. Peitch has had made up some handsome mahogany panels from his stock, to illustrate the finish and quality of the recent shipments he has received. The company contemplates greatly enlarging its mahogany stock soon, as the call for this wood is becoming stronger all the time.

The Martin Barriss Company says that the local market in hardwoods is becoming better and that the outlook for the spring and summer business is good. The company has been having a good call for Circassian walnut and during the past week received a fine shipment of 150 logs which will be worked over into finish and veneer at once.

The Advance Lumber Company is experiencing a good line of business this winter, particularly in the hardwood. The concern's southern mills are all in operation, some little difficulty being found in keeping up with the orders.

The oak-piling trade is in a healthy condition, according to the Edwin T. Smith Company, which makes a specialty of this work. The company has received a number of good orders for dock work, deliveries to be made early in the spring. The volume of inquiries from railroads for ties and poles is also greater than usual.

Among the lumber dealers who have called on the dealers in the local market recently are S. M. Cole, a well-known dealer of Oberlin, O.; I. A. H. Hilliard of New Orleans, and George E. Breece, manager of the West Virginia Lumber Company of Charleston, W. Va.

## COLUMBUS

The Kilbourne & Jacobs Manufacturing Company of Columbus has started to develop a large tract of timber land purchased in 1907 near Gauley Bridge, W. Va. This company uses a large amount of hardwoods in the manufacture of wheelbarrows, mining cars and other apparatus of that kind and some years ago decided to purchase its own supply. With the expansion of business generally, which has resulted in many orders, a number of mills will be erected at once on the tract, which is located close to several railroads.

Many of our lumbermen attended the annual meeting of the Hardwood Manufacturers' Association at Cincinnati.

A. C. Davis, head of the lumber company bearing his name, reports a steady demand for hardwoods with a likelihood of an advance in quotations soon. He says one of the chief drawbacks is the bad weather, which has caused some difficulty in moving consignments. He says the car situation is satisfactory.

George B. Johnson, secretary of the A. C. Davis Lumber Company, recently returned from a business trip to Detroit and through Ohio.

At the annual meeting of the South Side Lumber Company the following board of directors was elected: W. H. Smith, A. C. Davis, E. M. Veitmeyer, J. P. H. Stehm, J. G. Hughes and Frank P. Kennedy. W. H. Smith was elected president; E. M. Veitmeyer, vice-president, and A. C. Davis, secretary-treasurer. It was voted to increase the capital stock from \$25,000 to \$50,000.

H. C. Buskirk, sales manager of the General Lumber Company, reports a satisfactory run of orders with bright prospects for the future. He says the demand from factories is growing better. Mr. Buskirk will soon leave for a business trip through a number of Kentucky cities. H. W. Putnam, president, was called to Urbana on business recently.

W. E. Douglass, formerly connected with the Columbus office of the Crosby & Beckley Lumber

## CINCINNATI

Company, is now interested in the incorporation of the Columbia Lumber Company of Cleveland with a capital stock of \$50,000.

A company has been formed in Columbus by David C. Meahan and a number of prominent woodworking manufacturers, to manufacture and sell a preparation said to effectively fireproof all wood.

L. B. Schneider of the John R. Goble Lumber Company reports considerable activity in the hardwood trade. The demand is good and the outlook very bright. Mr. Schneider looks for an advance in many varieties of hardwoods soon.

At the annual meeting of the Columbus Furniture Dealers' Association, Robert Bell was elected president; C. L. Carille, vice-president; W. E. Heskett, treasurer, and C. M. Voorhees, secretary. The executive board consists of W. F. Garrett, P. W. Stewart and H. L. Harper.

The Williamsburg Furniture Company, Williamsburg, O., has increased its capital stock from \$35,000 to \$50,000.

The sawmill and veneer plant belonging to J. V. Hamkinson, Franklin, O., was totally destroyed by fire recently, entailing a loss of \$12,000.

The Auglaize Box Board Company has increased its capital stock from \$100,000 to \$200,000.

H. W. Collins, sales manager of the central district for the W. M. Ritter Lumber Company, reports a good demand for all grades. Mr. Collins looks for a general advance all along the list in the course of a month or six weeks. He believes that February will be one of the best months of the year and says the snowy weather has been one of the chief drawbacks to a more active demand. Mr. Collins will leave soon for a week's trip through the eastern part of Pennsylvania. He returned several days ago from a visit to a number of automobile body manufacturers.

The W. M. Ritter Lumber Company of Columbus has closed a deal whereby it acquires a 28,000-acre tract of timber land located on a number of the forks of the Guyandotte river in West Virginia. The tract was acquired from the Western Pocahontas Corporation, one of the large coal interests in that section. The timber will be cut at the Mahan and Fitzpatrick mills located nearby. It contains poplar, oak and hemlock and other varieties in smaller quantities.

The Canfield Lumber Company of Canfield, Ohio, was incorporated with a capital stock of \$15,000 by H. L. Weikert and others.

A. C. Miller of Delaware has added a planing mill to his sawmill and will dress all hardwoods.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, says the factory trade is good and the yard trade shows signs of improvement. He is of the opinion that there will be an increase in hardwoods if mills do not produce too much.

H. C. Bard of the Middle States Lumber Company reports a bright outlook, although the demand is a little slow at this time. D. O. McFarland of the Middle States company is on a business trip through northern Ohio and southern Michigan. G. O. McFarland, another member of the company, is located at Shreveport, La., buying stocks for the company.

The Columbus Saw Mill Company, at its annual meeting, elected the following board of directors: William Cushing, J. E. Cummins, W. D. Norton, C. T. Roberts and M. K. Naile. William Cushing was re-elected president; W. D. Norton, vice-president; J. E. Cummins, treasurer and general manager; M. K. Naile, secretary, and C. F. Roberts, superintendent of mill. The company operates a band mill of 25,000 feet capacity. The year 1909 was a very good one and General Manager Cummins reports a good demand for all kinds of hardwood. The demand for walnut from Hamburg, Germany, is now much better and several shipments will be made soon.

William Duhlmeier is touring Ohio and Indiana in the interests of the firm, and will return at the end of the week.

W. E. DeLaney of the Kentucky Lumber Co has returned from a trip through the South. He says that business with the company is fair, though at present he is very busy going over the mail accumulated during his absence. He says there has been a good log tide in the Kentucky river, and the mill at Burnside will start cutting early next week. The mill at Williamsburg is well supplied with logs, and will commence operations before the end of the week. Mr. DeLaney is an optimist at all times, and is of the opinion that the present wave of business prosperity will continue, but that it will be some time before the conservatism caused by the recent slump will wear away sufficiently to give the old-time confidence to business conditions.

The Freiberg Lumber Company is pushing the veneer end of its business and contemplating the addition of large storage sheds. The company is specializing in mahogany lumber, and has one of the largest supplies in the city. Mr. Freiberg returned home Friday from a trip through the state.

Fred Conn of the Bayou Land & Lumber Company is in Mississippi looking after the interests of the company. Sam Conn is in Louisiana at the company's timber tract and mill interests in the Bayou country. The business at the Cincinnati office is very good.

J. Dennis of the St. James Cedar Company left for Mobile, Ala., Tuesday on a buying mission, the deal embracing a large stock of air-dried quarter sawed oak.

There is much activity in the Southern railroad yards in the handling of southern pine, especially heavy building timbers, most of which has been reconsigned to the East. Locally there is not much activity, owing to a holding back in the conditions of the building trades. Contractors complain that up to this time there has been less new building prospects in sight than at any time in years, and that building conditions are very unsettled. The high prices of living and the demands of labor are threatening to have a serious effect on the building trades in the spring.

The Stille Brothers have purchased the ground at McLean avenue and Wade street occupied by the yards of Samuel H. Taft, thus becoming owners of the entire block bounded by Dalton avenue, McLean avenue, Wade and Poplar streets. The Stilles operate the big furniture plant known as the Stille & Duhlmeier Co. Samuel H. Taft will vacate the ground, which has been leased to Duhlmeier Bros., lumber dealers, who will add the ground to their own yard, which occupies the next lot east of the old Taft yard. The lumber in the Taft yards is being removed as rapidly as possible, consisting chiefly of building material. The Duhlmeier Brothers specialize in hardwoods, and do an extensive business with furniture manufacturers.

R. G. Page of the Licking River Lumber Company, Huntington, W. Va., was a visitor at the Hardwood Manufacturers' headquarters the past week. N. B. Nichols of the Little River Lumber Company, Philadelphia, Pa., dropped in Monday to pay his respects to Secretary Foster while on a business mission to the city.

Lewis Foster, secretary of the Hardwood Manufacturers' Association of the United States, left Monday for Chicago.

J. Watt Graham, president of the Graham Lumber Company, says that business is good, and that for the past month it has been all that could have been expected. His road representative, Fred Duling, who has just returned from a trip through Kentucky and Ohio, reported that business all along the line was very good, and that he would go back over the same territory in a week or ten days.

Chas. S. Walker, president of the Cincinnati

Lumbermen's Club, was very busy with the work of the committees arranging the entertainment of the delegates attending the convention of the Hardwood Manufacturers' Association. He was compelled to leave his office early Monday and seek rest, suffering from an attack of neuralgia.

James J. Heekin, the newly elected president of the Chamber of Commerce, who was elected by the lumbermen of the chamber, has been confined to his home by illness, but is slowly recovering, being now able to visit the chamber for an hour or so a day.

Furniture manufacturers are running steadily, but are not overworked, as this is the slow season, and the results of the buying at the markets are not yet being felt, but there is a cheerful tone among the manufacturers, and lumber salesmen are being cordially received. There is some revival noted in the manufacture of desks, which for the past two years has been the slowest branch of the furniture manufacturing industry. Orders for export are being received and the domestic demand is steadily growing.

R. Soudheimer of the E. Soudheimer Company, Memphis, Tenn., was a visitor in this city last week, looking over the field and calling on business acquaintances.

Secretary Storrett of the Lumbermen's Club has been a very busy member the past month arranging for all the entertainments given and assisting the various committees.

W. H. Heaton, the executive clerk of the Hardwood Manufacturers' Association, says the headquarters will remain a very busy spot for some time, arranging for the publication of the report of the recent convention in this city. The official stenographer's report has just been turned in and covers 260 pages of typewritten legal cap paper.

J. L. Strickland of Starns & Strickland, Memphis, Tenn., was a guest of the Cincinnati Lumbermen's Club at its dinner February 8, but was compelled to leave early on account of another engagement. He was accompanied by J. G. Gritman of Joshua Oldham & Sons, Brooklyn, N. Y., the well-known saw concern.

W. B. Townsend lost a valuable diamond during his visit to Cincinnati in attendance on the Hardwood Manufacturers' convention.

The banquet in connection with the convention of the National Wholesale Lumber Dealers' Association at the Sinton Hotel, on the evening of March 2, will be a strictly formal affair.

A. B. Jackson of Ault & Jackson was taken to the Jewish Hospital on Saturday last and a delicate operation performed. It was very successful and Mr. Jackson will make a good recovery, though it will be some time before he will be able to resume the duties at the office.

Ralph McCracken of the Kentucky Lumber Company and Fred Duling of the Graham Lumber Company left Tuesday night after the club meeting to attend the convention of the Kentucky Retail Lumber Dealers' Association at Louisville. Mr. Duling will make a tour of the South before his return.

A strong effort will be made by the Cincinnati Lumbermen's Club to properly advertise Cincinnati as the greatest hardwood market in the world. Although other cities are claiming to hold this coveted position, it can be clearly demonstrated that Cincinnati handles more hardwoods than any other point.

The statistical department of the Cincinnati Chamber of Commerce furnishes the following figures showing the lumber movement in Cincinnati for the month of January: Receipts, 5,743 cars, as compared with 5,348 cars for the same month last year. The shipments for January were 5,407 cars, while those of January, 1908, were 5,861 cars.

## INDIANAPOLIS

Building operations in the city during January amounted to \$276,385, as compared with \$178,520 during the corresponding month of last year.

The S. P. Coppock & Sons Lumber Company

of Fort Wayne is establishing a large transit yard.

An increase in capital stock from \$20,000 to \$70,000 has just been made by the Batesville Lumber & Veneer Company of Lawrenceburg for the purpose of extending the business.

F. C. Cline of this city has organized the F. C. Cline Lumber Company at Anderson which has taken over the business of the late George E. Springer in that city. Others interested in the new concern are L. C. Cline, D. L. Mustard and F. E. Mustard, and the capitalization is \$10,000.

The Indiana Hardwood Lumber Company is a new concern at Shelby, having just been organized with an authorized capitalization of \$40,000. Those interested are Joseph F., Arthur L. and Ola B. Johnson.

E. H. Eldridge, president of the E. H. Eldridge Lumber Company, died at his home in this city a few days ago, after an illness of several months. He was sixty-five years old and originally engaged in the lumber business in Chicago, but had been located here for about forty years. A widow, two sons and a daughter survive him.

The hardwood and refrigerator business of the Wilkie Manufacturing Company of Anderson was sold on January 31 to the Anderson Trust Company for \$50,000, on order of H. C. Sheridan, referee in bankruptcy. The trust company is trustee for the bondholders of the Wilkie company, the bonds outstanding amounting to \$50,000. The company went into the hands of a receiver six months ago.

On the evening of January 29, the annual banquet of the Atkins Pioneers was held at the Spencer house in this city. The association is composed of 113 men who have been in the employ of E. C. Atkins & Co. for more than twenty years and was organized in 1906. Those who spoke at the banquet were H. C. Atkins, J. H. Wilde, J. T. Dowling, Nelson A. Gladding, William Brennan, Albert Meredith, Frank Wells and Frank Kingsley.

## MEMPHIS

Weather conditions throughout this section during the past fortnight have been favorable for the production of hardwood lumber and the mills have made good progress. There are some short of timber and owing to the wetness of the woods it is impossible for them to make much progress, but most of the mills have a good supply of logs on hand or within easy reach. Indications are that production will continue on a liberal scale providing weather conditions are favorable therefor. Most of the mills in Memphis and vicinity are operating on full time.

Messrs. Cockrell and Clements, members of the Interstate Commerce Commission, held extensive hearings here this week in connection with the reconsignment practice as applied to cotton, cotton-seed products, grain, lumber and logs. The commission appears to be very much interested in this matter, and it is summoning witnesses, not only from the railroad people, but from the shippers. Practically every railroad here was represented at this hearing and among the lumber fraternity A. L. Foster of the J. W. Thompson Company, C. B. Dudley of the Dudley Lumber Company, Jas. E. Stark of the J. E. Stark Lumber Company, and other representatives, appeared for the lumber shippers of Memphis. The commissioners gave no intimation in regard to final action in connection with this matter. The report will go before the entire commission and decision will be reserved until that time. However, the members of the trade here are encouraged over the statement made by Commissioner Clements that he was satisfied with the testimony of the representatives of the lumber industry. Messrs. Darnell & Taenzer appeared in connection with the reconsignment

rate as applied to logs, but the commissioners gave no indication of their feeling in regard to this matter. The reconsigning rate in Memphis at present consists of a reduction of one cent on lumber shipped from Memphis to northern and eastern points if the shipments are made within four months after the lumber has been sent to Memphis from some out-of-town point. The commission will hold hearings at other points before returning to Washington and before a decision will be reached in connection with this reconsigning practice as applied to lumber and other commodities.

Building operations in Memphis are on a very large scale. During the month of January building permits in excess of \$1,000,000 were issued and the officials of the Memphis Union Station report that they will take out a permit during February for the new Union station, which is to cost approximately \$3,000,000. All indications point to continued activity in building circles and the outlook is for record-breaking figures for this month. As a result of this activity, building material of all kinds is in excellent demand and prices are very satisfactory. All of the planing mills and those turning out interior finish are engaged at full capacity.

The J. W. Thompson Lumber Company has sold its mill at Berclair, Miss. The company has cut out most of its timber owned near that plant, there being only about 750,000 feet left. This was sold with the mill. The sale was made to lumbermen at Greenwood, Miss.

W. H. Greble, W. B. Morgan, Claude Moore, Frank May, Ralph May and other delegates from Memphis, who attended the annual meeting of the Hardwood Manufacturers' Association, have returned to Memphis. Mr. Greble is very enthusiastic over the meeting, which he declares was one of the most successful in the history of that organization.

The American Lumber Company was recently incorporated here with a capital stock of \$50,000. J. Lindsay Wells and others are the incorporators. Mr. Wells has been carrying on a business in hardwoods and yellow pine for some time, but decided recently to incorporate the business. It will continue to engage in this same line.

The committees appointed to raise the fund of \$50,000 to advertise the advantages of Memphis and to secure new industries for this city have succeeded in securing more than half of this amount and believe that they will have no difficulty in obtaining the remainder. A committee of forty has been appointed by the Business Men's Club from its own members and from members of the other commercial organizations of this city, who will have charge of the publicity campaign. A strong effort will be made to secure lumber and other wood-working enterprises, although bids will be made for industries of every character. It is believed that both the population and business of Memphis will be largely increased as a result of the work of this committee.

The Alabama Tile & Timber Company has been incorporated under the laws of Alabama, with headquarters at Birmingham, Ala. The capital stock is \$25,000. The company will deal in yellow pine, hardwood lumber and in cross-ties. Claude Nabors and H. C. Howell are the principal incorporators.

The "Rapids" has been purchased by the C. B. Hall Stave Company of Memphis from the Little Rock Packet Company, and will be used for carrying heavy timber and staves. The consideration was \$8,000. The boat will claim Memphis as its home.

The Minden Lumber Company has recently purchased property at Charleston, Ark., which will be converted into a large lumber yard.

The leading lumber firms in the North Memphis lumber district contributed from \$10 to \$50 each to the Memphis Fire Relief fund, a

subsidiary organization of the Memphis Fire Department. The contributions were made because of the excellent work done by the fire department in putting out the flames which damaged the holdings of the Crescent Lumber Company to the extent of \$20,000 and which also seriously damaged one of the warehouses of the Anderson-Tully Company. The North Memphis lumber district is considerably congested and but for the excellent work of the fire department the flames would have spread to the adjoining yards and greatly increased the losses.

A preliminary survey is being made from Cotton Plant, Ark., to Cache river, in Arkansas, for the purpose of transporting logs from White and Cache rivers' bottoms to Cotton Plant for manufacture into lumber. There is a great deal of timber in these bottoms which is practically inaccessible at present but which will be rendered available upon completion of this line.

The Dierks Lumber & Coal Company, De Queen, Ark., it is announced, has decided to build a large mill on its property at De Queen, to take the place of the one recently destroyed by fire. Work is to begin within the next two months.

M. A. Beavers and W. J. Smith have established a sawmill at Manson, Ark. It will be used for the manufacture of hardwood lumber and railroad ties.

The mill of Russe & Birgoss, Inc., will resume operations at an early date. The plant has been closed down for repairs and improvement since January 1. These will increase the capacity from twenty-five to thirty per cent. The plant will be in operation not later than the middle of this month.

There are four mills in process of erection here, including that of the Nickey Brothers Hardwood Lumber Company. The others are being erected by the East End Lumber Company, Gibson & Whitaker and J. E. Munal & Sons. Work is being rushed on them as rapidly as possible and they will soon be ready for operation.

The Queenstown Manufacturing Company, at the head of which is C. W. Quinn of Chicago, has begun operations at its plant at Birmingham, Ala., for the manufacture of office, house and bank fixtures. The company began with orders sufficient to keep the plant in steady operation for the next six months.

R. J. Darnell of R. J. Darnell, Inc., and W. S. Darnell of the Darnell-Taenzer Lumber Company, have returned from Terre Haute, where they went to attend the burial of their father, I. M. Darnell, who died some days ago at St. Petersburg, Fla.

J. R. Eakin has removed from Wesson to El Dorado, Ark., and launched the J. R. Eakin Lumber Company, which will handle both yellow pine and hardwood lumber at wholesale. He was formerly connected with the Fordyce Lumber Company, Fordyce, Ark., and later with the Edgar Lumber Company, Wasson, Ark., serving both in the capacity of sales agent. He is still a director of the latter company.

## NASHVILLE

Cheering reports are being received from Congressman Joseph W. Byrns as to the probabilities for a liberal appropriation for the continuation of work on Cumberland river. This is a feature in which Nashville lumbermen and all those in the great valley of the Cumberland are vitally interested and one they watch with alertness.

A special from Adams, Tenn., announces the destruction there by fire of the Adams Planing Mill. The loss was \$7,000, insurance \$2,000. The mill was owned by a stock company composed of M. A. Carnard, Tillman Carnard, Wash Carnard and W. H. Miller.

The Nashville Builders' Exchange has taken up the project of the builders putting in perma-

neat exhibits of their workmanship. Floor space has been allotted at headquarters for this purpose and the outlook for a most creditable showing is quite promising.

Col. F. M. Hamilton of the Indiana Lumber Company, after being with that concern for the past quarter of a century, has sold out his interests in the same, together with his son, J. A. Hamilton, and the two have organized the Hamilton Lumber Company. The office of the new company is the one for so long occupied by the Indiana Lumber Company. Col. Hamilton is a native of Indiana but came to Tennessee in 1877. He has continued to forge to the front in the local race for industrial supremacy. The new president of the Indiana Lumber Company is I. P. Mattingly. He is from Indiana and is the son of C. T. Mattingly, one of the principal stockholders in the Indiana Lumber Company. The younger Mattingly has been identified with the local business for some years. The Indiana Lumber Company will continue its business as a wholesaler of hardwood lumber and as a manufacturer of hardwood dimension stock. The company has a large and well equipped planing mill and will do a large retail business as well as wholesale.

With the name of John W. Love on the lips of many members of the Board of Trade, the directors of that organization will this week go into the election of a new president to serve during 1910. Mr. Love is in no sense of the word a candidate for the honor, not even is he regarded as being a receptive candidate, but the fact that many of the members have urged him to allow the use of his name shows the high regard in which this sterling young Nashville lumberman is held in his native city.

The Old Woman's Home of which the late John B. Ransom was a director, has through its board of directors adopted resolutions of tenderest sentiment, honoring his memory and deploring his untimely taking away. Arthur Ransom, younger brother of John B. Ransom, has, as previously stated, been elected to most of the offices held by his brother and in an able way he is taking up the reins of responsibility and rendering excellent account of his stewardship.

### CHATTANOOGA

Fred Arn of the J. M. Card Lumber Company has returned from a trip to the East. While away he attended the meeting of the National Lumber Exporters' Association at Baltimore.

C. A. Johnson, manager of the Forest City Manufacturing Company, Forest City, Ark., was in the city recently purchasing machinery for his mill. Mr. Johnson has great hopes for the lumber business for the year 1910.

B. F. Williams of Welch, W. Va., passed through the city a few days ago returning from inspecting a lumber tract in Lawrence county, Alabama.

Ralph Grey was a visitor here recently looking after the interests of the Ferd. Brenner Lumber Company of Cincinnati.

The Williams & Voris Lumber Company has amended its charter and increased its capital stock from \$25,000 to \$110,000. The directors are S. A. Williams, Thos. Williams, M. J. Voris, A. P. Voris and A. W. Watring.

F. W. Blair was called home from his mill in North Georgia last week on account of the death of his mother. Mr. Blair reports business good along his line.

### LOUISVILLE

The regular meeting of the Hardwood Club held January 25 was devoid of interest, except for a discussion of the rules, suggested by the Interstate Commerce Commission, to be put into effect in the state of Kentucky. These rules were read and Mr. Norman, president of the club, was appointed a committee of one, to appear before the commission at its meeting February 3 and not only indicate the Hardwood Club's support of the new ruling, but also suggest to the Railroad Commission of Kentucky that the same rules be put in effect throughout the state.

Owing to the convention of the Hardwood Manufacturers at Cincinnati, it was moved and seconded that the regular meeting of the club, to be held February 1, be postponed to the evening of the next regular meeting.

Barry Norman, president of E. B. Norman & Co., and Graham Brown of W. P. Brown & Sons Lumber Company were the first to leave for the convention, and the writer was very much surprised to find Mr. Norman at his office Wednesday afternoon—he had expected to have to go to Memphis that evening and had time to take in but one feature of the opening exercises, that was the moving picture display by Mr. Gibson of the HARDWOOD RECORD. He was especially pleased that he had the opportunity to see the pictures, as he enjoyed them immensely. Mr. Norman said that the view he considered best was that of the Yellow Poplar Lumber Company's operations in West Virginia. Mr. Gibson also showed some very interesting views, taken along our part of the Ohio river.

Mr. Norman stated that the big business of January had broken their stock pretty badly, and that everything, high and low grades, are moving well. It is evident that the firm is very busy. The box business is booming, especially as the whiskey people are going after business.

W. P. Brown & Sons Lumber Company is working hard and Mark Brown could not get away until Tuesday evening. He said that he would have to run the business over the long distance while in Cincy.

A. E. Norman of the Norman Lumber Company and E. L. Davis of the Edw. L. Davis Lumber Company expected to take Mrs. Norman and Mrs. Davis to the convention, but one of the ladies was not feeling well, so the other would not take the trip without her. Mr. Norman was very busy, getting things in shape for this little vacation and only had time to say that he is well satisfied with business. Mr. Davis reports that all grades are moving as fast as the company can turn them out, and that he looks for a big trade as soon as the weather opens up for good and at advancing prices in the lower grades.

H. J. Gates and Ed Shippen of the Louisville Point Lumber Company left Wednesday night to attend the convention. They have just received a half million feet of hardwood and are keeping their men hustling. The water has not bothered them to any great extent, except that it has the ground soggy and the men find handling hard. Business is good and the firm is well satisfied with the January trade.

Harry Kline of the Louisville Veneer Mills was the firm's representative at the convention. The Colonel, D. E., could not get away, as he had been on several trips lately and had important affairs to attend to at home. He reports all grades are moving.

The following is a copy of an announcement recently made to the trade by the Wood Mosaic Flooring & Lumber Company of New Albany, Ind.: "Effective January 15, 1910. At the last meeting of the directors of the Wood-Mosaic Flooring & Lumber Company it was decided to shorten the official name of the company. We are resuming the original title as used when the business was established in Rochester, N. Y., in 1883. In future the official style of the company will be the Wood-Mosaic Company.—W. A. McLean, President."

Because of business at home Mr. McLean was unable to attend the convention. The Wood-Mosaic Company is running full speed and is well satisfied with conditions in general. Mr. McLean calls attention to the very small amount of plain oak to be had and expects higher prices soon. The firm has added an automobile to its assets, and the RECORD's correspondent was

benefited by it recently; the machine was placed at his disposal in making the balance of his calls in New Albany.

Mr. Knight of the Indiana Veneering Company has just recovered from a severe case of la grippe. Although not very strong, yet he is back at his desk, feeling that business demands his attention. The last three months have been the best in the history of the business. The firm has just finished putting in a new boiler. It is increasing its capacity in anticipation of a continuation of the big business it is now enjoying. Prices have been increased since the first of the year.

The Roberts & Connor Veneering Company, New Albany, Ind., is going along in a steady fashion, keeping up with the game. Mr. Roberts is in the West at present, and Mr. Connor stated that the reports from the North are that the furniture people are looking for a poor year.

Following a discussion which lasted many hours at the Galt house February 3, the proposed new code of demurrage rules, drawn by the Interstate Commerce Commission, was taken under advisement, and action was postponed until February 17. The only opposition was directed by the coal people, who object to being compelled to unload a car in less than three days. The rules are now in use in Indiana and all reports are to the effect that they are meeting with success.

An act has been introduced in the Kentucky Assembly, providing that compensation shall be paid by owners of timber on streams to persons who secure such timber adrift, and return it to the rightful owner and take up, to have a lien upon same until sold.

Although there were only 88 building permits taken out in January, 1910, as compared with 121 in January, 1909, the total outlay was much heavier. The estimated value of buildings placed under course of construction was \$271,956, against \$132,830 for January of 1909.

The Mountain Central Railroad will be extended a distance of ten miles from Campton to Hazel Green, opening up to the market a fine boundary of timber and coal lands. The right of way was secured last week.

A twenty-five-mile extension of the Wasioote and Black Mountain Road will be built from Pineville, through Bell and Harlan counties, to Harlan, Ky. The contract represents over a half million dollars. A tunnel 600 feet long will be one of the features. Two thousand men will go to work on the contract which will be rushed through in seven months. This is the most important move taken by any railroad in years so far as the lumber business is concerned, for it will penetrate rich coal and timber lands.

The Rivers and Harbors appropriation bill, which it was expected would be ready to be reported to the house February 8, may not be completed for some days. In all probability it will carry an appropriation of about \$63,000,000 for the Ohio river, to be divided into annual appropriations of about \$5,000,000. Louisville and Kentucky interests in general will be well pleased to see something definite in sight after the years of hard work that they have gone through to secure their property and shipping interests from annual damage.

It is estimated that not less than \$25,000 loss resulted from present Ohio river conditions. This does not include the cost of protecting the big coal fleet above the city, which was in the neighborhood of \$10,000.

The other rivers, in some cases just as important to lumbermen as the Ohio, to be benefited in the appropriations, are: The Kentucky, \$165,000; Tennessee, \$25,000; Cumberland, \$400,000; Big Sandy, \$125,000; Green River, \$750,000.

Work has already been begun on Paducah's famous winter harbor, which is very important to shipping interests below us.

The Inman-Pierson Company has been incorporated with a capital stock of \$100,000, giving

Louisville a new furniture factory and a veneer mill that will furnish the line, that is complete in every respect. The board of directors are: Charles W. Inman, Wm. A. Pierson, H. R. Whiteside, O. G. Hardin and James R. Duffin. Chas. W. Inman is the president, H. R. Whiteside, vice-president, and Wm. A. Pierson, secretary and treasurer.

### ASHLAND

The Wright-Saulsberry Lumber Company started its band mill last week. Enough timber was received on the tides to run the mill steadily for several months. Giles Wright, president of the company, attended the meeting of the Hardwood Manufacturers' Association in Cincinnati last week.

In the January 25th issue of the RECORD it was reported that the name of the Wright-Saulsberry Lumber Company had been changed to the Giles Wright Lumber Company. This was an error, as no change was made.

W. H. Dawkins and W. E. Berger, of the W. H. Hawkins Lumber Company, attended the meeting of the Hardwood Manufacturers' Association February 1, 2 and 3. They report business very satisfactory and advise that the band mill is operating on full time. Some very fine poplar timber was received on the tides of last week.

Charles A. Miller, of this city, who is now sales manager for the J. W. Johnson Company, Huntington, W. Va., has organized a new lumber company, of which he and G. W. Crosier, of Huntington, W. Va., are the chief promoters. They have purchased a tract of 2,000 acres of timber on the Greenbrier river, about twenty miles above Roncove, W. Va. Mr. Miller at present is on the grounds laying out the location for a commissary building, hotel, and a number of dwelling houses for employees. The company will construct a suspension bridge across the Greenbrier river and will haul its logs to the mill which it is building on the C. & O. Railroad. In order to do this, it will also build about six miles of railroad to its timber. Mr. Miller will retain his position with the J. W. Johnson Company and Mr. Crosier has resigned his position with the same company and will be general manager for the Miller-Crosier Lumber Company, which will be located at Anthony, W. Va. Both gentlemen are experienced lumbermen in every respect and their undertaking is an assured success.

R. G. Page, secretary of the Licking River Lumber Company, attended the Hardwood Manufacturers' meeting at Cincinnati and reports one of the best meetings the association has ever held. The company advises business is very satisfactory, and reports the receipt of large and desirable orders for car stock at good prices, and more orders for oak flooring than it is able to handle. The company has just completed its new Emerson dry kiln, at its flooring plant at Huntington, W. Va., which will increase its capacity. The band sawmill at Farmers, Ky., is being operated full time and the company is shipping large amounts of lumber, car stock and construction oak.

The Yellow Poplar Lumber Company started its band mill at Coal Grove the first of this month with a large supply of timber on hand and expects to operate steadily for several months. On the tides of last week it received a large supply of poplar timber which was let through the new splash dam in breaks of the Big Sandy a short time ago. W. A. Crawford was in attendance at the Hardwood Manufacturers' Association's meeting at Cincinnati last week.

The Kenova Poplar Manufacturing Company, of Kenova, W. Va., has closed a deal with the Lineham Lumber Company, whereby it comes into possession of the machinery which the

latter company had in its flooring plant at Cattslettsburg, Ky. It is the intention of the Kenova Poplar Manufacturing Company to remove all this machinery to its present location in Kenova and operate in connection with its bevel siding, moulding, etc., and manufacture hardwood flooring.

### ST. LOUIS

Building operations for January, according to the report of the building commissioner, increased more than \$300,000 over the corresponding month in 1909, the total operations for the month being \$1,461,000, as against \$1,124,219 for January of 1909.

The following is a report of the movement of lumber at this market during January: Receipts by rail during January, 1910, were 12,982 cars; during January, 1909, there were 10,423 cars, an increase of 2,559 cars in 1910. Shipments by rail during January, 1910, were 8,979 cars; shipments by rail during January, 1909, were 7,309 cars, an increase of 1,670 cars during this year. Owing to the river being closed by ice during the entire month, there were no shipments or receipts by river. Last year the water was low and there were no receipts or shipments.

The lumber inspected and measured by the Lumbermen's Exchange of St. Louis during January was as follows, as reported by Secretary Bush:

Plain oak .....	163,456 feet
Quartered oak .....	57,063 feet
Poplar .....	105,563 feet
Walnut .....	18,486 feet
Ash .....	42,042 feet
Cypress .....	61,405 feet
Elm .....	39 feet
Hackberry .....	90 feet

Total ..... 448,144 feet

A. J. Lang was elected treasurer of the Lumbermen's Exchange of St. Louis at a meeting of the board of directors held a few days ago. The secretary will not be elected until February 11, when the board of directors will hold another meeting. It is pretty certain that A. B. Bush, the present secretary, will be elected to succeed himself, as he has been a good and faithful secretary for the past several years. The exchange adopted the following resolution:

Whereas, The directors of the Lumbermen's Exchange of St. Louis learn with profound sorrow of the death of George W. Stoneman, who for some years was a highly esteemed member of this exchange; and

Whereas, His integrity and straightforwardness in business and his manly and lovable character endeared him to all who knew him; therefore be it

Resolved, That in the death of George W. Stoneman the lumber trade has lost a valued member and the community a citizen whose high standard in both business and civic life should be an example to all; and be it further

Resolved, That the deepest sympathy be extended to his bereaved wife and family and that a copy of these resolutions be spread upon the minutes of this exchange.

THOMAS E. POWE,  
ROLAND F. KREBS,  
FRANZ WALDSTEIN.

An involuntary bankruptcy petition against the Grand Valley Lumber Company was filed a few days ago in the United States circuit court. The petitioners and their claims are Great Southwestern Lumber Company, \$966; Ozan Lumber Company, \$399, and the Behrens Lumber Company. The death of J. N. Steber, president of the company, which occurred a short time ago, was the cause of the filing of the petition.

Henry Hafferkamp, one of the best-known St. Louis lumbermen in the local trade, died on January 24, in the fifty-ninth year of his age. He had been connected for forty-four years with the John A. Holmes Lumber Company and for many years was the vice-president of the company. He began his connection with the company when he was but fifteen years old.

Stephen R. Browne, cashier of the Garetson-Greenson Lumber Company, who was taken down suddenly with appendicitis on December 29 and immediately operated upon, is getting along nicely. Mr. Browne has been connected with the company for the past twelve years, and has many friends who are glad to hear of his prospective recovery.

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, is in the South on business. Before leaving he said that the Bennett company was doing a fine business on all items on the list, especially oak. This item has been in big demand and the facilities of the Bennett company enables it to supply almost all demands made. Good prices are being obtained.

Among the visitors in St. Louis recently was S. C. Major of the S. C. Major Lumber Company of Memphis. Mr. Major formerly resided in St. Louis and was connected with the Steele & Hibbard Lumber Company.

After spending several weeks on the Pacific coast, W. W. Dings, of the Garetson-Greenson Lumber Company, has returned. He had his family with him on the coast and left them pleasantly located at Santa Barbara, where they will spend the balance of the winter. He brought back several large orders for car material.

George E. Cottrill, secretary of the American Hardwood Lumber Company, says inquiries are coming in nicely since the first of the year. Orders are quite numerous also and the prospects are good for a big trade in the near future.

George Luehrmann of the Chas. F. Luehrmann Hardwood Lumber Company says orders have been plentiful the past few days, and are coming in more freely all the time. He looks for a nice trade in the spring.

William Lothman of the Lothman Cypress Company says the sales of cypress are increasing in number right along. Prices, too, are going up.

### LITTLE ROCK

At a meeting held here recently by representative lumbermen of the state, it was decided to build a Hoo-Hoo temple and office building devoted exclusively to lumber interests. A company capitalized at \$250,000 is to be incorporated and such men as A. C. Ramsey of Nashville and C. T. Abeles of this city comprise the finance committee. Stock to the amount of \$11,000 was taken at the initial meeting. The building is to be a nine-story, fireproof structure. Among other things, it is believed the erection of such a structure here, devoted purely to the interests of the lumber trade, will bring the general offices of the hardwood men from Memphis and other points to this city.

An order issued by the state railroad commission, requiring the St. Louis, Iron Mountain & Southern Railway Company to install the "rough material" rate on its lines within ten days, or suffer prosecution, is expected to bring results beneficial to the lumbermen. All roads have installed these rates except the Iron Mountain, which still insists on the old plan of "re-bating on re-shipment."

A big deal has been closed by the Henry Wrape Stave Company of Paragould, whereby one of the finest bodies of white oak timber in eastern Arkansas comes into its possession. The tract contains 2,285 acres, situated fifteen miles south of Stuttgart, in Arkansas county, and was purchased from M. A. Gauldin and Martin L. Pierce of Trimble, Tenn. The consideration was \$47,985, or \$21 per acre. The timber will be worked up for the company's big plant at Paragould.

The Heber Hardwood Company has been incorporated at Heber, in Cleburne county, with a capital stock of \$25,000. It will engage in the

manufacture of buggy, wagon and implement stock and veneers. The incorporators are: President, R. T. Martin, vice-president and general manager, W. B. Baker; secretary, Mortimer Frauenthal; treasurer, H. F. Fox.

The John Deere Plow Company of Arkansas has been chartered and has opened for business in this city. Capital \$10,000. Incorporators are Charles W. Mansur and Michael J. Burke, St. Louis, and J. W. and P. F. Carey, Little Rock.

The increase of capital stock of the Ft. Smith Traction Company, as certified to the secretary of state, from \$1,600,000 to \$6,500,000, is taken as an indication of extensive additions and improvements by that company at Ft. Smith.

Contrary to a report recently gaining currency that the Chapman-Dewey box factory at Jonesboro had suspended business, that company will reopen for active operations within a few months, according to authentic reports.

The Iron Mountain Railway Company, it is authoritatively announced, will on March 1 increase its shop force to the full complement of 1,800, instead of 1,600, as now. It is also understood that the additional car shops, 150 by 500 feet floor space, planned prior to the panic, are to be built this year. This will enable the handling of 100 cars at one time in repair work, or more than twice the present number.

The annual report just made by the Ft. Smith Wagon Company shows 1909 to have been the best year in the history of the company. This is the largest manufacturing concern in Ft. Smith and one of the largest of its kind in the South. Among the stockholders at the annual meeting just held were: S. H. Velle, president, Kansas City; William Butterworth, first vice-president, Moline, Ill., and T. N. Peck, second vice-president, Omaha. W. H. Johnson, local manager, entertained the visitors at a dinner at the Goldman hotel.

### MILWAUKEE

P. E. Gilbert of the S. C. Major Lumber Company of Memphis, Tenn., recently called upon the Milwaukee hardwood trade.

The present mild weather is hurting logging operations in various sections of the Wisconsin lumber country. The winter thus far has been very favorable in most sections of the state, with the exception of Ashland, and lumbermen say that the total cut will be large.

Several changes have been made in the operation and management of the plants of Joerns Brothers Manufacturing Company, manufacturers of various furniture lines. The plant at St. Paul, Minn., has been discontinued and the manufacturing will be confined to the plants of the company located at Sheboygan and Stevens Point, Wis. These will be under the management of C. A. Joerns. The wholesale business at St. Paul will be in charge of Paul Joerns.

The Mandt Wagon Company will expend nearly \$75,000 on new structures at its plant at Stoughton, this summer. Among the buildings to be erected will be a modern, three-story blacksmith shop of fire proof construction. Machinery is now being installed in the company's woodworking plant.

The new box factory of Joseph Dietzler at Hartford is now in operation. A specialty is being made of cheese boxes.

Ralph Wells, son of John W. Wells, the millionaire lumber manufacturer of Menominee, Mich., was married at Whitewater, Wis., recently to Miss Frances Winchester of that city. The couple will reside at Burnt River, Ont., where the groom is general manager of the large interests of the J. W. Wells Lumber Company at that place.

The Darling Land & Timber Company of Milwaukee has been incorporated with a capital

stock of \$5,000 by Jesse Darling, R. N. Tufford and E. L. Muther.

Cyrus H. McCormick, president of the International Harvester Company, was up from Chicago recently to attend the banquet which he gave the operating and sales managers of the company's Milwaukee plant. It was hinted by Mr. McCormick that the Milwaukee branch might be enlarged within the near future.

The Racine Stool Manufacturing Company has been incorporated at Racine with a capital stock of \$20,000. The company has leased the plant of the Belle City Sash & Door Company and will manufacture piano stools, benches and racks. Sol. Grollman, former superintendent of the piano stool department of the Racine Manufacturing Company, is the president and manager of the new company.

The Racine Manufacturing Company at Racine has erected several temporary dry kilns on the site of its former plant destroyed by fire. Building operations on the plant proper will begin in the spring.

The Callapoola & Rock Creek Timber Company has been incorporated at Washburn to manage the timber holdings in the West owned by residents of Washburn, Ashland, Iron River and other nearby points.

Twenty Wisconsin representatives of the North Star Lumber Company of Minneapolis, Minn., recently met in social gathering at the Galloway hotel at Eau Claire, Wis., with George P. Thompson and H. C. Wolforth of the general offices of the company.

The new sawmill of the Scott & Howe Lumber Company of Hurley has been placed in operation. The new plant replaces the one destroyed by fire last summer. It has a large daily capacity and is modern in every respect.

The sawmill of the Stearns Lumber Company at Washburn is being thoroughly overhauled preparatory to a busy run this season.

The annual meeting of the Webster Manufacturing Company, chair manufacturers of Superior, resulted in the election of the following: President, A. W. Highfield; vice-president, H. V. Gare; secretary, T. G. Alvord; treasurer, Grant Graham.

Charles P. Romadka, founder of the Romadka Brothers Company, a trunk manufacturing concern of Milwaukee, recently passed away at the age of sixty-seven years.

### MINNEAPOLIS

Hardwood lumbermen here who handle their own logging report that there has been little unfavorable weather in the past month, and their operations in the Wisconsin woods have gone ahead very successfully. There has been plenty of snow, which is essential in the territory where timber is so scattered as much of the hardwood now is, and yet it has not been excessively cold. It has been rather soft at times and has threatened to end hauling, but the nights have always brought a good freeze. A good quantity of logs is being put in, as the present high prices of birch and basswood are very attractive.

The local building movement continues without any sign of abatement. In fact, after the records had all been broken by the 1909 figures, Minneapolis began the new year with another increase for January, showing up with permits for buildings to cost \$602,395, compared with \$377,840 for the same month of 1909.

A big deal in the door and millwork trade has been put through here, in the sale of the City Sash & Door Company's wholesale yard, warehouse, trademark and good will to the Carr & Collier Company, just incorporated. The new concern is an offshoot of the Carr, Ryder & Adams interests of Dubuque, Ia., and the deal was carried through by J. T. Carr. The plant

here will be managed by W. E. Cullen, who has been identified with the same concern in Dubuque.

Scott W. Chambers, representative of the Northwestern Lumber Company of Stanley, Wis., was here during the week of the retailers' convention, in the interests of its hardwood and hemlock stocks.

### SAGINAW VALLEY

In the lumbering districts north of the Saginaw river the snow is rather deep in many localities for active operations in the woods. The large operators who have facilities for making ice roads manage to get along fairly well, but the smaller concerns have had to quit business temporarily. During the early part of the winter the weather was not sufficiently cold to make a solid bottom and the swamps and low grounds did not freeze. Conditions in that particular have somewhat improved.

The lumber output of the Saginaw river mills increased last year on all grades. During the early months the industry was slow, pending the disposition of the tariff, but the fall months noted a marked expansion all along the line and the year closed with trade in the best condition since 1907. The hardwood output of the mills during the year was:

	Feet.
W. D. Young & Co.	22,659,549
Campbell-Brown Lumber Co.	4,327,000
Richardson Lumber Co.	5,000,000
Kneeland, Buell & Bigelow Co.	9,182,996
Kneeland-Bigelow Co.	9,256,057
Knapp & Scott.	2,509,000
S. G. M. Gates Estate.	1,834,000
Bloss & Van Auker (Saginaw)	8,000,000

Total ..... 62,768,602  
The hardwood output in 1908 amounted to 46,147,974 feet.

The Kneeland, Buell & Bigelow Company has let the contract for the installment of a new battery of four boilers which will be put in early in April.

The Island Mill Lumber Company at Alpena is installing three new boilers. As soon as the work is finished, the mill will be started cutting hardwood, a "hot-water" pond having been established.

The Richardson Lumber Company at Alpena is also installing a new battery of boilers and making other extensive repairs to its plant.

The new hardwood flooring plant of the Hanson-Ward Company at Bay City has been finished and is in operation. It is a modern plant and is finely equipped. The timber comes down the Mackinaw division of the Michigan Central.

The Kneeland-Bigelow Company last week sold 8,000,000 feet of maple flooring, to be cut this spring, to the S. L. Eastman Flooring Company of Saginaw. A like quantity was furnished the Eastman people last year.

The Campbell-Brown Lumber Company's mill at Bay City is in operation, cutting lumber for Ross & Wentworth.

W. D. Young & Co. are having a fine run. Their plant is in motion day and night. The market for flooring is active and the firm is up to the neck in business. Mr. Young says it is only a question of getting the stuff to the customers fast enough. The flooring trade has picked up marvelously during the last sixty days.

John Widdicomb, founder and active head of the John Widdicomb Company, dropped dead from rheumatism of the heart Feb. 5 while at work in his office. He operated two of the largest furniture factories in Grand Rapids and was one of the oldest manufacturers there.

The Grand Rapids board of trade held its annual election and banquet Feb. 1. The new directors include Chas. W. Garfield, president of the Michigan Forestry Association, and Edwin F. Sweet, who is well known to lumbermen.

## CADILLAC

Edward Fitzgerald, formerly manager of the Mitchell Brothers Company of this city, recently met with an accident in Grand Rapids. While driving home with a friend he attempted to cross the street when the runners of the cutter skidded into the street-car track, turning over the vehicle and throwing both men into the street. Mr. Fitzgerald struck the pavement on his side and had to be taken home in a conveyance. It was found that there was a fracture of the left hip. Internal injury is also feared, but recovery is expected. The friend alighted on his feet and was not injured.

The ladder factory in connection with the Cummer Manufacturing Company's plant has resumed operation after a shut-down of about two months; a full crew is employed and everything is running smoothly.

H. H. Yohe, formerly general secretary of the Y. M. C. A. here, has succeeded Walter E. Curry as assistant to M. E. Thomas in the sales department of Cobbs & Mitchell, Inc. Mr. Curry was appointed assistant to Henry Ballou in the operating of the Cobbs & Mitchell interests.

Charles T. Mitchell, vice-president and general manager of the Mitchell Brothers Company, sailed from New York February 6 on a month's trip to the Bahama Islands and the West Indies. He was accompanied by Gaius Perkins of Grand Rapids.

Luther, Mich., is experiencing an old-fashioned winter such as it has not seen for many years, and in consequence lumbering is being pushed to a greater extent than usual. At this point as well as at many others in the state, the farmers are picking up their remaining timber and hauling it into the local mills. It is expected that next year this lumber will result in a considerably increased acreage of farm crops. Besides the saw and planing mill, it has a good flour and feed mill operated by water power, and a well patronized creamery, a large pickling station and two potato warehouses.

The Manistee & Grand Rapids Railroad has built one of the finest depots in that section of the state, and a new schoolhouse has replaced the one which was burned a short time ago. Although the old pine days are gone and the money does not come in as fast as in former years, yet Luther is entering into a period of true prosperity and its citizens are progressive and ready to push things along.

The East Jordan Lumber Company's flooring plant has shut down until April 1, during which time extensive repairs will be made. Among them the long bridge connecting the east and west sides will undergo extensive repairs while the lake is frozen.

The iron furnace at East Jordan which has been in the course of construction for two years has started. This furnace has a capacity of eighty tons per day, and started without a hitch. The chemical plant running in connection with the furnace has also started, and it is said to be the most modern and best equipped plant in the United States. Its capacity is 125 cords of wood per day.

If present plans carry, the Board of Trade of Traverse City will have a home of its own and it is stated that R. Floyd Clinch of Chicago will put up \$6,000 providing the Traverse City business men raise \$1,500.

Dollarville in Luce county is almost a place of the past. The Danaher Hardwood Lumber Company having completed its cut in this section has sold its mill of that place to Wickes Brothers of Saginaw and the plant is now being demolished preparatory to its new location. With the wrecking of the mill, Dollarville, once a thriving and prosperous town, will cease to exist. Most of the former employees already have scattered to other fields and only a few families now remain in the little village.

## DETROIT

Pleasing to hardwood men have been the frequent announcements recently of new automobile plants to be located in Detroit. During the past week the Van Dyke Motor Company, Hudson Motor Car Company and the Lozier Company announced that they would build big plants in this city. The Van Dyke company is a million-dollar corporation, the Hudson \$500,000 and the Lozier Company two millions. These plants taken along with the \$6,000,000 plant to be erected this spring by the General Motors Company and the great number of smaller automobile concerns which will locate in this city mean a big wave of prosperity in which hardwood dealers will share to a large extent.

In addition to the automobile plants, the Yeoman Body & Box Company announces that it will engage in the manufacture of automobile bodies. Extensive improvements will be made to the plant, which will be greatly enlarged. The company figures on an output of one hundred automobile bodies a day at the start. At present the whole energy of the plant will be devoted to the production of wood bodies, for which the concern has the most modern equipment. Later metal bodies will be included in the output. John T. Lombard and John G. Rittenhouse of the hardwood lumber firm of Lombard & Rittenhouse are members of the Yeomans company.

At the annual meeting of the Dwight Lum-

ber Company last week the following officers were elected: President, Edwin Lodge; vice-president, W. M. Dwight; treasurer, G. H. Satterlee; secretary, John C. Lodge; assistant secretary, Horace E. Carter; directors, Edwin Lodge, W. M. Dwight, G. H. Satterlee, John C. Lodge and Frank W. Blair. Horace E. Carter, who is made assistant secretary, is the son of the late Mr. Carter, who was secretary of the company.

A number of Detroit hardwood men attended the eighth annual meeting and banquet of the Hardwood Manufacturers' Association at Cincinnati the first of the month. Among them were Thomas Forman, E. W. Leach and J. M. Clifford.

William E. Brownlee of the Brownlee-Kelly Company has just returned to the city from a trip through the lumber regions of the Lake Superior district. Mr. Brownlee reports a great demand for hardwoods in the North.

"The price of poplar and ash is steadily mounting upward," says a local automobile manufacturer, "and it is becoming a hard matter to obtain the woods without paying a stiff price. For instance, poplar that should be about \$75 a thousand has mounted in price to \$125 and \$150 a thousand. The stuff has been pretty well cornered at that and a manufacturer who fails to look sharp will have to pay the difference. All kinds of lumber that enters into the automobile has advanced in price to a remarkable extent."

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

## CHICAGO

The local trade seems to depend entirely on personal conditions. In some cases the outlook is rosy, orders brisk and prices good. Others take a gloomy and pessimistic view of business; they can't get their prices, or have to pay the mill men too high a figure, or are hampered by poor transportation.

On the whole, however, the dominant idea seems to be that the lumber business is on a pretty fair footing, although not where it was expected to be by this time.

Mill men explain the high prices of which the jobbers complain by saying that they can get more for their lumber in other centers and consequently sell their stock elsewhere.

The general tendency of prices is upward, though in a conservative way. Upper grades of birch are still scarce, and it is predicted that this condition may result in an overproduction of logs to fill the demand, and consequently a break in price later on.

The trade in maple is brisk and the stock in the better grades is low and prices good. Basswood maintains the same rather slow movement that it has shown for several months. Prices are about as usual.

No radical change is reported in the condition of either red or white oak—they are both advancing steadily in price, and are sure to hold their own.

Cherry is not as brisk in some quarters as usual, but prices are good.

A local jobber says that wide panel cottonwood, 22 in. and up, is worth in this city \$75-\$85. It is being substituted for poplar in automobile and carriage bodies, for which it is acceptable to some manufacturers. With the present enormous production of automobiles the wonder is just how long it will be before the public appetite is satisfied.

The flooring people report a solid market and reasonable prices on oak and maple flooring.

## NEW YORK

The hardwood market at New York continues to show good strength throughout the list, more particularly in good grade lumber, with low-grade stock moving quite freely. Prices, however, are not quite as strong. The current conditions in all lines in the local buying trade are fair and the general feeling seems to be unanimous that the spring and summer trade will witness a good consumption of lumber in all channels. There seems to be a little speculation as to just what the early spring market will hold forth in the matter of low-grade stock, the belief being that that will depend largely upon the amount of production. Every holder of good grade hardwood lumber should realize a good profit and a high range of prices for his wood. Stocks are by no means plentiful and this is especially true of the local manufacturing and consuming trade. Hence with any kind of a development in consumption the spring market will be of a very satisfactory character. There is no reason why there should not be good volume of low-grade consumption if business develops anything like the proportions which seem likely, so that the best information that can be given at this time is for the manufacturer or wholesaler to meet conditions of the market from now on exactly as they appear and to be content to dispose of such stock as the market will absorb at proper values, holding the balance of his stock in reserve for the early spring trade which now seem promising.

## BUFFALO

Hardwood lumber is a good asset and the fact is well known to the consumer as well as the jobber, for there is demand for it in all directions, both for immediate delivery and on time. The plan of the yard dealer has been not to push trade much of late, as it costs so

much to handle lumber this winter, because of bad weather conditions. Prices are strong and indications point to an advance all along the line as soon as spring opens. The demand is greatest for oak, with poplar, chestnut and birch following. Maple has done well all winter and if one has elm and basswood they move. Ash is fairly active and there is demand for cherry. Buffalo stocks are about on a par with a year ago.

### PITTSBURG

The close of the inventory season is bringing to light several important points in the hardwood business. One is that both retailers and manufacturers have unusually small stocks for this season. Another point is that stocks of hardwoods at the mills are very low. Dry hardwood in many places is practically exhausted. One reason for this is that severe winter weather has crippled sawmill operations greatly since December 1. Deep snows, freezing which stopped all water supply and general difficulty in getting around in the woods made logging and sawing so expensive that many concerns have shut down their plants until March 1. Hardwood buyers are beginning to realize the gravity of the situation, and are showing more willingness to pay increased prices for good hardwood than they did three months ago. Full list prices are demanded on everything in the hardwood line; in a number of cases good premiums are asked for stock which can be moved quickly and is in first class condition. The gist of the whole matter is that the hardwood business is going to show a degree of speed and determination this spring which has not been evident in lumber dealing for two years. In the Pittsburgh district railroad and industrial operations are coming forward in more than double the number and of much greater importance than last year. House building is a problem as yet to be determined, for at present there is none on hand. Manufacturing operations, however, are showing up well and purchasing agents are getting busy locating all kinds of hardwood lumber which is dry enough to be available.

### BOSTON

A decidedly firm feeling is found in all branches of the hardwood lumber business. Demand is gradually improving and higher prices are being quoted. In several instances recently, buyers have been obliged to pay advances of one to three dollars a thousand over prices quoted them a few weeks ago. Offerings of desirable selections in many instances are very small and buyers find it difficult to pick up just what they want when they need it. Manufacturers state they are constantly in request for certain grades and thicknesses from different dealers, indicating that some buyers are trying in several places at a time to find just the stock they require.

Furniture manufacturers have been busy showing their sample lines at the various expositions and have booked some good orders. Their stocks of lumber are not large. The manufacturers of interior finish are not so busy as they were, although some still have a fair amount of business on hand. Plain and quartered oak is firmer. Whitewood has developed considerable strength. Higher prices have been paid.

### BALTIMORE

While there have been no important developments in the hardwood trade of this section, the members continue to feel hopeful, encouraged by a steady increase in the demand and number of inquiries being received. The range of values is moving upwards and unless present indications are misleading, the spring and summer will bring results satisfactory to the manu-

facturer and dealer. The competition for stocks at the mills keeps up, many of the intending buyers being exporters, who feel that they will be called on to furnish comparatively large quantities of lumber and want to get into a position to meet the demands upon them. The domestic trade is also well represented, and the producers are experiencing a most acceptable degree of prosperity. Furniture factories and other buyers are in the market for moderately large quantities of lumber, and though the yards are not rushed, they are kept busier than during the greater part of last year.

The reduction in the common grades has progressed, and the supplies, though still quite large, cannot be said to exert a depressing effect upon the market, while the better grades are almost entirely cleaned up at the mills. The latter have not been able to run all the time because of bad weather conditions, and the production has hardly kept pace with the consumption. The feeling among the exporters in particular is expectant, and they are buoyed up by reports of a material decrease in the holdings abroad. These are said to have become so thoroughly depleted of their higher grade planks as to call for replenishing. This is evidenced in the augmented prices which the foreign buyers are willing to pay. The elimination of the British parliamentary elections as a cause of business stagnation is also expected to have a good effect, and an advance in the quotations is looked for. The destruction of the Eisenhauer-MacLea Company's large stock of fine hardwoods, some of them having been under cover, seasoning, for years, will be seriously felt in the local trade.

### NORFOLK

The market for hardwood continues heavy, especially in the higher grades of oak. Prices have an upward tendency, and orders are being booked at satisfactory prices. The lower grades are in small demand at present. The call for good poplar is exceptionally strong. On the whole, indications are that 1910 will be one of the most successful years that hardwood people have known for some time.

### CLEVELAND

The situation in the hardwood market here has not changed much during the past fortnight. The call for hardwoods for manufacturing purposes is quite brisk. The automobile trade continues to use up all the wide clear poplar in sight, while the demand for good quartered and clear oak for furniture is also good.

Owing to the continued wintry weather, building work is at a standstill. A vast amount of high-class building is to be done in Cleveland this summer, and it is expected that the call for hardwoods in doors, trim flooring and other finish will be unusually heavy. Housebuilders say that prospective buyers and tenants are demanding hardwood floors all over the house now instead of only on the first floor. This means business for the hardwood dealers.

### COLUMBUS

The hardwood trade is now completely recovered from the slight dullness, caused by stock taking and the meeting of lumber dealers, held in Columbus the latter part of January. Prices remain steady and some advances have been recorded. The demand from the yard trade and manufacturing establishments continues good and many factories are in the market for additional stocks. Every one believes that the year 1910 will be one of the best years in the history of the industry. Preparations are being made on all sides for an expansion of the trade and deal-

## INSURANCE COST

As a lumberman you carefully analyze the cost of your stumpage, manufacture and sales, but your insurance is usually bunched with "general expense."

We can convince you that fire insurance is worthy of even more careful analysis and attention than any other feature of your business.

We can also convince you that our form of insurance is the safe, logical and economical one.

Will you give us an opportunity to prove our claims?

ers as well as factory purchasing agents are more liberal in their orders. An advance in practically all varieties and grades is expected in a few weeks and as a result many dealers are purchasing more liberally in order to have a larger stock on hand. Advance orders for shipment in March and April are numerous and there is a disposition to refuse such orders. The only drawback to a larger market is the inclement weather, which has interfered with shipments to a certain extent. The same cause also mitigates against active buying on the part of some dealers.

Quartered oak is wanted in every place and quotations are very strong. The supply is limited. Plain oak is also strong and an advance has been recorded recently in four-quartered red oak. Quotations for white oak are unchanged. There is a better demand for ash, chestnut and hickory. An advance is recorded in chestnut.

Poplar is one of the strongest points in the market and the demand from motor car factories for wide sizes is strong. Prices range from about \$1.40 to \$1.55. For ordinary sizes the quotations are: Firsts and seconds, about \$58 at the Ohio river; No. 1 common, \$37; No. 2 common, \$25; No. 3 common, \$16.

### INDIANAPOLIS

All of the local hardwood concerns are busy, the situation being much more satisfactory than it was a year ago at this time. The furniture factories are having a good run and there is an immense amount of building in sight on which hardwood men are figuring for the interior finish.

Prices continue steady, but are unchanged from two weeks ago. An advance, however, is expected.

### MEMPHIS

There is disappointment expressed by some members of the trade over the failure of business to expand more rapidly, but as a general rule the feeling is one of satisfaction. Buyers are sending in a great many inquiries and the majority of these are resulting in business at profitable prices. The tone of the market is quite firm on high-grade lumber of all kinds, while low-grade stock is bringing relatively better prices than for a long while. There is quite a scarcity of high-grade oak and ash in both plain and quartered stock and as the call is largely for dry lumber, shipments are somewhat restricted by the lightness of the offerings. A fairly active demand is noted for No. 2 common oak and ash, there being a decidedly larger inquiry than existed before the holidays. One of the most striking sales made here in some time was the turnover of 1,500,000 feet of cottonwood box boards this week at prices which have not heretofore been obtainable. The supply of box boards is light and the market shows a firm undertone thereon. High-grade cottonwood and red and bright clear sap gum are both in good demand. The lower grades of cottonwood and gum, however, are not moving very freely where prices are firmly held. The belief prevails that there will be a more active demand for these items soon, a fact which is leading to some advances in asking prices. Cypress is in active call and poplar is taken about as fast as it is ready for the market.

### NASHVILLE

Nashville dealers seem to be well satisfied with the local situation, both as to the amount of business they are doing and the prices that are being realized. Poplar, as has been the situation for some time, continues to be the leader among the hardwoods. Good wide stock is hard to find, and is in most excellent demand. Quite a feature of the hardwood situation, however, is the manner

in which ash has taken a jump recently. Several of the firms that had been holding their stock are congratulating themselves upon having done so. Oak and maple flooring are in good demand. Chestnut and birch are also selling well. The box factories are using a lot of cottonwood, while elm and basswood are moving along briskly. In fact, just about all the good dry hardwood stock any dealer has to sell is finding a ready market when shipment can be made promptly. The local dealers are anticipating an early and a busy spring building campaign.

### CHATTANOOGA

Dealers here say that one week the trade is good, while the next it is only common, but altogether it is satisfactory. Lower grades are moving freely. The export trade is improving. Conservative men say it is a case of demand and supply, and that no one is buying largely with a view of holding the stock.

### LOUISVILLE

The close of the month of January found the hardwood business in Louisville breaking all records for this time of the year. There has been a steady demand for all grades, high and low, with prices holding their own in the high, and a promise of better prices, as soon as the season opens up right, in the lower grades. Instructions to traveling men are to hold up prices at the cost of orders, but business has not suffered thus far as a result. Building activity has been helped by the fine weather and the reports show that more money is being put into the erection of apartment and office buildings; in fact, there is more money being invested. Oak and poplar are going along side by side and the stock in the local yards is pretty well broken as a result of the unexpected big business of January.

### ASHLAND

A satisfactory demand for lumber is reported and everything points to a greater increase in demand and better prices. Manufacturers are much encouraged over the future outlook and feel sure that this will be a very good year in the lumber business. A number of the mills have opened up for this season's run, having received a supply of logs on the recent tides of the Ohio's various branches.

The most pleasing feature of the market conditions at this time is an advance in prices. Both plain and quartered oak continue to increase in strength and demand, while dry stocks are decreasing. Chestnut, ash and basswood are in a very good demand. Poplar continues to climb in price on panel. First and second dry stock is very scarce. A number of manufacturers have received orders for some of their new stock now being manufactured. No. 1 and No. 2 common grades are in great demand and the supply of dry lumber is much broken. No. 3 common and box lumber is slowly improving. Manufacturers are receiving orders for considerable of their stock at satisfactory prices.

### ST. LOUIS

A good deal of hardwood business has been done during the past few weeks. The actual movement early in the month was somewhat retarded because of the cold weather, but recently shipping became better. The buying and selling continued, however, right along. While the bulk of the demand is for better grades, the lower grades are selling freely. The common grades in ash, cypress, plain oak, poplar, etc., are nearly depleted. This is particularly true of poplar. Gum is showing quite an improvement and the

stocks in the hands of manufacturers have been greatly reduced. The price on first and second red gum has advanced and common red is increasing in strength. There is quite an activity in cottonwood. Birch is strong and there is every indication that there will be a good demand for it later in the season. Owing to the advance in price of yellow pine, cypress is in good demand and has picked up considerably. Reports from the mills are to the effect that some heavy buying of cypress has been done within the past few weeks. This is especially true in mixed car lots. Inquiries are quite lively.

### MILWAUKEE

The outlook in general is gradually becoming brighter to hardwood manufacturers and dealers. Added to the rapidly growing demand from the manufacturing plants of the city is the increasing trade from retailers in the city and about the state. Retailers are at last beginning to realize that their stocks are becoming low and that it is high time to place their orders in order to be ready for the busy building season that is expected all over the state. The inability of the railroads to supply sufficient cars as a result of the recent snow blockade and the present congested condition of traffic, is causing no little inconvenience to lumbermen.

The sash and door plants are now in busy operation and are placing some good orders in oak, basswood and birch. The box plants are not ordering as well as dealers wish that they were, although better things are looked for from this source. The furniture factories are all busy and manufacturers in this line are expecting plenty of prosperity throughout the year.

Birch is in lively demand and prices have made several advances as a result. Oak is scarce and high as usual. Basswood is selling well and considerable poplar is wanted by the trade.

### MINNEAPOLIS

Prices on the shop grades of birch and basswood are going up every few days, and the small holdings of this stock that remain unsold are very jealously guarded. There has not been any increased buying of oak noted, as the offerings are just about as usual, and prices on all items are firm. The country yards are making inquiries but not buying much. The factory trade in the Twin Cities and vicinity is in the market right along, and some good sales have been made lately.

While low-grade stocks are still very weak as to price, the situation is improving. The box manufacturers are getting a greater volume of business and have been using more hardwood on account of its attractive price. Dealers are holding No. 2 birch firmly at about \$11 a thousand, which is \$1.50 to \$2 better than the basis of most sales last summer and fall. There is talk of advancing the low grades of pine, also indicating a return to better conditions for the cull hardwood. The season is showing well for the flooring trade and for all kinds of hardwood finish, as new work is continually being started and factories are figuring all the time. The flooring men are running strong and have been buying quite freely. The implement factories are prospering and will use more stock this year than last year.

### SAGINAW VALLEY

The market is active and strong for nearly all grades of stock and lumber is moving freely. No trouble is experienced in obtaining all the cars needed for moving stock. Prices are high. Dry lumber of all kinds is scarce. A party from

Minneapolis was in this market recently for thick maple, but was unable to obtain the stock at a price that could be entertained. No. 2 common and better maple is very firm at \$22 and \$25; beech at \$16 and \$17, there not having been the advance in this stock that has characterized other grades. Birch is strong at \$23 and \$26; ash is scarce at \$30 and \$32 and elm is in much better demand at \$26 and \$30. All indications point to still higher prices for the better grades of stock.

### CADILLAC

Trade conditions in Cadillac are more than seasonable, many good orders are being booked and more inquiries for all kinds of hardwood lumber than usual are being received at this time. No. 3 common hardwoods have strengthened materially and the excess stock of this commodity is not large. All of the local lumber plants are running and many thousand feet of logs are arriving daily both by train and sleigh loads.

### DETROIT

Owing to the cold weather, the hardwood market has been rather quiet the past two weeks. New work has been delayed and contractors are rushing old work to completion to be in readiness for more favorable weather. Dealers figure that within two or three weeks the busy season will be upon them and a big business is anticipated. Oak is in strong demand and prices are very satisfactory. Automobile manufacturers are still the large consumers of poplar, for which there is a healthy demand, at strong prices. The flooring factories report trade as brisk as ever, while the box manufacturers and the veneer trade show much activity.

### BARGAINS IN REBUILT WOOD WORKING MACHINERY

Every Machine Thoroughly Overhauled and Tested Before Leaving Our Shops

1 30-in. 3-Drum Invenible Sander  
1 30-in. Single Drum Berlin Sander

### ADDITIONAL WANTED AND FOR SALE

For other Wanted and For Sale  
Matter See Page 78

### EMPLOYES WANTED

#### WANTED--VENEER SALESMAN.

Experienced in quartered oak and mahogany veneer, with some experience in hardwood lumber. Address "VS," care HARDWOOD RECORD.

#### WANTED.

Hardwood lumber buyer for the states of West Virginia and Tennessee.

HERBERT C. TURNER,  
No. 1 Madison Ave.,  
New York City, N. Y.

#### WANTED.

A first-class spoke salesman with good references, who has an established trade with wagon manufacturers and hardware jobbers, and who is a good office man in this line. Might also consider placing our line with someone as side line in a territory where we might not already be represented. Address

FERGUSON LUMBER CO., Fort Smith, Ark.

#### WANTED AT ONCE--FOREMAN

for our dimension mill. Must be thoroughly familiar with building and glueing up hard and softwoods, and competent to take full charge of factory, and willing to start at a moderate salary. We would not want any but a first-class man. Address, stating experience,

"BOX 19," care HARDWOOD RECORD.

#### WANTED--COMMISSION MEN

to sell Northern Hardwoods to consuming trade in Chicago, Michigan, Indiana, Ohio and Pennsylvania. We are manufacturers. Address "Box A," care HARDWOOD RECORD.

#### WANTED--HARDWOOD SALESMAN.

An experienced hardwood lumber salesman for the road. Give references. Address,

"BOX 12," care HARDWOOD RECORD.

### TIMBER LANDS WANTED

#### WANTED.

Tract of white oak timber, two to five million feet.  
HAWKER LUMBER CO.,  
Buckhannon, W. Va.

### DIMENSION STOCK WANTED

#### SMALL DIMENSIONS.

Wanted: Plain and quartered red and white oak furniture stock, and plain and quartered chair backs and seat stock especially. Also small oak and birch squares.

FURNITURE & CHAIR STOCK CO.,  
Sibley Bldg., Philadelphia, Pa.

#### WANTED--DIMENSION STOCK.

We are in the market for several carloads of oak and hickory dimension stock.  
ESTABROOK-SKEELE LUMBER CO.,  
Fisher Bldg., Chicago, Ill.

### RAILWAY EQUIPMENT FOR SALE

#### LOCOMOTIVES AND CARS.

Standard and narrow gauge locomotives and cars of all sorts for logging and railroad use.

HICKS LOCOMOTIVE & CAR WORKS,  
Chicago, Ill.

#### LOCOMOTIVES FOR SALE.

Narrow or standard gauge from 7 tons to 70 tons; over 165 locomotives of various types at our shops.

SOUTHERN IRON & EQUIPMENT CO.,  
Atlanta, Ga.

Car Oak, Timbers and Planing.  
"BOX G." care HARDWOOD RECORD.

## MACHINERY FOR SALE

### FOR SALE—HAULING TRUCKS.

We have for sale four, six to eight-ton capacity self-tracking hauling trucks, suitable for hauling timber of any kind with traction engine or teams. Six-inch steel tires. First-class condition. KELLOGG SWITCHBOARD & SUPPLY CO., Escanaba, Mich.

### FOR SALE.

Timber Sizer, Atlantic Works, 28"x14", good condition, now in the South. Scraper with grinder, Whitney 10", for hardwood flooring. HERMAN MACHINE CO., Williamsport, Pa.

### FOR SALE—SELF-FEED RIP SAWS,

Bolting Saws, Quick acting Saw Gauges and special machinery. Prices right. Write for particulars.

MANUFACTURERS OF HARDWOOD LUMBER AND DIMENSION STOCK,  
P. O. BOX 345.  
Muncie, Ind.

## TIMBER LANDS FOR SALE

### FOR SALE.

4,500,000 feet white oak stumpage in West Virginia on railroad; also 3,389 acres in fee carrying over 20,000,000 feet timber (14,000,000 white oak), three miles from railroad; also tract in Virginia carrying 30,000,000 feet red gum, pine, white oak, cypress, ash, poplar, practically on railroad; also another tract carrying about half the quantity of same varieties; also 3,000 acres in Kentucky carrying asphalt rock (best known material for surfacing macadam roads), timber, coal and iron ore; also Virginia farms. NICOL & RANSDELL, Box H. R., Manassas, Va.

### FOR SALE.

Timber on 1,500 acres; about 10,000,000 feet.  
G. M. VOORHEES, Amelia, C. H., Va.

### STANDING TIMBER FOR SALE IN GEORGIA.

69 million feet Pine—mostly short leaf or "N. C. Pine."  
10 million feet Cypress.  
39 million feet Oak.  
30 million feet Gum.  
14 million feet Ash.  
2 million feet Poplar, Hickory, Cedar, etc.

164 million feet.  
Located on 21,492 acres—about one-third in fee, balance 19 to 29 years' lease. All in condensed tract, favorably situated on two railroads and a navigable river.

We are not manufacturers or brokers, but owners.

THE SIZER TIMBER COMPANY,  
15 William St., New York, N. Y.  
Care Robert R. Sizer & Co.

## BUSINESS OPPORTUNITIES

### FOR SALE.

McDonald Planing Mill, Wheeling, W. Va., including the machinery, fixtures, gas engine, office supplies, wagons, harness, lumber and other material. This is an exceptional opportunity to embark in the planing mill business at a small cost and in a desirable location on railroad.

JOHN P. ARBENZ, Special Receiver.  
910-911 Schmlubach Bldg., Wheeling, W. Va.

### FOR SALE.

A good live southern hardwood lumber business, established eighteen years ago. Will dispose of mill in Oklahoma, with timber contracts, lumber and logs cut, or will dispose of the entire business. Good reasons given.

FREDERICK A. LORENZ,  
277 Dearborn St., Chicago.

9	Cypress		Persimmon, Sycamore.
10	Elm	19	Dimension stock
11	Gum	20	Veneers and panel stock

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago

## A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances without adjustment. It has many other good features, but we've no more room to describe them.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

**C. H. DRIVER, Racine Junction, Wis.**

## Flanders Style Turnings, Square Chair Legs, Etc.

Can be made successfully and economically only on the special machine we build for this class of work.

We have the only arrangement that will turn a back post after it is bent—a big advantage over having to use dowels or splicing. Also permits of turned parts being made larger in diameter than the plain square portion.

This machine is not only a wonderful labor-saver, but its unlimited possibilities in the way of styles and shapes of work produced gives you the advantage of working out designs that your competitor, without the same up-to-date tool, cannot follow.

# **A SMALL BENCH HAND PLANER** **FOR WOODWORKERS**

Every woodworker whose shop is equipped with power should not be without one of these BENCH HAND PLANERS.

On it you can do all kinds of surfacing and jointing you will require and in half the time it would take you to do it by hand. With it you can plane out of wind, surface straight or tapering, joint, edge, etc. in the most rapid and perfect manner.

OUR

## **NO. 254 BENCH HAND PLANER**

is not expensive. The price is within the reach of all.

Write for Large Illustrated Circular

**J. A. FAY & EGAN CO., 414-434 W. Front St., Cincinnati, Ohio**

# **New Hoosier Improved Short Log Sawing Machine**

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address:

**THE SINKER-DAVIS COMPANY, Indianapolis, Indiana**

The Best Skidding Engines are none too good for the service demanded.

This is the principle that has guided our design and construction.

**LOGGING TOOLS  
LOGGING CARS**

**Catalogs on Request**

**RUSSEL WHEEL & FOUNDRY COMPANY**  
DETROIT, - MICHIGAN

## **RESULTS**

in steam skidding depend largely on keeping the machine busy **at skidding** and in getting the logs up to track at the **nearest** spot.

Frequent moves from one point to another are accomplished quickly by the

### **CLYDE SELF-PROPELLING STEAM SKIDDER**

and require no more time than walking down the track.

The steam guying-drums enable a set to be made while the tongs are being taken out to the first log.

These important features are exclusive in the **Clyde Skidder** and are what determine the **average results** for the month, the year or any other period.

A half million may be skidded with our machine in a single day, with large logs, in thick timber, close to track but the **correct test** of

any machine is the **average** in all kinds of timber, scattered growth and from the long haul as well as the short haul.

It's in the **final results** that the **CLYDE SKIDDER** outclasses them all. Let's send our testimonial booklet giving such results from scores of customers.

## CHECKING, SPLITTING, ROTTING POSITIVELY PREVENTED

by LORAC, a thick liquid, to be applied to either timber or lumber at a trifling cost. It will not discolor or injure the wood, neither will it interfere with its subsequent working or painting. It requires no preparation before use, no heating or mixing, and is easily applied by unskilled labor.

Ryan-Stimson Lumber Co., Memphis, Tenn., writes us July 21, 1909: "The Lorac Protector we received seems to be doing pretty well. Piece ship is at once another barrel of 600 lbs."

The Florence Pump and Lumber Co., Memphis, Tenn., writes July 6, 1909: "The Lorac Protector we recently had from you was all that could be asked for, and works splendidly, preventing the ends of squares from checking. Send us two barrels of 600 lbs. each."

Dec. 18, 1909: "Please send us two barrels of Lorac, about 600 lbs. each."

L. A. Schwarzwaelder, Chichester, N. Y., Manufacturer of Bank and Office Fixtures, writes us under date of Aug. 9, '09: "I have given your material a trial on some lumber, and find it has fulfilled all that you claim for it. Please ship me a barrel of 600 lbs. at your earliest convenience."

Herr Lange, Chief Forester, The Bismarck Forestry, Friedrichshub, Germany, writes: "As your Lorac Protector has shown excellent results on Beechwood, we request that you send us immediately additional 500 lbs. of the same."

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

## The T. Wilce Company

# Linderman Automatic Dovetail Glue Jointer

To the woodworker who weighs the cost of Jointing Lumber and the value of his finished product the LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER offers a method that eliminates the operations necessary to complete a glue joint as jointing, glueing, clamping, unclamping and edging the jointed panel to width, combining the five hand operations into One Automatic Operation with a

## WEDGE DOVETAIL JOINT

which has proven by practical tests to be stronger than a flat joint because it allows the glue to stay in the joint until the tapering wedge Dovetails draw the lumber together which forces the glue into the pores of the wood welding it with a permanent clamp.

# CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

☐ For more than thirty years the manufacturers of lumber at Cadillac have conducted business on one definite policy.

☐ In brief, that policy has embraced a source of timber supply of the best in the state of Michigan; the employment of the highest class of workmen and best machinery in the manufacture of their lumber and flooring; the exercise of exceptional care in the seasoning of stock, infinite pains in grading and painstaking attention to the requirements of every customer.

☐ The result of this policy has been Cadillac Quality and Cadillac Reputation for Satisfactory Dealing.

☐ If you are not a Cadillac partisan, it will be to your interest to get in line. Be friendly—write us.

## Michigan Hard Maple

☞ Correspondence solicited and inquiries promptly answered.

**GENERAL OFFICES:**  
**CONTINENTAL BUILDING.**

**Baltimore, Maryland****Ahnapee Veneer & Seating Co.**

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

# Results Are What Count

'09 Special All-Steel Combined Skidder and Loader

**A Combined Skidding and Loading Machine that will clear up the largest area at a setting** and can be moved and set up ready for business in the shortest possible time, will get the best results.

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money.

Note the new method of suspending skidding sheaves. They

are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines, one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading. The uppermost leg of jib has a spring connection to tower reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever.

Machine is raised and lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines, with stiff or swinging boom.

Constructed entirely of steel, except loading boom.

Is without question the strongest and fastest machine of the day.

## Brand Flooring is made on Berlin Hardwood Matchers

A trademark means something.

With us it means a whole lot. If you do good work you aren't ashamed to sign your name.

The trademark above is from the advertising of a big flooring factory.

It signifies that the people behind it make a good product and stamp their name on that product.

It signifies that their product must be well manufactured or else they wouldn't be proud of it.

It signifies that the machines in their plant are of the latest type and produce a product they aren't ashamed to advertise.

These people use "Berlin Hardwood Matchers", not because they like the sound of our name, but because they investigated before buying.

They bought the best.

## Berlin Hardwood Matchers

We give a few details of construction here because we are selling our output on quality.

The other fellow may claim age, distinction and anything else you please, but we prove construction. That's what the buyer is interested in.

The cylinder heads are our new six-bitted round type with no part to wear out or be ruined.

Our cylinder head is the stiffest ever designed for wood-working use.

There is no place for pitch or slivers to wedge in.

It is impossible to drive the knives back at any speed of feed.

We provide MATCHER LEGS of a type never introduced before. Over a hundred machines are out and never once has there been a complaint of box troubles.

The side-heads are our 12-bitted type and are the only 12-bitted side-heads ever built. These are the simplest, most compact on the market.

There is not a bolt or screw used in holding the knives in. Think this over. You have an expansion head also.

Jointers and grinders are provided and remember, we introduced the thin knife idea in this country.

Our Automobile Feed Drive does away with the gear train usually found. It transmits the full load every minute.

Details of the 89-X are sent at YOUR REQUEST. You certainly want a machine that the other fellow is making money with.

Such concerns as The Nashville Hardwood Flooring Co., Licking River Lumber Co., Foster-Latimer Lumber Co., who manufacture hardwood flooring almost exclusively, use the 89-X.

# GIBSON TALLY BOOK

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets— $4\frac{1}{8} \times 8\frac{5}{8}$  inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket.

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

Special, patented, triplicate tally tickets supplied, printed on waterproofed paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability, convenience, accuracy, and for systematizing the inspection and measurement of lumber.

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

## PRICE LIST

Aluminum Tally Covers, each.....	\$ 1.00

F. F. FISH, Secretary.

O. O. AGLER, President.

### General Market Conditions

General commercial conditions, including the marketing of hardwood lumber, are not yet exactly roseate. This fact is disappointing but true. Undeniably the business public has had faith in improved trade that has proved unwarranted by conditions that have manifested themselves during the last two months.

There was every prospect at the commencement of winter that there would be an immediate and forceful revival of business, with all woodworking factories on the verge of a business boom, and that things would move up to a high plane of activity.

However, the country has experienced the most rigorous weather that has been encountered for years. Out-of-door employment has

been practically impossible in many sections by reason of the inclemency of the winter, involving as it has heavy snow and sleet storms and blizzards. The railroads have been in a state of blockade for months. Freight yards were congested and there has been no certainty of the movement of freight.

The uncertainty of current legislation by congress has been another serious handicap to business, and the result of the tariff legislation of the last congress has been disastrous to many commercial interests. The cost of living has increased to such an extent that it has menaced good business relations between employers and employes on the present wage scale. This is not only true of railroads and corporations in general, but also of the lumber trade.

Generally, furniture sales, which are regarded as a barometer of hardwood consumption to a considerable extent, were disappointing, and a good many manufacturers report a cancellation or suspension of orders of a good many sales made during that period.

Anticipated building of freight cars by the railroads has not materialized. As a matter of fact, the railroads are hedging and generally their finances are in such shape that they have not dared to forward any investments that were not absolutely necessary for the carrying on of their present business.

Of all lines of lumber production, hardwoods are in far better shape than any other. Stocks are short in all kinds of lumber from No. 1 common and better, and there is no marked surplus in No. 2 and culls. The sales of the early winter have cleaned up practically all the dry good stock in hardwoods that there was in the country, either directly to the consuming trade or to jobbers. Therefore there is very little hardwood stock of any kind in first hands in shipping condition. Prices remain firm, and in some items have an advancing tendency, but actual sales and shipments are not keeping up with any regularity. The hardwood business the country over is very "spotted" in character.

The hardwood flooring people in both oak and maple are generally only fairly busy, although some of them report a slackening in trade, while a few have a good deal of business in sight. The interior finish contingent is also fairly well supplied with orders, with comparatively little in sight for the remote future. The veneer trade shows improvement in spots, and is dragging in others.

In connection with this analysis of the rather peculiar conditions prevailing, it should be said that there are a good many bright spots on the commercial map. Bank clearings in Chicago during the past week were close to high record, the total checks exchanged being \$307,103,744. This is an increase of \$47,000,000, or eighteen per cent over the clearings of the corresponding week of last year. This would indicate a liberal gain, and shows more activity in general business than prevailed early in the month.

The New York bank statement of last week showed an increase of \$1,500,000 in the excess reserves, raising the total held by the banks over the legal reserve required to \$26,103,000. This compares with a surplus of \$14,272,000 a year ago and \$32,468,550 two years ago. Changes in the deposit and loan items during the week were insignificant as compared with the totals.

The hardwood situation is well in hand, and if manufacturers hold their output down to normal, there is every reason to believe that lumber will be closely bought up at current or even a higher scale of values than prevails today.

## The Security of Timber Investments and Timber Bonds

There is a belief among a good many people who have no specific knowledge of lumber affairs that all lumbermen are either rich or on the immediate road to that alluring condition. There seems to be an idea prevalent that all any man has to do to acquire wealth is to buy timber land, erect a sawmill and go to sawing wood.

Unfortunately all lumbermen are not rich, and equally unfortunate is it that all lumbermen are not on the road to vast fortunes. Still the legend exists, and is being employed as a stock in trade by either the unscrupulous or the ignorant to foist on the investing public numerous and sundry land and timber schemes. These vary from eucalyptus-growing to opportunities to get into timber investments in the Pacific Northwest on the basis of \$100 a throw, down to timber bond investments of varying sizes and allurements.

Secretary Wilson has recently backed HARDWOOD RECORD in its analysis of the schemes of the eucalyptus pirates. Last Sunday's Chicago Record-Herald had a flamboyant advertisement in which the name of Gifford Pinchot was employed, and in which Mr. Pinchot's picture was used in the effort to foist a timber deal on small investors.

This deal may be all right and may be all wrong.

The editor's desk is loaded down with the announcements of various schemes of a similar nature. One highly colored pamphlet, with Seattle as its source, announces that the chief forester of the United States states that a continuance of the present rate of timber cutting in this country will completely exhaust the supply in twenty years. This statement is used in argument that great fortunes are to be made from timber investments at the present time and holds out allurements to the "moderate investor" that he may have the same opportunity to reap profits from the "timber industry" as does the large investor. This is "The Menz System of Timber, Gold Bonds, Profit Sharing, Deed Protected."

This scheme may be all right and it may be all wrong.

Mr. Menz's picture is reproduced from the Mississippi Valley Lumberman with a page of glowing tribute, and his picture is again produced with a facsimile from the Lumbermen's Review, and interspersed in the booklet are wonderful pictures of big trees and lots of figures indicative of the vast profits made in Pacific coast timber transactions, all centering about the Menz system.

As a general proposition the RECORD does not like to see this system of mining exploitation fastened on to the lumber trade. Heretofore the lumber business has been conducted on a business basis and on the level. Individuals or corporations have purchased large or small blocks of timber, have erected sawmills with their own money and have manufactured and sold lumber. Some have been successful and others have not. The greatest factor in commercial success in timber and lumber operations is a specific knowledge of the business. It is not within the realm of lumber history that any man ever made a success of lumber operations

vicariously. The successful man has always been on the job himself, and has had previous experience and lots of it.

The foregoing observations are made simply to call the investing public's attention to commercial history in lumber affairs, and to warn them against making timber investments through strangers simply on bare representations of glowing financial results. The RECORD would say: Carefully investigate before putting up a dollar.

Now there is another form of investment which at first was based on absolute legitimacy. This was the timber bond. These timber bonds were originally placed by large and going lumber corporations, who desired to supplement their timber holdings and perpetuate their business for a long period of time by increasing their timber holdings. These bonds were serial in character and usually carried 6 per cent semi-annual interest, and were paid off at regular periods in proportion as the timber, the basis of the security, was cut. Concerns seeking this form of loans were large, conservative and successful ones, people who by years of experience had demonstrated that they knew how to estimate and analyze timber properties and how to manufacture and market lumber successfully. The value of these bonds was recognized by the investing public and they have been easy sellers in both good and bad times. The profits of the bond companies handling

this class of securities, and the fact that they have become a standard in the market, have induced sundry pikers of late to spring on the public bond issues that do not constitute high-class security for the money proposed to be invested. These bond exploiters in their overanxiety to get rich quick have taken desperate chances on the character of the properties bonded, and at the present time there is offered for sale sundry timber bonds on a representation that the security is two, three or four for one, that will not bear scrutiny, and the statements made cannot be warranted by experts in timber values. The result of this flood of questionable securities being placed on the market will be that the legitimacy of the many first-class securities of this sort that are out will very soon be questioned and the legitimate timber bond will go begging.

There are certain basic principles which should be considered in the purchase of timber bonds. These may be enumerated as follows:

First: Are the titles of the timber lands involved perfect beyond peradventure?

Second: What is the quantity of the timber stand and the kinds of timber?

Third: What are the physics of the wood and what will the timber develop in dollars and cents in the form of lumber at shipping point?

Fourth: What is the legitimate cost of placing this timber in the form of lumber ready for shipment at shipping point?

Fifth: What is the fire risk involved in this timber; what is the flood risk and what is the agricultural or mineral value of the land when the timber is removed?

Sixth: Are the individuals seeking this loan men of wide experience in lumber affairs; is their commercial history good; and are they competent to carry on the lumber operation on a basis of

### TO THINK ABOUT

- ¶ **The science of stopping in time has never received the consideration its importance warrants.**
- ¶ **Genius consists in doing the right thing without being told more than seven times.**
- ¶ **Don't be afraid to blow your own horn.**
- ¶ **Inspire respect for yourself and confidence in the goods you sell, if you would be successful.**
- ¶ **A customer neglected is a customer lost.**
- ¶ **If you don't believe in yourself, how do you expect others to believe in you?**
- ¶ **Think twice before you speak and when you speak talk to yourself.**
- ¶ **Never lose a customer. If you have an undesirable one quit him—don't let him leave you.**
- ¶ **Make good—or make way for someone who can.**

economy and conservatism to a success that would warrant the assumption that the bonds and the interest thereon will be met promptly at maturity?

It may be said in conclusion that no one individual is competent to pass on all these propositions. It requires, first, the opinion of an expert attorney; second, the verified opinion of expert cruisers; third, the expert opinion of a competent judge of wood physics; fourth, the expert advice of a competent lumber operator familiar with the engineering difficulties and cost of lumber operations in the section involved.

Therefore, the RECORD wishes to issue another warning to investors, that they thoroughly acquaint themselves with all these facts, and be sure that the proposed investment is a worthy one before they turn loose their money.

## Hardwood Manufacture in Michigan

In the state of Michigan there are approximately one hundred manufacturers of hardwood lumber, both big and little. As a general proposition the hardwoods of Michigan in comparison with the general run of hardwoods are a low-grade product. While poplar, oak, cottonwood, ash and hickory attain an average value that is profitable and satisfactory, even at the present and reasonably increased price of maple and birch, the northern manufacturer is not getting nearly as high an average price per thousand for his stock as the producer of the leading southern woods.

Hardwood manufacture in Michigan at the present price at which hardwood stumpage is changing hands is not a remarkably profitable undertaking. As a matter of fact, if it were not for the close utilization of Michigan forests and the ingenuity and thoroughness with which a large portion of the forest and sawmill waste is utilized, there would be mighty little money today in manufacturing hardwood in that state. The only reason that Michigan and the northern country generally are on the hardwood commercial map at all is from the fact that they have a market for their product very close to points of production. The average freight rate on Michigan lumber runs very little above ten cents a hundred, which enables manufacturers to sell at a price that nets a little profit even on shipping culls.

What the future holds for northern hardwood production is somewhat conjectural. In Michigan, owing to the exhaustion of stumpage owned by small operators, probably at least half of the hundred present operators will be out of business within six years, which will reduce the total output of the state within that time at least twenty-five per cent. The remaining larger operators are generally equipped with a source of timber supply to last them for an average of from ten to fifteen years. With the comparatively recent awakening to the intrinsic merit and value of standard northern hardwoods, notably maple and birch, it may be that a sufficiently high range of prices may be attained for these woods to cover the carrying charges on five-dollar stumpage, but an increased price will be necessary if much profit is to be secured from manufacturing these woods in that locality during the remaining period of their existence.

The prices on grey elm, black ash, rock elm and basswood in the northern country are still ridiculously low as compared with the prices obtained for southern woods of similar character. To the wonderful development of the maple flooring business may be attributed the present and prospective advance in maple lumber to a considerable extent, and to the high price of oak and the substitution of birch in furniture making may be attributed the increasing price obtained for birch. It seems singular that the splendid basswood of Michigan and Wisconsin does not bring more money. As a matter of fact a higher price is being secured for the lower quality basswood of the Appalachian country than for that of the North. The grey elm of the North is one of the truly splendid hardwoods of the country, and still it is not receiving the attention from buyers that it should, and is way below its intrinsic worth at the present price schedule. The same observations can be made concerning black ash and rock elm. These

four woods named are of inferior quality and importance to maple and birch in the general aggregate, but still their low price is worthy of comment.

## A Suggestion

In the light of recent events the RECORD would respectfully suggest to the National Hardwood Lumber Association the consideration of the following preamble and resolutions at its next meeting:

Whereas, The National Hardwood Lumber Association was organized with singleness of purpose to further the best interests of all branches of the hardwood industry; and

Whereas, This organization has always maintained this tenet without rings, bossism or ward politics in methods; and

Whereas, All members are in true harmony on the subject of its inspection rules and methods of their application; that they are thoroughly convinced that these rules are the only just and logical ones that should or could be used by the hardwood trade, as within this organization lies all the brains and talent that are competent to make and interpret inspection rules; and

Whereas, This organization is and always has been open and above board in all its transactions between buyers and sellers; it never has permitted an issuance of certified certificates of inspection before the lumber was inspected; that all its meetings have been open to free discussion on the floor on the part of all hardwood lumbermen; that they have been open to free and untrammelled report of affairs as they actually transpired; and that the public has been supplied with a complete and unexpurgated report of all such transactions; and

Whereas, One Lucius E. Fuller has become a self-appointed mouthpiece of this organization, and that by reason of his perversion of facts and awkward handling of the truth, his utterances have led the association into manifest and unmistakable difficulties; and

Whereas, The said Lucius Fuller has recently broken his left leg; therefore be it

Resolved, That, without in any wise wishing to disparage the wisdom of Divine Providence, to the minds of the members of this organization it would have been much better if the said Lucius Fuller's right arm had been broken rather than his left leg; and furthermore be it

Resolved, That the said Lucius Fuller be requested to "beat it."

## The Pinchot-Ballinger Case

The committee appointed from the two houses of Congress to investigate Secretary Ballinger and to clear him as they go of the charges promulgated by Glavis is going on its merry way. Undenially the effort was originally intended as a whitewashing enterprise on behalf of Secretary Ballinger, but unfortunately sundry buckets of tar have been dropped into the whitewash, with the result that the secretary's escape with an immaculate coat is somewhat conjectural at the present time. The public is pretty well convinced that ex-Chief Forester Pinchot is all right, also Glavis, but they have another guess coming on Ballinger.

## The Wholesalers' Annual

Present indications are for a splendid attendance at the eighteenth annual of the National Wholesale Lumber Dealers' Association to be held at the Sinton Hotel, Cincinnati, on Wednesday and Thursday, March 2 and 3. At the regular sessions various reports will be presented and important matters discussed. Elaborate entertainment features have been planned and, altogether, this will undoubtedly be one of the most successful annuals ever held by the organization.

At this convention HARDWOOD RECORD will have an office, where the Selling Lumber by Mail System and the Gibson Tally Books will be on exhibition.

## Pert, Pertinent and Impertinent

### What the World Has Done for Me

It has given me winter and summer, and made one too cold, one too hot;  
It has given me sleep for the night time, but no decent place for my cot.

It leased me a beautiful boyhood in which to envy the man,  
Then brought me the coveted wonders to long for my boyhood again.

It assigned me a wonderful stomach and more wondrous appetite,  
Then sold me the food at a profit and reared when I filched a bite.

It sent all my goods from a factory, stamped all my toys with its name,  
Grew rich on my innocent failures, and called its account of it fame.

It wound up its clocks and divided my days and my deeds into hours,  
And paid me a stipend for staying away from the fields and the flowers.

It owned that it owed me a living; but let the debt run so long  
That is seems to have outlawed, and now I can wail or laugh at the wrong.

It called my just criticism libel, declared all my flattery flat,  
While it censured me out of its wisdom and bade me be spellbound for that.

It smiled at the deeds of my heart, and smirked at the words of my brain,  
And grinned at my shanty on Poor-st., and laughed at my castles in Spain.

Yet this world is my object in life, and my life the world's aim soon or late;  
So I'll lead it a wild goose chase, and die game without sorrow or hate.

—Lionel Josaphare.

You may lead a fool to talk but you can't make him think.

All men have follies. Those of the wise man are known only to himself; those of the fool to all men but himself.  
—The Smart Set.

The fellow who runs into debt doesn't try to get out faster than a walk.

There are two kinds of information—one to which everybody's entitled, and that is taught at school; and one which nobody ought to know except yourself, and that is what you think of Bill Jones.

A good salesman is like a good cook he can create an appetite when the buyer isn't hungry.

Some men never worry because they are made of wood.

The empty head is always eloquent on the subject of a full heart.

Much preaching is attempting to get water by polishing the faucet.

One form of pious gymnastics is to walk one way and point the other.

They who are candid over little faults often have big ones in the closet.

The more a man can pardon in himself the less he will forgive in others.

People who are afflicted with kleptomania always feel that they should take something for it.

## Holding the Umbrella

Getting in out of the Rain

Do everything reason tells you to do—unless conscience vetoes it.

If you are in a small place it may be because you won't fit in a big place.

All the world may be a stage, but just the same stage money does not pass.

The optimist expects to get a good hand even when the other fellow shuffles and deals.

The way to make a woman happy is to make her believe that she is making you unhappy.

The man who believes that two can live as cheaply as one never had to reckon with milliners and dressmakers.

And a man's idea of his own importance decreases as the gray in his hair increases.

Occasionally a girl is both pretty and intelligent—just to prove the exception to the rule.

Many a man who thinks he is honest because he pays back borrowed money wouldn't think of returning a borrowed umbrella.

The best thing to do when you catch a cold is to let go of it.

One way to remove paint is to sit down on it before it is dry.

Samson was the first actor on record to bring down the house.

From the black-mailer's viewpoint, keeping secrets is a paying business.

### Same Old Story

"Don't you believe," queried the fair advocate of woman's rights, "that men live faster than women?"

"I sure do," replied the mere man. "I was just ten months older than my wife when we married; now I am 42 and she was 30 last week."

### By Proxy

"Where is my wife, Miss Lowe?" he asked of the new governess.

"She has just gone upstairs, sir."

"Well, will you kindly give her this kiss for me? I've got to catch a train, and haven't time to take it to her myself."

### She Made a Name for Him

Benham—Yes, Adam would never have been heard from if Eve hadn't given him the apple.—The Smart Set.

People who speak volumes seldom talk like a book.

# AMERICAN FOREST TREES

EIGHTY-SECOND PAPER

## Scarlet Oak

*Quercus coccinea* Moench

Scarlet oak is so called because of the brilliant coloring which its foliage attains in the fall. Like those of some of the white oaks, the leaves of scarlet oak are rather persistent, and late in the season, when most of its associates have yielded to the demands of winter, the brilliancy of this tree is rendered doubly conspicuous, contrasted with the surrounding sombre, winter colors. Scarlet oak is botanically of the red oak group and its wood is not distinguished from red oak in trade or usage.

Its range comprises the northeastern quarter of the United States. Beginning in southern Maine, New Hampshire and Vermont, it grows through middle New York, Michigan, Wisconsin and Iowa to eastern Nebraska. Southward it extends along the coast through Virginia and inland along the mountains to South Carolina and Georgia. The growth is abundant over most of the range, the favorite habitat being dry, gravelly uplands, with similar oaks, birch and hickory. It seems to be most abundant coastwise through the range.

According to Sudworth, the name of scarlet oak is in use in Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, North Carolina, Missouri, Illinois, Indiana, Wisconsin, Minnesota, Michigan, Nebraska, Iowa and Ontario; red oak is the name in North Carolina, Alabama, Wisconsin, Nebraska and Minnesota; black oak in Nebraska, Illinois, Iowa and Wisconsin, and Spanish oak in North Carolina.

In appearance the tree is striking for its delicacy of foliage and twigs. The crown is always narrow and open, and in forest growth is compressed, not intruding on the bole for any distance. The height, in good specimens, is about one hundred feet, but it often exceeds that size considerably. In diameter it grows as large as four feet. The mature bark is dark in color and broken into broad, smooth ridges and plates, edged with red. It shows a reddish inner bark when cut. The leaves are on long, delicate petioles; are 4 to 5 inches long; deeply sinused, three to four on a side; long, bristle-toothed lobes, broad at the base; flowers, staminate aments slender, glabrous, delicate, recurved styles; acorns bitter, mature in two years; sessile, brown; cup closely drawn in at the edge.

The wood is applied similarly to red oak

and has the same qualities of strength, hardness, etc., but is probably a little more durable and faster growing. It has a pinkish, brown heart and thin lighter sapwood. The rings of growth are made conspicuous by the wide bands of large spring pores. In a radial section the rays appear long and low, the rest of the surface being dull

value. As a fuel wood it is of inferior quality. The lumber finds use in cooperage, for furniture and, to a small extent, as interior finish.

Of the differences between black and scarlet oak Alice Lounsberry in her Guide to the Trees says:

"Between the black oak and the scarlet oak there are certain differences in color which may aid many to distinguish them. It is true that at times they are dissimilar in leafage, but again the black oak is so very variable that some of its forms are nearly identical with those of *Quercus coccinea*.

"The kernel of its nut is bright yellow and smaller than that of the scarlet oak, which is white. But unfortunately the acorns mature in September and October only, so during the early part of the summer we must seek out some other unchanging difference between them. Again we are aided by color. The bark of the black oak is a dark brown, or nearly black, and it is broken into close scales. A still more poignant difference is that its inner bark is deep orange, never reddish or grey. In the spring its leaves are red, and they turn when the tree blooms to a silvery green. They are rich red or russet in hue in the autumn and quite without the vivid touch of color which is the chief charm of the scarlet oak."

The accompanying illustration shows an especially good scarlet oak forest tree pictured in West Virginia by the editor of HARDWOOD RECORD.

TYPICAL FOREST GROWTH SCARLET OAK, WEST VIRGINIA

and coarse. The weight per cubic foot is forty-six pounds and the specific gravity .7405; the coefficient of elasticity is 108,507; modulus of rupture .1054; longitudinal resistance .504.

Scarlet oak bark is reported to contain sufficient tannic acid to give it commercial

**Cow Trees**  
Groves of cow trees, such as are to be found in hilly districts in certain parts of South America, are said to be a wonderful sight. These trees, which, it need scarcely be said, do not actually resemble cows, grow to great height, yet for lengths of perhaps fifty feet they are quite without branches. Near the top they expand into thick heads of foliage, however, and display a matted texture of leaves and branches. The leaves are thick and ribbed, and often grow to be a foot long.

The natives milk these trees. A hole is bored into the heart of the trunk. From this hole there pours a milky fluid much esteemed as a drink. The fruit of the tree is also esteemed as food. A kind of bread is made from the bark, almost as nourishing as wheat bread.

# Makers of Machinery History

NUMBER XI

MELVILLE W. MIX

(See Portrait Supplement.)

In the phenomenal success of Melville W. Mix, the industrial world today recognizes the result of a sterling character and business ability of the highest order.

With the motto, "We can and we will," Mr. Mix has built up at Mishawaka, Ind., the largest plant of its kind in the world, devoted to the manufacture of power transmission machinery, elevating and conveying equipment and water softeners. Through his efforts largely the Dodge Manufacturing Company has become a substantial success, well and favorably known throughout the engineering and manufacturing world.

Melville W. Mix was born at Atlanta, Ill. As a boy he worked there in a hardware store while attending high school. In 1886 he went to Mishawaka, taking a position as clerk in the shipping department at the Dodge factory, then struggling for recognition. His work consisted of addressing envelopes for the house organ, "Power and Transmission."

Following his first employment with this concern, Mr. Mix advanced steadily and, not satisfied with merely doing his work, by diligent application outside of business hours, secured a thorough technical knowledge of transmission in all its phases. In the manufacturing and selling end of the business he became more and more proficient, and before long his abilities were recognized by the then head of the enterprise, W. H. Dodge, and he was given a responsible position in the sales department.

On opening a branch in Chicago in 1890 the company appointed Mr. Mix manager, and in this position he made such a good record that he was shortly after returned to the home office as sales manager. Other branches were opened, new products added to the line and the plant capacities increased, under his able administration.

In September, 1894, Wallace H. Dodge, founder of the company, died. All business at that time was in a very depressed state, which made the choice of a new president a most important matter. The directors, however, at once recognized in the sales manager a man with the ability to bring the business safely through the trying times, and Mr. Mix was duly elected president. At the time of his death Mr. Dodge was working on a plan to produce pulleys with a standard bore and interchangeable bushings to fit all shaftings. He hoped to have stocks in all manufacturing centers, and an immense factory to produce his goods.

On his advent into his new position Mr. Mix started with zeal and energy to put these ideas into execution.

As this story is written, the Dodge plant at Mishawaka covers sixty acres of ground, has a floor space of twenty-five acres, is oper-

ating on a capital of \$1,000,000, with a large surplus, and gives employment to more than twelve hundred persons. Branches are conducted at Chicago, Minneapolis, Pittsburg, Philadelphia, Boston, New York, Cincinnati, Atlanta, Ga., and St. Louis. A mammoth warehouse is maintained in Brooklyn for supplying foreign and eastern demands, two hundred agents carry complete stocks and innumerable dealers insure a world-wide distribution of the Dodge line.

Eager to do still greater things than this to make the name Dodge and the quality and service of Dodge goods so well known in manufacturing America that Dodge alone would come to the minds of every man considering power transmission machinery or supplies, Mr. Mix inaugurated immense advertising and publicity campaigns. The expenditures in this direction in 1909 amounted to over \$50,000, and the results have been highly gratifying.

Outside of his connection with the Dodge company, Mr. Mix is president of the National Veneer Products Company, Mishawaka, manufacturers of "Indestructo" trunks; president of the Mishawaka Trust & Savings Company, and president of the Mishawaka Public Improvement Corporation, own-

ers and operators of the Hotel Mishawaka, a \$100,000 hostelry, all of which show his indomitable energy. He is a member of the American Society of Mechanical Engineers, the Indiana Society of Engineers, and treasurer of the Manufacturers' Bureau of Indiana. In 1907 he was president of the American Supply & Machinery Manufacturers' Association. From 1902 until 1906 he served as mayor of Mishawaka, elevating that locality to a beautiful, prosperous city.

As a magazine writer recently put it, "Mr. Mix is one of the really remarkable successes in manufacturing. He seems to have been built for victories. Possessing the faculty of holding the details of a big business in his mind so closely and knowing so well how to draw conclusions from conditions, present and prospective, he is able to plan successfully where others would fail. He has a wonderful way of making and holding friends and of stirring up enthusiasm, and a memory that enables him not only to know on second meeting the face of every man whom he has met, but also his name. His abilities lay not only in the direction of developing personal work, but in aiding others. There is reasoning power and persuasiveness in his talk and a personality that inspires confidence."

## Tales About Live Ones and Dead Ones

By the Editor

### Betraying His Confidence

They're telling a story on Billie Greble, sales manager of the Three States Lumber Company, of Memphis, which is not so bad.

It seems that at the recent annual meeting of the Hardwood Manufacturers' Association at Cincinnati the tall and handsome blond gentleman, who does the sales stunts for the big Memphis cottonwood and gum company, encountered his old college chum, "Jack" Estabrook, president of the Estabrook-Skeele Lumber Company, of Chicago, and apparently in the best spirit of fellowship invited him to breakfast in the swellest cafe in Cincinnati the following morning. This looked like a good thing to Estabrook and although he ordinarily only fills dinner engagements, he arose betimes the next morning and joined Greble at the breakfast table.

Now, let Estabrook tell the rest of the story: "My suspicions were aroused when the first thing this bald-headed Indian ordered was a glass of Hunyadi water. It was just as I expected. I hadn't fairly got started on my breakfast when Greble excused himself and ducked, leaving a three-dollar breakfast bill for me to pay. It really isn't the three dollars that worry me, but I did hate to lose confidence in an old friend."

### An Apostle of Discord in Trouble

A newspaper man is prone to get into trouble, but it is rare indeed that calamities have ever fallen so thick and fast on any of them as on my friend Lew Fuller of the Lumber World. For a man who has adopted the motto of "A square deal for every man," Lew is having hard luck.

In the first place, the redoubtable editor of the "Wurruld" was waylaid by highway men week before last and was relieved of his watch, jewelry and the total surplus of his newspaper, some six dollars.

Then, with the chagrin of his misfortune and humiliation staring him in the face and naturally forgetful of his motto, he writes a deprecatory article on the recent annual meeting of the Hardwood Manufacturers' Association, which is false in premise, untruthful in detail and illogical and unfair in deduction. Any right-thinking man, no matter with what association he is affiliated, will recognize that the publication of this article will surely result in more harm to the author than the loss of his six dollars.

Now, on top of both these calamities, Lew slipped on the ice a few days ago and broke his right ankle and is now confined to his bed. His ankle will heal, and he can probably recoup the six dollars, but it will be a great deal more difficult for him to re-

MELVILLE W. MIX  
MISHAWAKA IND

cover from his slanderous talk concerning the greatest meeting ever held in the history of lumber affairs.

### Saved His Life

It may not be generally known that George T. Mickle, head of the big yellow pine concern, the George T. Mickle Lumber Company, Chamber of Commerce building, Chicago, is a reformed newspaper man. When Mr. Mickle was a lad he was employed as a reporter on the old Minneapolis Tribune. Having saved up a few dollars, he spent a vacation in the little country town in northern Illinois from which he had emigrated. He found his old school-girl chums in the town glad to be entertained by the "chap from the city," but his few dollars soon melted away in buggy rides and attending the county fair. He had the misfortune as a wind-up of his visit to collide with a farmer's buggy while driving with a couple of girls and smash two wheels of the agriculturist's wagon.

He acknowledged his fault and promised the farmer he would settle the bill, but the man of the soil wanted his money and wanted it quick, and after the lad had settled he had but very little chicken feed left as his share of the coin of the realm.

Having previously provided himself with a return ticket, Mickle immediately started for Minneapolis. Night overtook him at a

junction point some two hundred miles from the city, and he found himself penniless and with an appetite that is possible only to lads of sixteen. He wandered around the bakery shops and stared wistfully at the buns and pies displayed in the windows. Finally he ventured into the hotel of the town. Every minute his hunger became more and more acute, and the thought of sitting up in a day coach all night with gnawing vitals got on his nerves. Finally he discovered some copies of the paper on which he was engaged as a reporter and scraped up an acquaintance with the news vender. The man was glad to see him, having never before had a visit from anyone connected with the great Minneapolis newspaper for which he was agent. An expedient occurred to the lad, and he incidentally asked the agent how his account stood with the house. The man cheerfully looked it up and confessed that he owed the paper four dollars and thirty cents. Young Mickle asked him if it would be convenient to settle then and there, and the agent said it would.

In relating this incident, Mr. Mickle said that if you ever saw a kid hustle into a dining room and get his money's worth, it was this starved lad from Minneapolis, and in all his travels since that time he has never enjoyed a Pullman berth as he did that night.

## Mill Cost System

G. O. WORLAND

The matter of cost accounting has long occupied the minds of the most successful manufacturers in all lines, but it is a lamentable fact that in the lumber business, particularly in the manufacture of hardwoods, there is but little thought given to the cost of production.

It is a fact, however, that the conditions under which hardwood sawmills operate vary to such an extent that the methods of one plant might not prove of value to another, but there is no reason why each plant cannot figure the absolute cost of its lumber in each state of its manufacture and marketing, from the stump to the final closing of the customer's account.

That there might be developed a general uniform method of figuring these costs, with sufficient elasticity to fit the individual conditions as they may exist, a general comprehensive discussion of the matter at the recent annual meeting of the Indiana Hardwood Lumbermen's Association at Indianapolis was hoped for. It was believed that such a discussion would bring out much information that would be of benefit to every member and that, as a result, much of the unintelligent competition in the lumber trade might be eliminated, and each operator made to realize the advisability of running his business only along those lines which show a profit. It is to be regretted that there was not more

interest manifested in this discussion; whether it was from lack of knowledge of what was expected and unpreparedness of statistics for the purpose, or whether it was due to unnecessary unwillingness to publish such figures, it is difficult to ascertain.

Speaking of this hesitancy to give out information, it is advisedly quoted: "Your good competitor is the intelligent one and he is not going to harm you, and the sooner you educate the unintelligent competitor who is mistaken in figuring his costs, the sooner he is going to stop his unwise competition, either in the purchasing of raw material or the selling of the finished product." If he doesn't stop he is a fool and as a fool he cannot last long in any business.

The majority of mill men who have no cost accounting system neglect this branch of the business probably because they think it complicated and expensive, when, as a matter of fact, it can be made extremely simple and the time and expense reduced to such a small item as to be negligible, while endless ways of utilizing the knowledge acquired, for the benefit of the business, soon make themselves evident. Many successful operators let the matter of profit and loss go until the annual or semi-annual inventory, and convince themselves that the profit is satisfactory or if a loss occurs wonder where their money went to. They do not know what

items were profitable and what were not and oftentimes use the profits on one item to cover the loss of another.

The method used by our concern, making a specialty of quartered oak, which buys its logs from producers on the open market and ships them by rail to the mill, is herewith given, and may possibly be of interest to some operators.

The management of the business is divided between three men. One looks after the log-purchasing end; one selling and shipping, and the other the operations and general management. The general expense, which consists of salaries, office and traveling expenses, is charged one-third each to logs, manufacture and selling. The one-third general expense of the logging department is pro-rated per thousand feet at intervals, and added to the purchase price to which is also added freight charges, and thus the log cost delivered on track at the mill is arrived at.

The cost of manufacture is figured out each week. First the overhead expense is estimated as follows:

One-third general expense...	\$ 65.00
Interest .....	15.00
Taxes .....	8.00
Insurance .....	10.00
Depreciation .....	40.00
Maintenance and repairs.....	12.00

Total .....\$150.00

To this is added the payroll which, divided by the number of feet sawn, gives the cost of sawing that week, paying the whole cost from the time the logs are delivered or put on the track until the lumber is distributed in the yards for sticking.

Record of the daily cut is made on a chart which is herewith shown, at the end of the week. The weekly average is calculated, and recorded on the same chart, and at the end of thirteen weeks or one quarter the average for that time is taken and record made, illustrating at a glance the variation in the day's cut.

The cost of manufacture at this plant for the last six months of 1909, sixty per cent of the cut being quartered oak, is as follows: Taking the logs from the car and distributing the lumber in front of the piles is \$3.94 per thousand, of which labor was \$2.28, distribution 29 cents, and overhead expense \$1.37. Cost of sticking, which is done by contract, is 40 cents per thousand.

The record of the loading expense is kept on the reverse side of the yard order, and runs 15 cents per thousand for 2-inch poplar to \$1 per thousand for mixed orders, strips, etc., that have to be teamed to the car; the average on all is 41 cents per thousand feet.

The actual time of loading is kept by the inspector who counts his time as equivalent to that of two laborers and single horse and wagon as equivalent to one, and reckons the total at 15 cents per hour. Notation is also made, showing any reason for high cost, such as extra amount of degrades, mixing of grades, etc., so that excessive cost in loading can be noted at the time it occurs, and full

investigation made. The cost of rehandling cuts, degrades and cuts from special orders amounts to 7 cents per thousand feet; covering and uncovering piles, ½ cent, making a total expense on the amount of lumber shipped of 88½ cents per thousand.

Now with these facts before us we know what it costs to make lumber, and we credit the mill with five dollars per thousand feet, which allows a fair margin of profit to the manufacturer.

Going further, we have taken a record of the percentage of grades sawn out of the various kinds of logs, and the real object of this discussion and this article is to prove that there is no profit in the manufacture of quartered red oak at the prevailing market prices.

At this sawmill the percentage of grades sawn out of quartered red oak runs as follows:

Fas	42%
No. 1 common	37%
No. 2 common	11%
No. 3 common	5%
Strips	2%
Loss	3%

Total .....100%

This was cut from what was considered a high class of logs, and at the cost of these logs in open market the lumber was delivered on the yards at inventory prices, showing a profit of only three per cent in the manufacture. As to the inventory prices at which the lumber was put on the yards, there is only a yard margin of 10 per cent, out of which must be paid the holding, loading, depreciation, discount and selling expense.

These figures were verified by a number of prominent sawmill men at the Indianapolis meeting, and while the man who owns standing timber may figure that his quartered red oak is giving him a profit, if he does so he is making his profit on the logging end of the business, and not on the manufacture, as his logs are staple articles, and have a

fixed market value in the logs. It is therefore a questionable practice to give up the profit of marketing the logs in order to manufacture, and the mill man who is buying his logs on the market is making his lumber at practically no profit.

This is only one instance of where such figures can be used in solving the knotty problems encountered in the manufacture of hardwood lumber, and once a person gets a taste of such statistical figures it usually leads to further investigation and systematic handling of the various accounts, and enables one to analyze any parts of his business with a feeling of certainty.

This article outlines only a very crude system for arriving at some of the important facts, and is intended merely to stimulate thought on the part of those manufacturers who are not using some similar system. Should it prove of interest, and the reader care to go further, we would advise a careful study of the treatise entitled "The Exact Cost of Lumber—A Problem Solved," by Carl Wedderin, published by the Journal of Commerce Company, St. Louis, Mo. Mr. Wedderin's article goes into the subject from an accountant's standpoint, and with a careful perusal and the encouragement of your bookkeeper a great deal of the information can be put into practical use in most any sawmill business.

[The writer of this article is seeking all the information possible on this subject, and should any reader of the Record have any ideas that would help out or add to what has already been done, the columns of this journal will be open at all times for the publication of such information.—Editor.]

Hardwoods in Ecuador

In reply to an inquiry regarding the prospects of developing an export business in hardwood from Ecuador, Consular Agent George D. Hedian, of Esmeraldas, writes as follows:

The hardwood trees here are widely scattered; there are no forests made up entirely of either one or even several kinds of wood, such

as pine, cedar or oak forests of the United States. There are practically no public roads and absolutely no wagon roads in this province. The districts where the hardwoods are found would require roads made especially to bring out the logs, and the scattered location of the hardwoods would make the length of the roads greater than if all the trees of the forest were to be used.

The only persons regularly engaged in getting out logs are employed on the branches of the Santiago river, in the north of this province, and they bring out cedar, tangare and laurel, chiefly for delivery to the three sawmills located on that river. These logs are cut from lands nearest some tributary to the river, so that there is but a short land haulage, which is accomplished by a "frolic," in which the neighbors of the cutter join in dragging out the logs to the water, the crudest imaginable methods being employed. This has resulted in thinning out the merchantable woods near the streams, and logs are now brought out only during the rainy season, when the small streams have plenty of water to float them. In the lower part of this province, along the coast, the timber has not been touched, except for occasional house frames, but the conditions for getting it out to water transportation are the same.

No one is at present engaged in exporting hardwoods. If the market price of hardwoods in Boston or New York were known here, doubtless some business man would investigate as to the cost of putting the woods on the market, and if it offered a good margin of profit the business would establish itself, just as the export of ivory nuts has been developed. As the business of exporting hardwoods would be new in this port, it would be necessary for anyone desiring a shipment to deposit a fund with the firm or its New York representative to guarantee the expenses to be incurred, or guarantee a minimum price per ton for the wood to be shipped.

Another method by which a satisfactory business might be built up would be to send out a responsible timber expert to make an investigation. Public lands are cheap, title can be obtained, and contracts can be made for timber on private lands on a reasonable basis. Such an expert could doubtless establish a system of getting out and shipping the timber at a cost that would leave a satisfactory profit.

ARTICLE XXXVI  
GRAPHOPHONES

Things change and change rapidly. What is regarded as satisfactory at one time is considered less valuable or even worthless at a later period. So in the case of the graphophone, that reproducer of human speech so popular just now, there has recently occurred a change which is almost revolutionary, and hardwood was the means of achieving this result.

Until a year ago metal was used in the construction of the horns used on grapho-

SMALL HORNLESS GRAPHOPHONE

phones. From the start there was evident rather a harsh, rasping sound always unsatisfactory because it failed to produce tones truthfully. Manufacturers, however, continued its use for the very good reason that they knew of nothing better.

The horn of the graphophone is probably the most essential part of the instrument. It is doubtless a wonderful thing to record sounds, but it is equally as important to reproduce them accurately, and the horn is largely responsible for this part of the work.

About a year ago, after some experimentation, it was ascertained that by the use of certain hardwoods a horn could be made that would give the most pleasing tones possible under present conditions. The reason for this is that metal reverberates, each tone making a slight echo, giving an unsteady and harsh sound. With the hardwood horn, tones are reproduced with a mellowness and softness that is a vast improvement over the old metal styles.

In constructing these wooden horns a bell-shaped mold is made twenty-eight inches long, twenty-six inches wide at the widest place and two inches wide at the throat where the finished horn will fit onto the machine proper. These are precisely the dimensions of the old metal horn as first invented—that is, for the average sized graphophone. Into this mold sixteen panels, three inches wide at the broad end and tapering down to nothing at the other end, are dovetailed and then bent until they conform to the shape of the mold. The panels are then grooved and remain in the mold from two to three weeks, or until they are thoroughly bent into

the desired shape. When the horn is finished it is quite impossible to tell that it is pieced, so skillfully and accurately are the segments matched up and the finishing done.

For these horns spruce, oak and mahogany are the woods most used. Spruce gives the best tone, as it is more resonant than the others. Oak and mahogany are used in greater quantities, however; they give satisfaction from the point of view of tone, and besides are more beautiful woods and more popular at present for cabinet purposes. Oak and mahogany match much better than spruce in addition to being of greater strength, which accounts for their being more widely used in this line.

These graphophone horns are made of three-ply veneer, cross-banded, and so constructed that they do not warp or lose their shape. Both the outside and inside layers of veneer are arranged so that the grain runs spirally around the horn. The veneer is usually one-fifth of an inch thick. Manufacturers claim, and it is easily understood, that a veneered horn is not only much more satisfactory than one of solid wood, but is also stronger. Since the grain of the wood runs round the horn, it is much less likely to split than it would be if made of solid wood.

Veneered horns are made in both plain and fancy styles. Some have ribs and carved panels, some are built up with raised effects, but the most popular style is the smooth three ply horn of regulation shape, when

wood of attractive grain is used and the horn well finished. In some cases horns are faced with mahogany and various other woods to take the eye of the buyer seeking something new.

This is one instance where wood has supplanted metal because of the sound feature entirely. It has been thought for a great many years that all kinds of woods were deadening so far as the power to transmit sound

HIGH CLASS CABINET GRAPHOPHONE

is concerned, because of their non-resonant character. This idea is evidently a mistaken one, for although metal more sharply conveys sound, wood conveys it more clearly.

CABINET FOR HOLDING CYLINDER RECORDS

CABINET FOR HOLDING DISC RECORDS

GRAPHOPHONE HORN OF OAK VENEER

Graphophone manufacturers are of the opinion that wood will replace metal in the construction of horns in the near future. Spruce will undoubtedly be a large factor in this line, although oak and mahogany will still continue to be popular because of their beauty and their strength in the bending process.

In the cabinets for graphophones, hardwoods play an important part, and quite a large quantity of the popular cabinet woods are consumed annually by graphophone concerns. There is a wide diversity of styles manifest in this line of manufacture, and some of them are very noteworthy examples of the cabinetmaker's art. Graphophone cabinets are by no means confined to the small wooden box seen on the cheaper types of instruments, the more pretentious styles approximating the piano in quality of workmanship and finish.

As in the furniture trade, oak and mahogany are the most popular woods used. Quartered oak and veneers are used quite extensively and all cabinets having bulged sides

or panels are veneered, as they stand the strain much better than solid wood. Bent panels are subjected to the same treatment as the horns, being placed in a mold and kept there until the wood is thoroughly dry and of the desired shape. The parts are joined together by mortising and glue.

There is a growing popularity for hand-carved cabinets for high-grade graphophones. This demand, manufacturers state, prevails even among people who would not generally be considered in a position to buy hand-carved articles.

All stock purchased either for cabinets or horns is carefully selected and thoroughly treated. Mahogany seems to be the favorite among buyers of graphophones, although manufacturers are said to prefer oak for most purposes.

GRAPHOPHONE HORN OF MAHOGANY VENEER

The Columbia Phonograph Company, a large and very successful manufacturer of this class of goods, was the instigator of the wood horn. The illustrations, as well as much of the matter embodied in this story, were supplied by that company.

We are not looking for what the "overzealous" term a "boom," but we are, and always have been, optimistic enough to feel that we are not going to have any trouble in keeping our output sold from both our mills, as well as from our new plant as soon as completed.

WHITING LUMBER COMPANY.  
C. L. Barr, Secretary.

### "Doings" of Biltmore Forest School

The RECORD is in receipt of a letter from Dr. C. A. Schenck, director of the Biltmore Forest School, who is now at Darmstadt, Germany, with his graduating class, from which the following is excerpted:

Many thanks for your good letter of the 21st of January and for your assistance and encouragement. If we succeed in getting an official invitation from the leading lumbermen in Cadillac, the Biltmore Forest School and all the good for which it stands will be placed on a permanent basis.

Incidentally, the friendship of the best lumbermen in the United States is worth more to a school than all endowments possible; and I shall make it a point to deserve that friendship.

We shall sail from Rotterdam on the 8th of April and shall arrive in New York on the 18th, and hope to arrange to meet you at Chicago very soon thereafter. You understand it is our plan to sojourn after May 1 at the operation of the Little River Lumber Company at Townsend, Tenn., for a couple of months; then two months near Tomah, Wis., at the operations of the C. A. Good-year Lumber Company, and then, if matters come around right, to spend September and October at Cadillac, Mich., in the forests of the Cummert-Diggins Company, Cobbs & Mitchell, Inc., and the Mitchell Brothers' Company.

We are having a most interesting and valuable experience in the German forests.—C. A. SCHENCK.

It may be said that plans are practically perfected for the program as above outlined for the location of Dr. Schenck's Biltmore Forest School in the various sections noted during the open season of 1910. The arrangements will probably include a complete military camp to be transported from point to point, located in the very heart of the various forests, from which vantage ground the students will have the advantage of studying the most approved methods of woods work, railroad operations, sawmilling, flooring manufacture and the utilization of forest and sawmill refuse. It is very likely that later in the season the school will be removed to the extreme South, somewhere in the yellow pine regions. Dr. Schenck's students are afforded opportunities for wide experience, and his school has advantages not possessed by any other forest school in the United States.

My understanding is that Dr. Schenck proposes to limit his students to a total number of forty, and that the list of accepted applicants is now well nigh completed. Prompt action should be taken on the part of anyone wishing to be admitted to Dr. Schenck's next classes, by making immediate application to him at his present address, 16 Heidelberger Strasse, Darmstadt, Germany.

The proposed plans of Dr. Schenck in connection with his forest school will make lots of veteran lumbermen wish they were boys again to take advantage of it.—EDITOR.

## Hardwood Record Mail Bag

### Wants Red Cedar Fence Posts

RUSSELLVILLE, KY., Feb. 14. Editor HARDWOOD RECORD: We would like to get in correspondence with anyone handling red cedar fence posts in the square round boards, etc. . . . COMPANY.

The RECORD will be pleased to put any reader in touch with this concern, upon application for address at this office.—EDITOR.

### Hardwood Conditions as Seen by Whiting Lumber Co.

The RECORD is indebted to Chapin L. Barr, secretary of the Whiting Lumber Company, Philadelphia, Pa., for the following analysis of hardwood and oak flooring conditions as viewed by him.—EDITOR.

PHILADELPHIA, PA., Feb. 10. Editor HARDWOOD RECORD: At the request of your Mr. Jacob Holtzman, asking for our opinion on market conditions, we are pleased to report a very satisfactory business in hardwood flooring. We are now manufacturing about three-quarters of a million feet per month, and because of a decided

increase in the demand for oak flooring we have found it necessary to increase our production, and hope within the next ninety days to be showing an output of at least a million feet per month.

We are oversold on hardwood flooring and to day are refusing business because of not having the stock to offer, and we have for the past four months been getting better prices than we did for the same stock the early part of 1909, and we have every reason to believe that there will be further advance, particularly in the select and clear oak flooring, within the next sixty days.

We are also pleased to note a much better condition in the market calling for low-grade hardwoods, and our surplus, which represented several million feet ninety days ago, has all been sold, and some low-grade stock we are shipping green from the saw.

We hardly think it worth while to mention upper grades of hardwood, as this stock has been in very active demand and at exceptionally good prices for the past several months, and we have had no trouble in keeping our entire output in upper grades sold for shipment as fast as we could get it in shipping condition.

### The Grading of Maple Flooring

PHILADELPHIA, PA., Feb. 15. Editor HARDWOOD RECORD: Will you kindly advise us what the rules are for the grading of maple flooring?—LUMBER COMPANY.

The following are the current rules covering the inspection and measurement of maple flooring.—EDITOR.

CLEAR—Shall have one face free of all defects, but the question of color shall not be considered. Standard lengths in all widths in this grade shall be trimmed 2 to 16 feet, inclusive; the proportion of lengths 2 to 3½ feet shall be what the stock will produce up to 10 per cent.

No. 1—Will admit of tight, sound knots and slight imperfections in dressing, but must lay without waste. Standard lengths in all widths in this grade shall be trimmed 1½ to 16 feet, inclusive; the proportion of lengths 1½ to 3½ feet shall be what the stock will produce up to 25 per cent.

FACTORY—Must be of such character as will lay and give a good serviceable floor with some cutting. Standard lengths in all widths in this grade shall be trimmed 1 to 16 feet, inclusive; the proportion of lengths 1 to 3½ feet shall be what the stock will produce up to 50 per cent.

### Liked the Editor's "Rough Country Logging Operations" Picture Show and Dailies

PHILADELPHIA, PA., Feb. 7.—Editor HARDWOOD RECORD: After arriving home and thinking more soberly about the magnificent entertainment you gave your fellow lumbermen at Cincinnati, I desire to repeat what I told you that evening—it was the finest thing I have ever seen of that kind. You deserve great credit, and am sure you will be more than repaid for the trouble you have taken in connection with this matter. I feel sure that everyone enjoyed it and appreciated it, and that you are to be highly congratulated on the great success you have made. HORACE A. REEVES, JR.

CRAWFORDSVILLE, IND., Feb. 8.—Editor HARDWOOD RECORD: I want to congratulate you on your "show" and lecture at Cincinnati. That alone was worth the whole trip.—ROY BURKHOLDER.

BENZONIA, MICH., Feb. 12. Editor HARDWOOD RECORD: Enclosed find check for \$2 as per invoice. After such an exhibition of enterprise as was recently shown in your Cincinnati editions, it would seem mighty mean and unappreciative for any subscribing lumberman to withhold his subscription twenty-four hours after it became due.—CASE BROTHERS' LUMBER COMPANY.

### Electric Drive for Veneer Plants

The RECORD has recently received several communications from veneer manufacturers asking for suggestions concerning the proper method of power transmission for the various machines employed in their line, and especially for a motor drive of variable speed that could be applied to veneer cutters so that the speed could be reduced on bolts of large diameter and increased as the size was reduced, thus accomplishing a uniform speed of cut on logs of varying diameter.

In response to a request for information on this subject, the Allis-Chalmers Company of Milwaukee, Wis., large producer of power plants and electrical appliances, furnishes the following information concerning the equipment this company supplied to the W. D. Reeves Lumber Company of Helena, Ark., for its veneer plant. This equipment includes, as will be noted, the generating equipment of motor-driven machines.—EDITOR.

One 20" x 36" Reliance belted engine operating at a speed of 120 r. p. m.; steam pressure 125 lbs.; engine is arranged with a 12" wheel crowned for two belts, one 11" and the other 22". This engine drives one 250 K. W. A. II., 60-cycle, 3-phase, 220-volt alternator, one 50 K. W., 720 r. p. m., 220-volt generator. With the alternator is supplied one type "K", 9 K. W., 1,650 r. p. m., 120-volt exciter; one two-panel switchboard with A. C. and D. C. instruments.

The motor equipment is as follows:

One 5 H. P., 220-volt, 1,050 r. p. m., type "K" motor belted to line shaft, driving friction drive for hoisting blocks to veneer machine.

One 40 H. P., 220-volt, type "K" variable speed motor, 325 to 800 r. p. m., geared to a White & Blakesley veneer machine. This machine when operating at its full capacity, as it generally is, will supply 31,000 log feet of 5 16" veneer in eight hours. This veneering is made mostly from gum timber, and the gum logs vary in diameter from 24" to 41" and when cut for the veneer machine are 28" long.

One 7½ H. P., 220-volt, induction motor, 3-phase, 1,130 r. p. m., belted to line shaft, driving friction drive for operating log skid and bull chain for shifting logs.

One 60 H. P., 220-volt induction motor, speed 850 r. p. m., belted to a 60" Sturtevant double exhaust fan, operating at the speed of 1,000 r. p. m.

One 30 H. P., 220-volt, induction motor, speed 1,130 r. p. m., belted to a 30" Manistee, Michigan "hog" for tearing up slabs, operating at a speed of 1,200 r. p. m.

One 2 H. P., 220-volt, induction motor, 1,700 r. p. m., belted to a Whitney hardwood flooring scraper.

One 7½ H. P., 220-volt induction motor, 1,130 r. p. m., belted to end matcher for hardwood flooring made by A. J. Schindler Company.

One 20 H. P., 220-volt induction motor, 1,130 r. p. m., belted to Hoyt & Brother No. 27, 15" flooring machine.

One 10 H. P., 220-volt induction motor, 1,130 r. p. m., belted to a Houston 12" outside moulding machine.

One 7½ H. P., 220-volt induction motor, belted to a Hoyt & Brother siding resaw machine.

One 20 H. P., 220-volt induction motor, 1,130 r. p. m., belted to a Hoyt & Brother No. 14, 30" surfacer.

One 10 H. P., 220-volt induction motor, speed 1,130 r. p. m., belted to line shaft, driving one Williamsport spang edger and one Hoyt & Brother gang edger.

One 40 H. P., 220-volt induction motor, 1,130 r. p. m., geared to one Fisher band resaw machine, wheels 56" diameter.

One 3 H. P., 220-volt induction motor, 1,700 r. p. m., belted to box cutoff saw.

One 5 H. P., 220-volt induction motor, 1,700 r. p. m., belted to line shaft driving one Fisher box matcher and one box rip saw.

One 5 H. P., 220-volt induction motor, 1,700 r. p. m., belted to line shaft driving three box rip saws.

One 3 H. P., 220-volt induction motor, 1,700 r. p. m., belted to one box cut-off saw.

One 10 H. P., 220-volt induction motor, 1,130 r. p. m., belted to line shaft driving three box cut-off saws.

One 7½ H. P., 220-volt induction motor, 1,130 r. p. m., belted to line shaft driving three box rip saws.

One 10 H. P., 220-volt induction motor, 1,130 r. p. m., belted to line shaft driving two double veneer rip saws.

One 3 H. P., 220-volt induction motor, 1,700 r. p. m., belted to one Mershon squeezer.

One 3 H. P. induction motor, 1,700 r. p. m., belted to line shaft, driving one Fisher box matcher.

One 3 H. P. induction motor, 1,700 r. p. m., belted to line shaft, driving a Doig stapling machine.

One 2 H. P., 220-volt induction motor, 1,700 r. p. m., belted to a Clement No. 36 band saw.

### Advice from the Editor

CINCINNATI, O., Feb. 8. Editor HARDWOOD RECORD: Why don't you get in the swim and move your paper to Cincinnati? There is nothing to lose by such a move and everything to gain. I think that a live paper like yours here would be a decided success, and I don't believe you thought of this before or you would have been with us. Think it over and move down.—WILL S. STERRETT.

The following is my answer:

CHICAGO, ILL., Feb. 17.—Dear Sir: You ask why I don't move HARDWOOD RECORD to Cincinnati. Simply because Chicago is a better place in which to publish it, as Chicago is the financial

and general business center of the hardwood industry. Directly and indirectly there is financed and handled through this market over two billion feet of hardwoods annually.

You say you think that a live lumber paper would be a decided success in Cincinnati. How much do you think so? A publication like HARDWOOD RECORD involves an expenditure of approximately \$50,000 a year. Will you be one of fifty Cincinnati concerns to guarantee it one thousand annual revenue? If you will and will get the rest of the "bunch" to do so, you can get Gibson or someone else to publish a paper there. As a matter of fact, Cincinnati is the most prominent feature of the advertising sections of HARDWOOD RECORD today, and it is my advice to you to let well enough alone. You are getting all that you could out of a lumber paper today at a very small cost. Editor.

### Measurement Table for Hardwood Flooring

As is well known, both maple and oak flooring are delivered bundled. The extreme short lengths are bundled twelve pieces to the bundle, and the longer lengths are packed six pieces to the bundle. M. E. Thomas, sales manager of the Mitchell Brothers Company, and Cobbs & Mitchell, Inc., of Cadillac, Mich., has issued to the trade a circular showing how his concerns bundle flooring. The schedule follows:

13 16x1½", all lengths, 12 pieces.  
13 16x2, 21" and 3½", 2 to 5½ ft. lengths, 12 pieces; 6 to 16 ft. lengths, 6 pieces.  
1 1/2x2 and 2½", 2 to 5½ ft. lengths, 24 pieces; 6 to 16 ft. lengths, 12 pieces.  
3 8x1"—All lengths, 24 pieces.  
3 8x1½ and 2", 2 to 5½ ft. lengths, 24 pieces; 6 to 16 ft. lengths, 12 pieces.  
The 13 16x2, 21" and 3½", 2 to 5½ ft.; 1 1/2x2 and 2½", 2 to 5½ ft.; 3 8x1", and 3 8x1½ and 2", 2 to 5½ ft. bundles, are double in size and each one is counted as two bundles on our tally sheets.

On the same circular is involved a measurement table which is as follows:

Multiply the total lineal feet of the bundles by the proper number shown in third column of table and the product will be the total feet flooring, board measure.

Size	Pieces in bundle	Multiply by	Add
13 16x1½	12	21	50%
13 16x2	6	13½	38%
13 16x2½	6	11½	34%
13 16x3½	6	2	24%
1 2x2	12	21½	25%
1 2x2½	12	23½	23%
3 8x1	12	11½	50%
3 8x1½	12	2	34%
3 8x2	12	21½	25%

To estimate the number of feet required to cover a given number of square feet area, add to surface measure the percentages shown in last column of table.

### Not as Serious as First Reported

BALTIMORE, MD., Feb. 14.—Editor HARDWOOD RECORD: We note from the reports of our daily papers and others throughout the states, who published reports of our late fire, the figures given in these reports in some way, unintentionally no doubt, were exaggerated and which we wish to correct through your paper if you will be kind enough to publish same in your next issue.

Some of these papers showed a loss of \$125,000 over and above our actual loss, without insurance to cover same. The fact is our net loss on stock was \$91,755, covered by insurance of \$90,550; the net loss on sheds and office buildings, \$11,673.26, covered by insurance of \$9,700.

This, you will see, makes our loss practically nothing considering the amount above mentioned. Our object in asking you to publish this is to simply place ourselves before the public, and especially manufacturers of lumber, in a correct way.

We will continue in business in same manner as heretofore and at same address.

EISENHARTER MACLEA COMPANY.

## The Hustling Tree Doctor of Glen Ellyn

It was with a feeling of curiosity that the writer recently journeyed to the pretty little rural suburb of Glen Ellyn, situated among most picturesque surroundings, within an hour's ride of the heart of Chicago, to listen to a lecture on "Forestry," delivered by the official forester of the village, Dr. Frank Johnson.

Before going into detail relative to Dr. Johnson as a man, and he is an absorbing subject for anyone interested in his fellow beings, and to the substance of his talk, it might be well to diverge for a minute and give a short sketch of Glen Ellyn as a village.

In this community of 2,500 souls the spirit of good-fellowship abounds; from the small boy who directed me to St. Mark's Church, where the lecture was held, to that hustling and wide-awake gentleman, Byron Williams, president of the village council, and in the daytime editor of the *Woman's World*, the chief aim seemed to be to make a stranger feel at home, and to extend to him the hospitality of the community. The Men's Club, which includes in its membership most of the male population of Glen Ellyn, under whose auspices the lecture was given, was organized principally as a medium through which the men could become acquainted, and judging by the apparent pleasant feelings on all sides, and the familiar way in which each one greeted the other fellow—using the first names in most cases—it has been a decided success. The club meets once a month and an enjoyable evening is always assured.

The village government consists of ten officers besides the president and the various questions of import are taken care of by the usual standing committees. Much progress has already been made under the active leadership of the present administration, and it is a matter of but a short while before Glen Ellyn will be one of the most popular of Chicago's suburbs.

Dr. Johnson has officially taken care of the trees in the village for some time, and has long been a familiar figure to tree lovers in the vicinity of Chicago. Indeed, his work has been so widespread as to have attracted the attention of former Forester Pinchot, who recently wrote him a lengthy letter of commendation. The doctor's intimate and thorough knowledge of the practical side of the care of trees has been ac-

quired entirely from a close study of nature and totally without the aid of text books. To this genial and hard-working man a bug is a bug, regardless of the scientific name, which he says seldom rests heavily enough upon its shoulders to prevent its doing immense damage to his dearly beloved charges.

While not technically a forester, Dr. Johnson has a close knowledge of tree life that would be a valuable asset to many a university-trained man, who knows the woods only from the theoretical point of view. His work is to him all-absorbing; he thinks trees from sunrise till sun-

set, or perhaps longer; for I was told that he is a strict union man, working his full eight hours, every forenoon and every afternoon. According to the doctor's statement there are already growing in his own limited yard more than one hundred trees raised from pits and seeds, planted instead of being thrown away.

CLEANING OUT ROT AND FUNGUS GROWTH

The lecture was illustrated by specimens gathered by the speaker in the course of his work, which, besides their interesting illustrative character, were a mute token of the hard-working zeal of the doctor, for they represented enough cordwood to last an ordinary family half the winter.

Dr. Johnson does not believe in lengthy introductory remarks, and in this instance plunged directly into a discussion of proper and improper methods of pruning, showing to illustrate his points tree sections about the size of a butcher's block. These had been split, and one instance where the wound left in removing the limb had not been treated the entire heart under the apparently perfect heal was rotted away. The specimen which had been properly dressed was sound and healthy. An outline of proper methods of procedure according to the doctor is as follows: First make your cut properly so as to shed water, not horizontally; then be sure that the stump is trimmed down as closely as possible and that there is nothing in the way of the proper growth of the new bark. A mixture of hot tar and a little beeswax will insure permanent protection against weather and insects. When cutting heavy limbs make a preliminary cut, leaving a short stump, to prevent ragged breaking.

Another topic for discussion was that of properly cleaning and filling with concrete cavities of decay in trunk or limbs. The doctor claims that no hole is too big to treat, providing there is even a small strip of bark remaining by which the vital sap can reach the upper tree. The first step in treatment of this kind is to chisel out thoroughly all decayed wood, making sure that there are no borers left in the tree. This part of the job can be done in winter, if necessary, and with the advent of warm weather, when there is no danger of freezing, the concrete is installed—care being taken to have clean ingredients, and not to make the mixture too wet. A rich mixture is best, owing to its greater density, and hence ability to shed water. Before installation be sure that the cavity created is wider at the back than at the edge, thus insuring the permanence of the filling. It is wise to bore several holes in the back wall as an additional anchor. In exceptionally large fillings iron bars are of advantage in holding the concrete in place.

Split crotches are usually rather difficult to treat, but Dr. Johnson showed a simple device, consisting of a turn-buckle with stout ropes attached which, applied 20 to 30 feet up, will pull any tree into place. The two limbs are then bored through and bolts having threads and nuts at one end and hooks, which are locked together at the other, are inserted and drawn up to the proper distance. It is necessary to countersink the bolts and cover the wound with cement to insure against infection.

The numerous sections and portions of trees were all illustrative of the serious depredations that will follow neglect of wounds, just as infection will result from not properly caring for an injury to a human being, and the doctor's listeners were implored by him not to be guilty of negligence of this character. He demonstrated that early attention and proper treatment of wounds is a simple matter, but it is often very expensive and tedious to treat a tree which has suffered for some time.

After witnessing this exhibition of his ability and enthusiasm we feel safe in saying that Dr. Johnson is without a peer in his line of work and well merits the attention of all interested in ornamental trees or trees in general. Our curiosity has turned to admiration. E. W. M.

THE OPENING FILLED READY FOR THE BARK TO HEAL THE WOUND

## News Miscellany

### Nashville Lumbermen's Association to Reorganize

Steps were taken a few days ago to reorganize the Nashville Lumbermen's Association, this time placing it on an individual rather than on a firm basis. The move was inaugurated at a gathering of several prominent lumbermen two or three days before the banquet, at which time the banquet was decided upon.

A number of lumbermen were present at the Duncan on February 17 and after enjoying a bountiful repast the meeting was called to order by M. F. Greene of the Davidson, Hicks & Greene Company, who was vice-president of the former organization; the president was the late John B. Ransom. Mr. Greene stated the purpose of the gathering. He then announced the following Committee on Organization: Arthur B. Ransom, W. R. Binkley, and J. R. McIlwaine. While the committee was out formulating its report a number of lumbermen made talks. J. H. Baird spoke of the advantages of an organization based on individual membership rather than on a firm basis. He mentioned as excellent examples of the efficacy of such plan the organizations of lumbermen in the cities of Cincinnati and Memphis. Hamilton Love said Nashville was ready to prove that this city is the principal hardwood market of the world. Harry Bond told some old-time lumbermen's stories. John Denton and A. Loveman spoke in favor of the reorganization.

The report of the Committee on Organization was then received from Arthur B. Ransom, who prefaced the report by declaring that the lumbermen of the city should certainly get together, stand together and let the world know what Nashville is in the hardwood industry. His committee recommended the appointment of committees on organization, nomination of officers, and membership. The committee recommended two tickets to be run for the offices, a "red" and a "blue" ticket, and the officers shall be: president, vice-president and secretary and treasurer. The committee recommended that the membership should be placed on an individual basis and that the annual dues be \$5. Another meeting was recommended for the third Saturday in March at 1 p. m., at which time officers will be elected. The report was adopted unanimously.

An informal discussion on ways and means followed. Talks along this line were made by Arthur Ransom, A. H. Card, Olin White, W. T. Smith, J. H. Baird and others. The Nashville "booster" spirit pervaded each talk. The value of exchange information was dwelt upon and the necessity of broadening the organization. The necessity for securing a return of the full shipping privilege for Nashville was urged. It was shown that Nashville stocks amount to about ten million feet. The need of an executive committee to act between club meetings was urged.

It is probable that under the new regime the local organization will be broad enough in scope to include in membership all those who receive or ship forest products. Lumbermen, wood-working establishments, casket makers, cross tie people, handlers of poles and posts, furniture manufacturers, etc., will be admitted to membership.

Vice-president Greene named the following committees: Organization, Arthur B. Ransom, Charles E. Hunt, Hamilton Love, J. S. Denton, and A. M. Trice; nominations, S. K. Cowan, Henderson Baker, Olin White, H. B. Bond and A. Loveman; membership, A. H. Card, E. W. Pearson, R. T. Wilson, W. A. Binkley and Alfred Faris. The Nominations Committee will report two full tickets to the members in the next two weeks. The Membership Committee was authorized to act on the eligibility of all applications for membership. The Committee on Organization was instructed to draft a plan for re-organization. All the committees ap-

pointed will meet at the rooms of the Board of Trade on the first Saturday in March at 3 p. m.

J. H. Baird, Olin White, A. Loveman and J. S. Denton were appointed delegates to attend the annual meeting of the National Wholesale Lumber Dealers' Association in Cincinnati March 1-3.

Those in attendance at the banquet Thursday night were:

M. F. Greene,  
E. D. Ralston,  
J. W. Britton,  
J. R. McIlwaine,  
E. W. Pearson,  
L. D. Patterson,  
Richard T. Wilson,  
S. B. Ransom,  
E. M. Underhill,  
W. T. Smith,  
J. G. McIlwaine,  
C. E. Hunt,  
J. S. Denton,  
J. H. Wade,  
H. M. Greene,  
E. Bartholomew,  
James Kerr,  
C. E. Dews,  
J. H. Baird,  
A. N. Trice,  
John Eckstein,  
H. C. Card,  
W. A. Binkley,  
C. V. Bryant,  
Henderson Baker,

A. Loveman,  
L. Frank,  
Raymond Thrasher,  
D. S. Hutchison,  
H. P. Patterson,  
P. J. Loevenhart,  
John B. Ransom, Jr.,  
Charles M. Morford,  
Olin White,  
A. H. Card,  
T. A. Washington,  
Hamilton Love,  
C. L. McConnell,  
Joseph G. Scheffer,  
H. K. Wharton,  
H. B. Bond,  
G. H. Cheeky,  
Arthur B. Ransom,  
William Dunlap,  
T. E. Crittenden,  
George W. Gilliland,  
Al C. Faris,  
C. T. Dews,  
M. C. Ewing,  
Samuel K. Cowan.

### Meeting St. Louis Lumbermen's Club

The Lumbermen's Club of St. Louis held its regular monthly meeting and dinner at the Mercantile Club, Tuesday evening, February 8. Dinner was served at 6:30 and a musical programme was given while it was being enjoyed.

President R. J. O'Reilly called the business meeting to order. He said that the regular order of business would be postponed while S. W. Thompson, field secretary of the National Rivers and Harbors Congress, addressed the members on the deep waterway question.

Mr. Thompson stated that his heart was in the waterways movement and that he would do anything honorable to secure deep waterways; he said that there had been a great deal of talk about the tariff bill but the waterways subject was of greater importance. He gave a great many interesting and valuable statistics and figures on the importance of it. He mentioned the fact that the citizens of the United States paid out three times as much for transportation as they did for tariffs and gave details of the saving by waterway transportation over that by railroad and said that waterway and railroad competition increased tonnage; that the profits by the railroads in this country were about a third of those in Germany because waterways improvements are better in that country than in the United States; further that countries getting revenues from their railroads are the countries spending the most money for waterways improvements; that the United States would get left in disposing of its commodities unless it improves its waterways; that the policies pursued by this country in the improvements on the Great Lakes are foolish; that the day will come when it will be possible to send freight in bulk from the headwaters of the rivers emptying into the Mississippi River and to the Gulf; that legislation should be enacted to compel the railroads to cooperate with the waterways; that railroads should be prevented from grabbing waterfronts, as the waterways are the best creators of railroad business.

W. P. Kennett, one of the vice-presidents of the National Rivers and Harbors Congress, then spoke and indorsed what Mr. Thompson had said and mentioned the fact that the congress should have the moral, financial and political support of the Lumbermen's Club.

Paul Brown, an editorial writer on the St. Louis Republic, spoke for a few minutes on the importance of waterway development, especially free waterway terminals.

A resolution was then offered by Julius Seidel, that a vote of thanks be given Mr. Thompson.

George H. Morgan, secretary of the Merchants' Exchange of St. Louis, spoke on what Mr. Thompson had said and mentioned the fact that the importance of the lumber industry was recognized by the Merchants' Exchange.

The regular order of business was then taken up. The minutes of the January meeting were read and approved.

R. F. Krebs, chairman of the Traffic Committee, read a communication from a hardwood lumberman asking that an investigation be made of the railroad rates on cottonwood and gum from points on the West side of the river which are two cents higher than those from points on the East side. Mr. Krebs said that he could get no satisfaction from the railroads. He also stated that he had received a circular letter from a committee of shippers asking that the lumber shippers indorse the bill now before the city council, authorizing additional track construction in certain sections of the city.

R. B. McConnell then announced that a continuation of the Order of Hoo-Hoo would be held on March 12, and stated that he would be glad to show any of the lumbermen, who might wish to join the order, the "dark lights" on that evening.

### New Sales Office

Alf Bennett, president of the Alf Bennett Lumber Company of St. Louis, Mo., with offices on the thirteenth floor of the Wright (Lumbermen's) building, has completed arrangements by which his firm will open a selling office and agency in Houston, Tex., in order to more effectively handle its rapidly increasing sales. The company has recently made several new mill connections, the most recent of which is the acquirement of the mill of the Holliday-Shilkee Lumber Company at Todd, Tex.

The new office at Houston will be in charge of Dwight L. Dickinson, treasurer of the Alf Bennett company and a young lumberman of ability and experience. His position will be an important one, as he will not only handle the output of the newly acquired Todd mill, but also that of the mill of the Dayton Lumber Company at Dayton, Tex., and in addition, his will be the sales office for the entire state of Texas, where he will be in charge of the sales.

The deal for the Todd mill was closed with the Holliday-Shilkee company following a recent trip of Mr. Bennett to the South, in which he conferred with officials of the company on the matter. The details of the deal were later successfully arranged, and the matter was finally closed by wire and correspondence.

### Meeting Wagon Oak Plank Exporters' Association

A meeting of the Wagon Oak Plank Exporters' Association, somewhat preliminary in character, was held February 16 in the office of Secretary E. M. Terry of the National Lumber Exporters' Association. The gathering was called to consider the report of a committee named to draft inspection rules embodying the views of the exporters and governing the business in wagon oak planks. Owing to the brief notice given of the meeting, the out-of-town members were unable to attend, with the exception of H. D. Billmeyer, president of the H. D. Billmeyer Lumber Company of Cumberland, who is acting secretary of the association. President Harvey M. Dickson of the Dickson Lumber Company of Norfolk, the president, was kept away by illness. Among those on hand were Richard W. Price of Price & Heald, who acted as chairman; John L. Alcock of John L. Alcock & Co.; R. P. Baer of R. P. Baer & Co.; Holger A. Koppel, W. O. Price, L. H. Bowman of the R. E. Wood Lumber Company, and others.

Telegrams were received from the W. M.

Ritter Lumber Company of Columbus, O.; J. A. Wilkinson of Bristol, Tenn., and others, expressing sympathy with the movement.

The meeting had before it the rules adopted by the Liverpool Timber Trades Association at a meeting held January 21, which were identical with those adopted by the exporters in 1897. Since then, however, conditions of supply have changed greatly, and oak planks of the quality fixed at that time are not now obtainable in sufficient quantities to supply the demand. A readjustment of grades has become a necessity, and this appears to lie largely at the bottom of the differences between the exporters and the foreign buyers. The rules framed by the committee were tentatively adopted, and will be taken up again at a meeting to be held in Roanoke March 10, when a full attendance of the members is expected. The proposed rules are based upon the prevailing conditions of supply, and their acceptance by the foreign buyers will be insisted upon in order that this division of the business may be established upon a definite basis. They were extensively discussed and seemed to meet with unanimous approval.

#### Galloway-Pease to Move to Saginaw

The Galloway-Pease Company, the well-known wholesale lumber concern of Cincinnati, Ohio, announces that it will remove its general offices to 510 Eddy Building, Saginaw, Mich., to which address all correspondence should be sent after February 26. E. D. Galloway is president of this concern, which handles all kinds of hardwoods and white and yellow pine. The company will be a welcome addition to Saginaw lumber circles.

#### Conditions in the Broom Handle Business

The past few months have shown a greater volume of business among the broom handle manufacturers than any time in recent years. It was thought last fall that the prevailing high prices of broom-corn would effect a material reduction in the factory output, but quite the reverse has been the case, some concerns reporting as much as a fifty per cent. greater volume of business than they ever booked before. One plant in particular, specializing in high-grade brooms, is working three nights a week and is still a couple of weeks behind in its orders.

Until recent years the brokers practically controlled the broom-corn market and manufacturers were always quite content to purchase their stock through this medium; fairly uniform prices prevailed, the broker getting a legitimate profit but not as a rule being extortionate in his demands. Of late, however, broom concerns have been making their own purchases to a constantly increasing extent, and following the competition thus created, prices have shown an upward tendency. Fabulous prices have been realized in certain instances, by farmers who sold their product to a highly competitive market, and unless this new condition of affairs is regulated to a degree, broom prices promise to show a constant advance.

#### Annual Box Manufacturers' Association

The tenth annual meeting of the National Association of Box Manufacturers convened in the Casino at French Lick, Ind., Feb. 23, 1910. There was a large attendance at the opening session, when President Yegge called the meeting to order. Secretary E. H. Difebaugh was at his post. The meeting continues for three days, and there is much important legislation in prospect.

A most entertaining address of welcome was delivered by Col. Thomas Taggart. Wm. Rice

of Philadelphia responded in an appropriate and interesting manner.

President Yegge then delivered his annual address. This was exhaustive in character and touched on all the live issues of the day in the box business. He congratulated the association on its increased membership, and on the excellent condition of its finances; he warned against the substitution of paper packages for the old and reliable wooden ones, urged the use of odd lengths in an effort to decrease to all possible extent the waste of forest products and advocated the adoption of the code of trade ethics.

The treasurer of the association reported that there was a balance on hand of \$3,385, showing the excellent financial condition of the organization at present.

Secretary Difebaugh, in his usual happy style, made an address congratulating the members on the friendly relations that obtain among box manufacturers in contradistinction to the warlike attitude they formerly held toward one another.

Among the prominent hardwood men in attendance were R. M. Carrier of Sardis, Miss., and Lewis Doster of Cincinnati, O., respectively president and secretary of the Hardwood Manufacturers' Association of the United States.

The first night of the convention the members of the association and their guests were entertained by H. H. Gibson, editor HARDWOOD RECORD, with a talk on Rough Country Lumbering illustrated with numerous stereopticon views and moving pictures.

#### Secretary Wilson Establishes Record for Service

On March 7 Secretary Wilson of the Department of Agriculture will have completed thirteen consecutive years of service in that capacity, a record in the ranks of cabinet officers, past and present.

Secretary Wilson emphatically denies the truth of the rumor that he will shortly retire. He declares that he likes the job and that while the people like him, which he believes is the case, he sees no reason for not remaining in office indefinitely.

Mr. Wilson has been active in the interests of forestry and conservation, and has recently been the medium through which representatives of the Forest Service and Interior Department met in consultation, the object being to induce a spirit of harmony between the two departments and insure their working together.

#### Prominent Cleveland Lumberman Organizes New Concern

John H. Jenks, for many years connected with the Robert H. Jenks Lumber Company of Cleveland, has organized for a wholesale business the Alpha Lumber Company, with offices in the Williamson building, that city. Considering the enviable reputation which Mr. Jenks holds as a thorough and competent lumberman, the RECORD confidently predicts that his administration as president will be fruitful of wide and uninterrupted success.

#### Annual Insurance Concerns

The annual meeting of the directors and stockholders of the Lumber Insurance Company of New York and the Adirondack Fire Insurance Company, headquarters 84 William street, New York City, was held at the headquarters February 9, with a majority of the stockholders and directors present. Reports received covering the past year showed a satisfactory gain in business as well as resources. These companies are doing a valuable work for the trade in the saving in rates as well as in fair and prompt settlements in the event of losses, and this fact is best appreciated when it is considered that the Lum-

ber Insurance Company is now enjoying an annual premium of \$305,000 and the Adirondack company \$280,000. The underwriting for these companies is managed by the Lumber Insurers' General Agency, which has branches in all the principal cities and on the coast.

The following officers were reelected:

President—G. A. Mitchell.

Vice-president—W. H. Gratwick.

Treasurer—Guy White.

Secretary—R. H. McKelvey.

The following directors were also reelected by the respective companies:

LUMBER INSURANCE COMPANY OF NEW YORK.

CLYDE FOUR-LINE SELF-PROPELLING SKIDDER

### Clyde Logging Equipment

Shown on this page are four views of logging equipment manufactured by the Clyde Iron Works of Duluth, Minn. This concern puts out machines of the highest order which are generally prized among the trade for the efficient and speedy work possible with their use.

The first cut represents the company's famous steel four-line self-propelling skidder, with flexible steel booms for skidding and decking logs at the track. This is a very popular machine in hardwood sections as well as in the pine timber of the South, and is particularly successful on account of the speed with which it may be moved from one point to another and set up ready for operation. This is an essential point where the timber is small and scattered. This machine is extensively used in the hardwood of the North and also throughout the timber sections of the South. The guy lines from the peaks of the booms are tightened by means of friction drums driven by the engines.

The second view represents the above described machine in operation at Ontonagon, Mich., for the Greenwood Lumber Company. In this operation the skidding lines are taken out with horses. The machine is also arranged to use rehaul and do away with horses where desired.

The third picture on this page shows the same operation at Ontonagon after the skidder has gone through, leaving the logs for the loader to put on to cars. This company uses a McGiffert loader, furnished by the Clyde people.

The last halftone is a combination two-line skidder and loader with steel swinging boom, and is built on the Decker type of frame, which provides for spotting the cars through the machine

THE SKIDDER IN OPERATION AT ONTONAGON, MICH.

over the trucks. It is equipped with three engines; two of them are for the skidding lines (each engine having two drums, one for an out-haul line and the other for the spotting line), which are taken back to the logs by power instead of horses. The third engine is for loading, equipped with two drums, one for a loading line and the other for a spotting line for spotting the cars through the machine. The swinging boom is operated by steam cylinder, direct connected and under the control of the loading engineer. This machine is self-propelling and the guy lines are tightened by means of steam driven arms so that moving from one point to another and setting ready for work is a matter of but a few moments. The water tanks are located underneath the lower deck between the trucks and are made of steel and of large capacity. The skidding lines lead from the rigid A frame or boom back to the loading boom.

### Preparation for Wholesalers' Annual

Present indications point to a large attendance at the forthcoming annual of the National Wholesale Lumber Dealers' Association to be held at the Hotel Sinton, Cincinnati, on March 1, 2 and 3. This is the first time that this organization has come West for its annual convention since it met in Chicago seven or eight years ago. This innovation is meeting with general favor and there seems to be a determination among a large number of lumbermen to make this such a successful meeting that the organization will in future frequently return to this section of the country for its annuals.

The lumber contingent of Cincinnati, favorably known and justly as royal hosts, are planning

to entertain the convention visitors in a lavish way. Besides this, there will be a delightful formal banquet given by the association on the first evening of the convention. The business to be considered by the association at this time is also of an important and interesting nature, so that visitors to the convention will be doubly repaid for the journey and time and money expended.

W. A. Bennett and T. J. Moffitt, the local members of the committee on arrangements for the convention, have been actively at work securing eminent speakers to address the lumbermen at the banquet on Wednesday evening, March 2. Lieutenant Governor Treadway of Ohio; S. A. ("Deepwater") Thompson, field secretary of the Rivers and Harbors Congress; Thomas C. Powell, vice-president of the Cincinnati, New Orleans & Texas Pacific Railroad; Hon. David B. Foulke, M. C., Richmond, Ind., and Rev. Charles F. Goss of Cincinnati will be in attendance. Esberger's orchestra will furnish the music. The price of admission to the banquet has been set at \$8 per plate, and an invitation has been extended to all members of the Lumbermen's Club of Cincinnati to attend.

Joseph Bolser, chairman of the committee on entertainment of the Cincinnati Lumbermen's Club, has arranged a smoker for the evening of March 3, to which the Lumbermen's Club extend an invitation to all who attend the convention to be present as their guests. An elegant buffet lunch will be set, with perfectos and liquids. A musical entertainment, instrumental and vocal, has been arranged, consisting of numbers by the Haydn Quintet, a ragtime feast of and a monologue by Horace Williamson.

LOGS LEFT BY SKIDDER FOR LOADING ON CARS

CLYDE COMBINATION TWO-LINE SKIDDER AND LOADER

### Pinchot Still in the Fight

President Gifford Pinchot of the National Conservation Association recently issued a circular letter to members of that organization, wherein he discusses and criticizes the merits of conservation legislation now before Congress. He calls for the aid of the association in support of the bills of which he approves, and to defeat those which meet his disfavor. The letter, excerpts from which are herewith produced, signals Pinchot's return to the fight, from a new quarter. The letter:

To the Members of the National Conservation Association:

Nothing is more important to this association than the passage of good laws for the protection of our natural resources at the present session of Congress.

Nine bills relating to conservation were introduced in Congress on January 18 on behalf of the Secretary of the Interior, and are now pending before the Public Lands Committee of the Senate.

The officers of the association have already conferred with this committee on these bills and have met with the hearty cooperation of the committee. The views of the association were presented by the Hon. James R. Garfield, as its representative. The immediate result was an amended bill on withdrawal of public lands (S. 5485). As reported by Senator Nelson, this bill should have the unqualified support of the members of the association. I call upon you to communicate with your representatives and senators in a strong effort to get it enacted into law.

In the same spirit of constructive criticism I ask your attention to the remaining eight bills and to changes which will be required in them in order that this association may advocate their enactment. The passage of sound laws on conservation at this session of Congress is and must remain the first consideration. We must get the best bills we can and then get them passed.

#### GENERAL CHARACTER OF THE BILLS

Some of the eight bills still in committee merely require amendment; others must be recast altogether.

#### WATER POWER BILL

The first principle of water power control is a fixed and definite time limit. All rights granted to water power companies by the government should terminate at a specific time, and there should be no doubt about it. Whether the water power bill (S. 5488) clearly obeys this principle is left uncertain by the vagueness of its terms. Not only so, but it takes away from the Secretary of the Interior the right to decide the conditions on which the people's property may be used by the companies on renewal of the lease, and as to these conditions gives the companies in effect the equivalent of the right of condemnation through the courts. The bill wisely provides for compensation to the government by the companies, in harmony with existing law, and that is good. But it has conclusive defects, whether seen from the point of view of conservation or from that of the water power companies. It imposes upon the latter certain restrictions which are far more burdensome to them than they are valuable to the government. Such is the possible unforeseen increase of charge at every ten-year period, which would seriously hamper the financing of such enterprises. The immediate effect of the passage of this bill would doubtless be to stop the development of water power on government land. The restrictions on rates charged to the public would be easy to evade. The provisions against monopoly are less effective than those now in force under the Secretary of Agriculture, from whom, by a radical departure from existing laws, and at the obvious cost of duplication of work, it takes the control of water power development in national forests.

The water power bill does not follow the results of recent government experience in dealing with similar problems. It repeals in silence the existing water power law, and curtails the already ample power now exercised (with the approval of a former attorney-general) by the Department of Agriculture. In addition to existing law two principal things are needed. Water power sites should be protected from private appropriation under the land laws, and it should be made possible to issue to the companies permits good for and definitely terminating at the end of fifty years. The government should be left as free as the lessee to bargain for a renewal of the permit, or to refuse it. It will then be, in the words of Mr. Justice Holmes, "in possession of what all admit to be a great public good, and what it has it may keep, and give no one a reason for its will."

#### RECLAMATION BILL

The great merit of the Reclamation Act of 1902 is that it compels the making of homes on the land reclaimed. The bill (S. 5491), which

deals with reclamation projects, destroys this vital principle by opening these lands to absentee landlordism and to speculation. The present law provides that no sale of water in any government irrigation project "shall be made to any land owner unless he be an actual bona fide resident of such land, or occupant thereof residing in the neighborhood of said land." This clause the bill repeals. It should not pass.

#### TIMBER BILL

The inducement to speculation in government timber is the worst feature of the Timber and Stone Act, and has led to an insistent demand for its repeal. The bill for the sale of timber and timber lands (S. 5489), repeals this act, but replaces it with provisions which promote speculation and retard the development of agricultural and mineral lands far beyond the act it repeals. On land which it governs this bill allows the purchaser of government timber to let his trees stand uncut for twenty years. Five years is long enough, as experience has abundantly proved. This provision is useless to the small man, who must cut quickly, and of great use to the timber speculator, who can hold his timber for a rise in price. It invites the concentration of government timber in the hands of great companies. It makes the use of "dummy" entrymen easy and profitable, and reduces the public auction for which it provides to a mere form.

The timber bill defers settlement of land under sale until the timber is cut. It still further retards land settlement and prospecting for minerals by compelling the prospector and the homesteader on the land it cover to pay for the timber he needs or must remove at a price fixed by public auction. It imposes more stringent conditions on the small man than on the timber speculator, and fails to provide for reforestation on lands valuable only for the growth of timber.

The bill for the classification of public lands (S. 5484) is inconsistent with the coal bill in failing to separate the surface from the underlying mineral, and it opens to private appropriation at \$2.50 per acre such deposits of iron ore as lie in the national forests of Minnesota.

#### ALASKA SURVEY BILL

The bill for surveys in Alaska requires no comment at this time.

### Annual Banquet Memphis Lumbermen's Club

The Lumbermen's Club of Memphis, far famed for its hospitality, fairly outdid itself in the annual banquet which was given at the Hotel Gayoso February 21. The entertainment committee conceived the happy idea of inviting the ladies and they added so much enjoyment to the occasion that no more annual entertainments will be given without them.

The spacious dining-room of the hotel was beautifully decorated, Washington's birthday furnishing the motif not only for the decorations themselves, but also for the handsome souvenir of the evening, and a part of the menu itself. Covers were laid for about 200 guests, thus making this the most elaborate function ever attempted by the club.

The souvenir was a masterpiece, not only in conception, but in execution. A huge stork, bearing in its bill a cloth from which projected the head and feet of George Washington and from the side of which hung a big sword, adorned the souvenir, while on the cloth was printed "February 22." The "Father of his country" was born shortly after midnight of February 21 and the conception of the entertainment committee showed that he was born with his hat, boots and spurs on, ready for action, a suggestion which, it was pointed out by one of the speakers, may account for the fact that we have such a wonderful country. A big cherry tree appeared on the upper half of the souvenir card while at the bottom lay the logs which constitute the insignia of the lumber fraternity.

A band rendered delightful music throughout the dinner and, while the latter was being dispatched, S. C. Major, president of the club, introduced W. R. Barksdale, chairman of the entertainment committee, who acted as toastmaster.

The ladies not only added to the charm of the occasion by their presence, but several of them participated in the program. Mrs. Marie Greenwood Worden and Mrs. C. P. J. Mooney rendered a number of delightful songs during the evening and were roundly encored. Furthermore, Mrs. Lelia Morgan Murrell, a Tennessee

woman known all over the South for her delightful literary work, responded to the toast delivered by Judge James M. Greer, "The Ladies." She characterized the entertainment as one of the most beautiful she had ever attended and paid a glowing tribute to the lumbermen of Memphis, comparing their hospitality to that of the Arabians and the beauty of the occasion itself to French art.

Max Sondheimer spoke to the toast "Our Guests." He was in delightful mood and entertained the audience with his wit and humor.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, responded to the toast "Our Guests." He expressed the appreciation of himself and the other guests on the splendid hospitality afforded by the club and of the delightful entertainment provided.

Judge James M. Speer spoke to the toast "The Ladies." He reviewed the part that woman has played in all ages, but testified that the idea that man is boss has been exploded and that woman and man stand on a plane of equality. He referred touchingly to the mother who bore him and to the wife who bore with him and declared that every man was blessed if divinely foolish about women and doubly blessed if he were divinely foolish about only one woman.

Harry B. Anderson, son of S. B. Anderson, president of the Anderson-Tully Company, made one of the distinct hits of the evening with his response to the toast "Memphis." He said in part:

Memphis wants to bring the world to her borders and she does not stand on past performances. She stands ready to welcome all who have been successful. She is a commercial city in a commercial country in a commercial age. There have been ages of faith and of chivalry, and the world is all the better that these have existed, but this is an age of commerce, and commerce rests upon the cities, while the commerce of Memphis rests upon your shoulders. There is room for all and Memphis is highly cosmopolitan. It has every facility to offer to those who desire to commit suicide as well as for those who have ambitions and desires they wish to live to realize and it has prohibition for the teetotalers and saloons for the bibulously inclined. The world is bound to come to Memphis and the Memphis of today is to the Memphis of tomorrow as the old abandoned courthouse is to the new temple of justice which has been only recently completed in this city.

You are familiar with your antecedents in the lumber business who laid the foundations for you and you are now enjoying the prosperity which they missed. I call your attention, however, to the fact that you are an evanescent tribe and that you must move on when the forests of this section have been denuded of their timber. But, even though you pass on you have builded so well that, even though you be forgotten, the city you have founded overlooking the mighty Father of Waters will forever stand as a monument to your untiring energy and to your wonderful spirit of progress and commercialism.

C. P. J. Mooney, managing editor of the Commercial Appeal, began his address about the beginning of the morning of February 22, responding in a most able way to the toast "George Washington."

At the conclusion of Mr. Mooney's talk, the band struck up the national anthem "America," and every person in the dining-room rose and joined in singing it. As the strains of this song died away one of the most successful entertainments in the history of the club was brought to a close.

### Grand Rapids Lumbermen Meet

The Lumbermen's Club of Grand Rapids had a dinner and business meeting at Bauman's banquet rooms, Grand Rapids, Mich., Feb. 22, with full attendance. President Fred I. Nichols of the Nichols & Cox Lumber Company presided. It was voted to employ E. L. Ewing of Grand Rapids as traffic manager for a year, Mr. Ewing holding a similar position with local furniture manufacturers. A resolution was adopted endorsing Fred A. Diggins of Cadillac as candidate for president of the National Hardwood Lumber Association at the June convention held in Louisville.

### Experimental Work in the Philippines

Interesting experimental work is now being carried on in the forest lands of northern Negros and Bataan. A sufficient force of foresters and rangers is out of the question for the Philippines, because of the lack of trained men no less than of money, and while there has been felt a decided lack of information and results which only thorough study could furnish, intensive work over the whole forested area is impossible under such circumstances.

The difficulty has been met by the establishment of an efficient service on two permanent tracts of public forests, one in northern Negros and the other in Bataan, opposite Manila. Among the questions to be studied are the seeding conditions of the different forest trees, the best planting methods, protection of the forests from caligin making and indiscriminate cutting, and other important problems. This work will give the student rangers practical experience in the woods, which can be later supplemented by work in the Forest School at the College of Agriculture in Laguna Province, a branch of the new university.

For protecting the forests from fire and misuse trails are constructed or reopened, giving easy and quick access to the different portions of the tracts. Every effort is made to interfere as little as possible with the people who are living in or near the forests. They will not be permitted to destroy unnecessarily the commercial growth, which now has a cash value to the people of more than \$100 per hectare, but instead they will be given agricultural land covered with cogon grass, brush or poor timber. Records of the cost of all the different classes of work will be kept, and it is expected that the results of the work will be such as to warrant its extension to other provinces during the next few years.

### Chicago Concatenation

As the thirteen kittens, who were initiated February 17 in the Ball room on the nineteenth floor of the La Salle Hotel, will testify, ample homage was paid the Great Spirit of the Hoo-Hoo of northern Illinois, notwithstanding the string of unfortunate events which seriously upset the plans of Vicegerent Snark Carl Saye of Chicago.

The notices, though mailed at 1 o'clock on Tuesday, February 15, were held up in the Chicago postoffice with a vast amount of similar matter, and it was only due to the strenuous work of Mr. Saye, who personally dug up a large number of the notices, that the affair was so well attended. Even under these conditions there were seventy-five loyal Hoo-Hoo present at the concatenation, and about forty attended the banquet which preceded it in the East Room on the mezzanine floor.

Another serious misfortune was the failure of the express company to deliver the trunk, and when those present assembled at 9 o'clock for the sacred ceremony, after a pleasant and quiet dinner, the paraphernalia available was only such as had been hastily gotten together from the Chicago stores.

However, as is usually the case with a hastily arranged affair, the program went off smoothly, considering the circumstances, and the thirteen kittens emerged well carried and with a deep reverence for the great Hoo-Hoo, but probably wishing they had been one more or one less in number.

### A Wise Principle

The newly revised constitution which the Lumbermen's Club of Cincinnati has adopted embodies in its improvements features which might well be considered in similar organizations.

Of particular interest to the trade is the principle set forth in the preamble, in which the club pledges itself "by united action to better make the demands of this organization forcible; and, above all, in demanding and maintaining a high standard of commercial honor and in-

tegrity among those engaged in the lumber business in this vicinity."

Section 5 of Article 1 in the body of the constitution states the manner in which this policy is to be carried out. Upon receipt of requests from a responsible person, firm or corporation for investigation of charges of misconduct, or any irregular business practices preferred against local parties, whether members of the club or not, the president shall appoint a commission with power to act, three members being named by him and one by each of the interested parties.

It is further stated that this commission shall be authorized to require both principals in dispute to produce evidence bearing upon the case before that body, which, after deliberation, shall render its finding to the Executive Board, which body will communicate them in writing to both parties.

Another paragraph reads that "Any member of the club refusing to abide by the decision of the commission, or who declines, in case of complaint being lodged against him, to submit his case to the special commission, shall be subject to expulsion from the club by a unanimous vote of the Executive Board; any principal to the dispute not a member of the club who refuses to abide by the decision of the special commission forfeits all right to again call upon the club for arbitration of dispute."

The saving of time and expense in cases which will be affected by this new ruling alone justify its adoption.

### Spring Work of Yale Forest School

Yale Forest School announces the spring plans of the Senior class as follows:

In accordance with the established custom of the Yale Forest School, the spring term of the Senior class will be on the holdings of a southern lumber company. Through the courtesy of J. B. White of Kansas City, the instruction will be given on the lands of the Louisiana Central Lumber Company near Clarks, Caldwell Parish, Louisiana.

The class, numbering about thirty-five students, will reach Clarks, March 7, and the term will close June 11.

The instruction is of a very practical nature. It comprises a study of the logging and manufacturing methods employed by the lumber company, practice in topographic mapping with special reference to logging operations, timber estimating, and a study of the problems concerned in the management of yellow pine timber lands.

Special lectures on different phases of the lumber industry will be given by visiting lumbermen.

The student camp will be located about eight miles from Clarks on a spur of the logging railroad where the company has erected quarters for the accommodation of the men.

The work of instruction in mapping and estimating will be in charge of H. H. Chapman, assistant professor of forestry, and the logging and manufacturing study in charge of R. C. Bryant, assistant professor of lumbering.

### The World's Shipbuilding

The annual shipbuilding report of the Glasgow Herald, covering the period 1908-1909, has been forwarded by Consul J. W. McEum and a brief digest of its contents is given herewith.

While the industry in the United Kingdom has not regained the position it was expected to hold by this time, still it shows gratifying improvement over the depressing figures of 1908. The Clyde is the pulse of the Scottish shipbuilding trade, and by showing a decrease in number of vessels turned out, though an increase in tonnage and horsepower, indicates the general condition throughout the country. Nineteen hundred and nine Clyde figures are 215,000 tons lower than those of 1908.

In the United States the 1909 market shows a decrease from the previous year and there

was one less battleship built. In the Great Lakes region the American Shipbuilding Company continues to do an extensive business in the manufacture of freighters, but is practically limited to that line of work. Government contracts have been let to concerns in Newport News, Camden and Philadelphia for the construction of battleships, destroyers and submarines; those houses now busy on government work are Cramps, the Newport News Company and the Harlan & Hollingsworth Company. A peculiarity of the trade in this country is the falling off in motor boat construction.

The German market is not as brisk in this line as in 1908, though the decrease in tonnage is not alarming. Four large new warships were completed in the past year.

Returns from France indicate an increase in tonnage turned out, there being four battleships completed and a comfortable production of merchant vessels.

Contrary to the usual rule, Holland is reported to have added a battleship and a coast defense cruiser to her naval forces.

The Danish output is the same character as that of Holland, though the tonnage is considerably less.

The industry in Norway is in a healthy condition though, showing a decrease from 1908 figures. This can also be said of shipbuilding conditions in Sweden and Belgium.

### The Dodge Manufacturing Company as a Consumer of Hardwood

Operating the largest factory in the world for the manufacture of power transmission machinery, elevating and conveying machinery and water softeners, the Dodge Manufacturing Co., Mishawaka, Ind., is among the largest users of hardwood lumber in the country.

High grade maple and oak are consumed in enormous quantities by this concern, a large percentage being consumed in making the "Independence" split wood pulley. Considerable is also required for the wood rims of iron center pulleys and flywheels, as also for the hardwood laggings for changing iron belt wheels to rope drivers.

For Dodge wood products there is annually consumed 7,000,000 feet of lumber. The company cuts in its own sawmill which is one of the most complete in the Middle West, the capacity being 15,000 feet per day. More than 6,000,000 feet is carried in the yards and a dry kiln capacity of 500,000 feet maintained at all times. Logs are received constantly by wagon and by rail from the adjacent neighborhood and also from other localities.

The mill is right in the heart of the lumber and log yards and is operated by power independent of the main plant. Recently there was installed a 125 horsepower Corliss engine with two return tubular boilers, 60-inch by 16-foot Dutch oven attachment. Refuse is used for fuel. The cutting is done by band saws with all the essential auxiliaries for convenience, rapidity and efficiency.

In connection with the sawmill there is a box factory equipped with saws, planers and nailing machines, providing all the boxes and crates necessary in shipping certain Dodge goods.

An idea of the importance of the lumber end at Dodge's is gained from the fact that there are annually produced over 250,000 wood pulleys.

### Miscellaneous Notes

The Batesville Lumber & Veneer Company has been incorporated at Lawrenceburg, Ind. Its capital stock is \$20,000. George Bessler is president of the new concern.

The Singer Manufacturing Company is planning to establish a large sawmill and veneer plant at Truman, Ark.

H. L. Mains of Portland, Ore., has just opened a shop where he will manufacture hardwood interior finish, veneered panels, staved turned columns of large dimensions and every

thing in special mill and cabinet work. He reports that he will be in the market soon for hardwood lumber, especially birch.

The Lasswell Land & Lumber Company has been organized at Hollywood, Mo., with \$20,000 capital, by J. P. Lasswell, J. W. Crider and W. A. Post.

A charter has been granted to the Montith Tie & Timber Company at Cherryville, Va. Its capital stock is \$100,000.

The Dunbar Tie Company of Rosenberg, Tex., has been succeeded by the Brazos River Cottonwood Company.

The Guatemalan & Mahogany Company capitalized at \$150,000, has been organized at Jersey City, N. J., by C. O. Schroeter, E. Nelson Tibbals and W. A. Tibbals.

The Griffith Lumber Company of San Antonio, Tex., has been incorporated with a capital stock of \$20,000 by John, Albert and Johnson Griffith.

The Hardwood Lumber Company has been organized at Heber, Ala., with a capital stock of \$25,000. It will establish a plant to manufacture wagon, buggy and implement stock, boxes, crates and handles. R. T. Martin is president of the new company.

The Minchener Hardwood Company of Montgomery, Ala., has been incorporated with a capital stock of \$7,500. J. R. Minchener, Fred S. Ball and W. H. Samford are the incorporators.

The West-Otis Lumber Company is a new concern for Little Rock, Ark. It is capitalized at \$75,000 and M. B. West president; G. E. Otis, A. L. West, Frank Ogden and J. T. Green are the incorporators.

The Moffett-Bowman Lumber Company, manufacturer and wholesaler of hardwood lumber at Madison, Ind., is planning to move its plant to Memphis, Tenn., about March 1.

Another landmark disappeared recently when a large pin oak was cut down at New Britain, Pa. It was hollow inside and a swarm of bees had made their winter nest in it. The tree was about three feet in diameter. One hundred and twenty-five rings had been counted, which with the decayed heart must have made the tree at least one hundred and fifty years old.

The Cotton Brothers Cypress Company, Ltd., whose plant is located at Morgan City, La., on February 13 severed its connection with the Louisiana Red Cypress Company of New Orleans and in the future will sell its output direct. Its plant has a capacity of over 50,000 feet per day of rough lumber, besides shingles and lath.

A. M. Scutt has severed his connection with the J. Walter Wright Lumber Company of Elizabethton, Tenn., and with W. W. Lambert has organized the Scutt-Lambert Lumber Company with head offices at Elizabethton, to conduct a general manufacturing and wholesaling business in hardwoods. The new company has purchased about two million feet of dry stock and has also closed for a tract of timber comprising a choice lot of oak, poplar, and other hardwoods, which it will immediately take steps to develop.

The annual meeting of the Lumber Trade Club of Boston, was held at the Hotel Bellevue, Thursday evening, February 10 at six o'clock. The reports of the various committees were read and approved. The following officers were elected for the coming year:

For president, Walter E. Chamberlain of John M. Woods & Co.; first, vice-president, Edward S. Tenney of the A. T. Stearns Lumber Company; second vice-president, Herbert F. Hunter of the Palmer & Hunter Company; secretary and treasurer, J. E. F. Downes of the Downes Lumber Company; executive committee: E. D. Sawyer, George W. Curtis and J. C. Murphy.

L. F. Grames & Son, saw guard, shaper

guard and saw vise manufacturers, Allentown, Pa., have erected a new factory at Jordan and Union streets, where they will soon move their entire works. This will enable them to considerably increase their output. Mr. Nagle of this house report business in satisfactory shape, and when they are established in their new works, he says they will be amply able to meet all demands.

G. H. Ingram and C. H. Goodwin recently purchased the Taylorsville (N. C.) chair factory. They will continue the manufacture of chairs and will also install machinery for dressing lumber and for making doors, sash and blinds.

L. L. Lampton, E. W. Reid, Wm. Graham and R. B. Lampton are the incorporators of the New Orleans Dry Kiln and Stacker Company, capitalized at \$10,000. The new concern will manufacture horizontal and edge lumber stacking machinery and dry kiln and sawmill equipment. Mississippi capital is behind the new enterprise which has its headquarters in New Orleans.

The South Bend (Ind.) trade has recently lost the Martin Lumber Company, of South Bend, from among its membership, the McErlain & Jackson Company, doing business on East Tutt street, having recently taken over this concern. The Martin Lumber Company has been engaged in the wholesale and retail business for several years, its yards being at 1717 to 1725 South Michigan street. Before the formation of this concern Judson D. Martin was associated with R. G. Page under the style Martin & Page

Lumber Company. Mr. Martin will conduct his affairs at his residence, Elkhart, Ind., where he is a member of the firm of Martin & Amidon.

It has been reported the Armour interests of Chicago have recently purchased a hardwood timber tract covering several thousand acres in the vicinity of Hill City, Minn. They will erect a factory for the manufacture of lard pails and other packages which they require in marketing their product. This new tract will take the place of the tracts formerly owned at Ithaca and Marble, Mich., where the timber is now entirely cut off.

Following the exhaustion of the timber supply in Wise county, Virginia, the Tug River Lumber Company, Rockcastle Lumber Company and the C. L. Ritter Lumber Company, allied corporations, will move their head offices from Bristol, Tenn., to Huntington, W. Va., the change to be effected early in March. The C. L. Ritter Lumber Company will operate lands in southwestern Virginia, having there purchased a large timber tract and sawmill. The Rockcastle concern owns a \$250,000 stand near Meek, Ky., and will continue on that site, while the Tug River Lumber Company will also be located in Virginia.

The Tallahatchie Lumber Company, the hardwood manufacturer of Philipp, Miss., expects to have its new mill in operation about March 15. This equipment will be one of the model plants of the Mississippi delta hardwood region.

A new concern to enter the lumber business at Albany, N. Y., is the F. F. Crannell Lumber Company, capitalized at \$80,000. The directors are Francis F., Charles R., and Wilbur H. Crannell.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

The Entertainment Committee of the Louisville Hardwood Club, after a conference with the Board of Directors of the National Hardwood Lumber Association, has decided upon Thursday and Friday, June 9 and 10, as the dates for the thirteenth annual convention of the National Hardwood Lumber Association, and the headquarters will be the Hotel Seelbach, Louisville. Frank F. Fish, the secretary, reports the committee is actively at work on a very interesting program, details of which will be printed later.

The St. James Cedar Company, wholesalers of lumber and ties, Union Trust building, Cincinnati, O., and Detroit, Mich., announces that it has purchased the interest of Omar Farrell, and that he is no longer connected with the concern.

The Lumbermen's Club of Memphis, Tenn., held its annual banquet at the Hotel Gayoso, February 21, and everyone present had a most enjoyable time.

The Sargent Lumber Company, wholesale lumber dealer, this city, announces that after March 1 its offices will be located in 812 Great Northern building, where it will have even better facilities to take prompt care of all orders than heretofore.

D. C. Thickston, lumber retailer of Cassopolis, Mich., was in town last week for a few days.

The RECORD was favored with a call on February 16 from H. P. Wiborg and W. C. Bartlett of the Wiborg & Hanna Company, the well-known hardwood house of Cincinnati, O.

George T. Mickle of George T. Mickle & Co., city, returned from sojourn at French Lick, Ind., on February 21.

The Northfield Lumber Company is a new concern incorporated under Indiana state laws to engage in the dimension stock and lumber business, with headquarters at Chicago Heights,

Ill. H. C. Snyder, who for some time was with the Flanner-Steger Land & Lumber Company, is president of the institution.

Two welcome Indiana lumbermen callers at the HARDWOOD RECORD office on February 11 were J. V. Stimson of Huntingburg, and James Downs of Rochester.

Gouvenour E. Smith & Co., wholesalers, of New York City, announce that they have just closed a contract with the Craggy Lumber Company of Swannanoa, N. C., to handle its entire output of hardwood lumber, which will consist of ash, oak, basswood and poplar. The lumber the North Carolina concern manufactures is all hand-sawed and it has an output of about five million feet annually.

Prouty & Miller, of Newport, Vt., proprietors of the Taunton Lumber Company of Brockton, Mass., advise that Alfred H. Wilbur has been appointed manager of the latter concern to succeed William H. Lewis, who died on January 23. Mr. Wilbur was associated with Mr. Lewis during his entire term of service for the Taunton Lumber Company, and under his direction the business will undoubtedly be carried on in the same manner as in the past.

John S. Weidman, well-known lumberman of Weidman, Mich., made the RECORD a call on February 15, en route to the South on a timber-purchasing expedition.

Among the welcome RECORD callers on February 14 was J. L. Strickland, of Starnes & Strickland, Greenville, Miss.

The Stone Mountain Lumber Company, Inc., at Keokee, Va., manufacturer and wholesale dealer in poplar and hardwoods, advises that it has a tract of 3,000 acres of hardwood timber, consisting of oak, chestnut, poplar, birch and hemlock, and that it has just commenced operating its circular mill, which has a daily capacity of 20,000 feet. This concern is located ten miles from Appalachia, Va., on the Virginia and Southwestern Railroad.

A. F. Anderson, well-known lumberman of

Cadillac, Mich., spent a few days in town last week.

Lucius Fuller, editor of the Lumber World, has been confined to his bed for some days suffering with a broken ankle.

G. C. Pratt of the G. C. Pratt Tie & Timber Company, Chicago, recently made an extensive trip through southern mill points, and reports placing several large orders.

David W. Walker, who conducts a mahogany business at 133 La Salle street, Chicago, reports that business is at last back to normal and shows good promises for the future. Mr. Walker states that the mahogany trade was heavily hit in the recent depression and that producers were under contract for large orders and had, in some cases, 6,000,000 to 7,000,000 feet of this lumber on sticks. A consequent eruption in prices was inevitable.

Philip J. Attley, manager of the Ross-Attley Lumber Company, Heth, Ark., paid a visit to Chicago last week accompanied by Mrs. Attley. They expected to return to the mill within a few days.

The Landeck Lumber Company of Milwaukee, Wis., has consolidated with the firm of L. J. Pomeroy & Co., Chicago, and hereafter the Chicago branch of the Wisconsin firm, located in the Marquette building, will be conducted under the title of the Landeck Lumber Company.

C. H. Donaldson and George Mason of the Mason & Donaldson Lumber Company, Rhineland, Wis., were in Chicago recently on business visits. They report considerable difficulty in getting cars, but say that business is good.

F. A. Diggins of Murphy & Diggins, and B. C. Kelly of the St. Johns Table Company, Cadillac, Mich., were in Chicago this week on their way South, intending to spend a week or two in hunting game along the Texas gulf coast.

Carroll F. Sweet of the Fuller & Rice Lumber & Manufacturing Company, Grand Rapids, Mich., passed through Chicago late last week on his way to Denver, Col., where he was called by the death of a brother-in-law.

W. J. Vertrees of Bushnell, Ill., who is president of the Bushnell Tank Works, was a recent Chicago visitor.

E. V. Allen, president of the Victor Manufacturing Company of Columbus, O., and Leavenworth, Kan., was in Chicago last week.

Charles H. Barnaby, of Greencastle, Ind., the long-time president of the Indiana Hardwood Lumbermen's Association, was in Chicago last week.

Frank F. Fish, secretary of the National Hardwood Lumber Association, was in Louisville, Ky., this week looking after the arrangements for the coming meeting of the National Hardwood Lumber Association, to be held June 9 and 10, 1910.
